EXECUTIVE NARRATIVE

Sample Delivery Group: C4W1232
Laboratory: Bureau Veritas Canada
Site: Loring AFB
Sampling dates: 10/08/2024 – 10/10/2024
Number of Samples: 10
Test Method: USEPA Method 1633
Analysis: per- and polyfluoroalkyl substances (PFAS)

Quality Assurance Project Plan: Draft TO 1048 Quality Program Plan, September 2023 (QAPP).

Validation Guidelines: United States Department of Defense (DOD) Environmental Data Quality Workgroup (EDQW), General Validation Guidelines, November 2019; United States Department of Defense Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances analysis by QSM Table B-24, Environmental Data Quality Workgroup, October 18, 2022

Client Sample Identification	Laboratory Sample Identification	Matrix	Validation Stage

LORNG_ST16002_10092024MF	AFQX14	groundwater	S2BVM

Table 1 provides a summary of the major and minor data quality issues identified in this data set. All data are acceptable except those results which have been qualified with “R”, rejected. Data validation qualifiers along with associated descriptions are provided in Table 2. All data qualification related to this group of samples is detailed on the attached sheets.

All data users should note two facts. First, an “R” flag means that the associated value is unusable due to significant quality control (QC) problems, the data is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on any data tables even as a last resort. Second, no analyte concentration, even if it passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

DATA ASSESSMENT

1. NARRATIVE AND COMPLETENESS REVIEW

The case narrative was reviewed, and the data package was checked for completeness. No discrepancies were noted.

2. SAMPLE DELIVERY AND CONDITION

The samples arrived at the laboratory in acceptable condition. Proper custody was documented.

3. HOLDING TIME

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Proper sample handling and preservation also play a role in the chemical stability of analytes in the sample matrix. If samples are not collected and stored using proper containers and/or preservatives, data may not be valid.

No problems were found for this criterion.

4. CALIBRATION

Satisfactory instrument calibration is established to ensure that the instrument can produce acceptable quantitative data. An initial calibration demonstrates that the instrument can give acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance. Additionally, a continuing calibration is analyzed at the end of each 12-hour analytical sequence, denoted as a "closing" calibration verification and ascertains acceptable performance at the conclusion of the analytical sequence.

A) Initial Calibration

Percent relative standard deviation (%RSD) is calculated from the initial calibration and is used to indicate stability of a specific compound over the calibration range.

An RSD value outside the initial calibration limit indicates the potential for quantitation errors. For this reason, all positive and non-detected results are qualified as estimated. Severe performance failures (RSD >30%) requires rejection of all results. The following QC criteria have been applied for this project: The %RSD of initial calibration must be <20%.

No problems were found for this criterion.

B) Continuing Calibration

The Percent Recovery (%R) for all target analytes in the continuing calibration must be within 70-130%. All initial calibration verification (ICV) and continuing calibration verification (CCV) %Rs were with acceptance limits with the following exceptions.

No problems were found for this criterion.

C) Instrument Sensitivity Check

Prior to analysis an instrument sensitivity check (ISC) must be performed. The ISC must be at the limit of quantitation (LOQ). All analyte concentrations must be within ±30%. Note: the laboratory reports refer to the ISC as Low-Concentration Calibration Verification (LCV). The validator has determined that the low level CCV in the laboratory's report is equivalent to the method required ISC.

No problems were found for this criterion.

5. BLANK CONTAMINATION

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. When an equipment blank, or lab blank has an analyte detection, then all associated field samples are qualified per validation guidance as appropriate.

A) Method blank contamination:

No problems were found for this criterion.

B) Instrument blank contamination:

No problems were found for this criterion.

C) Field/Equipment blank contamination:

No sample was submitted as a field/equipment blank in association with samples in this sample delivery group (SDG).

6. EXTRACTED INTERNAL STANDARDS

All samples are spiked with labeled standard compounds prior to sample preparation and analyses to evaluate overall laboratory performance and efficiency of the analytical technique. The reported project samples had observed standard recoveries within the established limits in all cases with the following exceptions.

No problems were found for this criterion.

7. NON-EXTRACTED INTERNAL STANDARDS

Non-extracted internal standard peak areas are used to quantify extracted internal standard recoveries. The reported project samples had non-extracted internal standard area counts within the established limits in all cases with the following exceptions.

No problems were found for this criterion.

8. COMPOUND IDENTIFICATION

The project target analyte compounds are identified on the LC/MS/MS by using the analytes retention time (RT). The retention time of each target analyte should be within ± 0.4 minutes of the predicted retention. Target analyte detections should display a signal-to-noise of ≥ 3:1, have proper peak integration, and display all ions at the correct retention times.

Target analyte detections should have passing ion ratios (50 - 150% of theoretical). Ion ratio failures could be caused by matrix interference and/or be the result of the presence of isomers in the sample at different ratios than the ratio of isomers present in the calibration standards.

Ion ratios were verified as part of the Level 2B data validation. No anomalies were identified with the following exceptions.

The transition mass ratios were outside the established ratio limits for isotope dilution standards listed in the table below during the analyses of the listed samples indicating some degree of uncertainty in the qualitative identification of the analyte. The impacted results have been qualified "J" on this basis.

Sample	*Isotope Dilution Standard*
LORNG_C1_ST_10082024PF	*PFOSA*
LORNG_C2_ST_10082024PF	*PFOSA*

Additional target compound identification criterion was not verified as part of the Level 2B data validation.

9. COMPOUND QUANTIFICATION

Target compound quantitation was not verified as part of the Level 2B data validation.

Manual integrations were not reviewed at the Stage 2B level.

10. MATRIX SPIKE/MATRIX SPIKE DUPLICATE RECOVERY / MATRIX DUPLICATE

Matrix spike/matrix spike duplicate (MS/MSD) data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD data may be used in conjunction with other quality control criteria for additional qualification of data.

No sample was submitted for MS/MSD evaluation in association with this SDG.

11. FIELD DUPLICATES

Field duplicates may be taken and analyzed as an indication of overall precision. These analyses measure both field and laboratory precision. A control limit of ≤ 30% for the Relative Percent Difference (RPD), shall be used when original and duplicate sample values are greater than or equal to the sample specific LOQ. For field duplicate analyses that do not meet the technical criteria, the action was applied to only the parent sample and its duplicate.

No samples were submitted as a field duplicate pair in association with this SDG.

12. LABORATORY CONTROL SAMPLES

The Laboratory Control Sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. The LCS results are used to verify that the laboratory can perform the analysis in a clean matrix.

No problems were found for this criterion.

13. DILUTIONS, RE-EXTRACTIONS & REANALYSIS

Samples may be re-analyzed for dilution, re-extraction and for other QC reasons. In such cases, the best result values are used.

Samples were re-extracted and/or reanalyzed as necessary to confirm results or bring analytes in to the instruments linear calibration range.

14. SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

Overall, the laboratory data generated met the project goals and quality control criteria, with the exceptions identified in this report and as summarized in Table 1.

15. OTHER

None.

Table 1
Review Elements Summary

	Were acceptance criteria met?		
	Yes	No	
Per-fluorinated Compounds		Major	Minor
Holding Time/Sample Handling	x		
Method Blanks	x		
Instrument Blanks	x		
Field Blanks	NA		
Calibration Percent Relative Standard Deviation and Percent Difference	x		
Instrument Sensitivity Check	x		
Extracted Internal Standards	x		
Non-Extracted Internal Standards	x		
Compound Identification			x
Matrix Spike/Matrix Spike Duplicate/Matrix Duplicate	NA		
Laboratory Control Sample	x		
Other Quality Control Data out of Specification	x		
Field Duplicate	NA		

Major= Major data quality issue identified resulting in rejection of data.
Minor= Minor data quality issue identified resulting in the qualification of data. Data qualification should be used to inform the data users of data limitations.
NA = Not applicable

Table 2
Data Validation Qualifiers

Data Qualifier	Definition
U	**The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.**
J	**The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.**
J+	**The result is an estimated quantity, but the result may be biased high.**
J-	**The result is an estimated quantity, but the result may be biased low.**
UJ	**The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.**
R	**The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided.**

HHL	HOLDINGTIME: SAMPLING TO ANALYSIS HOLDING TIME EXCEEDED
HPHL	HOLDINGTIME: SAMPLING TO EXTRACTION HOLDING TIME EXCEEDED
IAG	ION ABUNDANCE RATIO OUTSIDE CALCULATED LIMITS
IC2	CALIBRATION: EXCEEDS RSD CRITERIA AND INITIAL CALIBRATION EXCEEDED THE R2 FOR FIRST ORDER REGRESSION
ICA	ABSOLUTE VALUE OF CONCENTRATION FOR ALL NON-SPIKED PROJECT ANALYTES >DL FOR SAMPLES CONTAINING INTERFERING ELEMENTS
ICD	CALIBRATION: INITIAL CALIBRATION RSD EXCEEDED
ICE	CALIBRATION: RESULT GREATER THAN LINEAR CALIBRATION RANGE
ICL	CALIBRATION: INITIAL CALIBRATION LOW STD. GREATER THAN THE REPORTING LIMIT
ICP	CALIBRATION: INITIAL CALIBRATION RSD EXCEEDED FOR CONFIRMATION COLUMN
ICR2	CALIBRATION: INITIAL CALIBRATION EXCEEDED THE R2 FOR FIRST ORDER REGRESSION
ICS	CALIBRATION: INDUCTIVELY COUPLED PLASMA (ICP) AND/OR ICP MASS SPECTROSCOPY (ICPMS) INTERFERENCE CHECK SAMPLE (ICS) SOLUTIONS A AND B (ICS A/B) RECOVERIES ARE OUTSIDE CONTROL LIMITS.
IDG	ISOTOPE DILUTION ANALYTE RECOVERY OUTSIDE ACCEPTANCE CRITERIA
IMPR	IMPROPER SAMPLE PRESERVATION/HANDLING/COLLECTION
IRF	CALIBRATION: INITIAL CALIBRATION RELATIVE RESPONSE FACTOR BELOW THE LOWER CONTROL LIMIT
ISH	INTERNALSTANDARD: INTERNAL STANDARD RESPONSE GREATER THAN THE UPPER CONTROL LIMIT
ISL	INTERNALSTANDARD: INTERNAL STANDARD RESPONSE LESS THAN THE LOWER CONTROL LIMIT

DATA VALIDATION PFAS

Module 6; PFAS by QSM Table B-24; October 18, 2022

Validator: GAP

Reviewer: DM

Date Validated: 01/27/2025

Reviewed: 2/6/2025

Project: Loring AFB

SDG: C4W1232

LAB: Bureau Veritas Canada

Samples Collected: 10/08/2024 – 10/10/2024

10 aqueous

SAMPLE RECEIPT AND CASE NARRATIVE REVIEW

- ✓ Traffic reports, chain-of-custody forms or SDG narrative do not indicate any problems with sample receipt, condition of the samples, analytical problems or special circumstances affecting the quality of the data.
- ✓ AFFF samples are to be shipped in HDPE containers with an unlined cap
- ✓ Shipment temp 0-6°C: recommended to freeze tissue samples upon receipt
- ✓ If temp upon receipt is greater than 6°C J/UJ all

  Received on 10/11 at <6 C

HOLDING TIMES

- ✓ Recommended storage temp is ≤ -20°C
- ✓ Per method 1633: aqueous samples may be held in the lab for up to 90 days when stored at recommended temp and protected from light; when stored at 0-6 °C and protected from light samples can be held for up to 28 days (see method for additional details)
- ✓ Per method 1633: solid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C (see method for additional details)
- ✓ Per method 1633: biosolid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C; however, freezing is recommended (see method for additional details)
- ✓ Samples extracts should be stored at 0-4°C protected from light and analyzed within 90 days

- ✓ If hold time is exceeded qualify J/UJ
- ✓ If hold time is grossly exceeded (2X hold time) J/X

244 Table II. Sample Storage and Holding Time Requirements

Matrix Type	Stored at 0 - 6°C, protected from light		Stored at ≤ -20°C, protected from light	
	Holding Time	Caveat	Holding Time	Caveat
Aqueous	28 days	Precursor degradation occurs after 7 days	90 days	None
Solid and Tissue	90 days	Should be prepared as soon as possible if NFDHA is a target analyte	90 days	Should be prepared as soon as possible if NFDHA is a target analyte
Biosolid	90 days	Not recommended due to the production of gases due to microbiological activity	90 days	None

Samples collected 10/08/2024 – 10/10/2024
Extracted 10/29/2024 and 11/03/2024
Analyzed 10/30/2024 and 11/04/2024 ok

Extracted Internal STANDARDS (EIS)

- ✓ Added to all QC and field samples
- ✓ Recoveries are within the limits as defined in QAPP; QSM 6.0 specified using lab derived limits with lower limits no less than 20%
- ✓ Detected for analytes qualified using an EIS percent recovery >200% should be qualified J-. Nod-detects should not be qualified.
- ✓ If EIS recovery is <10%; associated detected and non-detects should be qualified X
- ✓ EIS retention times should be within 0.4 minutes of standard; use professional judgment to qualify

EDS rules as Module 6 does not define all situations:

- **For EIS %R >200% J- positive results, no action on non-detects (per module 6)**
- **For EIS %Rs >lab limit J- positive results, no action on non-detects**
- **For EIS %Rs between lab limit; no action (per module 6)**
- **For EIS %Rs lower lab limit but >10%; J+ positive results, UJ non-detects**
- **For EIS %Rs <10% X positive and non-detected (per module 6)**

Per Loring QAPP:

Extracted Internal Standards	Preliminary in-house acceptance criteria of 20-150% to be used until in-house limits are generated and approved for project use. Lower limit of in-house acceptance criteria cannot be <20%

All reported ok

Non-Extracted Internal STANDARDS (NIS)

- ✓ Used to quantify EIS
- ✓ If low are counts are reported (<30%) detected and non-detected should be qualified X

ok

Laboratory Control Sample (LCS) and Low-Level Laboratory Control Sample (LLLCS)

- ✓ LCMS Lab Control Recovery (Form III), Form I, prep log, run log
- ✓ LCS prepared, extracted, analyzed, and reported once for every 20 field samples of a similar matrix, per SDG.
- ✓ Laboratory Control Samples were analyzed for all the target analytes that the samples are analyzed for.
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150% if lab limits have not been generated.
- ✓ If LCS or LLLCS %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If LCS or LLLCS %R is < lower limit; qualify detected J- and non-detected X

Use lab limits to evaluate per Loring QAPP

Batch 9731524 ok

Batch 9742338 ok

MS/MSD and Matrix Duplicate

- ✓ LCMS Matrix Spike Recovery (Form III)
- ✓ The Matrix Spike Samples were spiked and analyzed for all the target analytes that the samples are analyzed for (Same analytes as LCS).
- ✓ Per module 6: MS and MSD are applicable where the spike concentration is a least 3 times greater than the native analyte concentration **(3X rule)**
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150%.
- ✓ If MS or MSD %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If MS or MSD %R is < lower limit but >10%; qualify detected J- and non-detected UJ
- ✓ If MS or MSD %R is < 10%; qualify detected J- and non-detected X
- ✓ If MS/MSD RPD is out; qualify detected J and non-detected UJ
- ✓ For matrix duplicate; for concentrations of analytes that are equal to or greater than the LOQ, the RPD must be ≤30%; if out qualified detected J; no action on non-detects

Use lab limits to evaluate per Loring QAPP; RPD 30%

MS/MSD Sample:
none

Matrix Duplicate:
none

BLANKS

- ✓ LCMS Method Blank Summary (Form IV), method blank Form I, prep log, run log
- ✓ Frequency of Analysis: method blank has been analyzed for every 20 (or less) samples of similar matrix or concentration or each extraction batch.
- ✓ Continuing Calibration Blanks (Form I) and run log
- ✓ Frequency of Analysis: immediately following the highest standard analyzed and daily prior to sample analysis.
- ✓ Field/rinse blanks are non-detected for all analytes

Per Loring QAPP:

- Sample results with associated blank contamination will be qualified as follows:

Method Type	Blank Result	Sample Result	Action
PFAS, Organics, and Wet Chemistry	< LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ	≤ 2x blank: Qualify non-detect (U) at reported result. ≥ 2x-5x blank: J+
	≥ LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ and < blank result	Qualify non-detect (U) at reported result
		≥ LOQ and ≥ blank result	≤ 2x blank: Qualify non-detect (U) at reported result. 2x-5x blank: J+
Metals	≤ LOQ	≤ LOD and < 5x blank result	Qualify non-detect (U) at LOD.
		LOD < Sample Result ≤ LOQ and < 5x blank result	Qualify non-detect (U) at reported result.
		> LOQ	< 5x blank result; qualify estimated (J+)
	> LOQ	≤ LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result ≤ LOQ	Qualify non-detect (U) at reported result
		> LOQ but < 5x blank result	Qualify estimated (J+)
		≥ 5x blank result	No qualification

FB/EBs
none

Batch 9731524 all ND
Batch 9742338 all ND

All ICB/CCBs all ND <MDL

MASS CALIBRATION

- ✓ Verified to be ±0.2 amu of true value

Bile Salt Interference Check and Qualitative Identification Standard

- ✓ Provided and requirements met
- ✓ 1.0 minute between RTs of bile salt and PFOS
- ✓ Qualitative Identification Standard to confirm RTs

All acceptable

ICAL

- ✓ Initial Calibration Data Curve Evaluation (Form VI) and run log
- ✓ Lowest standard should be at or below LOQ
- ✓ %RSD <20% or relative standard error (RSE) <20%
- ✓ If %RSD > 20% but <30% J/UJ
- ✓ If %RSD >30% J/R

See below

INSTRUMENT PERFORMANCE CHECK PER DRAFT METHOD 1633

- ✓ Concentration equal to LOQ
- ✓ Analyzed after ICAL and daily before samples
- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

CCAL

- ✓ Continuing Calibration Data (Form VII) and run log
- ✓ Continuing calibration standard analyzed on each working day, prior to sample analyses.
- ✓ Calibration verification/continuing calibration standard been analyzed after every 10 samples and at the end of each analytical sequence
- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

COMPOUND INDENTIFICATION

- ✓ RT within ±0.4 RRT units (review for Level 4)
- ✓ S/N ration 3:1 (review for Level 4)
- ✓ Ion response ratio with ±50% (review for Level 2B)
- ✓ If ion ratio is outside limit; qualify J

Ion ratios out for:

LORNG_C1_ST_10082024PF	AFQX05	PFOSA	flag J
LORNG_C2_ST_10082024PF	AFQX07	PFOSA	flag J

Use IAG reason code

FIELD DUPLICATES

- ✓ Use QAPP defined criteria
- ✓ If outside acceptance criteria qualify J/UJ (MODULE FLAGS NONDETECTS TOO)

Loring AFB QAPP for aqueous and solid samples:

Field Duplicate	≤30% RPD or the absolute difference between analyte concentrations <LOQ

none

EXECUTIVE NARRATIVE

Sample Delivery Group: C4W1275
Laboratory: Bureau Veritas Canada
Site: Loring AFB
Sampling dates: 10/09/2024
Number of Samples: 26
Test Method: USEPA Method 1633
Analysis: per- and polyfluoroalkyl substances (PFAS)

Quality Assurance Project Plan: Draft TO 1048 Quality Program Plan, September 2023 (QAPP).

Validation Guidelines: United States Department of Defense (DOD) Environmental Data Quality Workgroup (EDQW), General Validation Guidelines, November 2019; United States Department of Defense Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances analysis by QSM Table B-24, Environmental Data Quality Workgroup, October 18, 2022

Table 1 provides a summary of the major and minor data quality issues identified in this data set. All data are acceptable except those results which have been qualified with “R”, rejected. Data validation qualifiers along with associated descriptions are provided in Table 2. All data qualification related to this group of samples is detailed on the attached sheets.

All data users should note two facts. First, an “R” flag means that the associated value is unusable due to significant quality control (QC) problems, the data is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on any data tables even as a last resort. Second, no analyte concentration, even if it passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

DATA ASSESSMENT

1. NARRATIVE AND COMPLETENESS REVIEW

The case narrative was reviewed, and the data package was checked for completeness. No discrepancies were noted.

2. SAMPLE DELIVERY AND CONDITION

The samples arrived at the laboratory in acceptable condition. Proper custody was documented.

3. HOLDING TIME

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Proper sample handling and preservation also play a role in the chemical stability of analytes in the sample matrix. If samples are not collected and stored using proper containers and/or preservatives, data may not be valid.

No problems were found for this criterion.

4. CALIBRATION

Satisfactory instrument calibration is established to ensure that the instrument can produce acceptable quantitative data. An initial calibration demonstrates that the instrument can give acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance. Additionally, a continuing calibration is analyzed at the end of each 12-hour analytical sequence, denoted as a "closing" calibration verification and ascertains acceptable performance at the conclusion of the analytical sequence.

A) Initial Calibration

Percent relative standard deviation (%RSD) is calculated from the initial calibration and is used to indicate stability of a specific compound over the calibration range.

An RSD value outside the initial calibration limit indicates the potential for quantitation errors. For this reason, all positive and non-detected results are qualified as estimated. Severe performance failures (RSD >30%) requires rejection of all results. The following QC criteria have been applied for this project: The %RSD of initial calibration must be <20%.

No problems were found for this criterion.

B) Continuing Calibration

The Percent Recovery (%R) for all target analytes in the continuing calibration must be within 70-130%. All initial calibration verification (ICV) and continuing calibration verification (CCV) %Rs were with acceptance limits with the following exceptions.

No problems were found for this criterion.

C) Instrument Sensitivity Check

Prior to analysis an instrument sensitivity check (ISC) must be performed. The ISC must be at the limit of quantitation (LOQ). All analyte concentrations must be within ±30%. Note: the laboratory reports refer to the ISC as Low-Concentration Calibration Verification (LCV). The validator has determined that the low level CCV in the laboratory's report is equivalent to the method required ISC.

No problems were found for this criterion.

5. BLANK CONTAMINATION

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. When an equipment blank, or lab blank has an analyte detection, then all associated field samples are qualified per validation guidance as appropriate.

A) Method blank contamination:

No problems were found for this criterion.

B) Instrument blank contamination:

No problems were found for this criterion.

C) Field/Equipment blank contamination:

Sample LORNG_EB018_10092024 was submitted as an equipment blank in association with samples LORNG_GC_BW002D_10092024 and LORNG_BW05011S_10092024. No problems were found for this criterion.

Sample LORNG_EB019_10092024 was submitted as an equipment blank in association with sample LORNG_WBGB_BW001_10092024. No problems were found for this criterion.

Sample LORNG_EB020_10092024 was submitted as an equipment blank in association with the samples listed in the table below. No problems were found for this criterion.

LORNG_BW06007_10092024	*LORNG_BW06007_10092024FD*
LORNG_JMW3601_10092024	*LORNG_MMW0124_10092024*

6. EXTRACTED INTERNAL STANDARDS

All samples are spiked with labeled standard compounds prior to sample preparation and analyses to evaluate overall laboratory performance and efficiency of the analytical technique. The reported project samples had observed standard recoveries within the established limits in all cases with the following exceptions.

No problems requiring qualification of sample results were found for this criterion.

7. NON-EXTRACTED INTERNAL STANDARDS

Non-extracted internal standard peak areas are used to quantify extracted internal standard recoveries. The reported project samples had non-extracted internal standard area counts within the established limits in all cases with the following exceptions.

No problems were found for this criterion.

8. COMPOUND IDENTIFICATION

The project target analyte compounds are identified on the LC/MS/MS by using the analytes retention time (RT). The retention time of each target analyte should be within ± 0.4 minutes of the predicted retention. Target analyte detections should display a signal-to-noise of ≥ 3:1, have proper peak integration, and display all ions at the correct retention times.

Target analyte detections should have passing ion ratios (50 - 150% of theoretical). Ion ratio failures could be caused by matrix interference and/or be the result of the presence of isomers in the sample at different ratios than the ratio of isomers present in the calibration standards.

Ion ratios were verified as part of the Level 2B data validation. No anomalies were identified with the following exceptions.

The transition mass ratios were outside the established ratio limits for isotope dilution standards listed in the table below during the analyses of the listed samples indicating some degree of uncertainty in the qualitative identification of the analyte. The impacted results have been qualified "J" on this basis.

Sample	*Isotope Dilution Standard*
LORNG_JMW3601_10092024	*PFOSA*
LORNG_MMW0124_10092024	*PFOSA*

Additional target compound identification criterion was not verified as part of the Level 2B data validation.

9. COMPOUND QUANTIFICATION

Target compound quantitation was not verified as part of the Level 2B data validation.

Manual integrations were not reviewed at the Stage 2B level.

10. MATRIX SPIKE/MATRIX SPIKE DUPLICATE RECOVERY / MATRIX DUPLICATE

Matrix spike/matrix spike duplicate (MS/MSD) data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD data may be used in conjunction with other quality control criteria for additional qualification of data.

No sample was submitted for MS/MSD evaluation in association with this sample delivery group (SDG).

11. FIELD DUPLICATES

Field duplicates may be taken and analyzed as an indication of overall precision. These analyses measure both field and laboratory precision. A control limit of ≤ 30% for the Relative Percent Difference (RPD), shall be used when original and duplicate sample values are greater than or equal to the sample specific LOQ. For field duplicate analyses that do not meet the technical criteria, the action was applied to only the parent sample and its duplicate.

Samples LORNG_MMW0010_10092024 and LORNG_MMW0010_10092024FD were submitted as a field duplicate pair in association with this SDG. Adequate field precision was demonstrated.

Samples LORNG_MMW0007A_10092024 and LORNG_MMW0007A_10092024FD were submitted as a field duplicate pair in association with this SDG. Adequate field precision was demonstrated.

Samples LORNG_JBW7347B_10092024 and LORNG_JBW7347B_10092024FD were submitted as a field duplicate pair in association with this SDG. Adequate field precision was demonstrated.

Samples LORNG_BW06007_10092024 and LORNG_BW06007_10092024FD were submitted as a field duplicate pair in association with this SDG. Adequate field precision was demonstrated.

12. LABORATORY CONTROL SAMPLES

The Laboratory Control Sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. The LCS results are used to verify that the laboratory can perform the analysis in a clean matrix.

No problems were found for this criterion.

13. DILUTIONS, RE-EXTRACTIONS & REANALYSIS

Samples may be re-analyzed for dilution, re-extraction and for other QC reasons. In such cases, the best result values are used.

Samples were re-extracted and/or reanalyzed as necessary to confirm results or bring analytes in to the instruments linear calibration range.

14. SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

Overall, the laboratory data generated met the project goals and quality control criteria, with the exceptions identified in this report and as summarized in Table 1.

15. OTHER

None.

Table 1
Review Elements Summary

	Were acceptance criteria met?		
	Yes	No	
Per-fluorinated Compounds		Major	Minor
Holding Time/Sample Handling	x		
Method Blanks	x		
Instrument Blanks	x		
Field Blanks	x		
Calibration Percent Relative Standard Deviation and Percent Difference	x		
Instrument Sensitivity Check	x		
Extracted Internal Standards	x		
Non-Extracted Internal Standards	x		
Compound Identification			x
Matrix Spike/Matrix Spike Duplicate/Matrix Duplicate	NA		
Laboratory Control Sample	x		
Other Quality Control Data out of Specification	x		
Field Duplicate	x		

Major= Major data quality issue identified resulting in rejection of data.
Minor= Minor data quality issue identified resulting in the qualification of data. Data qualification should be used to inform the data users of data limitations.
NA = Not applicable

Table 2
Data Validation Qualifiers

Data Qualifier	Definition
U	The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided.

DATA VALIDATION PFAS

Module 6; PFAS by QSM Table B-24; October 18, 2022

Validator: GAP

Reviewer: DM

Date Validated: 01/28/2025

Reviewed: 2/7/2025

Project: Loring AFB

SDG: C4W1275

LAB: Bureau Veritas Canada

Samples Collected: 10/09/2024

26 aqueous

SAMPLE RECEIPT AND CASE NARRATIVE REVIEW

- ✓ Traffic reports, chain-of-custody forms or SDG narrative do not indicate any problems with sample receipt, condition of the samples, analytical problems or special circumstances affecting the quality of the data.
- ✓ AFFF samples are to be shipped in HDPE containers with an unlined cap
- ✓ Shipment temp 0-6°C: recommended to freeze tissue samples upon receipt
- ✓ If temp upon receipt is greater than 6°C J/UJ all

Received on 10/11 at <6 C

HOLDING TIMES

- ✓ Recommended storage temp is ≤ -20°C
- ✓ Per method 1633: aqueous samples may be held in the lab for up to 90 days when stored at recommended temp and protected from light; when stored at 0-6 °C and protected from light samples can be held for up to 28 days (see method for additional details)
- ✓ Per method 1633: solid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C (see method for additional details)
- ✓ Per method 1633: biosolid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C; however, freezing is recommended (see method for additional details)
- ✓ Samples extracts should be stored at 0-4°C protected from light and analyzed within 90 days

- ✓ If hold time is exceeded qualify J/UJ
- ✓ If hold time is grossly exceeded (2X hold time) J/X

244 Table II. Sample Storage and Holding Time Requirements

Matrix Type	Stored at 0 - 6°C, protected from light		Stored at ≤ -20°C, protected from light	
	Holding Time	Caveat	Holding Time	Caveat
Aqueous	28 days	Precursor degradation occurs after 7 days	90 days	None
Solid and Tissue	90 days	Should be prepared as soon as possible if NFDHA is a target analyte	90 days	Should be prepared as soon as possible if NFDHA is a target analyte
Biosolid	90 days	Not recommended due to the production of gases due to microbiological activity	90 days	None

Samples collected 10/09/2024
Extracted 10/28/2024; 10/30/2024; 10/31/2024; 11/01/2024 and 11/03/2024
Analyzed 10/30/2024; 10/31/2024; 11/01/2024; and 11/04/2024 ok

Extracted Internal STANDARDS (EIS)

- ✓ Added to all QC and field samples
- ✓ Recoveries are within the limits as defined in QAPP; QSM 6.0 specified using lab derived limits with lower limits no less than 20%
- ✓ Detected for analytes qualified using an EIS percent recovery >200% should be qualified J-. Nod-detects should not be qualified.
- ✓ If EIS recovery is <10%; associated detected and non-detects should be qualified X
- ✓ EIS retention times should be within 0.4 minutes of standard; use professional judgment to qualify

EDS rules as Module 6 does not define all situations:

- **For EIS %R >200% J- positive results, no action on non-detects (per module 6)**
- **For EIS %Rs >lab limit J- positive results, no action on non-detects**
- **For EIS %Rs between lab limit; no action (per module 6)**
- **For EIS %Rs lower lab limit but >10%; J+ positive results, UJ non-detects**
- **For EIS %Rs <10% X positive and non-detected (per module 6)**

Per Loring QAPP:

Extracted Internal Standards	Preliminary in-house acceptance criteria of 20-150% to be used until in-house limits are generated and approved for project use. Lower limit of in-house acceptance criteria cannot be <20%

All reported ok except

AFQZ93 13C2-4:2 FTS ↑ 4:2 FTS ND; no action

Non-Extracted Internal STANDARDS (NIS)

- ✓ Used to quantify EIS
- ✓ If low are counts are reported (<30%) detected and non-detected should be qualified X

ok

Laboratory Control Sample (LCS) and Low-Level Laboratory Control Sample (LLLCS)

- ✓ LCMS Lab Control Recovery (Form III), Form I, prep log, run log
- ✓ LCS prepared, extracted, analyzed, and reported once for every 20 field samples of a similar matrix, per SDG.
- ✓ Laboratory Control Samples were analyzed for all the target analytes that the samples are analyzed for.
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150% if lab limits have not been generated.
- ✓ If LCS or LLLCS %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If LCS or LLLCS %R is < lower limit; qualify detected J- and non-detected X

Use lab limits to evaluate per Loring QAPP

Batch 1728787 ok
Batch 9732953 ok
Batch 9734690 ok
Batch 3742338 ok

MS/MSD and Matrix Duplicate

- ✓ LCMS Matrix Spike Recovery (Form III)
- ✓ The Matrix Spike Samples were spiked and analyzed for all the target analytes that the samples are analyzed for (Same analytes as LCS).
- ✓ Per module 6: MS and MSD are applicable where the spike concentration is a least 3 times greater than the native analyte concentration **(3X rule)**
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150%.
- ✓ If MS or MSD %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If MS or MSD %R is < lower limit but >10%; qualify detected J- and non-detected UJ
- ✓ If MS or MSD %R is < 10%; qualify detected J- and non-detected X
- ✓ If MS/MSD RPD is out; qualify detected J and non-detected UJ
- ✓ For matrix duplicate; for concentrations of analytes that are equal to or greater than the LOQ, the RPD must be ≤30%; if out qualified detected J; no action on non-detects

Use lab limits to evaluate per Loring QAPP; RPD 30%

MS/MSD Sample:
none

Matrix Duplicate:
none

BLANKS

- ✓ LCMS Method Blank Summary (Form IV), method blank Form I, prep log, run log
- ✓ Frequency of Analysis: method blank has been analyzed for every 20 (or less) samples of similar matrix or concentration or each extraction batch.
- ✓ Continuing Calibration Blanks (Form I) and run log
- ✓ Frequency of Analysis: immediately following the highest standard analyzed and daily prior to sample analysis.
- ✓ Field/rinse blanks are non-detected for all analytes

Per Loring QAPP:

- Sample results with associated blank contamination will be qualified as follows:

Method Type	Blank Result	Sample Result	Action
PFAS, Organics, and Wet Chemistry	< LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ	≤ 2x blank: Qualify non-detect (U) at reported result. ≥ 2x-5x blank: J+
	≥ LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ and < blank result	Qualify non-detect (U) at reported result
		≥ LOQ and ≥ blank result	≤ 2x blank: Qualify non-detect (U) at reported result. 2x-5x blank: J+
Metals	≤ LOQ	≤ LOD and < 5x blank result	Qualify non-detect (U) at LOD.
		LOD < Sample Result ≤ LOQ and < 5x blank result	Qualify non-detect (U) at reported result.
		> LOQ	< 5x blank result; qualify estimated (J+)
	> LOQ	≤ LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result ≤ LOQ	Qualify non-detect (U) at reported result
		> LOQ but < 5x blank result	Qualify estimated (J+)
		≥ 5x blank result	No qualification

MASS CALIBRATION

- ✓ Verified to be ±0.2 amu of true value

Bile Salt Interference Check and Qualitative Identification Standard

- ✓ Provided and requirements met
- ✓ 1.0 minute between RTs of bile salt and PFOS
- ✓ Qualitative Identification Standard to confirm RTs

All acceptable

ICAL

- ✓ Initial Calibration Data Curve Evaluation (Form VI) and run log
- ✓ Lowest standard should be at or below LOQ
- ✓ %RSD <20% or relative standard error (RSE) <20%
- ✓ If %RSD > 20% but <30% J/UJ
- ✓ If %RSD >30% J/R

See below

INSTRUMENT PERFORMANCE CHECK PER DRAFT METHOD 1633

- ✓ Concentration equal to LOQ
- ✓ Analyzed after ICAL and daily before samples
- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

CCAL

- ✓ Continuing Calibration Data (Form VII) and run log
- ✓ Continuing calibration standard analyzed on each working day, prior to sample analyses.
- ✓ Calibration verification/continuing calibration standard been analyzed after every 10

samples and at the end of each analytical sequence

- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

EXECUTIVE NARRATIVE

Sample Delivery Group: FC19095
Laboratory: SGS Orlando
Site: Loring AFB
Sampling dates: 09/20/2024, 09/23/2024 – 09/24/2024
Number of Samples: 21
Test Method: USEPA Method 1633
Analysis: per- and polyfluoroalkyl substances (PFAS)

Quality Assurance Project Plan: Draft TO 1048 Quality Program Plan, September 2023 (QAPP).

Validation Guidelines: United States Department of Defense (DOD) Environmental Data Quality Workgroup (EDQW), General Validation Guidelines, November 2019; United States Department of Defense Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances analysis by QSM Table B-24, Environmental Data Quality Workgroup, October 18, 2022

Table 1 provides a summary of the major and minor data quality issues identified in this data set. All data are acceptable except those results which have been qualified with “R”, rejected. Data validation qualifiers along with associated descriptions are provided in Table 2. All data qualification related to this group of samples is detailed on the attached sheets.

All data users should note two facts. First, an “R” flag means that the associated value is unusable due to significant quality control (QC) problems, the data is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on any data tables even as a last resort. Second, no analyte concentration, even if it passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

DATA ASSESSMENT

1. NARRATIVE AND COMPLETENESS REVIEW

The case narrative was reviewed, and the data package was checked for completeness. No discrepancies were noted.

2. SAMPLE DELIVERY AND CONDITION

The sample arrived at the laboratory in acceptable condition. Proper custody was documented.

3. HOLDING TIME

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Proper sample handling and preservation also play a role in the chemical stability of analytes in the sample matrix. If samples are not collected and stored using proper containers and/or preservatives, data may not be valid.

No problems were found for this criterion.

4. CALIBRATION

Satisfactory instrument calibration is established to ensure that the instrument can produce acceptable quantitative data. An initial calibration demonstrates that the instrument can give acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance. Additionally, a continuing calibration is analyzed at the end of each 12-hour analytical sequence, denoted as a "closing" calibration verification and ascertains acceptable performance at the conclusion of the analytical sequence.

A) Initial Calibration

Percent relative standard deviation (%RSD) is calculated from the initial calibration and is used to indicate stability of a specific compound over the calibration range.

An RSD value outside the initial calibration limit indicates the potential for quantitation errors. For this reason, all positive and non-detected results are qualified as estimated. Severe performance failures (RSD >30%) requires rejection of all results. The following QC criteria have been applied for this project: The %RSD of initial calibration must be <20%.

No problems were found for this criterion.

B) Continuing Calibration

The Percent Recovery (%R) for all target analytes in the continuing calibration must be within 70-130%. All initial calibration verification (ICV) and continuing calibration verification (CCV) %Rs were with acceptance limits with the following exceptions.

No problems were found for this criterion.

C) Instrument Sensitivity Check

Prior to analysis an instrument sensitivity check (ISC) must be performed. The ISC must be at the limit of quantitation (LOQ). All analyte concentrations must be within ±30%. Note: the laboratory reports refer to the ISC as Low-Concentration Calibration Verification (LCV). The validator has determined that the low level CCV in the laboratory's report is equivalent to the method required ISC.

No problems were found for this criterion with the following exceptions.

The observed %R for PFDA was outside of acceptance criteria for the low level CCV associated with the samples listed in the table below. The results reported for the impacted analyte in the associated samples have been qualified "UJ" on this basis.

LORNG_EBGB_BW001_09202024	*LORNG_UNK-036_09202024*
LORNG_NP_BW001D_09242024	*LORNG_USMW003_09202024*
LORNG_OW01003_09242024	

5. BLANK CONTAMINATION

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. When an equipment blank, or lab blank has an analyte detection, then all associated field samples are qualified per validation guidance as appropriate.

A) Method blank contamination:

No problems were found for this criterion.

B) Instrument blank contamination:

No problems requiring qualification of sample results were found for this criterion.

C) Field/Equipment blank contamination:

No samples were submitted field/equipment blanks in association with the samples in this sample delivery group (SDG).

6. EXTRACTED INTERNAL STANDARDS

All samples are spiked with labeled standard compounds prior to sample preparation and analyses to evaluate overall laboratory performance and efficiency of the analytical technique. The reported project samples had observed standard recoveries within the established limits in all cases with the following exceptions.

No problems were found for this criterion.

7. NON-EXTRACTED INTERNAL STANDARDS

Non-extracted internal standard peak areas are used to quantify extracted internal standard recoveries. The reported project samples had non-extracted internal standard area counts within the established limits in all cases with the following exceptions.

No problems were found for this criterion.

8. COMPOUND IDENTIFICATION

The project target analyte compounds are identified on the LC/MS/MS by using the analytes retention time (RT). The retention time of each target analyte should be within ± 0.4 minutes of the predicted retention. Target analyte detections should display a signal-to-noise of ≥ 3:1, have proper peak integration, and display all ions at the correct retention times.

Target analyte detections should have passing ion ratios (50 - 150% of theoretical). Ion ratio failures could be caused by matrix interference and/or be the result of the presence of isomers in the sample at different ratios than the ratio of isomers present in the calibration standards.

Ion ratios were verified as part of the Level 2B data validation. No anomalies were identified with the following exception.

The transition mass ratio was outside the established ratio limits for PFOA during the analysis of sample LORNG_UNK-036_09202024 indicating some degree of uncertainty in the qualitative identification of the analyte. The impacted result has been qualified "J" on this basis.

Additional target compound identification criterion was not verified as part of the Level 2B data validation.

9. COMPOUND QUANTIFICATION

Target compound quantitation was not verified as part of the Level 2B data validation.

Manual integrations were not reviewed at the Stage 2B level.

10. MATRIX SPIKE/MATRIX SPIKE DUPLICATE RECOVERY / MATRIX DUPLICATE

Matrix spike/matrix spike duplicate (MS/MSD) data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD data may be used in conjunction with other quality control criteria for additional qualification of data.

Sample LORNG_BW05008_09242024 was submitted for MS/MSD evaluation in association with this SDG. Upon evaluation all accuracy and precision indicators were acceptable.

Sample LORNG_MMW0006_09232024 was submitted for MS/MSD evaluation in association with this SDG. Upon evaluation all accuracy and precision indicators were acceptable or did not result in a need to qualify sample results.

Sample LORNG_EBGB_BW001_09202024 was submitted for MS/MSD evaluation in association with this SDG. Upon evaluation all accuracy and precision indicators were acceptable.

Sample LORNG_OW01003_09242024 was submitted for MS/MSD evaluation in association with this SDG. Upon evaluation all accuracy and precision indicators were acceptable.

11. FIELD DUPLICATES

Field duplicates may be taken and analyzed as an indication of overall precision. These analyses measure both field and laboratory precision. A control limit of ≤ 30% for the Relative Percent Difference (RPD), shall be used when original and duplicate sample values are greater than or equal to the sample specific LOQ. For field duplicate analyses that do not meet the technical criteria, the action was applied to only the parent sample and its duplicate.

No samples were submitted as a field duplicate pair in association with this SDG.

12. LABORATORY CONTROL SAMPLES

The Laboratory Control Sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. The LCS results are used to verify that the laboratory can perform the analysis in a clean matrix.

No problems were found for this criterion.

13. DILUTIONS, RE-EXTRACTIONS & REANALYSIS

Samples may be re-analyzed for dilution, re-extraction and for other QC reasons. In such cases, the best result values are used.

No re-extraction and/or reanalyses were submitted for data review.

14. SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

Overall, the laboratory data generated met the project goals and quality control criteria, with the exceptions identified in this report and as summarized in Table 1.

15. OTHER

None.

Table 1
Review Elements Summary

	Were acceptance criteria met?		
	Yes	No	
Per-fluorinated Compounds		Major	Minor
Holding Time/Sample Handling	x		
Method Blanks	x		
Instrument Blanks	x		
Field Blanks	NA		
Calibration Percent Relative Standard Deviation and Percent Difference	x		
Instrument Sensitivity Check			x
Extracted Internal Standards	x		
Non-Extracted Internal Standards	x		
Compound Identification			x
Matrix Spike/Matrix Spike Duplicate/Matrix Duplicate	x		
Laboratory Control Sample	x		
Other Quality Control Data out of Specification	x		
Field Duplicate	NA		

Major= Major data quality issue identified resulting in rejection of data.
Minor= Minor data quality issue identified resulting in the qualification of data. Data qualification should be used to inform the data users of data limitations.
NA = Not applicable

Table 2
Data Validation Qualifiers

Data Qualifier	Definition
U	The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided.

LAB: SGS Orlando

Samples Collected: 09/20/2024, 09/23/2024 – 09/24/2024

21 aqueous

SAMPLE RECEIPT AND CASE NARRATIVE REVIEW

- ✓ Traffic reports, chain-of-custody forms or SDG narrative do not indicate any problems with sample receipt, condition of the samples, analytical problems or special circumstances affecting the quality of the data.
- ✓ AFFF samples are to be shipped in HDPE containers with an unlined cap
- ✓ Shipment temp 0-6°C: recommended to freeze tissue samples upon receipt
- ✓ If temp upon receipt is greater than 6°C J/UJ all

  Received on 09/26 at <6 C

HOLDING TIMES

- ✓ Recommended storage temp is ≤ -20°C
- ✓ Per method 1633: aqueous samples may be held in the lab for up to 90 days when stored at recommended temp and protected from light; when stored at 0-6 °C and protected from light samples can be held for up to 28 days (see method for additional details)
- ✓ Per method 1633: solid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C (see method for additional details)
- ✓ Per method 1633: biosolid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C; however, freezing is recommended (see method for additional details)
- ✓ Samples extracts should be stored at 0-4°C protected from light and analyzed within 90 days

- ✓ If hold time is exceeded qualify J/UJ
- ✓ If hold time is grossly exceeded (2X hold time) J/X

244 Table II. Sample Storage and Holding Time Requirements

Matrix Type	Stored at 0 - 6°C, protected from light		Stored at ≤ -20°C, protected from light	
	Holding Time	Caveat	Holding Time	Caveat
Aqueous	28 days	Precursor degradation occurs after 7 days	90 days	None
Solid and Tissue	90 days	Should be prepared as soon as possible if NFDHA is a target analyte	90 days	Should be prepared as soon as possible if NFDHA is a target analyte
Biosolid	90 days	Not recommended due to the production of gases due to microbiological activity	90 days	None

Samples collected 09/20/2024, 09/23/2024 – 09/24/2024
Extracted 10/11/2024; 10/21/2024
Analyzed 10/29/2024; 10/12/2024 ok

Extracted Internal STANDARDS (EIS)

- ✓ Added to all QC and field samples
- ✓ Recoveries are within the limits as defined in QAPP; QSM 6.0 specified using lab derived limits with lower limits no less than 20%
- ✓ Detected for analytes qualified using an EIS percent recovery >200% should be qualified J-. Nod-detects should not be qualified.
- ✓ If EIS recovery is <10%; associated detected and non-detects should be qualified X
- ✓ EIS retention times should be within 0.4 minutes of standard; use professional judgment to qualify

EDS rules as Module 6 does not define all situations:

- **For EIS %R >200% J- positive results, no action on non-detects (per module 6)**
- **For EIS %Rs >lab limit J- positive results, no action on non-detects**
- **For EIS %Rs between lab limit; no action (per module 6)**
- **For EIS %Rs lower lab limit but >10%; J+ positive results, UJ non-detects**
- **For EIS %Rs <10% X positive and non-detected (per module 6)**

Per Loring QAPP:

Extracted Internal Standards	Preliminary in-house acceptance criteria of 20-150% to be used until in-house limits are generated and approved for project use. Lower limit of in-house acceptance criteria cannot be <20%

All ok

Non-Extracted Internal STANDARDS (NIS)

- ✓ Used to quantify EIS
- ✓ If low are counts are reported (<30%) detected and non-detected should be qualified X

ok

Laboratory Control Sample (LCS) and Low-Level Laboratory Control Sample (LLLCS)

- ✓ LCMS Lab Control Recovery (Form III), Form I, prep log, run log
- ✓ LCS prepared, extracted, analyzed, and reported once for every 20 field samples of a similar matrix, per SDG.
- ✓ Laboratory Control Samples were analyzed for all the target analytes that the samples are analyzed for.
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150% if lab limits have not been generated.
- ✓ If LCS or LLLCS %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If LCS or LLLCS %R is < lower limit; qualify detected J- and non-detected X

Use lab limits to evaluate per Loring QAPP

OP5798-BS ok

MS/MSD and Matrix Duplicate

- ✓ LCMS Matrix Spike Recovery (Form III)
- ✓ The Matrix Spike Samples were spiked and analyzed for all the target analytes that the samples are analyzed for (Same analytes as LCS).
- ✓ Per module 6: MS and MSD are applicable where the spike concentration is a least 3 times greater than the native analyte concentration **(3X rule)**
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150%.
- ✓ If MS or MSD %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If MS or MSD %R is < lower limit but >10%; qualify detected J- and non-detected UJ
- ✓ If MS or MSD %R is < 10%; qualify detected J- and non-detected X
- ✓ If MS/MSD RPD is out; qualify detected J and non-detected UJ
- ✓ For matrix duplicate; for concentrations of analytes that are equal to or greater than the LOQ, the RPD must be ≤30%; if out qualified detected J; no action on non-detects

Use lab limits to evaluate per Loring QAPP; RPD 30%

BLANKS

- ✓ LCMS Method Blank Summary (Form IV), method blank Form I, prep log, run log
- ✓ Frequency of Analysis: method blank has been analyzed for every 20 (or less) samples of similar matrix or concentration or each extraction batch.
- ✓ Continuing Calibration Blanks (Form I) and run log
- ✓ Frequency of Analysis: immediately following the highest standard analyzed and daily prior to sample analysis.
- ✓ Field/rinse blanks are non-detected for all analytes

Per Loring QAPP:

- Sample results with associated blank contamination will be qualified as follows:

Method Type	Blank Result	Sample Result	Action
PFAS, Organics, and Wet Chemistry	< LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ	≤ 2x blank: Qualify non-detect (U) at reported result. ≥ 2x-5x blank: J+
	≥ LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ and < blank result	Qualify non-detect (U) at reported result
		≥ LOQ and ≥ blank result	≤ 2x blank: Qualify non-detect (U) at reported result. 2x-5x blank: J+
Metals	≤ LOQ	≤ LOD and < 5x blank result	Qualify non-detect (U) at LOD.
		LOD < Sample Result ≤ LOQ and < 5x blank result	Qualify non-detect (U) at reported result.
		> LOQ	< 5x blank result; qualify estimated (J+)
	> LOQ	≤ LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result ≤ LOQ	Qualify non-detect (U) at reported result
		> LOQ but < 5x blank result	Qualify estimated (J+)
		≥ 5x blank result	No qualification

ICBs/CCBs see below

MASS CALIBRATION

- ✓ Verified to be ±0.2 amu of true value

Bile Salt Interference Check and Qualitative Identification Standard

- ✓ Provided and requirements met
- ✓ 1.0 minute between RTs of bile salt and PFOS
- ✓ Qualitative Identification Standard to confirm RTs

All acceptable

ICAL

- ✓ Initial Calibration Data Curve Evaluation (Form VI) and run log
- ✓ Lowest standard should be at or below LOQ
- ✓ %RSD <20% or relative standard error (RSE) <20%
- ✓ If %RSD > 20% but <30% J/UJ
- ✓ If %RSD >30% J/R

See below

INSTRUMENT PERFORMANCE CHECK PER DRAFT METHOD 1633

- ✓ Concentration equal to LOQ
- ✓ Analyzed after ICAL and daily before samples
- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

CCAL

- ✓ Continuing Calibration Data (Form VII) and run log
- ✓ Continuing calibration standard analyzed on each working day, prior to sample analyses.
- ✓ Calibration verification/continuing calibration standard been analyzed after every 10 samples and at the end of each analytical sequence

- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

EXECUTIVE NARRATIVE

Sample Delivery Group: FC19279
Laboratory: SGS Orlando
Site: Loring AFB
Sampling dates: 09/25/2024 – 09/27/2024, and 09/30/2024
Number of Samples: 59
Test Method: USEPA Method 1633
Analysis: per- and polyfluoroalkyl substances (PFAS)

Quality Assurance Project Plan: Draft TO 1048 Quality Program Plan, September 2023 (QAPP).

Validation Guidelines: United States Department of Defense (DOD) Environmental Data Quality Workgroup (EDQW), General Validation Guidelines, November 2019; United States Department of Defense Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances analysis by QSM Table B-24, Environmental Data Quality Workgroup, October 18, 2022

Table 1 provides a summary of the major and minor data quality issues identified in this data set. All data are acceptable except those results which have been qualified with “R”, rejected. Data validation qualifiers along with associated descriptions are provided in Table 2. All data qualification related to this group of samples is detailed on the attached sheets.

All data users should note two facts. First, an “R” flag means that the associated value is unusable due to significant quality control (QC) problems, the data is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on any data tables even as a last resort. Second, no analyte concentration, even if it passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

DATA ASSESSMENT

1. NARRATIVE AND COMPLETENESS REVIEW

The case narrative was reviewed, and the data package was checked for completeness. No discrepancies were noted.

2. SAMPLE DELIVERY AND CONDITION

The samples arrived at the laboratory in acceptable condition. Proper custody was documented.

3. HOLDING TIME

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Proper sample handling and preservation also play a role in the chemical stability of analytes in the sample matrix. If samples are not collected and stored using proper containers and/or preservatives, data may not be valid.

No problems were found for this criterion related to the results reported by the validator.

4. CALIBRATION

Satisfactory instrument calibration is established to ensure that the instrument can produce acceptable quantitative data. An initial calibration demonstrates that the instrument can give acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance. Additionally, a continuing calibration is analyzed at the end of each 12-hour analytical sequence, denoted as a "closing" calibration verification and ascertains acceptable performance at the conclusion of the analytical sequence.

A) Initial Calibration

Percent relative standard deviation (%RSD) is calculated from the initial calibration and is used to indicate stability of a specific compound over the calibration range.

An RSD value outside the initial calibration limit indicates the potential for quantitation errors. For this reason, all positive and non-detected results are qualified as estimated. Severe performance failures (RSD >30%) requires rejection of all results. The following QC criteria have been applied for this project: The %RSD of initial calibration must be <20%.

No problems were found for this criterion.

B) Continuing Calibration

The Percent Recovery (%R) for all target analytes in the continuing calibration must be within 70-130%. All initial calibration verification (ICV) and continuing calibration verification (CCV) %Rs were with acceptance limits with the following exceptions.

No problems were found for this criterion.

C) Instrument Sensitivity Check

Prior to analysis an instrument sensitivity check (ISC) must be performed. The ISC must be at the limit of quantitation (LOQ). All analyte concentrations must be within ±30%. Note: the laboratory reports refer to the ISC as Low-Concentration Calibration Verification (LCV). The validator has determined that the low level CCV in the laboratory's report is equivalent to the method required ISC.

No problems were found for this criterion.

5. BLANK CONTAMINATION

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. When an equipment blank, or lab blank has an analyte detection, then all associated field samples are qualified per validation guidance as appropriate.

A) Method blank contamination:

No problems were found for this criterion.

B) Instrument blank contamination:

No problems requiring qualification of sample results were found for this criterion.

C) Field/Equipment blank contamination:

Sample LORNG_EB001_09272024 was submitted as an equipment blank in association with samples LORNG_BW02001_09272024 and LORNG_BW02002_09272024. No problems were found for this criterion.

Sample LORNG_EB002_09302024 was submitted as an equipment blank in association with the samples listed in the table below. No problems were found for this criterion.

LORNG_MMW0018B_09302024	*LORNG_JMW0992_09302024*
LORNG_MMW0018B_09302024FD	*LORNG_BW03001_09302024*

6. EXTRACTED INTERNAL STANDARDS

All samples are spiked with labeled standard compounds prior to sample preparation and analyses to evaluate overall laboratory performance and efficiency of the analytical technique. The reported project samples had observed standard recoveries within the established limits in all cases with the following exceptions.

No problems were found for this criterion with the following exceptions.

The observed isotope dilution standard recovery for 13C5-PFPeA was lower than the lowest acceptance limit but greater than 10% during the analysis of sample LORNG_BW16002_09262024. The results reported for the associated target analytes in the

impacted sample have been qualified "UJ" on this basis. Additionally, the observed isotope dilution standard recovery for 13C4-PFBA was extremely low (less than 10%). The result reported for the impacted analyte in the associated sample has been qualified rejected "R" on this basis.

The observed isotope dilution standard recoveries for the standards listed in the table below were lower than the lowest acceptance limit but greater than 10% during the analysis of sample LORNG_JPZ1780_09262024. The results reported for the associated target analytes in the impacted sample have been qualified "J" or "UJ" as appropriate on this basis.

13C6-PFDA	*13C7-PFUnDA*	*13C8-PFOS*	*13C8-FOSA*	*d3-MeFOSAA*	*d5-EtFOSAA*

Additionally, the observed isotope dilution standard recoveries for the analytes listed in the table below were extremely low (less than 10%). The non-detected results reported for the associated target analytes in the impacted sample have been qualified rejected "R" on this basis.

13C2-PFDoDA	*13C2-PFTeDA*	*d5-EtFOSA*	*d7-MeFOSE*	*d9-EtFOSE*

7. NON-EXTRACTED INTERNAL STANDARDS

Non-extracted internal standard peak areas are used to quantify extracted internal standard recoveries. The reported project samples had non-extracted internal standard area counts within the established limits in all cases with the following exceptions.

No problems were found for this criterion.

8. COMPOUND IDENTIFICATION

The project target analyte compounds are identified on the LC/MS/MS by using the analytes retention time (RT). The retention time of each target analyte should be within ± 0.4 minutes of the predicted retention. Target analyte detections should display a signal-to-noise of ≥ 3:1, have proper peak integration, and display all ions at the correct retention times.

Target analyte detections should have passing ion ratios (50 - 150% of theoretical). Ion ratio failures could be caused by matrix interference and/or be the result of the presence of isomers in the sample at different ratios than the ratio of isomers present in the calibration standards.

Ion ratios were verified as part of Level 2B and Level 4 data validation. No anomalies were identified with the following exceptions.

The transition mass ratio was outside the established ratio limits for PFNS during the analysis of sample LORNG_JMW-0406_09262024 indicating some degree of uncertainty in the qualitative identification of the analyte. The impacted result has been qualified "J" on this basis.

The transition mass ratios were outside the established ratio limits for PFBA during the analyses of the samples listed in the table below indicating some degree of uncertainty in the qualitative identification of the analyte. The impacted results have been qualified "J" on this basis.

LORNG_JMW6001_09262024FD	*LORNG_JMW-0602_09252024*
LORNG_SB/OW16001_09252024FD	*LORNG_SB/OW16001_09252024*

The transition mass ratios were outside the established ratio limits for PFBA and PFPeA during the analysis of sample LORNG_JMW0445_09252024 indicating some degree of uncertainty in the qualitative identification of the analytes. The impacted results have been qualified "J" on this basis.

Additional target compound identification criterion was verified as part of the Level 4 data validation. No anomalies were identified.

9. COMPOUND QUANTIFICATION

Target compound quantitation was verified as part of the Level 4 data validation. No anomalies were identified.

Manual integrations were reviewed at the Stage 4 level. No anomalies were identified.

10. MATRIX SPIKE/MATRIX SPIKE DUPLICATE RECOVERY / MATRIX DUPLICATE

Matrix spike/matrix spike duplicate (MS/MSD) data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD data may be used in conjunction with other quality control criteria for additional qualification of data.

Sample LORNG_OW12002_09262024 was submitted for MS evaluation in association with this sample delivery group (SDG). Upon evaluation all accuracy indicators were acceptable.

Sample LORNG_MMW0326_09252024 was submitted for MS/MSD evaluation in association with this SDG. Upon evaluation all accuracy and precision indicators were acceptable.

Sample LORNG_JPZ1780_09262024 was submitted for MS/MSD evaluation in association with this SDG. Upon evaluation all accuracy and precision indicators were acceptable.

Sample LORNG_OW21005_09302024 was submitted for laboratory duplicate evaluation in association with this SDG. Adequate laboratory precision was demonstrated with the exception of PFOS. The result reported for the impacted analyte in the parent sample has been qualified "J" on this basis.

11. FIELD DUPLICATES

Field duplicates may be taken and analyzed as an indication of overall precision. These analyses measure both field and laboratory precision. A control limit of ≤ 30% for the Relative Percent Difference (RPD), shall be used when original and duplicate sample values are greater than or equal to the sample specific LOQ. For field duplicate analyses that do not meet the technical criteria, the action was applied to only the parent sample and its duplicate.

Samples LORNG_BW16001_09252024 and LORNG_BW16001_09252024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated.

Samples LORNG_JBW7734_09262024 and LORNG_JBW7734_09262024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated.

Samples LORNG_JMW-0602_09252024 and LORNG_JMW-0602_09252024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated.

Samples LORNG_JMW6001_09262024 and LORNG_JMW6001_09262024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated with the exceptions of PFHxA, PFHpA, and PFOA. The results reported for the impacted analytes in the field duplicate samples have been qualified "J" on this basis.

Samples LORNG_JPZ0348_09262024 and LORNG_JPZ0348_09262024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated.

Samples LORNG_MMW0018B_09302024 and LORNG_MMW0018B_09302024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated.

Samples LORNG_OW09001_09262024 and LORNG_OW09001_09262024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated.

Samples LORNG_OW21005_09302024 and LORNG_OW21005_09302024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated.

Samples LORNG_SB/OW16001_09252024 and LORNG_SB/OW16001_09252024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated.

Samples LORNG_BW10006_09262024 and LORNG_BW10006_09262024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated.

12. LABORATORY CONTROL SAMPLES

The Laboratory Control Sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. The LCS results are used to verify that the laboratory can perform the analysis in a clean matrix.

No problems were found for this criterion.

13. DILUTIONS, RE-EXTRACTIONS & REANALYSIS

Samples may be re-analyzed for dilution, re-extraction and for other QC reasons. In such cases, the best result values are used.

Samples were re-extracted as necessary to confirm quality control results.

14. SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

Overall, the laboratory data generated met the project goals and quality control criteria, with the exceptions identified in this report and as summarized in Table 1.

15. OTHER

Please note sample LORNG_BW10007_09262024 was submitted for split sample analyses. The sample was also analyzed by Bureau Veritas. The split sample results are located in SDG C4V7274. Adequate precision was demonstrated.

Table 1
Review Elements Summary

	Were acceptance criteria met?		
	Yes	No	
Per-fluorinated Compounds		Major	Minor
Holding Time/Sample Handling	x		
Method Blanks	x		
Instrument Blanks	x		
Field Blanks	x		
Calibration Percent Relative Standard Deviation and Percent Difference	x		
Instrument Sensitivity Check	x		
Extracted Internal Standards		x	x
Non-Extracted Internal Standards	x		
Compound Identification			x
Matrix Spike/Matrix Spike Duplicate/Matrix Duplicate			x
Laboratory Control Sample	x		
Other Quality Control Data out of Specification	x		
Field Duplicate			x

Major= Major data quality issue identified resulting in rejection of data.
Minor= Minor data quality issue identified resulting in the qualification of data. Data qualification should be used to inform the data users of data limitations.
NA = Not applicable

Table 2
Data Validation Qualifiers

Data Qualifier	Definition
U	The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided.

Table 3
PFAS Definitions Table

NO	CAS #	Target Name	Target Abbreviation
1	763051-92-9	11-Chloroeicosafluoro-3-oxaundecane-1-sulfonic acid	11Cl-PF3OUdS
2	914637-49-3	2H,2H,3H,3H-Perfluorooctanoic acid	5:3FTCA

59 aqueous

SAMPLE RECEIPT AND CASE NARRATIVE REVIEW

- ✓ Traffic reports, chain-of-custody forms or SDG narrative do not indicate any problems with sample receipt, condition of the samples, analytical problems or special circumstances affecting the quality of the data.
- ✓ AFFF samples are to be shipped in HDPE containers with an unlined cap
- ✓ Shipment temp 0-6°C: recommended to freeze tissue samples upon receipt
- ✓ If temp upon receipt is greater than 6°C J/UJ all

  Received on 10/2 at 4.2 C

HOLDING TIMES

- ✓ Recommended storage temp is ≤ -20°C
- ✓ Per method 1633: aqueous samples may be held in the lab for up to 90 days when stored at recommended temp and protected from light; when stored at 0-6 °C and protected from light samples can be held for up to 28 days (see method for additional details)
- ✓ Per method 1633: solid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C (see method for additional details)
- ✓ Per method 1633: biosolid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C; however, freezing is recommended (see method for additional details)
- ✓ Samples extracts should be stored at 0-4°C protected from light and analyzed within 90 days

- ✓ If hold time is exceeded qualify J/UJ
- ✓ If hold time is grossly exceeded (2X hold time) J/X

244 Table II. Sample Storage and Holding Time Requirements

Matrix Type	Stored at 0 - 6°C, protected from light		Stored at ≤ -20°C, protected from light	
	Holding Time	Caveat	Holding Time	Caveat
Aqueous	28 days	Precursor degradation occurs after 7 days	90 days	None
Solid and Tissue	90 days	Should be prepared as soon as possible if NFDHA is a target analyte	90 days	Should be prepared as soon as possible if NFDHA is a target analyte
Biosolid	90 days	Not recommended due to the production of gases due to microbiological activity	90 days	None

Samples collected 09/25/2024 – 09/27/2024, and 09/30/2024
Extracted 10/18/2024; 10/19/2024; 10/21/2024; 11/06/2024 ok
REs on 11/13/2024 and 11/15/2024 past hold time; not reported
Analyzed 11/07/2024; 11/08/2024; 11/11/2024; 11/15/2024 ok

Extracted Internal STANDARDS (EIS)

- ✓ Added to all QC and field samples
- ✓ Recoveries are within the limits as defined in QAPP; QSM 6.0 specified using lab derived limits with lower limits no less than 20%
- ✓ Detected for analytes qualified using an EIS percent recovery >200% should be qualified J-. Nod-detects should not be qualified.
- ✓ If EIS recovery is <10%; associated detected and non-detects should be qualified X
- ✓ EIS retention times should be within 0.4 minutes of standard; use professional judgment to qualify

EDS rules as Module 6 does not define all situations:

- **For EIS %R >200% J- positive results, no action on non-detects (per module 6)**
- **For EIS %Rs >lab limit J- positive results, no action on non-detects**
- **For EIS %Rs between lab limit; no action (per module 6)**
- **For EIS %Rs lower lab limit but >10%; J+ positive results, UJ non-detects**
- **For EIS %Rs <10% X positive and non-detected (per module 6)**

Per Loring QAPP:

Extracted Internal Standards	Preliminary in-house acceptance criteria of 20-150% to be used until in-house limits are generated and approved for project use. Lower limit of in-house acceptance criteria cannot be <20%

All ok except

Non-Extracted Internal STANDARDS (NIS)

- ✓ Used to quantify EIS
- ✓ If low are counts are reported (<30%) detected and non-detected should be qualified X

ok

Laboratory Control Sample (LCS) and Low-Level Laboratory Control Sample (LLLCS)

- ✓ LCMS Lab Control Recovery (Form III), Form I, prep log, run log
- ✓ LCS prepared, extracted, analyzed, and reported once for every 20 field samples of a similar matrix, per SDG.
- ✓ Laboratory Control Samples were analyzed for all the target analytes that the samples are analyzed for.
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150% if lab limits have not been generated.
- ✓ If LCS or LLLCS %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If LCS or LLLCS %R is < lower limit; qualify detected J- and non-detected X

Use lab limits to evaluate per Loring QAPP

MS/MSD and Matrix Duplicate

- ✓ LCMS Matrix Spike Recovery (Form III)
- ✓ The Matrix Spike Samples were spiked and analyzed for all the target analytes that the samples are analyzed for (Same analytes as LCS).
- ✓ Per module 6: MS and MSD are applicable where the spike concentration is a least 3 times greater than the native analyte concentration **(3X rule)**
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150%.
- ✓ If MS or MSD %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If MS or MSD %R is < lower limit but >10%; qualify detected J- and non-detected UJ
- ✓ If MS or MSD %R is < 10%; qualify detected J- and non-detected X
- ✓ If MS/MSD RPD is out; qualify detected J and non-detected UJ
- ✓ For matrix duplicate; for concentrations of analytes that are equal to or greater than the LOQ, the RPD must be ≤30%; if out qualified detected J; no action on non-detects

Use lab limits to evaluate per Loring QAPP; RPD 30%

MS/MSD Sample:

FC19279-39	**LORNG_OW12002_09262024**	**MS only**	**ok**

BLANKS

- ✓ LCMS Method Blank Summary (Form IV), method blank Form I, prep log, run log
- ✓ Frequency of Analysis: method blank has been analyzed for every 20 (or less) samples of similar matrix or concentration or each extraction batch.
- ✓ Continuing Calibration Blanks (Form I) and run log
- ✓ Frequency of Analysis: immediately following the highest standard analyzed and daily prior to sample analysis.
- ✓ Field/rinse blanks are non-detected for all analytes

Per Loring QAPP:

- Sample results with associated blank contamination will be qualified as follows:

Method Type	Blank Result	Sample Result	Action
PFAS, Organics, and Wet Chemistry	< LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ	≤ 2x blank: Qualify non-detect (U) at reported result. ≥ 2x-5x blank: J+
	≥ LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ and < blank result	Qualify non-detect (U) at reported result
		≥ LOQ and ≥ blank result	≤ 2x blank: Qualify non-detect (U) at reported result. 2x-5x blank: J+
Metals	≤ LOQ	≤ LOD and < 5x blank result	Qualify non-detect (U) at LOD.
		LOD < Sample Result ≤ LOQ and < 5x blank result	Qualify non-detect (U) at reported result.
		> LOQ	< 5x blank result; qualify estimated (J+)
	> LOQ	≤ LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result ≤ LOQ	Qualify non-detect (U) at reported result
		> LOQ but < 5x blank result	Qualify estimated (J+)
		≥ 5x blank result	No qualification

ICBs/CCBs see below

MASS CALIBRATION

- ✓ Verified to be ±0.2 amu of true value

Bile Salt Interference Check and Qualitative Identification Standard

- ✓ Provided and requirements met
- ✓ 1.0 minute between RTs of bile salt and PFOS
- ✓ Qualitative Identification Standard to confirm RTs

All acceptable

ICAL

- ✓ Initial Calibration Data Curve Evaluation (Form VI) and run log
- ✓ Lowest standard should be at or below LOQ
- ✓ %RSD <20% or relative standard error (RSE) <20%
- ✓ If %RSD > 20% but <30% J/UJ
- ✓ If %RSD >30% J/R

See below

INSTRUMENT PERFORMANCE CHECK PER DRAFT METHOD 1633

- ✓ Concentration equal to LOQ
- ✓ Analyzed after ICAL and daily before samples
- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

CCAL

- ✓ Continuing Calibration Data (Form VII) and run log
- ✓ Continuing calibration standard analyzed on each working day, prior to sample analyses.
- ✓ Calibration verification/continuing calibration standard been analyzed after every 10 samples and at the end of each analytical sequence
- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

ENVIRONMENTAL DATA SERVICES, LTD.

EXECUTIVE NARRATIVE

Sample Delivery Group: FC19304
Laboratory: SGS Orlando
Site: Loring AFB
Sampling dates: 09/25/2024
Number of Samples: 3
Test Method: USEPA Method 1633
Analysis: per- and polyfluoroalkyl substances (PFAS)

Quality Assurance Project Plan: Draft TO 1048 Quality Program Plan, September 2023 (QAPP).

Validation Guidelines: United States Department of Defense (DOD) Environmental Data Quality Workgroup (EDQW), General Validation Guidelines, November 2019; United States Department of Defense Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances analysis by QSM Table B-24, Environmental Data Quality Workgroup, October 18, 2022

Client Sample Identification	Laboratory Sample Identification	Matrix	Validation Stage
LORNG_C1_ST_09252024BF	FC19304-1	groundwater	S2BVM
LORNG_C2_ST_09252024BF	FC19304-2	groundwater	S2BVM
LORNG_C3_ST_09252024BF	FC19304-3	groundwater	S2BVM

Table 1 provides a summary of the major and minor data quality issues identified in this data set. All data are acceptable except those results which have been qualified with “R”, rejected. Data validation qualifiers along with associated descriptions are provided in Table 2. All data qualification related to this group of samples is detailed on the attached sheets.

All data users should note two facts. First, an “R” flag means that the associated value is unusable due to significant quality control (QC) problems, the data is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on any data tables even as a last resort. Second, no analyte concentration, even if it passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

DATA ASSESSMENT

1. NARRATIVE AND COMPLETENESS REVIEW

The case narrative was reviewed, and the data package was checked for completeness. No discrepancies were noted.

2. SAMPLE DELIVERY AND CONDITION

The samples arrived at the laboratory in acceptable condition. Proper custody was documented.

3. HOLDING TIME

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Proper sample handling and preservation also play a role in the chemical stability of analytes in the sample matrix. If samples are not collected and stored using proper containers and/or preservatives, data may not be valid.

No problems were found for this criterion related to the results reported by the validator.

4. CALIBRATION

Satisfactory instrument calibration is established to ensure that the instrument can produce acceptable quantitative data. An initial calibration demonstrates that the instrument can give acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance. Additionally, a continuing calibration is analyzed at the end of each 12-hour analytical sequence, denoted as a "closing" calibration verification and ascertains acceptable performance at the conclusion of the analytical sequence.

A) Initial Calibration

Percent relative standard deviation (%RSD) is calculated from the initial calibration and is used to indicate stability of a specific compound over the calibration range.

An RSD value outside the initial calibration limit indicates the potential for quantitation errors. For this reason, all positive and non-detected results are qualified as estimated. Severe performance failures (RSD >30%) requires rejection of all results. The following QC criteria have been applied for this project: The %RSD of initial calibration must be <20%.

No problems were found for this criterion.

B) Continuing Calibration

The Percent Recovery (%R) for all target analytes in the continuing calibration must be within 70-130%. All initial calibration verification (ICV) and continuing calibration verification (CCV) %Rs were with acceptance limits with the following exceptions.

No problems were found for this criterion.

C) Instrument Sensitivity Check

Prior to analysis an instrument sensitivity check (ISC) must be performed. The ISC must be at the limit of quantitation (LOQ). All analyte concentrations must be within ±30%. Note: the laboratory reports refer to the ISC as Low-Concentration Calibration Verification (LCV). The validator has determined that the low level CCV in the laboratory's report is equivalent to the method required ISC.

No problems were found for this criterion with the following exceptions.

The %R for NEtFOSA was outside of acceptance criteria for the low level CCV associated with samples LORNG_C3_ST_09252024BF and LORNG_C2_ST_09252024BF. The results reported for the impacted analyte in the associated samples have been qualified "UJ" on this basis.

The observed %Rs for PFDS, PFTrDA, and PFMPA were outside of acceptance criteria for the low level CCV associated with sample LORNG_C1_ST_09252024BF. The results reported for the impacted analytes in the associated sample have been qualified "UJ" on this basis.

5. BLANK CONTAMINATION

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. When an equipment blank, or lab blank has an analyte detection, then all associated field samples are qualified per validation guidance as appropriate.

A) Method blank contamination:

No problems were found for this criterion.

B) Instrument blank contamination:

No problems requiring qualification of sample results were found for this criterion.

C) Field/Equipment blank contamination:

No sample was submitted as a field/equipment blank in association with samples in this sample delivery group (SDG).

6. EXTRACTED INTERNAL STANDARDS

All samples are spiked with labeled standard compounds prior to sample preparation and analyses to evaluate overall laboratory performance and efficiency of the analytical technique. The reported project samples had observed standard recoveries within the established limits in all cases with the following exceptions.

No problems requiring qualification of sample results were found for this criterion.

7. NON-EXTRACTED INTERNAL STANDARDS

Non-extracted internal standard peak areas are used to quantify extracted internal standard recoveries. The reported project samples had non-extracted internal standard area counts within the established limits in all cases with the following exceptions.

No problems were found for this criterion.

8. COMPOUND IDENTIFICATION

The project target analyte compounds are identified on the LC/MS/MS by using the analytes retention time (RT). The retention time of each target analyte should be within ± 0.4 minutes of the predicted retention. Target analyte detections should display a signal-to-noise of ≥ 3:1, have proper peak integration, and display all ions at the correct retention times.

Target analyte detections should have passing ion ratios (50 - 150% of theoretical). Ion ratio failures could be caused by matrix interference and/or be the result of the presence of isomers in the sample at different ratios than the ratio of isomers present in the calibration standards.

Ion ratios were verified as part of the Level 2B data validation. No anomalies were identified.

Additional target compound identification criterion was not verified as part of the Level 2B data validation.

9. COMPOUND QUANTIFICATION

Target compound quantitation was not verified as part of the Level 2B data validation.

Manual integrations were not reviewed at the Stage 2B level.

10. MATRIX SPIKE/MATRIX SPIKE DUPLICATE RECOVERY / MATRIX DUPLICATE

Matrix spike/matrix spike duplicate (MS/MSD) data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD data may be used in conjunction with other quality control criteria for additional qualification of data.

No sample was submitted for MS/MSD evaluation in association with this SDG.

11. FIELD DUPLICATES

Field duplicates may be taken and analyzed as an indication of overall precision. These analyses measure both field and laboratory precision. A control limit of ≤ 30% for the Relative Percent Difference (RPD), shall be used when original and duplicate sample values are greater than or equal to the sample specific LOQ. For field duplicate analyses that do not meet the technical criteria, the action was applied to only the parent sample and its duplicate.

No samples were submitted as a field duplicate pair in association with this SDG.

12. LABORATORY CONTROL SAMPLES

The Laboratory Control Sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. The LCS results are used to verify that the laboratory can perform the analysis in a clean matrix.

No problems were found for this criterion.

13. DILUTIONS, RE-EXTRACTIONS & REANALYSIS

Samples may be re-analyzed for dilution, re-extraction and for other QC reasons. In such cases, the best result values are used.

Samples were re-analyzed as necessary due to quality control issues.

14. SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

Overall, the laboratory data generated met the project goals and quality control criteria, with the exceptions identified in this report and as summarized in Table 1.

15. OTHER

None.

Table 1
Review Elements Summary

	Were acceptance criteria met?		
	Yes	No	
Per-fluorinated Compounds		Major	Minor
Holding Time/Sample Handling	x		
Method Blanks	x		
Instrument Blanks	x		
Field Blanks	NA		
Calibration Percent Relative Standard Deviation and Percent Difference			x
Instrument Sensitivity Check	x		
Extracted Internal Standards	x		
Non-Extracted Internal Standards	x		
Compound Identification	x		
Matrix Spike/Matrix Spike Duplicate/Matrix Duplicate	NA		
Laboratory Control Sample	x		
Other Quality Control Data out of Specification	x		
Field Duplicate	NA		

Major= Major data quality issue identified resulting in rejection of data.
Minor= Minor data quality issue identified resulting in the qualification of data. Data qualification should be used to inform the data users of data limitations.
NA = Not applicable

Table 2
Data Validation Qualifiers

Data Qualifier	Definition
U	**The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.**
J	**The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.**
J+	**The result is an estimated quantity, but the result may be biased high.**
J-	**The result is an estimated quantity, but the result may be biased low.**
UJ	**The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.**
R	**The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided.**

Table 3
PFAS Definitions Table

NO	CAS #	Target Name	Target Abbreviation
1	763051-92-9	11-Chloroeicosafluoro-3-oxaundecane-1-sulfonic acid	11Cl-PF3OUdS

SAMPLE RECEIPT AND CASE NARRATIVE REVIEW

- ✓ Traffic reports, chain-of-custody forms or SDG narrative do not indicate any problems with sample receipt, condition of the samples, analytical problems or special circumstances affecting the quality of the data.
- ✓ AFFF samples are to be shipped in HDPE containers with an unlined cap
- ✓ Shipment temp 0-6°C: recommended to freeze tissue samples upon receipt
- ✓ If temp upon receipt is greater than 6°C J/UJ all

Received on 10/3 at 2.2 C

HOLDING TIMES

- ✓ Recommended storage temp is ≤ -20°C
- ✓ Per method 1633: aqueous samples may be held in the lab for up to 90 days when stored at recommended temp and protected from light; when stored at 0-6 °C and protected from light samples can be held for up to 28 days (see method for additional details)
- ✓ Per method 1633: solid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C (see method for additional details)
- ✓ Per method 1633: biosolid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C; however, freezing is recommended (see method for additional details)
- ✓ Samples extracts should be stored at 0-4°C protected from light and analyzed within 90 days

- ✓ If hold time is exceeded qualify J/UJ
- ✓ If hold time is grossly exceeded (2X hold time) J/X

244 Table II. Sample Storage and Holding Time Requirements

Matrix Type	Stored at 0 - 6°C, protected from light		Stored at ≤ -20°C, protected from light	
	Holding Time	Caveat	Holding Time	Caveat
Aqueous	28 days	Precursor degradation occurs after 7 days	90 days	None
Solid and Tissue	90 days	Should be prepared as soon as possible if NFDHA is a target analyte	90 days	Should be prepared as soon as possible if NFDHA is a target analyte
Biosolid	90 days	Not recommended due to the production of gases due to microbiological activity	90 days	None

Samples collected 09/25/2024
Extracted 10/22/2024
Analyzed 10/25/2024; 10/27/2024; 10/28/2024 ok

Extracted Internal STANDARDS (EIS)

- ✓ Added to all QC and field samples
- ✓ Recoveries are within the limits as defined in QAPP; QSM 6.0 specified using lab derived limits with lower limits no less than 20%
- ✓ Detected for analytes qualified using an EIS percent recovery >200% should be qualified J-. Nod-detects should not be qualified.
- ✓ If EIS recovery is <10%; associated detected and non-detects should be qualified X
- ✓ EIS retention times should be within 0.4 minutes of standard; use professional judgment to qualify

EDS rules as Module 6 does not define all situations:

- **For EIS %R >200% J- positive results, no action on non-detects (per module 6)**
- **For EIS %Rs >lab limit J- positive results, no action on non-detects**
- **For EIS %Rs between lab limit; no action (per module 6)**
- **For EIS %Rs lower lab limit but >10%; J+ positive results, UJ non-detects**
- **For EIS %Rs <10% X positive and non-detected (per module 6)**

Per Loring QAPP:

Extracted Internal Standards	Preliminary in-house acceptance criteria of 20-150% to be used until in-house limits are generated and approved for project use. Lower limit of in-house acceptance criteria cannot be <20%

All ok except

LORNG_C1_ST_09252024BF	FC19304-1	
13C2-4:2FTS ↑ for run 2	reported from run1; no action	
13C3-HFPO-DA ↑ for run 1	HFPO-DA	reported from run 2; no action
	ADONA	reported from run 1 ND; no action
	9Cl-PF3ONS	reported from run 1 ND; no action

LORNG_C3_ST_09252024BF	FC19304-3	
13C2-4:2FTS ↑ for run 1	reported from run 2; no action	
13C3-HFPO-DA ↑ for run 1	HFPO-DA	reported from run 1 ND; no action
	ADONA	reported from run 1 ND; no action
	9Cl-PF3ONS	reported from run 1 ND; no action
	11Cl-PF3OUdS	reported from run 1 ND; no action

Non-Extracted Internal STANDARDS (NIS)

- ✓ Used to quantify EIS
- ✓ If low are counts are reported (<30%) detected and non-detected should be qualified X

ok

Laboratory Control Sample (LCS) and Low-Level Laboratory Control Sample (LLLCS)

- ✓ LCMS Lab Control Recovery (Form III), Form I, prep log, run log
- ✓ LCS prepared, extracted, analyzed, and reported once for every 20 field samples of a similar matrix, per SDG.
- ✓ Laboratory Control Samples were analyzed for all the target analytes that the samples are analyzed for.
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150% if lab limits have not been generated.
- ✓ If LCS or LLLCS %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If LCS or LLLCS %R is < lower limit; qualify detected J- and non-detected X

Use lab limits to evaluate per Loring QAPP

OP5980-LLBS	ok
OP5980-BS	ok

MS/MSD and Matrix Duplicate

- ✓ LCMS Matrix Spike Recovery (Form III)
- ✓ The Matrix Spike Samples were spiked and analyzed for all the target analytes that the samples are analyzed for (Same analytes as LCS).
- ✓ Per module 6: MS and MSD are applicable where the spike concentration is a least 3 times greater than the native analyte concentration **(3X rule)**
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150%.
- ✓ If MS or MSD %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If MS or MSD %R is < lower limit but >10%; qualify detected J- and non-detected UJ
- ✓ If MS or MSD %R is < 10%; qualify detected J- and non-detected X
- ✓ If MS/MSD RPD is out; qualify detected J and non-detected UJ
- ✓ For matrix duplicate; for concentrations of analytes that are equal to or greater than the LOQ, the RPD must be ≤30%; if out qualified detected J; no action on non-detects

Use lab limits to evaluate per Loring QAPP; RPD 30%

none

BLANKS

- ✓ LCMS Method Blank Summary (Form IV), method blank Form I, prep log, run log
- ✓ Frequency of Analysis: method blank has been analyzed for every 20 (or less) samples of similar matrix or concentration or each extraction batch.
- ✓ Continuing Calibration Blanks (Form I) and run log
- ✓ Frequency of Analysis: immediately following the highest standard analyzed and daily prior to sample analysis.
- ✓ Field/rinse blanks are non-detected for all analytes

Per Loring QAPP:

- Sample results with associated blank contamination will be qualified as follows:

Method Type	Blank Result	Sample Result	Action
PFAS, Organics, and Wet Chemistry	< LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ	≤ 2x blank: Qualify non-detect (U) at reported result. ≥ 2x-5x blank: J+
	≥ LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ and < blank result	Qualify non-detect (U) at reported result
		≥ LOQ and ≥ blank result	≤ 2x blank: Qualify non-detect (U) at reported result. 2x-5x blank: J+
Metals	≤ LOQ	≤ LOD and < 5x blank result	Qualify non-detect (U) at LOD.
		LOD < Sample Result ≤ LOQ and < 5x blank result	Qualify non-detect (U) at reported result.
		> LOQ	< 5x blank result; qualify estimated (J+)
	> LOQ	≤ LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result ≤ LOQ	Qualify non-detect (U) at reported result
		> LOQ but < 5x blank result	Qualify estimated (J+)
		≥ 5x blank result	No qualification

FB/EBs
none

OP5980-MB all ND

ICBs/CCBs see below

MASS CALIBRATION

- ✓ Verified to be ±0.2 amu of true value

Bile Salt Interference Check and Qualitative Identification Standard

- ✓ Provided and requirements met
- ✓ 1.0 minute between RTs of bile salt and PFOS
- ✓ Qualitative Identification Standard to confirm RTs

All acceptable

ICAL

- ✓ Initial Calibration Data Curve Evaluation (Form VI) and run log
- ✓ Lowest standard should be at or below LOQ
- ✓ %RSD <20% or relative standard error (RSE) <20%
- ✓ If %RSD > 20% but <30% J/UJ
- ✓ If %RSD >30% J/R

See below

INSTRUMENT PERFORMANCE CHECK PER DRAFT METHOD 1633

- ✓ Concentration equal to LOQ
- ✓ Analyzed after ICAL and daily before samples
- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

CCAL

- ✓ Continuing Calibration Data (Form VII) and run log
- ✓ Continuing calibration standard analyzed on each working day, prior to sample analyses.
- ✓ Calibration verification/continuing calibration standard been analyzed after every 10 samples and at the end of each analytical sequence
- ✓ If not analyzed all associated data should be qualified X

- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

Table 1 provides a summary of the major and minor data quality issues identified in this data set. All data are acceptable except those results which have been qualified with “R”, rejected. Data validation qualifiers

along with associated descriptions are provided in Table 2. All data qualification related to this group of samples is detailed on the attached sheets.

All data users should note two facts. First, an “R” flag means that the associated value is unusable due to significant quality control (QC) problems, the data is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on any data tables even as a last resort. Second, no analyte concentration, even if it passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

DATA ASSESSMENT

1. NARRATIVE AND COMPLETENESS REVIEW

The case narrative was reviewed, and the data package was checked for completeness. No discrepancies were noted.

2. SAMPLE DELIVERY AND CONDITION

The sample arrived at the laboratory in acceptable condition. Proper custody was documented.

3. HOLDING TIME

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Proper sample handling and preservation also play a role in the chemical stability of analytes in the sample matrix. If samples are not collected and stored using proper containers and/or preservatives, data may not be valid.

No problems were found for this criterion related to the results reported by the validator.

4. CALIBRATION

Satisfactory instrument calibration is established to ensure that the instrument can produce acceptable quantitative data. An initial calibration demonstrates that the instrument can give acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance. Additionally, a continuing calibration is analyzed at the end of each 12-hour analytical sequence, denoted as a "closing" calibration verification and ascertains acceptable performance at the conclusion of the analytical sequence.

A) Initial Calibration

Percent relative standard deviation (%RSD) is calculated from the initial calibration and is used to indicate stability of a specific compound over the calibration range.

An RSD value outside the initial calibration limit indicates the potential for quantitation errors. For this reason, all positive and non-detected results are qualified as estimated. Severe performance failures (RSD >30%) requires rejection of all results. The following QC criteria have been applied for this project: The %RSD of initial calibration must be <20%.

No problems were found for this criterion.

B) Continuing Calibration

The Percent Recovery (%R) for all target analytes in the continuing calibration must be within 70-130%. All initial calibration verification (ICV) and continuing calibration verification (CCV) %Rs were with acceptance limits with the following exceptions.

No problems were found for this criterion.

C) Instrument Sensitivity Check

Prior to analysis an instrument sensitivity check (ISC) must be performed. The ISC must be at the limit of quantitation (LOQ). All analyte concentrations must be within ±30%. Note: the laboratory reports refer to the ISC as Low-Concentration Calibration Verification (LCV). The validator has determined that the low level CCV in the laboratory's report is equivalent to the method required ISC.

No problems were found for this criterion with the following exceptions.

The observed (%R) for NEtFOSA was outside of acceptance criteria for the low level CCV associated with sample LORNG_JPZ1382_10012024. The result reported for the impacted analyte in the associated sample has been qualified "UJ" on this basis.

The observed %Rs for PFDS, PFTrDA, and PFMPA were outside of acceptance criteria for the low level CCV associated with the samples listed in the table below. The results reported for the impacted analytes in the associated sample have been qualified "UJ" on this basis.

LORNG_OW20001_10022024	*LORNG_JMW3501_10012024*
LORNG_LF3MW3_10012024FD	*LORNG_JBW7614_10012024*

5. BLANK CONTAMINATION

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. When an equipment blank, or lab blank has an analyte detection, then all associated field samples are qualified per validation guidance as appropriate.

A) Method blank contamination:

No problems were found for this criterion.

B) Instrument blank contamination:

No problems requiring qualification of sample results were found for this criterion.

C) Field/Equipment blank contamination:

Sample LORNG_EB003_10012024 was submitted as an equipment blank in association with samples LORNG_JMW-0241A_10012024, LORNG_JBW7614_10012024, and LORNG_BW13001_10012024. No problems were found for this criterion.

Sample LORNG_EB004_10012024 was submitted as an equipment blank in association with samples LORNG_LF3MW3_10012024 and LORNG_LF3MW3_10012024FD. No problems were found for this criterion.

Sample LORNG_EB005_10012024 was submitted as an equipment blank in association with samples LORNG_JMW3501_10012024 and LORNG_BW18007_10012024. No problems were found for this criterion.

Sample LORNG_EB006_10012024 was submitted as an equipment blank in association with samples LORNG_JMW-0806_10012024 and LORNG_LF2MW1_10012024. No problems were found for this criterion.

6. EXTRACTED INTERNAL STANDARDS

All samples are spiked with labeled standard compounds prior to sample preparation and analyses to evaluate overall laboratory performance and efficiency of the analytical technique. The reported project samples had observed standard recoveries within the established limits in all cases with the following exceptions.

No problems requiring qualification of sample results were found for this criterion.

7. NON-EXTRACTED INTERNAL STANDARDS

Non-extracted internal standard peak areas are used to quantify extracted internal standard recoveries. The reported project samples had non-extracted internal standard area counts within the established limits in all cases with the following exceptions.

No problems were found for this criterion.

8. COMPOUND IDENTIFICATION

The project target analyte compounds are identified on the LC/MS/MS by using the analytes retention time (RT). The retention time of each target analyte should be within ± 0.4 minutes of the predicted retention. Target analyte detections should display a signal-to-noise of ≥ 3:1, have proper peak integration, and display all ions at the correct retention times.

Target analyte detections should have passing ion ratios (50 - 150% of theoretical). Ion ratio failures could be caused by matrix interference and/or be the result of the presence of isomers in the sample at different ratios than the ratio of isomers present in the calibration standards.

Ion ratios were verified as part of the Level 2B data validation. No anomalies were identified with the following exceptions.

The transition mass ratio was outside the established ratio limits for PFHxA during the analysis of sample LORNG_JBW7614_10012024 indicating some degree of uncertainty in the qualitative identification of the analyte. The impacted result has been qualified "J" on this basis.

The transition mass ratio was outside the established ratio limits for PFNA during the analysis of sample LORNG_OW01004_09272024 indicating some degree of uncertainty in the qualitative identification of the analyte. The impacted result has been qualified "J" on this basis.

The transition mass ratio was outside the established ratio limits for PFNS during the analysis of sample LORNG_BW01009_10012024 indicating some degree of uncertainty in the qualitative identification of the analyte. The impacted result has been qualified "J" on this basis.

Additional target compound identification criterion was not verified as part of the Level 2B data validation.

9. COMPOUND QUANTIFICATION

Target compound quantitation was not verified as part of the Level 2B data validation.

Manual integrations were not reviewed at the Stage 2B level.

10. MATRIX SPIKE/MATRIX SPIKE DUPLICATE RECOVERY / MATRIX DUPLICATE

Matrix spike/matrix spike duplicate (MS/MSD) data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD data may be used in conjunction with other quality control criteria for additional qualification of data.

Sample LORNG_JMW3501_10012024 was submitted for MS evaluation in association with this sample delivery group (SDG). Upon evaluation all accuracy indicators were acceptable or did not result in a need to qualify sample results.

Sample LORNG_BW02002_09272024 was submitted for MS evaluation in association with this SDG. Upon evaluation all accuracy indicators were acceptable.

Sample LORNG_JPZ1382_10012024 was submitted for laboratory duplicate evaluation in association with this SDG. Adequate laboratory precision was demonstrated.

Sample LORNG_BW18007_10012024 was submitted for laboratory duplicate evaluation in association with this SDG. Adequate laboratory precision was demonstrated.

11. FIELD DUPLICATES

Field duplicates may be taken and analyzed as an indication of overall precision. These analyses measure both field and laboratory precision. A control limit of ≤ 30% for the Relative Percent Difference (RPD), shall be used when original and duplicate sample values are greater than or equal to the sample specific LOQ. For field duplicate analyses that do not meet the technical criteria, the action was applied to only the parent sample and its duplicate.

Samples LORNG_LF3MW3_10012024 and LORNG_LF3MW3_10012024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated.

Samples LORNG_OW08002_09262024 and LORNG_OW08002_09262024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated.

12. LABORATORY CONTROL SAMPLES

The Laboratory Control Sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. The LCS results are used to verify that the laboratory can perform the analysis in a clean matrix.

No problems were found for this criterion.

13. DILUTIONS, RE-EXTRACTIONS & REANALYSIS

Samples may be re-analyzed for dilution, re-extraction and for other QC reasons. In such cases, the best result values are used.

Samples were re-extracted and/or analyzed at dilutions as necessary to confirm quality control results or due to high analyte concentrations.

14. SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

Overall, the laboratory data generated met the project goals and quality control criteria, with the exceptions identified in this report and as summarized in Table 1.

15. OTHER

Please note sample LORNG_JPZ0349_09262024 was submitted for split sample analyses. The sample was also analyzed by Bureau Veritas. The split sample results are located in SDG C4V7274. Adequate precision was demonstrated.

Table 1
Review Elements Summary

	Were acceptance criteria met?		
	Yes	No	
Per-fluorinated Compounds		Major	Minor
Holding Time/Sample Handling	x		
Method Blanks	x		
Instrument Blanks	x		
Field Blanks	x		
Calibration Percent Relative Standard Deviation and Percent Difference	x		
Instrument Sensitivity Check			x
Extracted Internal Standards	x		
Non-Extracted Internal Standards	x		
Compound Identification			x
Matrix Spike/Matrix Spike Duplicate/Matrix Duplicate	x		
Laboratory Control Sample	x		
Other Quality Control Data out of Specification	x		
Field Duplicate	x		

Major= Major data quality issue identified resulting in rejection of data.
Minor= Minor data quality issue identified resulting in the qualification of data. Data qualification should be used to inform the data users of data limitations.
NA = Not applicable

Table 2
Data Validation Qualifiers

Data Qualifier	Definition
U	The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided.

24 aqueous

SAMPLE RECEIPT AND CASE NARRATIVE REVIEW

- ✓ Traffic reports, chain-of-custody forms or SDG narrative do not indicate any problems with sample receipt, condition of the samples, analytical problems or special circumstances affecting the quality of the data.
- ✓ AFFF samples are to be shipped in HDPE containers with an unlined cap
- ✓ Shipment temp 0-6°C: recommended to freeze tissue samples upon receipt
- ✓ If temp upon receipt is greater than 6°C J/UJ all

  Received on 10/3 at 2.6,2.8,3.0 C

HOLDING TIMES

- ✓ Recommended storage temp is ≤ -20°C
- ✓ Per method 1633: aqueous samples may be held in the lab for up to 90 days when stored at recommended temp and protected from light; when stored at 0-6 °C and protected from light samples can be held for up to 28 days (see method for additional details)
- ✓ Per method 1633: solid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C (see method for additional details)
- ✓ Per method 1633: biosolid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C; however, freezing is recommended (see method for additional details)
- ✓ Samples extracts should be stored at 0-4°C protected from light and analyzed within 90 days

- ✓ If hold time is exceeded qualify J/UJ
- ✓ If hold time is grossly exceeded (2X hold time) J/X

244 Table II. Sample Storage and Holding Time Requirements

Matrix Type	Stored at 0 - 6°C, protected from light		Stored at ≤ -20°C, protected from light	
	Holding Time	Caveat	Holding Time	Caveat
Aqueous	28 days	Precursor degradation occurs after 7 days	90 days	None
Solid and Tissue	90 days	Should be prepared as soon as possible if NFDHA is a target analyte	90 days	Should be prepared as soon as possible if NFDHA is a target analyte
Biosolid	90 days	Not recommended due to the production of gases due to microbiological activity	90 days	None

Samples collected 09/26/2024 – 09/27/2024, 10/01/2024 – 10/02/2024
Extracted 10/22/2024
Analyzed 10/25/2024; 10/27/2024; 11/07/2024; 11/08/2024; 11/10/2024 ok

Extracted Internal STANDARDS (EIS)

- ✓ Added to all QC and field samples
- ✓ Recoveries are within the limits as defined in QAPP; QSM 6.0 specified using lab derived limits with lower limits no less than 20%
- ✓ Detected for analytes qualified using an EIS percent recovery >200% should be qualified J-. Nod-detects should not be qualified.
- ✓ If EIS recovery is <10%; associated detected and non-detects should be qualified X
- ✓ EIS retention times should be within 0.4 minutes of standard; use professional judgment to qualify

EDS rules as Module 6 does not define all situations:

- **For EIS %R >200% J- positive results, no action on non-detects (per module 6)**
- **For EIS %Rs >lab limit J- positive results, no action on non-detects**
- **For EIS %Rs between lab limit; no action (per module 6)**
- **For EIS %Rs lower lab limit but >10%; J+ positive results, UJ non-detects**
- **For EIS %Rs <10% X positive and non-detected (per module 6)**

Per Loring QAPP:

Extracted Internal Standards	Preliminary in-house acceptance criteria of 20-150% to be used until in-house limits are generated and approved for project use. Lower limit of in-house acceptance criteria cannot be <20%

All ok except

LORNG_OW01005_09272024 FC19307-15

13C2-4:2FTS run 1 ↑ associated analyte reported from run 2; no action

LORNG_JMW3501_10012024 FC19307-21

13C2-4:2FTS run 2↑ associated analyte reported from run 1; no action

13C3-HFPO-DA run1 ↑ HFPO-DA reported from run 2; no action

ADONA ND; no action

9Cl-PF3ONS ND; no action

11Cl-PF3OUdS ND; no action

LORNG_JPZ1382_10012024 FC19307-22

13C3-HFPO-DA ↑ HFPO-DA ND; no action

ADONA ND; no action

9Cl-PF3ONS ND; no action

11Cl-PF3OUdS ND; no action

Non-Extracted Internal STANDARDS (NIS)

- ✓ Used to quantify EIS
- ✓ If low are counts are reported (<30%) detected and non-detected should be qualified X

ok

Laboratory Control Sample (LCS) and Low-Level Laboratory Control Sample (LLLCS)

- ✓ LCMS Lab Control Recovery (Form III), Form I, prep log, run log
- ✓ LCS prepared, extracted, analyzed, and reported once for every 20 field samples of a similar matrix, per SDG.
- ✓ Laboratory Control Samples were analyzed for all the target analytes that the samples are analyzed for.
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150% if lab limits have not been generated.
- ✓ If LCS or LLLCS %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If LCS or LLLCS %R is < lower limit; qualify detected J- and non-detected X

Use lab limits to evaluate per Loring QAPP

OP5980-LLBS	ok
OP5979-LLBS	ok
OP5980-BS	ok
OP5979-BS	ok

MS/MSD and Matrix Duplicate

- ✓ LCMS Matrix Spike Recovery (Form III)
- ✓ The Matrix Spike Samples were spiked and analyzed for all the target analytes that the samples are analyzed for (Same analytes as LCS).
- ✓ Per module 6: MS and MSD are applicable where the spike concentration is a least 3 times greater than the native analyte concentration **(3X rule)**
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150%.
- ✓ If MS or MSD %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If MS or MSD %R is < lower limit but >10%; qualify detected J- and non-detected UJ
- ✓ If MS or MSD %R is < 10%; qualify detected J- and non-detected X
- ✓ If MS/MSD RPD is out; qualify detected J and non-detected UJ
- ✓ For matrix duplicate; for concentrations of analytes that are equal to or greater than the LOQ, the RPD must be ≤30%; if out qualified detected J; no action on non-detects

Use lab limits to evaluate per Loring QAPP; RPD 30%

MS/MSD Sample:

FC19307-21	**LORNG_JMW3501_10012024**	**MS only all ok except 3:3-FTCA MS ↑ ND; no action**
FC19307-1	**LORNG_BW02002_09272024**	**MS only ok**

Matrix Duplicate:

FC19307-22 LORNG_JPZ1382_10012024 ok
FC19307-2 LORNG_BW18007_10012024 ok

BLANKS

- ✓ LCMS Method Blank Summary (Form IV), method blank Form I, prep log, run log
- ✓ Frequency of Analysis: method blank has been analyzed for every 20 (or less) samples of similar matrix or concentration or each extraction batch.
- ✓ Continuing Calibration Blanks (Form I) and run log
- ✓ Frequency of Analysis: immediately following the highest standard analyzed and daily prior to sample analysis.
- ✓ Field/rinse blanks are non-detected for all analytes

Per Loring QAPP:

- Sample results with associated blank contamination will be qualified as follows:

Method Type	Blank Result	Sample Result	Action
PFAS, Organics, and Wet Chemistry	< LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ	≤ 2x blank: Qualify non-detect (U) at reported result. ≥ 2x-5x blank: J+
	≥ LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ and < blank result	Qualify non-detect (U) at reported result
		≥ LOQ and ≥ blank result	≤ 2x blank: Qualify non-detect (U) at reported result. 2x-5x blank: J+
Metals	≤ LOQ	≤ LOD and < 5x blank result	Qualify non-detect (U) at LOD.
		LOD < Sample Result ≤ LOQ and < 5x blank result	Qualify non-detect (U) at reported result.
		> LOQ	< 5x blank result; qualify estimated (J+)
	> LOQ	≤ LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result ≤ LOQ	Qualify non-detect (U) at reported result
		> LOQ but < 5x blank result	Qualify estimated (J+)
		≥ 5x blank result	No qualification

MASS CALIBRATION

- ✓ Verified to be ±0.2 amu of true value

Bile Salt Interference Check and Qualitative Identification Standard

- ✓ Provided and requirements met
- ✓ 1.0 minute between RTs of bile salt and PFOS
- ✓ Qualitative Identification Standard to confirm RTs

All acceptable

ICAL

- ✓ Initial Calibration Data Curve Evaluation (Form VI) and run log
- ✓ Lowest standard should be at or below LOQ
- ✓ %RSD <20% or relative standard error (RSE) <20%
- ✓ If %RSD > 20% but <30% J/UJ
- ✓ If %RSD >30% J/R

See below

INSTRUMENT PERFORMANCE CHECK PER DRAFT METHOD 1633

- ✓ Concentration equal to LOQ
- ✓ Analyzed after ICAL and daily before samples
- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

CCAL

- ✓ Continuing Calibration Data (Form VII) and run log
- ✓ Continuing calibration standard analyzed on each working day, prior to sample analyses.
- ✓ Calibration verification/continuing calibration standard been analyzed after every 10 samples and at the end of each analytical sequence
- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

COMPOUND INDENTIFICATION

- ✓ RT within ±0.4 RRT units (review for Level 4)
- ✓ S/N ration 3:1 (review for Level 4)
- ✓ Ion response ratio with ±50% (review for Level 2B)
- ✓ If ion ratio is outside limit; qualify J

All ok except

LORNG_JBW7614_10012024	FC19307-20	PFHxA	FLAG J
LORNG_OW01004_09272024	FC19307-13	PFNA	FLAG J
LORNG_BW01009_10012024	FC19307-16	PFNS	FLAG J

Use IAG reason code

FIELD DUPLICATES

- ✓ Use QAPP defined criteria
- ✓ If outside acceptance criteria qualify J/UJ (MODULE FLAGS NONDETECTS TOO)

Loring AFB QAPP for aqueous and solid samples:

Field Duplicate	≤30% RPD or the absolute difference between analyte concentrations <LOQ

LORNG_LF3MW3_10012024 and LORNG_LF3MW3_10012024FD all ok

LORNG_OW08002_09262024 and LORNG_OW08002_09262024FD all ok

ENVIRONMENTAL DATA SERVICES, LTD.

EXECUTIVE NARRATIVE

Sample Delivery Group: FC19340
Laboratory: SGS Orlando
Site: Loring AFB
Sampling dates: 10/01/2024 – 10/02/2024
Number of Samples: 18
Test Method: USEPA Method 1633
Analysis: per- and polyfluoroalkyl substances (PFAS)

Quality Assurance Project Plan: Draft TO 1048 Quality Program Plan, September 2023 (QAPP).

Validation Guidelines: United States Department of Defense (DOD) Environmental Data Quality Workgroup (EDQW), General Validation Guidelines, November 2019; United States Department of Defense Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances analysis by QSM Table B-24, Environmental Data Quality Workgroup, October 18, 2022

Table 1 provides a summary of the major and minor data quality issues identified in this data set. All data are acceptable except those results which have been qualified with “R”, rejected. Data validation qualifiers along with associated descriptions are provided in Table 2. All data qualification related to this group of samples is detailed on the attached sheets.

All data users should note two facts. First, an “R” flag means that the associated value is unusable due to significant quality control (QC) problems, the data is invalid and provides no information as to whether the

compound is present or not. “R” values should not appear on any data tables even as a last resort. Second, no analyte concentration, even if it passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

DATA ASSESSMENT

1. NARRATIVE AND COMPLETENESS REVIEW

The case narrative was reviewed, and the data package was checked for completeness. No discrepancies were noted.

2. SAMPLE DELIVERY AND CONDITION

The sample arrived at the laboratory in acceptable condition. Proper custody was documented.

3. HOLDING TIME

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Proper sample handling and preservation also play a role in the chemical stability of analytes in the sample matrix. If samples are not collected and stored using proper containers and/or preservatives, data may not be valid.

No problems were found for this criterion related to the results reported by the validator.

4. CALIBRATION

Satisfactory instrument calibration is established to ensure that the instrument can produce acceptable quantitative data. An initial calibration demonstrates that the instrument can give acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance. Additionally, a continuing calibration is analyzed at the end of each 12-hour analytical sequence, denoted as a "closing" calibration verification and ascertains acceptable performance at the conclusion of the analytical sequence.

A) Initial Calibration

Percent relative standard deviation (%RSD) is calculated from the initial calibration and is used to indicate stability of a specific compound over the calibration range.

An RSD value outside the initial calibration limit indicates the potential for quantitation errors. For this reason, all positive and non-detected results are qualified as estimated. Severe performance failures (RSD >30%) requires rejection of all results. The following QC criteria have been applied for this project: The %RSD of initial calibration must be <20%.

No problems were found for this criterion.

B) Continuing Calibration

The Percent Recovery (%R) for all target analytes in the continuing calibration must be within 70-130%. All initial calibration verification (ICV) and continuing calibration verification (CCV) %Rs were with acceptance limits with the following exceptions.

No problems were found for this criterion.

C) Instrument Sensitivity Check

Prior to analysis an instrument sensitivity check (ISC) must be performed. The ISC must be at the limit of quantitation (LOQ). All analyte concentrations must be within ±30%. Note: the laboratory reports refer to the ISC as Low-Concentration Calibration Verification (LCV). The validator has determined that the low level CCV in the laboratory's report is equivalent to the method required ISC.

No problems were found for this criterion.

5. BLANK CONTAMINATION

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. When an equipment blank, or lab blank has an analyte detection, then all associated field samples are qualified per validation guidance as appropriate.

A) Method blank contamination:

No problems were found for this criterion.

B) Instrument blank contamination:

No problems requiring qualification of sample results were found for this criterion.

C) Field/Equipment blank contamination:

Sample LORNG_EB007_10022024 was submitted as an equipment blank in association with sample LORNG_OW20001_10022024. No problems were found for this criterion.

Sample LORNG_EB008_10022024 was submitted as an equipment blank in association with sample LORNG_MMW0015_10022024. No problems were found for this criterion.

Sample LORNG_EB009_10022024 was submitted as an equipment blank in association with samples listed in the table below. No problems were found for this criterion.

LORNG_MMW0002_10022024	*LORNG_JMW1684_10022024*
LORNG_JBW7348_10022024	*LORNG_JMW1684_10022024FD*
LORNG_JBW7348_10022024FD	

6. EXTRACTED INTERNAL STANDARDS

All samples are spiked with labeled standard compounds prior to sample preparation and analyses to evaluate overall laboratory performance and efficiency of the analytical technique. The reported project samples had observed standard recoveries within the established limits in all cases with the following exceptions.

No problems were found for this criterion.

7. NON-EXTRACTED INTERNAL STANDARDS

Non-extracted internal standard peak areas are used to quantify extracted internal standard recoveries. The reported project samples had non-extracted internal standard area counts within the established limits in all cases with the following exceptions.

No problems were found for this criterion.

8. COMPOUND IDENTIFICATION

The project target analyte compounds are identified on the LC/MS/MS by using the analytes retention time (RT). The retention time of each target analyte should be within ± 0.4 minutes of the predicted retention. Target analyte detections should display a signal-to-noise of ≥ 3:1, have proper peak integration, and display all ions at the correct retention times.

Target analyte detections should have passing ion ratios (50 - 150% of theoretical). Ion ratio failures could be caused by matrix interference and/or be the result of the presence of isomers in the sample at different ratios than the ratio of isomers present in the calibration standards.

Ion ratios were verified as part of the Level 2B data validation. No anomalies were identified with the following exception.

The transition mass ratio was outside the established ratio limits for PFBA during the analysis of sample LORNG_BW13001_10012024 indicating some degree of uncertainty in the qualitative identification of the analyte. The impacted result has been qualified "J" on this basis.

Additional target compound identification criterion was not verified as part of the Level 2B data validation.

9. COMPOUND QUANTIFICATION

Target compound quantitation was not verified as part of the Level 2B data validation.

Manual integrations were not reviewed at the Stage 2B level.

10. MATRIX SPIKE/MATRIX SPIKE DUPLICATE RECOVERY / MATRIX DUPLICATE

Matrix spike/matrix spike duplicate (MS/MSD) data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD data may be used in conjunction with other quality control criteria for additional qualification of data.

Sample LORNG_MMW0015_10022024 was submitted for MS evaluation in association with this sample delivery group (SDG). Upon evaluation all accuracy indicators were acceptable or did not result in a need to qualify sample results.

Sample LORNG_OW20003_10022024 was submitted for laboratory duplicate evaluation in association with this SDG. Adequate laboratory precision was demonstrated.

11. FIELD DUPLICATES

Field duplicates may be taken and analyzed as an indication of overall precision. These analyses measure both field and laboratory precision. A control limit of ≤ 30% for the Relative Percent Difference (RPD), shall be used when original and duplicate sample values are greater than or equal to the sample specific LOQ. For field duplicate analyses that do not meet the technical criteria, the action was applied to only the parent sample and its duplicate.

Samples LORNG_JBW7348_10022024 and LORNG_JBW7348_10022024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation adequate field precision was demonstrated.

Samples LORNG_JMW1684_10022024 and LORNG_JMW1684_10022024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation adequate field precision was demonstrated.

12. LABORATORY CONTROL SAMPLES

The Laboratory Control Sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. The LCS results are used to verify that the laboratory can perform the analysis in a clean matrix.

No problems were found for this criterion.

13. DILUTIONS, RE-EXTRACTIONS & REANALYSIS

Samples may be re-analyzed for dilution, re-extraction and for other QC reasons. In such cases, the best result values are used.

No re-extraction, reanalyses or dilutions were provided for data review.

14. SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

Overall, the laboratory data generated met the project goals and quality control criteria, with the exceptions identified in this report and as summarized in Table 1.

15. OTHER

None.

Table 1
Review Elements Summary

	Were acceptance criteria met?		
	Yes	No	
Per-fluorinated Compounds		Major	Minor
Holding Time/Sample Handling	x		
Method Blanks	x		
Instrument Blanks	x		
Field Blanks	x		
Calibration Percent Relative Standard Deviation and Percent Difference	x		
Instrument Sensitivity Check	x		
Extracted Internal Standards	x		
Non-Extracted Internal Standards	x		
Compound Identification			x
Matrix Spike/Matrix Spike Duplicate/Matrix Duplicate	x		
Laboratory Control Sample	x		
Other Quality Control Data out of Specification	x		
Field Duplicate	x		

Major= Major data quality issue identified resulting in rejection of data.
Minor= Minor data quality issue identified resulting in the qualification of data. Data qualification should be used to inform the data users of data limitations.
NA = Not applicable

Table 2
Data Validation Qualifiers

Data Qualifier	Definition
U	The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided.

DATA VALIDATION PFAS

Module 6; PFAS by QSM Table B-24; October 18, 2022

Validator: GAP

Reviewer: DLW

Date Validated: 01/13/2025

Reviewed: 1/16/25

Project: Loring AFB

SDG: FC19340

LAB: SGS Orlando

Samples Collected: 10/01/2024 – 10/02/2024

18 aqueous

SAMPLE RECEIPT AND CASE NARRATIVE REVIEW

- ✓ Traffic reports, chain-of-custody forms or SDG narrative do not indicate any problems with sample receipt, condition of the samples, analytical problems or special circumstances affecting the quality of the data.
- ✓ AFFF samples are to be shipped in HDPE containers with an unlined cap
- ✓ Shipment temp 0-6°C: recommended to freeze tissue samples upon receipt
- ✓ If temp upon receipt is greater than 6°C J/UJ all

  Received on 10/4 at 2.6C

HOLDING TIMES

- ✓ Recommended storage temp is ≤ -20°C
- ✓ Per method 1633: aqueous samples may be held in the lab for up to 90 days when stored at recommended temp and protected from light; when stored at 0-6 °C and protected from light samples can be held for up to 28 days (see method for additional details)
- ✓ Per method 1633: solid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C (see method for additional details)
- ✓ Per method 1633: biosolid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C; however, freezing is recommended (see method for additional details)
- ✓ Samples extracts should be stored at 0-4°C protected from light and analyzed within 90 days

- ✓ If hold time is exceeded qualify J/UJ
- ✓ If hold time is grossly exceeded (2X hold time) J/X

244 Table II. Sample Storage and Holding Time Requirements

Matrix Type	Stored at 0 - 6°C, protected from light		Stored at ≤ -20°C, protected from light	
	Holding Time	Caveat	Holding Time	Caveat
Aqueous	28 days	Precursor degradation occurs after 7 days	90 days	None
Solid and Tissue	90 days	Should be prepared as soon as possible if NFDHA is a target analyte	90 days	Should be prepared as soon as possible if NFDHA is a target analyte
Biosolid	90 days	Not recommended due to the production of gases due to microbiological activity	90 days	None

Samples collected 10/01/2024 – 10/02/2024
Extracted 10/23/2024
Analyzed ; 11/08/2024; 11/09/2024; 11/11/2024 ok

Extracted Internal STANDARDS (EIS)

- ✓ Added to all QC and field samples
- ✓ Recoveries are within the limits as defined in QAPP; QSM 6.0 specified using lab derived limits with lower limits no less than 20%
- ✓ Detected for analytes qualified using an EIS percent recovery >200% should be qualified J-. Nod-detects should not be qualified.
- ✓ If EIS recovery is <10%; associated detected and non-detects should be qualified X
- ✓ EIS retention times should be within 0.4 minutes of standard; use professional judgment to qualify

EDS rules as Module 6 does not define all situations:

- **For EIS %R >200% J- positive results, no action on non-detects (per module 6)**
- **For EIS %Rs >lab limit J- positive results, no action on non-detects**
- **For EIS %Rs between lab limit; no action (per module 6)**
- **For EIS %Rs lower lab limit but >10%; J+ positive results, UJ non-detects**
- **For EIS %Rs <10% X positive and non-detected (per module 6)**

Per Loring QAPP:

Extracted Internal Standards	Preliminary in-house acceptance criteria of 20-150% to be used until in-house limits are generated and approved for project use. Lower limit of in-house acceptance criteria cannot be <20%

All ok

Non-Extracted Internal STANDARDS (NIS)

- ✓ Used to quantify EIS
- ✓ If low are counts are reported (<30%) detected and non-detected should be qualified X

ok

Laboratory Control Sample (LCS) and Low-Level Laboratory Control Sample (LLLCS)

- ✓ LCMS Lab Control Recovery (Form III), Form I, prep log, run log
- ✓ LCS prepared, extracted, analyzed, and reported once for every 20 field samples of a similar matrix, per SDG.
- ✓ Laboratory Control Samples were analyzed for all the target analytes that the samples are analyzed for.
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150% if lab limits have not been generated.
- ✓ If LCS or LLLCS %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If LCS or LLLCS %R is < lower limit; qualify detected J- and non-detected X

Use lab limits to evaluate per Loring QAPP

OP5999-LLBS ok

OP5999-BS ok

MS/MSD and Matrix Duplicate

- ✓ LCMS Matrix Spike Recovery (Form III)
- ✓ The Matrix Spike Samples were spiked and analyzed for all the target analytes that the samples are analyzed for (Same analytes as LCS).
- ✓ Per module 6: MS and MSD are applicable where the spike concentration is a least 3 times greater than the native analyte concentration **(3X rule)**
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150%.
- ✓ If MS or MSD %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If MS or MSD %R is < lower limit but >10%; qualify detected J- and non-detected UJ
- ✓ If MS or MSD %R is < 10%; qualify detected J- and non-detected X
- ✓ If MS/MSD RPD is out; qualify detected J and non-detected UJ
- ✓ For matrix duplicate; for concentrations of analytes that are equal to or greater than the LOQ, the RPD must be ≤30%; if out qualified detected J; no action on non-detects

Use lab limits to evaluate per Loring QAPP; RPD 30%

MS/MSD Sample:
FC19340-6 LORNG_MMW0015_10022024 MS only all ok

Matrix Duplicate:
FC19340-7 LORNG_OW20003_10022024 ok

BLANKS

- ✓ LCMS Method Blank Summary (Form IV), method blank Form I, prep log, run log
- ✓ Frequency of Analysis: method blank has been analyzed for every 20 (or less) samples of similar matrix or concentration or each extraction batch.
- ✓ Continuing Calibration Blanks (Form I) and run log
- ✓ Frequency of Analysis: immediately following the highest standard analyzed and daily prior to sample analysis.
- ✓ Field/rinse blanks are non-detected for all analytes

Per Loring QAPP:

- Sample results with associated blank contamination will be qualified as follows:

Method Type	Blank Result	Sample Result	Action
PFAS, Organics, and Wet Chemistry	< LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ	≤ 2x blank: Qualify non-detect (U) at reported result. ≥ 2x-5x blank: J+
	≥ LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ and < blank result	Qualify non-detect (U) at reported result
		≥ LOQ and ≥ blank result	≤ 2x blank: Qualify non-detect (U) at reported result. 2x-5x blank: J+
Metals	≤ LOQ	≤ LOD and < 5x blank result	Qualify non-detect (U) at LOD.
		LOD < Sample Result ≤ LOQ and < 5x blank result	Qualify non-detect (U) at reported result.
		> LOQ	< 5x blank result; qualify estimated (J+)
	> LOQ	≤ LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result ≤ LOQ	Qualify non-detect (U) at reported result
		> LOQ but < 5x blank result	Qualify estimated (J+)
		≥ 5x blank result	No qualification

MASS CALIBRATION

- ✓ Verified to be ±0.2 amu of true value

Bile Salt Interference Check and Qualitative Identification Standard

- ✓ Provided and requirements met
- ✓ 1.0 minute between RTs of bile salt and PFOS
- ✓ Qualitative Identification Standard to confirm RTs

All acceptable

ICAL

- ✓ Initial Calibration Data Curve Evaluation (Form VI) and run log
- ✓ Lowest standard should be at or below LOQ
- ✓ %RSD <20% or relative standard error (RSE) <20%
- ✓ If %RSD > 20% but <30% J/UJ
- ✓ If %RSD >30% J/R

See below

INSTRUMENT PERFORMANCE CHECK PER DRAFT METHOD 1633

- ✓ Concentration equal to LOQ
- ✓ Analyzed after ICAL and daily before samples
- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

CCAL

- ✓ Continuing Calibration Data (Form VII) and run log
- ✓ Continuing calibration standard analyzed on each working day, prior to sample analyses.
- ✓ Calibration verification/continuing calibration standard been analyzed after every 10 samples and at the end of each analytical sequence
- ✓ If not analyzed all associated data should be qualified X

- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

Table 1 provides a summary of the major and minor data quality issues identified in this data set. All data are acceptable except those results which have been qualified with “R”, rejected. Data validation qualifiers along with associated descriptions are provided in Table 2. All data qualification related to this group of samples is detailed on the attached sheets.

All data users should note two facts. First, an “R” flag means that the associated value is unusable due to significant quality control (QC) problems, the data is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on any data tables even as a last resort. Second, no analyte concentration, even if it passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

DATA ASSESSMENT

1. NARRATIVE AND COMPLETENESS REVIEW

The case narrative was reviewed, and the data package was checked for completeness. No discrepancies were noted.

2. SAMPLE DELIVERY AND CONDITION

The sample arrived at the laboratory in acceptable condition. Proper custody was documented.

3. HOLDING TIME

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Proper sample handling and preservation also play a role in the chemical stability of analytes in the sample matrix. If samples are not collected and stored using proper containers and/or preservatives, data may not be valid.

No problems were found for this criterion.

4. CALIBRATION

Satisfactory instrument calibration is established to ensure that the instrument can produce acceptable quantitative data. An initial calibration demonstrates that the instrument can give acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance. Additionally, a continuing calibration is analyzed at the end of each 12-hour analytical sequence, denoted as a "closing" calibration verification and ascertains acceptable performance at the conclusion of the analytical sequence.

A) Initial Calibration

Percent relative standard deviation (%RSD) is calculated from the initial calibration and is used to indicate stability of a specific compound over the calibration range.

An RSD value outside the initial calibration limit indicates the potential for quantitation errors. For this reason, all positive and non-detected results are qualified as estimated. Severe performance failures (RSD >30%) requires rejection of all results. The following QC criteria have been applied for this project: The %RSD of initial calibration must be <20%.

No problems were found for this criterion.

B) Continuing Calibration

The Percent Recovery (%R) for all target analytes in the continuing calibration must be within 70-130%. All initial calibration verification (ICV) and continuing calibration verification (CCV) %Rs were with acceptance limits with the following exceptions.

No problems were found for this criterion with the following exceptions.

The observed %R for NEtFOSAA was outside of acceptance criteria for the ICV associated with sample LORNG_RFW1144_10032024. The result reported for the impacted analyte in the associated sample has been qualified "UJ" on this basis.

C) Instrument Sensitivity Check

Prior to analysis an instrument sensitivity check (ISC) must be performed. The ISC must be at the limit of quantitation (LOQ). All analyte concentrations must be within ±30%. Note: the laboratory reports refer to the ISC as Low-Concentration Calibration Verification (LCV). The validator has determined that the low level CCV in the laboratory's report is equivalent to the method required ISC.

No problems were found for this criterion with the following exceptions.

The observed %R for PFDA was outside of acceptance criteria for the low level CCV associated with sample LORNG_RFW1144_10032024. The result reported for the impacted analyte in the associated sample has been qualified "UJ" on this basis.

5. BLANK CONTAMINATION

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. When an equipment blank, or lab blank has an analyte detection, then all associated field samples are qualified per validation guidance as appropriate.

A) Method blank contamination:

No problems were found for this criterion.

B) Instrument blank contamination:

No problems requiring qualification of sample results were found for this criterion.

C) Field/Equipment blank contamination:

Sample LORNG_EB010_10032024 was submitted as an equipment blank in association with sample LORNG_LF2MW2_10032024. No problems were found for this criterion.

Sample LORNG_EB012_10032024 was submitted as an equipment blank in association with samples LORNG_JMW0991_10032024 and LORNG_LF3MW4_10032024. No problems were found for this criterion.

Sample LORNG_EB011_10032024 was submitted as an equipment blank in association with sample LORNG_JMW1665_10032024. No problems were found for this criterion with the following exceptions. PFOA and PFOS were positively identified. Positive sample results reported for the impacted analytes in the associated samples have been evaluated and qualified as appropriate per validation guidance.

6. EXTRACTED INTERNAL STANDARDS

All samples are spiked with labeled standard compounds prior to sample preparation and analyses to evaluate overall laboratory performance and efficiency of the analytical technique. The reported project samples had observed standard recoveries within the established limits in all cases with the following exceptions.

No problems were found for this criterion.

7. NON-EXTRACTED INTERNAL STANDARDS

Non-extracted internal standard peak areas are used to quantify extracted internal standard recoveries. The reported project samples had non-extracted internal standard area counts within the established limits in all cases with the following exceptions.

No problems were found for this criterion.

8. COMPOUND IDENTIFICATION

The project target analyte compounds are identified on the LC/MS/MS by using the analytes retention time (RT). The retention time of each target analyte should be within ± 0.4 minutes of the predicted retention. Target analyte detections should display a signal-to-noise of ≥ 3:1, have proper peak integration, and display all ions at the correct retention times.

Target analyte detections should have passing ion ratios (50 - 150% of theoretical). Ion ratio failures could be caused by matrix interference and/or be the result of the presence of isomers in the sample at different ratios than the ratio of isomers present in the calibration standards.

Ion ratios were verified as part of the Level 2B data validation. No anomalies were identified with the following exception.

The transition mass ratio was outside the established ratio limits for PFOA during the analysis of sample LORNG_EB011_10032024 indicating some degree of uncertainty in the qualitative identification of the analyte. The impacted result has been qualified "J" on this basis.

The transition mass ratio was outside the established ratio limits for PFNS during the analysis of sample LORNG_RFW1147_10042024 indicating some degree of uncertainty in the qualitative identification of the analyte. The impacted result has been qualified "J" on this basis.

Additional target compound identification criterion was not verified as part of the Level 2B data validation.

9. COMPOUND QUANTIFICATION

Target compound quantitation was not verified as part of the Level 2B data validation.

Manual integrations were not reviewed at the Stage 2B level.

10. MATRIX SPIKE/MATRIX SPIKE DUPLICATE RECOVERY / MATRIX DUPLICATE

Matrix spike/matrix spike duplicate (MS/MSD) data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD data may be used in conjunction with other quality control criteria for additional qualification of data.

Sample LORNG_BW07001_10042024 was submitted for MS/MSD evaluation in association with this sample delivery group (SDG). Upon evaluation all accuracy and precision indicators were acceptable.

Sample LORNG_JMW0991_10032024 was submitted for MS/MSD evaluation in association with this SDG. Upon evaluation all accuracy and precision indicators were acceptable or did not result in a need to qualify sample results with the following exceptions. Poor MS/MSD precision was noted for PFOS. The positive result reported for the PFOS in the parent sample has been qualified "J" on this basis. The observed MS recoveries were extremely low (0%) for the analytes listed in the table below while the MSD recoveries were acceptable. Based on professional judgment the results reported for the impacted analytes in the parent sample have been qualified "UJ" on this basis.

PFTrDA	*PFTeDA*	*PFDS*	*PFDoS*	*11Cl-PF3OUdS*

11. FIELD DUPLICATES

Field duplicates may be taken and analyzed as an indication of overall precision. These analyses measure both field and laboratory precision. A control limit of ≤ 30% for the Relative Percent Difference (RPD), shall be used when original and duplicate sample values are greater than or equal to the sample specific LOQ. For field duplicate analyses that do not meet the technical criteria, the action was applied to only the parent sample and its duplicate.

Samples LORNG_OW20004_10032024 and LORNG_OW20004_10032024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation adequate field precision was demonstrated.

12. LABORATORY CONTROL SAMPLES

The Laboratory Control Sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. The LCS results are used to verify that the laboratory can perform the analysis in a clean matrix.

No problems were found for this criterion.

13. DILUTIONS, RE-EXTRACTIONS & REANALYSIS

Samples may be re-analyzed for dilution, re-extraction and for other QC reasons. In such cases, the best result values are used.

Samples were re-extracted and/or reanalyzed as necessary to confirm results or bring analyte concentration into the instrument's linear calibration range.

14. SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

Overall, the laboratory data generated met the project goals and quality control criteria, with the exceptions identified in this report and as summarized in Table 1.

15. OTHER

None.

Table 1
Review Elements Summary

	Were acceptance criteria met?		
	Yes	No	
Per-fluorinated Compounds		Major	Minor
Holding Time/Sample Handling	x		
Method Blanks	x		
Instrument Blanks	x		
Field Blanks			x
Calibration Percent Relative Standard Deviation and Percent Difference			x
Instrument Sensitivity Check			x
Extracted Internal Standards	x		
Non-Extracted Internal Standards	x		
Compound Identification			x
Matrix Spike/Matrix Spike Duplicate/Matrix Duplicate			x
Laboratory Control Sample	x		
Other Quality Control Data out of Specification	x		
Field Duplicate	x		

Major= Major data quality issue identified resulting in rejection of data.
Minor= Minor data quality issue identified resulting in the qualification of data. Data qualification should be used to inform the data users of data limitations.
NA = Not applicable

Table 2
Data Validation Qualifiers

Data Qualifier	Definition
U	The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided.

SAMPLE RECEIPT AND CASE NARRATIVE REVIEW

- ✓ Traffic reports, chain-of-custody forms or SDG narrative do not indicate any problems with sample receipt, condition of the samples, analytical problems or special circumstances affecting the quality of the data.
- ✓ AFFF samples are to be shipped in HDPE containers with an unlined cap
- ✓ Shipment temp 0-6°C: recommended to freeze tissue samples upon receipt
- ✓ If temp upon receipt is greater than 6°C J/UJ all

Received on 10/5 at <6C

HOLDING TIMES

- ✓ Recommended storage temp is ≤ -20°C
- ✓ Per method 1633: aqueous samples may be held in the lab for up to 90 days when stored at recommended temp and protected from light; when stored at 0-6 °C and protected from light samples can be held for up to 28 days (see method for additional details)
- ✓ Per method 1633: solid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C (see method for additional details)
- ✓ Per method 1633: biosolid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C; however, freezing is recommended (see method for additional details)
- ✓ Samples extracts should be stored at 0-4°C protected from light and analyzed within 90 days

- ✓ If hold time is exceeded qualify J/UJ
- ✓ If hold time is grossly exceeded (2X hold time) J/X

244 Table II. Sample Storage and Holding Time Requirements

Matrix Type	Stored at 0 - 6°C, protected from light		Stored at ≤ -20°C, protected from light	
	Holding Time	Caveat	Holding Time	Caveat
Aqueous	28 days	Precursor degradation occurs after 7 days	90 days	None
Solid and Tissue	90 days	Should be prepared as soon as possible if NFDHA is a target analyte	90 days	Should be prepared as soon as possible if NFDHA is a target analyte
Biosolid	90 days	Not recommended due to the production of gases due to microbiological activity	90 days	None

Samples collected 10/03/2024 – 10/04/2024
Extracted 10/24/2024
Analyzed 11/13/2024; 11/14/2024; 11/15/2024; 11/17/2024 ok

Extracted Internal STANDARDS (EIS)

- ✓ Added to all QC and field samples
- ✓ Recoveries are within the limits as defined in QAPP; QSM 6.0 specified using lab derived limits with lower limits no less than 20%
- ✓ Detected for analytes qualified using an EIS percent recovery >200% should be qualified J-. Nod-detects should not be qualified.
- ✓ If EIS recovery is <10%; associated detected and non-detects should be qualified X
- ✓ EIS retention times should be within 0.4 minutes of standard; use professional judgment to qualify

EDS rules as Module 6 does not define all situations:

- **For EIS %R >200% J- positive results, no action on non-detects (per module 6)**
- **For EIS %Rs >lab limit J- positive results, no action on non-detects**
- **For EIS %Rs between lab limit; no action (per module 6)**
- **For EIS %Rs lower lab limit but >10%; J+ positive results, UJ non-detects**
- **For EIS %Rs <10% X positive and non-detected (per module 6)**

Per Loring QAPP:

Extracted Internal Standards	Preliminary in-house acceptance criteria of 20-150% to be used until in-house limits are generated and approved for project use. Lower limit of in-house acceptance criteria cannot be <20%

All ok

Non-Extracted Internal STANDARDS (NIS)

- ✓ Used to quantify EIS
- ✓ If low are counts are reported (<30%) detected and non-detected should be qualified X

ok

Laboratory Control Sample (LCS) and Low-Level Laboratory Control Sample (LLLCS)

- ✓ LCMS Lab Control Recovery (Form III), Form I, prep log, run log
- ✓ LCS prepared, extracted, analyzed, and reported once for every 20 field samples of a similar matrix, per SDG.
- ✓ Laboratory Control Samples were analyzed for all the target analytes that the samples are analyzed for.
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150% if lab limits have not been generated.
- ✓ If LCS or LLLCS %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If LCS or LLLCS %R is < lower limit; qualify detected J- and non-detected X

Use lab limits to evaluate per Loring QAPP

OP6035-LLBS ok
OP6036-LLBS ok

OP6035-BS ok
OP6036-BS ok

Lab noted incorrectly in Case narrative and result footnote that LL LCS was out for PFDA for sample -13. Sample 13 is associated with OP6035-LLBS and there were no %Rs outside of acceptance criteria. The ISC associated with this sample is out for PFDA

MS/MSD and Matrix Duplicate

- ✓ LCMS Matrix Spike Recovery (Form III)
- ✓ The Matrix Spike Samples were spiked and analyzed for all the target analytes that the samples are analyzed for (Same analytes as LCS).
- ✓ Per module 6: MS and MSD are applicable where the spike concentration is a least 3 times greater than the native analyte concentration **(3X rule)**
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150%.
- ✓ If MS or MSD %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If MS or MSD %R is < lower limit but >10%; qualify detected J- and non-detected UJ
- ✓ If MS or MSD %R is < 10%; qualify detected J- and non-detected X
- ✓ If MS/MSD RPD is out; qualify detected J and non-detected UJ
- ✓ For matrix duplicate; for concentrations of analytes that are equal to or greater than the LOQ, the RPD must be ≤30%; if out qualified detected J; no action on non-detects

Use lab limits to evaluate per Loring QAPP; RPD 30%

BLANKS

- ✓ LCMS Method Blank Summary (Form IV), method blank Form I, prep log, run log
- ✓ Frequency of Analysis: method blank has been analyzed for every 20 (or less)

samples of similar matrix or concentration or each extraction batch.

- ✓ Continuing Calibration Blanks (Form I) and run log
- ✓ Frequency of Analysis: immediately following the highest standard analyzed and daily prior to sample analysis.
- ✓ Field/rinse blanks are non-detected for all analytes

Per Loring QAPP:

- Sample results with associated blank contamination will be qualified as follows:

Method Type	Blank Result	Sample Result	Action
PFAS, Organics, and Wet Chemistry	< LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ	≤ 2x blank: Qualify non-detect (U) at reported result. ≥ 2x-5x blank: J+
	≥ LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ and < blank result	Qualify non-detect (U) at reported result
		≥ LOQ and ≥ blank result	≤ 2x blank: Qualify non-detect (U) at reported result. 2x-5x blank: J+
Metals	≤ LOQ	≤ LOD and < 5x blank result	Qualify non-detect (U) at LOD.
		LOD < Sample Result ≤ LOQ and < 5x blank result	Qualify non-detect (U) at reported result.
		> LOQ	< 5x blank result; qualify estimated (J+)
	> LOQ	≤ LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result ≤ LOQ	Qualify non-detect (U) at reported result
		> LOQ but < 5x blank result	Qualify estimated (J+)
		≥ 5x blank result	No qualification

MASS CALIBRATION

- ✓ Verified to be ±0.2 amu of true value

Bile Salt Interference Check and Qualitative Identification Standard

- ✓ Provided and requirements met
- ✓ 1.0 minute between RTs of bile salt and PFOS
- ✓ Qualitative Identification Standard to confirm RTs

All acceptable

ICAL

- ✓ Initial Calibration Data Curve Evaluation (Form VI) and run log
- ✓ Lowest standard should be at or below LOQ
- ✓ %RSD <20% or relative standard error (RSE) <20%
- ✓ If %RSD > 20% but <30% J/UJ
- ✓ If %RSD >30% J/R

See below

INSTRUMENT PERFORMANCE CHECK PER DRAFT METHOD 1633

- ✓ Concentration equal to LOQ
- ✓ Analyzed after ICAL and daily before samples
- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

CCAL

- ✓ Continuing Calibration Data (Form VII) and run log
- ✓ Continuing calibration standard analyzed on each working day, prior to sample analyses.
- ✓ Calibration verification/continuing calibration standard been analyzed after every 10 samples and at the end of each analytical sequence
- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

EXECUTIVE NARRATIVE

Sample Delivery Group: FC19378
Laboratory: SGS Orlando
Site: Loring AFB
Sampling dates: 09/24/2024 – 09/27/2024, and 09/30/2024 – 10/01/2024
Number of Samples: 70
Test Method: USEPA Method 1633
Analysis: per- and polyfluoroalkyl substances (PFAS)

Quality Assurance Project Plan: Draft TO 1048 Quality Program Plan, September 2023 (QAPP).

Validation Guidelines: United States Department of Defense (DOD) Environmental Data Quality Workgroup (EDQW), General Validation Guidelines, November 2019; United States Department of Defense Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances analysis by QSM Table B-24, Environmental Data Quality Workgroup, October 18, 2022

Table 1 provides a summary of the major and minor data quality issues identified in this data set. All data are acceptable except those results which have been qualified with “R”, rejected. Data validation qualifiers along with associated descriptions are provided in Table 2. All data qualification related to this group of samples is detailed on the attached sheets.

All data users should note two facts. First, an “R” flag means that the associated value is unusable due to significant quality control (QC) problems, the data is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on any data tables even as a last resort. Second, no analyte concentration, even if it passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

This Clip added by Tige Cunningham of WSP (2/6/25):sample IDs were revised after validation was completed by EDS.

Subject: Loring Sample ID Change Job FC19378

Hi Tige,

I noticed an error going back to the Soil Sampling Work Plan where we created a location ID that was already used in 2023:

	SB06021	LORNG_SB06021_0-1_09252024
	SB06022	LORNG_SB06022_0-1_09262024
	SB06022	LORNG_SB06022_10-12_09262024FD
	SB06022	LORNG_SB06022_10-12_09262024
	SB06022	LORNG_SB06022_5-7_09262024

	SB06025	LORNG_SB06025_0-1_09252024
	SB06026	LORNG_SB06026_0-1_09262024
	SB06026	LORNG_SB06026_10-12_09262024FD
	SB06026	LORNG_SB06026_10-12_09262024
	SB06026	LORNG_SB06026_5-7_09262024

Are you able to check to see if the validation report is complete for these samples and if not, notify the validator of the change? SGS job number for all of the above samples is FC19378.

I can create a revised COC if needed for a revised lab report, and we’ll notify Andrew for any ERPIMS-related changes needed and change the sample ID in the sample tracker with clear comments on what happened.

Thank you,

DATA ASSESSMENT

1. NARRATIVE AND COMPLETENESS REVIEW

The case narrative was reviewed, and the data package was checked for completeness. No discrepancies were noted.

2. SAMPLE DELIVERY AND CONDITION

The sample arrived at the laboratory in acceptable condition. Proper custody was documented.

3. HOLDING TIME

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Proper sample handling and preservation also play a role in the chemical stability of analytes in the sample matrix. If samples are not collected and stored using proper containers and/or preservatives, data may not be valid.

No problems were found for this criterion related to the results reported by the validator.

4. CALIBRATION

Satisfactory instrument calibration is established to ensure that the instrument can produce acceptable quantitative data. An initial calibration demonstrates that the instrument can give acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance. Additionally, a continuing calibration is analyzed at the end of each 12-hour analytical sequence, denoted as a "closing" calibration verification and ascertains acceptable performance at the conclusion of the analytical sequence.

A) Initial Calibration

Percent relative standard deviation (%RSD) is calculated from the initial calibration and is used to indicate stability of a specific compound over the calibration range.

An RSD value outside the initial calibration limit indicates the potential for quantitation errors. For this reason, all positive and non-detected results are qualified as estimated. Severe performance failures (RSD >30%) requires rejection of all results. The following QC criteria have been applied for this project: The %RSD of initial calibration must be <20%.

No problems were found for this criterion.

B) Continuing Calibration

The Percent Recovery (%R) for all target analytes in the continuing calibration must be within 70-130%. All initial calibration verification (ICV) and continuing calibration verification (CCV) %Rs were with acceptance limits with the following exceptions.

No problems were found for this criterion with the following exception. The %Rs for NEtFOSAA was outside of acceptance criteria in the ICV associated with sample LORNG_SB07033_10-12_09252024. The result reported for the impacted analyte in the associated sample has been qualified "UJ" on this basis.

C) Instrument Sensitivity Check

Prior to analysis an instrument sensitivity check (ISC) must be performed. The ISC must be at the limit of quantitation (LOQ). All analyte concentrations must be within ±30%. Note: the laboratory reports refer to the ISC as Low-Concentration Calibration Verification (LCV). The validator has determined that the low level CCV in the laboratory's report is equivalent to the method required ISC.

No problems were found for this criterion with the following exception. The %R for PFDA was outside of acceptance criteria in the ISC associated with sample LORNG_SB07033_10-12_09252024. The result reported for the impacted analyte in the associated sample has been qualified "UJ" on this basis.

5. BLANK CONTAMINATION

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. When an equipment blank, or lab blank has an analyte detection, then all associated field samples are qualified per validation guidance as appropriate.

A) Method blank contamination:

No problems were found for this criterion.

B) Instrument blank contamination:

No problems requiring qualification of sample results were found for this criterion.

C) Field/Equipment blank contamination:

The samples listed in the table below were submitted as equipment blanks in association with soil samples collected in this sampling event. No problems were found for this criterion with the following exceptions.

Equipment Blank	*Associated Samples*	*Positively Detected Analytes*
LORNG_EB100_09242024	*Samples collected on 09/24/2024*	*None*
LORNG_EB101_09252024	*Samples collected on 09/25/2024*	*PFOA, PFOS*
LORNG_EB102_09262024	*Samples collected on 09/26/2024*	*FOSA, NETFOSA, NETFOSE, NMEFOSA, NMEFOSE, PFHPA, PFHXA, PFOA, PFOS*
LORNG_EB103_09272024	*Samples collected on 09/27/2024*	*FOSA, NETFOSA, NETFOSE, PFHPA, PFOA*
LORNG_EB104_09302024	*Samples collected on 09/30/2024*	*FOSA, NETFOSA, NETFOSE, NMEFOSA, NMEFOSE, PFHPA, PFHXA, PFOA, PFOS*

LORNG_EB105_10012024	*Samples collected on 10/01/2024*	*None*
LORNG_EB106_10022024	*Samples collected on 10/02/2024 (none in this SDG)*	*FOSA, PFOS*

Positive results reported for the impacted analytes in the associated samples have been evaluated and qualified as appropriate per validation guidance.
WSP reviewed qualifiers added to soil results by EDS due to low level EB contamination. Region 1 guidance was used and professional judgment was made by WSP to not qualify the detections in the soil samples as not detected (U) from the low level detections reported in the Equipment Blanks. The soil detections for PFOS and/or PFOA were less than the LOQ and were reported by the laboratory as estimated (J). The (J) qualifier was retained during validation and a reason code added of EBL or EBG to alert the end user that the soil result is associated with an equipment blank that had low level detections.

6. EXTRACTED INTERNAL STANDARDS

All samples are spiked with labeled standard compounds prior to sample preparation and analyses to evaluate overall laboratory performance and efficiency of the analytical technique. The reported project samples had observed standard recoveries within the established limits in all cases with the following exceptions.

No problems were found for this criterion.

7. NON-EXTRACTED INTERNAL STANDARDS

Non-extracted internal standard peak areas are used to quantify extracted internal standard recoveries. The reported project samples had non-extracted internal standard area counts within the established limits in all cases with the following exceptions.

No problems were found for this criterion.

8. COMPOUND IDENTIFICATION

The project target analyte compounds are identified on the LC/MS/MS by using the analytes retention time (RT). The retention time of each target analyte should be within ± 0.4 minutes of the predicted retention. Target analyte detections should display a signal-to-noise of ≥ 3:1, have proper peak integration, and display all ions at the correct retention times. Target analyte detections should have passing ion ratios (50 - 150% of theoretical). Ion ratio failures could be caused by matrix interference and/or be the result of the presence of isomers in the sample at different ratios than the ratio of isomers present in the calibration standards.

Ion ratios were verified as part of the Level 2B and Level 4 data validation. No anomalies were identified with the following exceptions.

The transition mass ratios were outside the established ratio limits for PFHxA during the analyses of samples LORNG_SB07030_15-17_09252024 and LORNG_EB102_09262024 indicating some degree of uncertainty in the qualitative identification of the analyte. The impacted results have been qualified "J" on this basis.

The transition mass ratios were outside the established ratio limits for PFHxA, PFNS, and FOSA during the analysis of sample LORNG_SB07030_0-1_09252024 indicating some degree of uncertainty in the qualitative identification of the analytes. The impacted results have been qualified "J" on this basis.

Additional target compound identification criterion was verified as part of the Level 4 data validation. No anomalies were identified.

9. COMPOUND QUANTIFICATION

Target compound quantitation was verified as part of the Level 4 data validation. No anomalies were identified.

Manual integrations were reviewed at the Stage 4 level. No anomalies were identified.

10. MATRIX SPIKE/MATRIX SPIKE DUPLICATE RECOVERY / MATRIX DUPLICATE

Matrix spike/matrix spike duplicate (MS/MSD) data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD data may be used in conjunction with other quality control criteria for additional qualification of data.

Sample LORNG_SB07032_0-1_09252024 was submitted for MS/MSD evaluation in association with this sample delivery group (SDG). Upon evaluation all accuracy and precision indicators were acceptable or did not result in a need to qualify sample results.

Sample LORNG_SB06023_8-10_09262024 was submitted for MS/MSD evaluation in association with this SDG. Upon evaluation all accuracy and precision indicators were acceptable.

Sample LORNG_SB16021_0-1_09262024 was submitted for MS/MSD evaluation in association with this SDG. Upon evaluation all accuracy and precision indicators were acceptable.

Sample LORNG_SB18057_0-1_09262024 was submitted for MS/MSD evaluation in association with this SDG. Upon evaluation all accuracy and precision indicators were acceptable.

Sample LORNG_SB01043_0-1_10012024 was submitted for MS/MSD evaluation in association with this SDG. Upon evaluation all accuracy and precision indicators were acceptable.

11. FIELD DUPLICATES

Field duplicates may be taken and analyzed as an indication of overall precision. These analyses measure both field and laboratory precision. A control limit of ≤ 30% for the Relative Percent Difference (RPD), shall be used when original and duplicate sample values are greater than or equal to the sample specific LOQ. For field duplicate analyses that do not meet the technical criteria, the action was applied to only the parent sample and its duplicate.

Samples LORNG_SB01045_0-1_09302024 and LORNG_SB01045_0-1_09302024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated.

Samples LORNG_SB05040_0-1_09242024 and LORNG_SB05040_0-1_09242024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated.

Samples LORNG_SB06022_10-12_09262024 and LORNG_SB06022_10-12_09262024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated.

Samples LORNG_SB07031_0-1_09252024 and LORNG_SB07031_0-1_09252024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated.

Samples LORNG_SB07034_11-13_09262024 and LORNG_SB07034_11-13_09262024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated.

Samples LORNG_SB16019_0-1_09242024 and LORNG_SB16019_0-1_09242024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated.

Samples LORNG_SB18054_0-1_09262024 and LORNG_SB18054_0-1_09262024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated.

Samples LORNG_SB18056_13-15_09262024 and LORNG_SB18056_13-15_09262024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated.

Samples LORNG_SB20018_7-9_09272024 and LORNG_SB20018_7-9_09272024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated.

12. LABORATORY CONTROL SAMPLES

The Laboratory Control Sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. The LCS results are used to verify that the laboratory can perform the analysis in a clean matrix.

No problems requiring qualification of sample results were found for this criterion.

13. DILUTIONS, RE-EXTRACTIONS & REANALYSIS

Samples may be re-analyzed for dilution, re-extraction and for other QC reasons. In such cases, the best result values are used.

Samples were reanalyzed to confirm results.

14. SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

Overall, the laboratory data generated met the project goals and quality control criteria, with the exceptions identified in this report and as summarized in Table 1.

15. OTHER

Please note sample LORNG_SB20017_13-15_09272024 was submitted for split sample analyses. The sample was also analyzed by Bureau Veritas. The split sample results are located in SDG C4V7278. Adequate precision was demonstrated.

Table 1
Review Elements Summary

	Were acceptance criteria met?		
	Yes	No	
Per-fluorinated Compounds		Major	Minor
Holding Time/Sample Handling	x		
Method Blanks	x		
Instrument Blanks	x		
Field Blanks			x
Calibration Percent Relative Standard Deviation and Percent Difference			x
Instrument Sensitivity Check			x
Extracted Internal Standards	x		
Non-Extracted Internal Standards	x		
Compound Identification			x
Matrix Spike/Matrix Spike Duplicate/Matrix Duplicate	x		
Laboratory Control Sample	x		
Other Quality Control Data out of Specification	x		
Field Duplicate	x		

Major= Major data quality issue identified resulting in rejection of data.
Minor= Minor data quality issue identified resulting in the qualification of data. Data qualification should be used to inform the data users of data limitations.
NA = Not applicable

Table 2
Data Validation Qualifiers

Data Qualifier	Definition
U	The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided.

Data Qualification Reason Codes

Reason Code	Reason Code Description
A	Serial dilution
A1	Ambient Blank
A2	Dissolved concentration > total concentration RPD exceeded criteria.
B	The analyte was found in an associated blank as well as in the sample.
B2	CCB
B3	CCB - Neg
B4	Grinding Blank
C	LCS Recovery
C1	Reference Recovery
C2	Reference Recovery RPD
D	MS RPD
D1	Lab Replicate RPD
D2	No precision available
D3	Field Duplicate RPD
D4	Field Triplicate RSD
D5	Laboratory Triplicate RSD
F	Field Blank
F1	Hydrocarbon pattern does not match standard
G1	Initial Calibration RRF
G2	Initial Calibration RSD/r^2/r
G3	ICV RRF
H1	Test Hold Time
H2	Prep Hold Time
I	Surrogate recovery outside project limits.
J	CRA/CRI Recovery
K	An analyte (non-common laboratory artifact) was detected in the sample at a concentration less than 5X the concentration detected in the associated method blank.
L	Lab Blank
L1	Lab Blank - Neg
LS	Low Level LCS Recovery
M	MS Recovery
M2	Post Spike
N	Blank - No Action
N1	Non-extracted Internal Standard
O	ICS
P	Sample preservation/collection requirement not met.
P1	Column RPD
P2	Improper preparation/extraction
P3	Vial Contamination
P4	Cleanup Standard Recovery
P5	PCDPE interference
P6	Matrix Interference
Q	Encore sample holding time exceeded by more than 2X.
Q1	Material Blank
Q2	Encore sample holding time exceeded by less than 2X.
R	Exceeds LinearCalibration Range
R1	Retention Time/Relative Retention Time not met
R2	Relative Retention Time not met
S	Internal standard

Data Qualification Reason Codes

T	Trip Blank
TI	Tentatively Identified Compound
TR	Trace Level Detect
U	Receipt Temperature
V	Equipment Blank
V1	ICV
V2	CCV
V3	CCV RRF
V4	Sample Receipt Condition
V5	Ending Continuing Calibration Verification
V6	Low Level Calibration Verification
V7	Interference Check Sample A
V8	Interference Check Sample AB
V9	Interference Check Sample A - Negative
W	Column breakdown (pesticides/8270)
X	Raised reporting limit
Y	Cooler temperature greater than 10 degreec C.
Y1	False Positive
Y2	Data rejected due to radiological anomolies
Y3	Non-accredited analyte/compound. Accreditation not offered at time of analyses for the analyte/compound by the stated method and matrix.
Y4	Performance Check - Degradation of DDT
Y5	Extracted Internal Standard
Y6	Analyte not confirmed on second column.
Y7	Signal to Noise Ratio not met
Y8	CCV Frequency not met
Y9	Ion abundance ratios are outside criteria - estimated maximum possible concentration (EMPC) reported
Z	LCS RPD
Z1	Data rejected, more valid data available.
Z2	Detection Level not met uncertainty greater than DL
Z3	Severe negative result.
Z4	MDA Greater than RDL.
Z5	Ion Ratio
Z6	Sample or the associated closing CCV was analyzed past the 12-hour time period from Tune or opening CCV
Z7	Non-accredited analyte/compound
Z8	Low percent solids
Z9	Compound quantitation not verifiable

Module 6; PFAS by QSM Table B-24; October 18, 2022

Validator: GAP

Reviewer: DLW

Date Validated: 01/13/2025

Reviewed: 1/16/25

Project: Loring AFB

SDG: FC19378

LAB: SGS Orlando

Samples Collected: 09/24/2024 – 09/27/2024, and 09/30/2024 – 10/01/2024

70 aqueous

SAMPLE RECEIPT AND CASE NARRATIVE REVIEW

- ✓ Traffic reports, chain-of-custody forms or SDG narrative do not indicate any problems with sample receipt, condition of the samples, analytical problems or special circumstances affecting the quality of the data.
- ✓ AFFF samples are to be shipped in HDPE containers with an unlined cap
- ✓ Shipment temp 0-6°C: recommended to freeze tissue samples upon receipt
- ✓ If temp upon receipt is greater than 6°C J/UJ all

  Received on 10/2 at 4.2 C

HOLDING TIMES

- ✓ Recommended storage temp is ≤ -20°C
- ✓ Per method 1633: aqueous samples may be held in the lab for up to 90 days when stored at recommended temp and protected from light; when stored at 0-6 °C and protected from light samples can be held for up to 28 days (see method for additional details)
- ✓ Per method 1633: solid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C (see method for additional details)
- ✓ Per method 1633: biosolid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C; however, freezing is recommended (see method for additional details)
- ✓ Samples extracts should be stored at 0-4°C protected from light and analyzed within 90 days

- ✓ If hold time is exceeded qualify J/UJ
- ✓ If hold time is grossly exceeded (2X hold time) J/X

244 Table II. Sample Storage and Holding Time Requirements

Matrix Type	Stored at 0 - 6°C, protected from light		Stored at ≤ -20°C, protected from light	
	Holding Time	Caveat	Holding Time	Caveat
Aqueous	28 days	Precursor degradation occurs after 7 days	90 days	None
Solid and Tissue	90 days	Should be prepared as soon as possible if NFDHA is a target analyte	90 days	Should be prepared as soon as possible if NFDHA is a target analyte
Biosolid	90 days	Not recommended due to the production of gases due to microbiological activity	90 days	None

Samples collected 09/24/2024 – 09/27/2024, and 09/30/2024 – 10/01/2024
Extracted 10/15/2024; 10/16/2024; 10/17/2024; 10/21/2024
11/05/2024 REs
Analyzed 11/01/2024 ; 11/06/2024; 11/11/2024; 11/13/2024; 11/12/2024; 11/15/2024

All ok

Extracted Internal STANDARDS (EIS)

- ✓ Added to all QC and field samples
- ✓ Recoveries are within the limits as defined in QAPP; QSM 6.0 specified using lab derived limits with lower limits no less than 20%
- ✓ Detected for analytes qualified using an EIS percent recovery >200% should be qualified J-. Nod-detects should not be qualified.
- ✓ If EIS recovery is <10%; associated detected and non-detects should be qualified X
- ✓ EIS retention times should be within 0.4 minutes of standard; use professional judgment to qualify

EDS rules as Module 6 does not define all situations:

- **For EIS %R >200% J- positive results, no action on non-detects (per module 6)**
- **For EIS %Rs >lab limit J- positive results, no action on non-detects**
- **For EIS %Rs between lab limit; no action (per module 6)**
- **For EIS %Rs lower lab limit but >10%; J+ positive results, UJ non-detects**
- **For EIS %Rs <10% X positive and non-detected (per module 6)**

Per Loring QAPP:

Extracted Internal Standards	Preliminary in-house acceptance criteria of 20-150% to be used until in-house limits are generated and approved for project use. Lower limit of in-house acceptance criteria cannot be <20%

All ok

Non-Extracted Internal STANDARDS (NIS)

- ✓ Used to quantify EIS
- ✓ If low are counts are reported (<30%) detected and non-detected should be qualified X

ok

Laboratory Control Sample (LCS) and Low-Level Laboratory Control Sample (LLLCS)

- ✓ LCMS Lab Control Recovery (Form III), Form I, prep log, run log
- ✓ LCS prepared, extracted, analyzed, and reported once for every 20 field samples of a similar matrix, per SDG.
- ✓ Laboratory Control Samples were analyzed for all the target analytes that the samples are analyzed for.
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150% if lab limits have not been generated.
- ✓ If LCS or LLLCS %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If LCS or LLLCS %R is < lower limit; qualify detected J- and non-detected X

Use lab limits to evaluate per Loring QAPP

OP5882-LLBS	ok
OP5941-LLBS	ok

OP5834-BS	3:3-FTCA ↑ associated with samples 2,3,4,5,6,7,8,9,10,11,12 All ND; no action
OP5869-BS	ok
OP5854-BS	ok
OP5882-BS	ok
OP5941-BS	ok

MS/MSD and Matrix Duplicate

- ✓ LCMS Matrix Spike Recovery (Form III)
- ✓ The Matrix Spike Samples were spiked and analyzed for all the target analytes that the samples are analyzed for (Same analytes as LCS).
- ✓ Per module 6: MS and MSD are applicable where the spike concentration is a least 3 times greater than the native analyte concentration **(3X rule)**
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150%.
- ✓ If MS or MSD %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If MS or MSD %R is < lower limit but >10%; qualify detected J- and non-detected UJ
- ✓ If MS or MSD %R is < 10%; qualify detected J- and non-detected X
- ✓ If MS/MSD RPD is out; qualify detected J and non-detected UJ
- ✓ For matrix duplicate; for concentrations of analytes that are equal to or greater than the LOQ, the RPD must be ≤30%; if out qualified detected J; no action on non-detects

Use lab limits to evaluate per Loring QAPP; RPD 30%

BLANKS

- ✓ LCMS Method Blank Summary (Form IV), method blank Form I, prep log, run log
- ✓ Frequency of Analysis: method blank has been analyzed for every 20 (or less) samples of similar matrix or concentration or each extraction batch.
- ✓ Continuing Calibration Blanks (Form I) and run log
- ✓ Frequency of Analysis: immediately following the highest standard analyzed and daily prior to sample analysis.
- ✓ Field/rinse blanks are non-detected for all analytes

Per Loring QAPP:

- Sample results with associated blank contamination will be qualified as follows:

Method Type	Blank Result	Sample Result	Action
PFAS, Organics, and Wet Chemistry	< LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ	≤ 2x blank: Qualify non-detect (U) at reported result. ≥ 2x-5x blank: J+
	≥ LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ and < blank result	Qualify non-detect (U) at reported result
		≥ LOQ and ≥ blank result	≤ 2x blank: Qualify non-detect (U) at reported result. 2x-5x blank: J+
Metals	≤ LOQ	≤ LOD and < 5x blank result	Qualify non-detect (U) at LOD.
		LOD < Sample Result ≤ LOQ and < 5x blank result	Qualify non-detect (U) at reported result.
		> LOQ	< 5x blank result; qualify estimated (J+)
	> LOQ	≤ LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result ≤ LOQ	Qualify non-detect (U) at reported result
		> LOQ but < 5x blank result	Qualify estimated (J+)
		≥ 5x blank result	No qualification

ICBs/CCBs see below

MASS CALIBRATION

- ✓ Verified to be ±0.2 amu of true value

Bile Salt Interference Check and Qualitative Identification Standard

- ✓ Provided and requirements met
- ✓ 1.0 minute between RTs of bile salt and PFOS
- ✓ Qualitative Identification Standard to confirm RTs

All acceptable

ICAL

- ✓ Initial Calibration Data Curve Evaluation (Form VI) and run log
- ✓ Lowest standard should be at or below LOQ
- ✓ %RSD <20% or relative standard error (RSE) <20%
- ✓ If %RSD > 20% but <30% J/UJ
- ✓ If %RSD >30% J/R

See below

INSTRUMENT PERFORMANCE CHECK PER DRAFT METHOD 1633

- ✓ Concentration equal to LOQ
- ✓ Analyzed after ICAL and daily before samples
- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

CCAL

- ✓ Continuing Calibration Data (Form VII) and run log
- ✓ Continuing calibration standard analyzed on each working day, prior to sample analyses.
- ✓ Calibration verification/continuing calibration standard been analyzed after every 10 samples and at the end of each analytical sequence
- ✓ If not analyzed all associated data should be qualified X

- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

EXECUTIVE NARRATIVE

Sample Delivery Group: FC19573
Laboratory: SGS Orlando
Site: Loring AFB
Sampling dates: 10/08/2024; 10/10/2024 – 10/11/2024; and 10/14/2024
Number of Samples: 46
Test Method: USEPA Method 1633
Analysis: per- and polyfluoroalkyl substances (PFAS)

Quality Assurance Project Plan: Draft TO 1048 Quality Program Plan, September 2023 (QAPP).

Validation Guidelines: United States Department of Defense (DOD) Environmental Data Quality Workgroup (EDQW), General Validation Guidelines, November 2019; United States Department of Defense Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances analysis by QSM Table B-24, Environmental Data Quality Workgroup, October 18, 2022

Table 1 provides a summary of the major and minor data quality issues identified in this data set. All data are acceptable except those results which have been qualified with “R”, rejected. Data validation qualifiers along with associated descriptions are provided in Table 2. All data qualification related to this group of samples is detailed on the attached sheets.

All data users should note two facts. First, an “R” flag means that the associated value is unusable due to significant quality control (QC) problems, the data is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on any data tables even as a last resort. Second, no analyte concentration, even if it passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

DATA ASSESSMENT

1. NARRATIVE AND COMPLETENESS REVIEW

The case narrative was reviewed, and the data package was checked for completeness. No discrepancies were noted.

2. SAMPLE DELIVERY AND CONDITION

The sample arrived at the laboratory in acceptable condition. Proper custody was documented.

3. HOLDING TIME

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Proper sample handling and preservation also play a role in the chemical stability of analytes in the sample matrix. If samples are not collected and stored using proper containers and/or preservatives, data may not be valid.

No problems were found for this criterion with the following exceptions.

Samples LORNG_BW05012D_10142024, LORNG_BW05012I_10142024, and LORNG_MMW0004_10102024 were re-extracted outside of the required holding time. The results reported from the re-extraction have been qualified "UJ" on this basis.

4. CALIBRATION

Satisfactory instrument calibration is established to ensure that the instrument can produce acceptable quantitative data. An initial calibration demonstrates that the instrument can give acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance. Additionally, a continuing calibration is analyzed at the end of each 12-hour analytical sequence, denoted as a "closing" calibration verification and ascertains acceptable performance at the conclusion of the analytical sequence.

A) Initial Calibration

Percent relative standard deviation (%RSD) is calculated from the initial calibration and is used to indicate stability of a specific compound over the calibration range.

An RSD value outside the initial calibration limit indicates the potential for quantitation errors. For this reason, all positive and non-detected results are qualified as estimated. Severe performance failures (RSD >30%) requires rejection of all results. The following QC criteria have been applied for this project: The %RSD of initial calibration must be <20%.

No problems were found for this criterion.

B) Continuing Calibration

The Percent Recovery (%R) for all target analytes in the continuing calibration must be within 70-130%. All initial calibration verification (ICV) and continuing calibration verification (CCV) %Rs were with acceptance limits with the following exceptions.

No problems were found for this criterion with the following exceptions.

The observed %R for PFPeS was outside of acceptance criteria for an ICV associated with the samples listed in the table below. The results reported for the impacted analyte in the associated samples have been qualified "J" or "UJ" as appropriate on this basis.

LORNG_EB023_10102024	*LORNG_BW06005_10112024*
LORNG_FMW3410_10102024FD	*LORNG_JMW7916_10102024*
LORNG_FMW3410_10102024	*LORNG_AA20MW-01_10112024*

LORNG_MMW0020_60_10102024	*LORNG_UNK-TC01_10102024*
LORNG_MMW0020_150_10102024	*LORNG_JBW7327_265_10102024*
LORNG_AA11MW-01_10112024	*LORNG_BW06005_10112024*

C) Instrument Sensitivity Check

Prior to analysis an instrument sensitivity check (ISC) must be performed. The ISC must be at the limit of quantitation (LOQ). All analyte concentrations must be within ±30%. Note: the laboratory reports refer to the ISC as Low-Concentration Calibration Verification (LCV). The validator has determined that the low level CCV in the laboratory's report is equivalent to the method required ISC.

No problems were found for this criterion with the following exceptions.

The observed %Rs for PFDA were outside of acceptance criteria for the ISCs associated with the samples listed in the table below. The results reported for the impacted analyte in the associated samples have been qualified "UJ" on this basis.

LORNG_EB023_10102024	*LORNG_JMW7916_10102024*
LORNG_FMW3410_10102024FD	*LORNG_JPZ0342_10102024*
LORNG_FMW3410_10102024	*LORNG_UNK-TC01_10102024*
LORNG_AA11MW-02_10112024	*LORNG_JBW7327_265_10102024*
LORNG_MMW0020_60_10102024	*LORNG_BW05012S_10142024*
LORNG_MMW0020_150_10102024	*LORNG_BW07003_10142024*

LORNG_MMW0004_10102024	*LORNG_BW05012I_10142024*
LORNG_BW05012D_10142024	

The observed %Rs for 3:3FTCA and PFMPA were outside of acceptance criteria for the ISC associated with samples LORNG_BW07003_10142024, LORNG_JMW0683_101020 24, and LORNG_AA20MW-01_10112024. The results reported for the impacted analytes in the associated samples have been qualified "UJ" on this basis.

5. BLANK CONTAMINATION

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. When an equipment blank, or lab blank has an analyte detection, then all associated field samples are qualified per validation guidance as appropriate.

A) Method blank contamination:

No problems were found for this criterion.

B) Instrument blank contamination:

No problems requiring qualification of sample results were found for this criterion.

C) Field/Equipment blank contamination:

Sample LORNG_EB021_10102024 was submitted as an equipment blank in association with samples LORNG_UNK-TC01_10102024, LORNG_BW18010_10102024, and LORNG_MMW0004_10102024. No problems were found for this criterion.

Sample LORNG_EB022_10102024 was submitted as an equipment blank in association with the samples listed in the table below. No problems were found for this criterion.

LORNG_JBW7327_45_10102024	*LORNG_JBW7327_158_10102024*
LORNG_JBW7327_45_10102024FD	*LORNG_JBW7327_265_10102024*

Sample LORNG_EB023_10102024 was submitted as an equipment blank in association with samples LORNG_BW13003_10102024 and LORNG_BW13002_10102024. No problems were found for this criterion.

Sample LORNG_EB024_10102024 was submitted as an equipment blank in association with the samples listed in the table below. No problems were found for this criterion.

LORNG_CBW02_10102024	*LORNG_FMW3410_10102024FD*
LORNG_FMW3410_10102024	*LORNG_OW24001_10102024*

Sample LORNG_EB025_10142024 was submitted as an equipment blank in association with samples LORNG_BW05012I_10142024 and LORNG_BW05012D_10142024. No problems were found for this criterion.

6. EXTRACTED INTERNAL STANDARDS

All samples are spiked with labeled standard compounds prior to sample preparation and analyses to evaluate overall laboratory performance and efficiency of the analytical technique. The reported project samples had observed standard recoveries within the established limits in all cases with the following exceptions.

No problems requiring result qualification were found for this criterion with the following exceptions.

The observed isotope dilution standard recoveries for 13C5-PFHxA and 13C3-HFPO-DA were less than the lowest acceptance limit during the analysis of sample LORNG_BW05012D_10142024. The results reported for the associated target analytes in the impacted sample have been qualified "UJ" on this basis.

The observed isotope dilution standard recoveries for 13C5-PFHxA, 13C3-PFBS, and 13C3-HFPO-DA were less than the lowest acceptance limit during the analysis of sample LORNG_BW05012I_10142024. The results reported for the associated target analytes in the impacted sample have been qualified "UJ" on this basis.

The observed isotope dilution standard recovery for 13C5-PFPeA was less than the lowest acceptance during the analysis of sample LORNG_MMW0004_10102024. The results reported for the associated target analytes in the impacted sample have been qualified "UJ" on this basis.

7. NON-EXTRACTED INTERNAL STANDARDS

Non-extracted internal standard peak areas are used to quantify extracted internal standard recoveries. The reported project samples had non-extracted internal standard area counts within the established limits in all cases with the following exceptions.

No problems were found for this criterion.

8. COMPOUND IDENTIFICATION

The project target analyte compounds are identified on the LC/MS/MS by using the analytes retention time (RT). The retention time of each target analyte should be within ± 0.4 minutes of the predicted retention. Target analyte detections should display a signal-to-noise of ≥ 3:1, have proper peak integration, and display all ions at the correct retention times.

Target analyte detections should have passing ion ratios (50 - 150% of theoretical). Ion ratio failures could be caused by matrix interference and/or be the result of the presence of isomers in the sample at different ratios than the ratio of isomers present in the calibration standards.

Ion ratios were verified as part of the Level 2B data validation. No anomalies were identified with the following exception.

The transition mass ratios were outside the established ratio limits for PFNS during the analyses of the samples listed in the table below indicating some degree of uncertainty in the qualitative identification of the analyte. The impacted results have been qualified "J" on this basis.

LORNG_8711-MW07_10112024	*LORNG_MMW8015_10112024*
LORNG_BW12005_10112024	*LORNG_AA11MW-01_10112024*
LORNG_JBW8003B_10112024	*LORNG_AA20MW-01_10112024*

The transition mass ratio was outside the established ratio limits for PFHxA during the analysis of sample LORNG_BW13002_10102024 indicating some degree of uncertainty in the qualitative identification of the analyte. The impacted result has been qualified "J" on this basis.

The transition mass ratio was outside the established ratio limits for PFDoDA during the analysis of sample LORNG_MMW0004_10102024 indicating some degree of uncertainty in the qualitative identification of the analyte. The impacted result has been qualified "J" on this basis.

The transition mass ratios were outside the established ratio limits for FOSA during the analyses of samples LORNG_BW07003_10142024 and LORNG_OW07003_10112024 indicating some degree of uncertainty in the qualitative identification of the analyte. The impacted results have been qualified "J" on this basis.

Additional target compound identification criterion was not verified as part of the Level 2B data validation.

9. COMPOUND QUANTIFICATION

Target compound quantitation was not verified as part of the Level 2B data validation.

Manual integrations were not reviewed at the Stage 2B level.

10. MATRIX SPIKE/MATRIX SPIKE DUPLICATE RECOVERY / MATRIX DUPLICATE

Matrix spike/matrix spike duplicate (MS/MSD) data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD data may be used in conjunction with other quality control criteria for additional qualification of data.

Sample LORNG_FMW3410_10102024 was submitted for MS evaluation in association with this sample delivery group (SDG). Upon evaluation all accuracy indicators were acceptable with the following exception. The observed recovery for PFDA was less than the lowest acceptable limit. The result reported for the impacted analyte in the parent sample has been qualified "UJ" on this basis.

Sample LORNG_JBW8003B_10112024 was submitted for MS/MSD evaluation in association with this SDG. Upon evaluation all accuracy and precision indicators were acceptable or did not result in a need to qualify sample results.

Sample LORNG_FMW3410_10102024FD was submitted for matrix duplicate evaluation in association with this SDG. Adequate laboratory precision was demonstrated.

11. FIELD DUPLICATES

Field duplicates may be taken and analyzed as an indication of overall precision. These analyses measure both field and laboratory precision. A control limit of ≤ 30% for the Relative Percent Difference (RPD), shall be used when original and duplicate sample values are greater than or equal to the sample specific LOQ. For field duplicate analyses that do not meet the technical criteria, the action was applied to only the parent sample and its duplicate.

Samples LORNG_AA07MW-02_10102024 and LORNG_AA07MW-02_10102024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation adequate field precision was demonstrated.

Samples LORNG_FMW3410_10102024 and LORNG_FMW3410_10102024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation adequate field precision was demonstrated.

Samples LORNG_JBW7327_45_10102024 and LORNG_JBW7327_45_10102024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation adequate field precision was demonstrated.

Samples LORNG_OW05003_10112024 and LORNG_OW05003_10112024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation adequate field precision was demonstrated.

Samples LORNG_USMW025_10112024 and LORNG_USMW025_10112024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation adequate field precision was demonstrated.

12. LABORATORY CONTROL SAMPLES

The Laboratory Control Sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. The LCS results are used to verify that the laboratory can perform the analysis in a clean matrix.

No problems were found for this criterion with the following exceptions. The observed recoveries for FPDA were less than the lowest acceptance limit in the LCS and low level LCS (LLLCS) associated with the samples listed in the table below. The results reported for the impacted analyte in the associated samples have been qualified "UJ" on this basis.

LORNG_EB023_10102024	*LORNG_JMW7916_10102024*
LORNG_FMW3410_10102024FD	*LORNG_AA20MW-01_10112024*
LORNG_FMW3410_10102024	*LORNG_MMW0004_10102024*
LORNG_AA11MW-02_10112024	*LORNG_JPZ0342_10102024*
LORNG_BW07003_10142024	*LORNG_UNK-TC01_10102024*
LORNG_JMW0683_10102024	*LORNG_JBW7327_265_10102024*
LORNG_MMW0020_60_10102024	*LORNG_BW05012D_10142024*

LORNG_AA11MW-01_10112024	*LORNG_BW05012S_10142024*
LORNG_BW06005_10112024	

13. DILUTIONS, RE-EXTRACTIONS & REANALYSIS

Samples may be re-analyzed for dilution, re-extraction and for other QC reasons. In such cases, the best result values are used.

Samples were re-extracted and/or reanalyzed as necessary to confirm results and/or bring analyte concentrations into the instrument's linear calibration range.

14. SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

Overall, the laboratory data generated met the project goals and quality control criteria, with the exceptions identified in this report and as summarized in Table 1.

15. OTHER

Please note sample LORNG_JBW7326A_10082024SPLIT was submitted for split sample analyses. The split sample results are located in SDG C4V9358. Adequate precision was demonstrated.

Table 1
Review Elements Summary

	Were acceptance criteria met?		
	Yes	No	
Per-fluorinated Compounds		Major	Minor
Holding Time/Sample Handling			x
Method Blanks	x		
Instrument Blanks	x		
Field Blanks	x		
Calibration Percent Relative Standard Deviation and Percent Difference			x
Instrument Sensitivity Check			x
Extracted Internal Standards			x
Non-Extracted Internal Standards	x		
Compound Identification			x
Matrix Spike/Matrix Spike Duplicate/Matrix Duplicate			x
Laboratory Control Sample			x
Other Quality Control Data out of Specification	x		
Field Duplicate	x		

Major= Major data quality issue identified resulting in rejection of data.
Minor= Minor data quality issue identified resulting in the qualification of data. Data qualification should be used to inform the data users of data limitations.
NA = Not applicable

Table 2
Data Validation Qualifiers

Data Qualifier	Definition
U	**The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.**
J	**The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.**
J+	**The result is an estimated quantity, but the result may be biased high.**
J-	**The result is an estimated quantity, but the result may be biased low.**
UJ	**The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.**
R	**The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided.**

Table 3
PFAS Definitions Table

NO	CAS #	Target Name	Target Abbreviation
1	763051-92-9	11-Chloroeicosafluoro-3-oxaundecane-1-sulfonic acid	11Cl-PF3OUdS
2	914637-49-3	2H,2H,3H,3H-Perfluorooctanoic acid	5:3FTCA

Data Validation Worksheet

DATA VALIDATION PFAS

Module 6; PFAS by QSM Table B-24; October 18, 2022

Validator: GAP

Reviewer: DM

Date Validated: 02/03/2025

Reviewed: 2/7/2025

Project: Loring AFB

SDG: FC19573

LAB: SGS Orlando

Samples Collected: 10/08/2024; 10/10/2024 – 10/11/2024; and 10/14/2024

46 aqueous

SAMPLE RECEIPT AND CASE NARRATIVE REVIEW

- ✓ Traffic reports, chain-of-custody forms or SDG narrative do not indicate any problems with sample receipt, condition of the samples, analytical problems or special circumstances affecting the quality of the data.
- ✓ AFFF samples are to be shipped in HDPE containers with an unlined cap
- ✓ Shipment temp 0-6°C: recommended to freeze tissue samples upon receipt
- ✓ If temp upon receipt is greater than 6°C J/UJ all

  Received on 10/16 at <6C

HOLDING TIMES

- ✓ Recommended storage temp is ≤ -20°C
- ✓ Per method 1633: aqueous samples may be held in the lab for up to 90 days when stored at recommended temp and protected from light; when stored at 0-6 °C and protected from light samples can be held for up to 28 days (see method for additional details)
- ✓ Per method 1633: solid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C (see method for additional details)
- ✓ Per method 1633: biosolid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C; however, freezing is recommended (see method for additional details)
- ✓ Samples extracts should be stored at 0-4°C protected from light and analyzed within 90 days

- ✓ If hold time is exceeded qualify J/UJ
- ✓ If hold time is grossly exceeded (2X hold time) J/X

244 Table II. Sample Storage and Holding Time Requirements

Matrix Type	Stored at 0 - 6°C, protected from light		Stored at ≤ -20°C, protected from light	
	Holding Time	Caveat	Holding Time	Caveat
Aqueous	28 days	Precursor degradation occurs after 7 days	90 days	None
Solid and Tissue	90 days	Should be prepared as soon as possible if NFDHA is a target analyte	90 days	Should be prepared as soon as possible if NFDHA is a target analyte
Biosolid	90 days	Not recommended due to the production of gases due to microbiological activity	90 days	None

Samples collected 10/08/2024; 10/10/2024 – 10/11/2024; and 10/14/2024
Initial Extracted 10/31/2024
Analyzed 11/21/2024; 11/22/2024 ok

Re-extractions	reanalyses	
FC19573-26: 11/26/2024	11/28/2024	extracted past hold time (17 days past)
LORNG_BW05012D_10142024	flag reported analytes UJ	
FC19573-27: 11/26/2024	11/28/2024	extracted past hold time (17 days past)
LORNG_BW05012I_10142024	flag reported analytes UJ	
FC19573-36: 11/26/2024	11/28/2024	extracted past hold time (21 days past)
LORNG_MMW0004_10102024	flag reported analytes UJ	

Extracted Internal STANDARDS (EIS)

- ✓ Added to all QC and field samples
- ✓ Recoveries are within the limits as defined in QAPP; QSM 6.0 specified using lab derived limits with lower limits no less than 20%

- ✓ Detected for analytes qualified using an EIS percent recovery >200% should be qualified J-. Nod-detects should not be qualified.
- ✓ If EIS recovery is <10%; associated detected and non-detects should be qualified X
- ✓ EIS retention times should be within 0.4 minutes of standard; use professional judgment to qualify

EDS rules as Module 6 does not define all situations:

- **For EIS %R >200% J- positive results, no action on non-detects (per module 6)**
- **For EIS %Rs >lab limit J- positive results, no action on non-detects**
- **For EIS %Rs between lab limit; no action (per module 6)**
- **For EIS %Rs lower lab limit but >10%; J+ positive results, UJ non-detects**
- **For EIS %Rs <10% X positive and non-detected (per module 6)**

Per Loring QAPP:

Extracted Internal Standards	Preliminary in-house acceptance criteria of 20-150% to be used until in-house limits are generated and approved for project use. Lower limit of in-house acceptance criteria cannot be <20%

Laboratory Control Sample (LCS) and Low-Level Laboratory Control Sample (LLLCS)

- ✓ LCMS Lab Control Recovery (Form III), Form I, prep log, run log
- ✓ LCS prepared, extracted, analyzed, and reported once for every 20 field samples of a similar matrix, per SDG.
- ✓ Laboratory Control Samples were analyzed for all the target analytes that the samples are analyzed for.
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150% if lab limits have not been generated.
- ✓ If LCS or LLLCS %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If LCS or LLLCS %R is < lower limit; qualify detected J- and non-detected X

Use lab limits to evaluate per Loring QAPP

MS/MSD and Matrix Duplicate

- ✓ LCMS Matrix Spike Recovery (Form III)
- ✓ The Matrix Spike Samples were spiked and analyzed for all the target analytes that the samples are analyzed for (Same analytes as LCS).
- ✓ Per module 6: MS and MSD are applicable where the spike concentration is a least 3 times greater than the native analyte concentration **(3X rule)**
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150%.
- ✓ If MS or MSD %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If MS or MSD %R is < lower limit but >10%; qualify detected J- and non-detected UJ
- ✓ If MS or MSD %R is < 10%; qualify detected J- and non-detected X
- ✓ If MS/MSD RPD is out; qualify detected J and non-detected UJ
- ✓ For matrix duplicate; for concentrations of analytes that are equal to or greater than the LOQ, the RPD must be ≤30%; if out qualified detected J; no action on non-detects

Use lab limits to evaluate per Loring QAPP; RPD 30%

BLANKS

- ✓ LCMS Method Blank Summary (Form IV), method blank Form I, prep log, run log
- ✓ Frequency of Analysis: method blank has been analyzed for every 20 (or less) samples of similar matrix or concentration or each extraction batch.
- ✓ Continuing Calibration Blanks (Form I) and run log
- ✓ Frequency of Analysis: immediately following the highest standard analyzed and daily prior to sample analysis.
- ✓ Field/rinse blanks are non-detected for all analytes

Per Loring QAPP:

- Sample results with associated blank contamination will be qualified as follows:

Method Type	Blank Result	Sample Result	Action
PFAS, Organics, and Wet Chemistry	< LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ	≤ 2x blank: Qualify non-detect (U) at reported result. ≥ 2x-5x blank: J+
	≥ LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ and < blank result	Qualify non-detect (U) at reported result
		≥ LOQ and ≥ blank result	≤ 2x blank: Qualify non-detect (U) at reported result. 2x-5x blank: J+
Metals	≤ LOQ	≤ LOD and < 5x blank result	Qualify non-detect (U) at LOD.
		LOD < Sample Result ≤ LOQ and < 5x blank result	Qualify non-detect (U) at reported result.
		> LOQ	< 5x blank result; qualify estimated (J+)
	> LOQ	≤ LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result ≤ LOQ	Qualify non-detect (U) at reported result
		> LOQ but < 5x blank result	Qualify estimated (J+)
		≥ 5x blank result	No qualification

ICBs/CCBs see below

MASS CALIBRATION

- ✓ Verified to be ±0.2 amu of true value

Bile Salt Interference Check and Qualitative Identification Standard

- ✓ Provided and requirements met
- ✓ 1.0 minute between RTs of bile salt and PFOS
- ✓ Qualitative Identification Standard to confirm RTs

All acceptable

ICAL

- ✓ Initial Calibration Data Curve Evaluation (Form VI) and run log
- ✓ Lowest standard should be at or below LOQ
- ✓ %RSD <20% or relative standard error (RSE) <20%
- ✓ If %RSD > 20% but <30% J/UJ
- ✓ If %RSD >30% J/R

See below

INSTRUMENT PERFORMANCE CHECK PER DRAFT METHOD 1633

- ✓ Concentration equal to LOQ
- ✓ Analyzed after ICAL and daily before samples
- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

CCAL

- ✓ Continuing Calibration Data (Form VII) and run log
- ✓ Continuing calibration standard analyzed on each working day, prior to sample analyses.
- ✓ Calibration verification/continuing calibration standard been analyzed after every 10 samples and at the end of each analytical sequence
- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

Use IAG reason code

FC19573-10	PFPeA	did not flag; see below
FC19573-34	PFPeA	did not flag; see below

Instruments 3T and 8Q show secondary ions for PFBA and PFPeA while instrument 7Q does not

Per method 1633:

> The total response of all isomers (branched and linear) in the quantitative standards must be used to define the IAR. In samples, the total response should include only the branched isomer peaks that have been identified in either the quantitative or qualitative standard (see Section 7.3 regarding records of traceability of all standards). If standards (either quantitative or qualitative) are not available for purchase, only the linear isomer can be identified and quantitated in samples. The ratio requirement does not apply to PFBA, PFPeA, NMeFOSE, NEtFOSE, PFMPA, or PFMBA because secondary transitions (Q2) for these analytes are either not detectable or have inadequate S/N to be reliable for routine use in an ion ratio calculation.

FIELD DUPLICATES

- ✓ Use QAPP defined criteria
- ✓ If outside acceptance criteria qualify J/UJ (MODULE FLAGS NONDETECTS TOO)

Loring AFB QAPP for aqueous and solid samples:

Field Duplicate	≤30% RPD or the absolute difference between analyte concentrations <LOQ

ENVIRONMENTAL DATA SERVICES, LTD.

EXECUTIVE NARRATIVE

Sample Delivery Group: FC19671
Laboratory: SGS Orlando
Site: Loring AFB
Sampling dates: 10/15/2024 – 10/16/2024
Number of Samples: 37
Test Method: USEPA Method 1633
Analysis: per- and polyfluoroalkyl substances (PFAS)

Quality Assurance Project Plan: Draft TO 1048 Quality Program Plan, September 2023 (QAPP).

Validation Guidelines: United States Department of Defense (DOD) Environmental Data Quality Workgroup (EDQW), General Validation Guidelines, November 2019; United States Department of Defense Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances analysis by QSM Table B-24, Environmental Data Quality Workgroup, October 18, 2022

Table 1 provides a summary of the major and minor data quality issues identified in this data set. All data are acceptable except those results which have been qualified with “R”, rejected. Data validation qualifiers along with associated descriptions are provided in Table 2. All data qualification related to this group of samples is detailed on the attached sheets.

All data users should note two facts. First, an “R” flag means that the associated value is unusable due to significant quality control (QC) problems, the data is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on any data tables even as a last resort. Second, no analyte concentration, even if it passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

DATA ASSESSMENT

1. NARRATIVE AND COMPLETENESS REVIEW

The case narrative was reviewed, and the data package was checked for completeness. No discrepancies were noted.

2. SAMPLE DELIVERY AND CONDITION

The sample arrived at the laboratory in acceptable condition. Proper custody was documented.

3. HOLDING TIME

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Proper sample handling and preservation also play a role in the chemical stability of analytes in the sample matrix. If samples are not collected and stored using proper containers and/or preservatives, data may not be valid.

No problems were found for this criterion.

4. CALIBRATION

Satisfactory instrument calibration is established to ensure that the instrument can produce acceptable quantitative data. An initial calibration demonstrates that the instrument can give acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance. Additionally, a continuing calibration is analyzed at the end of each 12-hour analytical sequence, denoted as a "closing" calibration verification and ascertains acceptable performance at the conclusion of the analytical sequence.

A) Initial Calibration

Percent relative standard deviation (%RSD) is calculated from the initial calibration and is used to indicate stability of a specific compound over the calibration range.

An RSD value outside the initial calibration limit indicates the potential for quantitation errors. For this reason, all positive and non-detected results are qualified as estimated. Severe performance failures (RSD >30%) requires rejection of all results. The following QC criteria have been applied for this project: The %RSD of initial calibration must be <20%.

No problems were found for this criterion.

B) Continuing Calibration

The Percent Recovery (%R) for all target analytes in the continuing calibration must be within 70-130%. All initial calibration verification (ICV) and continuing calibration verification (CCV) %Rs were with acceptance limits with the following exceptions.

No problems were found for this criterion with the following exceptions.

The observed %R for 8:2 FTS was outside of acceptance criteria for a CCV associated with sample LORNG_AA20MW-02_10152024. The result reported for the impacted analyte in the associated sample has been qualified "UJ" on this basis.

C) Instrument Sensitivity Check

Prior to analysis an instrument sensitivity check (ISC) must be performed. The ISC must be at the limit of quantitation (LOQ). All analyte concentrations must be within ±30%. Note: the laboratory reports refer to the ISC as Low-Concentration Calibration Verification (LCV). The validator has determined that the low level CCV in the laboratory's report is equivalent to the method required ISC.

No problems were found for this criterion.

5. BLANK CONTAMINATION

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. When an equipment blank, or lab blank has an analyte detection, then all associated field samples are qualified per validation guidance as appropriate.

A) Method blank contamination:

No problems were found for this criterion.

B) Instrument blank contamination:

No problems requiring qualification of sample results were found for this criterion.

C) Field/Equipment blank contamination:

Sample LORNG_EB026_10152024 was submitted as an equipment blank in association with samples LORNG_JMW0941_10152024 and LORNG_JMW0980_10152024. No problems were found for this criterion with the following exceptions. FOSA, PFOA and PFOS were positively identified. Positive sample results reported for the impacted analytes in the associated samples have been evaluated and qualified as appropriate per validation guidance.

Sample EB027_10152024 was submitted as an equipment blank in association with sample LORNG_JBW7316_10152024. No problems were found for this criterion.

Sample LORNG_EB028_10152024 was submitted as an equipment blank in association with samples LORNG_JMW0882_10152024 and LORNG_JMW0882_10152024FD. No problems were found for this criterion with the following exceptions. The analytes listed in the table below were positively identified. Positive sample results reported for the impacted analytes in the associated samples have been evaluated and qualified as appropriate per validation guidance.

FOSA	*NETFOSAA*	*NETFOSE*	*NMEFOSE*

PFHpA	*PFOA*	*PFOS*	

Sample LORNG_EB029_10152024 was submitted as an equipment blank in association with samples LORNG_BW10008_10152024 and LORNG_BW18008_10152024. No problems were found for this criterion.

Sample EB030_10162024 was submitted as an equipment blank in association with samples LORNG_BW08003_10162024 and LORNG_JBW7341B_10162024. No problems were found for this criterion.

Sample LORNG_EB031_10162024 was submitted as an equipment blank in association with the samples listed in the table below. No problems were found for this criterion.

LORNG_JMW0880_10162024	*LORNG_BW01008_10162024*
LORNG_JMW0681_10162024	*LORNG_BW01008_10162024FD*
LORNG_JBW7350_10162024	

Sample LORNG_EB032_10162024 was submitted as an equipment blank in association with samples LORNG_BW17006_10162024, LORNG_BW18004_10162024, and LORNG_OW20007_10162024. No problems were found for this criterion.

6. EXTRACTED INTERNAL STANDARDS

All samples are spiked with labeled standard compounds prior to sample preparation and analyses to evaluate overall laboratory performance and efficiency of the analytical technique. The reported project samples had observed standard recoveries within the established limits in all cases with the following exceptions.

No problems requiring result qualification were found for this criterion.

7. NON-EXTRACTED INTERNAL STANDARDS

Non-extracted internal standard peak areas are used to quantify extracted internal standard recoveries. The reported project samples had non-extracted internal standard area counts within the established limits in all cases with the following exceptions.

No problems were found for this criterion.

8. COMPOUND IDENTIFICATION

The project target analyte compounds are identified on the LC/MS/MS by using the analytes retention time (RT). The retention time of each target analyte should be within ± 0.4 minutes of the predicted retention. Target analyte detections should display a signal-to-noise of ≥ 3:1, have proper peak integration, and display all ions at the correct retention times.

Target analyte detections should have passing ion ratios (50 - 150% of theoretical). Ion ratio failures could be caused by matrix interference and/or be the result of the presence of isomers in the sample at different ratios than the ratio of isomers present in the calibration standards.

Ion ratios were verified as part of the Level 2B data validation. No anomalies were identified with the following exception.

The transition mass ratio was outside the established ratio limits for FOSA during the analysis of sample LORNG_EB026_10152024 indicating some degree of uncertainty in the qualitative identification of the analyte. The impacted result has been qualified "J" on this basis.

The transition mass ratios were outside the established ratio limits for PFNS during the analyses of samples LORNG_AA07MW-01_10152024 and LORNG_OW01002_10162024 indicating some degree of uncertainty in the qualitative identification of the analyte. The impacted results have been qualified "J" on this basis.

Additional target compound identification criterion was not verified as part of the Level 2B data validation.

9. COMPOUND QUANTIFICATION

Target compound quantitation was not verified as part of the Level 2B data validation.

Manual integrations were not reviewed at the Stage 2B level.

10. MATRIX SPIKE/MATRIX SPIKE DUPLICATE RECOVERY / MATRIX DUPLICATE

Matrix spike/matrix spike duplicate (MS/MSD) data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD data may be used in conjunction with other quality control criteria for additional qualification of data.

Sample LORNG_BW08003_10162024 was submitted for MS evaluation in association with this sample delivery group (SDG). Upon evaluation all accuracy indicators were acceptable.

Sample LORNG_BW01008_10162024 was submitted for MS/MSD evaluation in association with this SDG. Upon evaluation all accuracy and precision indicators were acceptable.

Sample LORNG_BW09001_10162024 was submitted for matrix duplicate evaluation in association with this SDG. Adequate laboratory precision was demonstrated.

11. FIELD DUPLICATES

Field duplicates may be taken and analyzed as an indication of overall precision. These analyses measure both field and laboratory precision. A control limit of ≤ 30% for the Relative Percent Difference (RPD), shall be used when original and duplicate sample values are greater than or equal to the sample specific LOQ. For field duplicate analyses that do not meet the technical criteria, the action was applied to only the parent sample and its duplicate.

Samples LORNG_AA20MW-02_10152024 and LORNG_AA20MW-02_10152024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation adequate field precision was demonstrated.

Samples LORNG_BW01008_10162024 and LORNG_BW01008_10162024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation adequate field precision was demonstrated.

Samples LORNG_JMW0882_10152024 and LORNG_JMW0882_10152024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation adequate field precision was demonstrated.

12. LABORATORY CONTROL SAMPLES

The Laboratory Control Sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. The LCS results are used to verify that the laboratory can perform the analysis in a clean matrix.

No problems were found for this criterion.

13. DILUTIONS, RE-EXTRACTIONS & REANALYSIS

Samples may be re-analyzed for dilution, re-extraction and for other QC reasons. In such cases, the best result values are used.

Samples were re-extracted and/or reanalyzed as necessary to confirm results or bring analyte concentration into the instrument's linear calibration range.

14. SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

Overall, the laboratory data generated met the project goals and quality control criteria, with the exceptions identified in this report and as summarized in Table 1.

15. OTHER

None.

Table 1
Review Elements Summary

	Were acceptance criteria met?		
	Yes	No	
Per-fluorinated Compounds		Major	Minor
Holding Time/Sample Handling	x		
Method Blanks	x		
Instrument Blanks	x		
Field Blanks			x
Calibration Percent Relative Standard Deviation and Percent Difference			x
Instrument Sensitivity Check	x		
Extracted Internal Standards	x		
Non-Extracted Internal Standards	x		
Compound Identification			x
Matrix Spike/Matrix Spike Duplicate/Matrix Duplicate	x		
Laboratory Control Sample	x		
Other Quality Control Data out of Specification	x		
Field Duplicate	x		

Major= Major data quality issue identified resulting in rejection of data.
Minor= Minor data quality issue identified resulting in the qualification of data. Data qualification should be used to inform the data users of data limitations.
NA = Not applicable

Table 2
Data Validation Qualifiers

Data Qualifier	Definition
U	The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided.

Data Validation Worksheet

DATA VALIDATION PFAS

Module 6; PFAS by QSM Table B-24; October 18, 2022

Validator: GAP

Reviewer: DM

Date Validated: 01/29/2025

Reviewed: 2/7/2025

Project: Loring AFB

SDG: FC19671

LAB: SGS Orlando

Samples Collected: 10/15/2024 – 10/16/2024

37 aqueous

SAMPLE RECEIPT AND CASE NARRATIVE REVIEW

- ✓ Traffic reports, chain-of-custody forms or SDG narrative do not indicate any problems with sample receipt, condition of the samples, analytical problems or special circumstances affecting the quality of the data.
- ✓ AFFF samples are to be shipped in HDPE containers with an unlined cap
- ✓ Shipment temp 0-6°C: recommended to freeze tissue samples upon receipt
- ✓ If temp upon receipt is greater than 6°C J/UJ all

  Received on 10/18-10/19 at <6C

HOLDING TIMES

- ✓ Recommended storage temp is ≤ -20°C
- ✓ Per method 1633: aqueous samples may be held in the lab for up to 90 days when stored at recommended temp and protected from light; when stored at 0-6 °C and protected from light samples can be held for up to 28 days (see method for additional details)
- ✓ Per method 1633: solid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C (see method for additional details)
- ✓ Per method 1633: biosolid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C; however, freezing is recommended (see method for additional details)
- ✓ Samples extracts should be stored at 0-4°C protected from light and analyzed within 90 days

- ✓ If hold time is exceeded qualify J/UJ
- ✓ If hold time is grossly exceeded (2X hold time) J/X

244 Table II. Sample Storage and Holding Time Requirements

Matrix Type	Stored at 0 - 6°C, protected from light		Stored at ≤ -20°C, protected from light	
	Holding Time	Caveat	Holding Time	Caveat
Aqueous	28 days	Precursor degradation occurs after 7 days	90 days	None
Solid and Tissue	90 days	Should be prepared as soon as possible if NFDHA is a target analyte	90 days	Should be prepared as soon as possible if NFDHA is a target analyte
Biosolid	90 days	Not recommended due to the production of gases due to microbiological activity	90 days	None

Samples collected 10/15/2024 – 10/16/2024
Extracted 11/04/2024; 11/06/2024
Analyzed 11/25/2024; 11/26/2024; 11/27/2024 ok

Extracted Internal STANDARDS (EIS)

- ✓ Added to all QC and field samples
- ✓ Recoveries are within the limits as defined in QAPP; QSM 6.0 specified using lab derived limits with lower limits no less than 20%
- ✓ Detected for analytes qualified using an EIS percent recovery >200% should be qualified J-. Nod-detects should not be qualified.
- ✓ If EIS recovery is <10%; associated detected and non-detects should be qualified X
- ✓ EIS retention times should be within 0.4 minutes of standard; use professional judgment to qualify

EDS rules as Module 6 does not define all situations:

- **For EIS %R >200% J- positive results, no action on non-detects (per module 6)**
- **For EIS %Rs >lab limit J- positive results, no action on non-detects**
- **For EIS %Rs between lab limit; no action (per module 6)**
- **For EIS %Rs lower lab limit but >10%; J+ positive results, UJ non-detects**
- **For EIS %Rs <10% X positive and non-detected (per module 6)**

Per Loring QAPP:

Extracted Internal Standards	Preliminary in-house acceptance criteria of 20-150% to be used until in-house limits are generated and approved for project use. Lower limit of in-house acceptance criteria cannot be <20%

All ok except

LORNG_EB026_10152024 FC19671-13
13C7-PFUnDA ↑ run 1 associated result ND; no action
13C2-PFDoDA ↑ run 1 associated result ND; no action

LORNG_OW01002_10162024 FC19671-27
13C8-FOSA ↑ run 1 associated result reported from run 2; no action

Non-Extracted Internal STANDARDS (NIS)

- ✓ Used to quantify EIS
- ✓ If low are counts are reported (<30%) detected and non-detected should be qualified X

ok

Laboratory Control Sample (LCS) and Low-Level Laboratory Control Sample (LLLCS)

- ✓ LCMS Lab Control Recovery (Form III), Form I, prep log, run log
- ✓ LCS prepared, extracted, analyzed, and reported once for every 20 field samples of a similar matrix, per SDG.
- ✓ Laboratory Control Samples were analyzed for all the target analytes that the samples are analyzed for.
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150% if lab limits have not been generated.
- ✓ If LCS or LLLCS %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If LCS or LLLCS %R is < lower limit; qualify detected J- and non-detected X

Use lab limits to evaluate per Loring QAPP

OP6212-LLBS ok
OP6279-LLBS ok

OP6212-BS ok
OP6279-BS ok

MS/MSD and Matrix Duplicate

- ✓ LCMS Matrix Spike Recovery (Form III)
- ✓ The Matrix Spike Samples were spiked and analyzed for all the target analytes that the samples are analyzed for (Same analytes as LCS).
- ✓ Per module 6: MS and MSD are applicable where the spike concentration is a least 3 times greater than the native analyte concentration **(3X rule)**
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150%.
- ✓ If MS or MSD %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If MS or MSD %R is < lower limit but >10%; qualify detected J- and non-detected UJ
- ✓ If MS or MSD %R is < 10%; qualify detected J- and non-detected X
- ✓ If MS/MSD RPD is out; qualify detected J and non-detected UJ
- ✓ For matrix duplicate; for concentrations of analytes that are equal to or greater than the LOQ, the RPD must be ≤30%; if out qualified detected J; no action on non-detects

Use lab limits to evaluate per Loring QAPP; RPD 30%

MS/MSD Sample:

ok

BLANKS

- ✓ LCMS Method Blank Summary (Form IV), method blank Form I, prep log, run log
- ✓ Frequency of Analysis: method blank has been analyzed for every 20 (or less) samples of similar matrix or concentration or each extraction batch.
- ✓ Continuing Calibration Blanks (Form I) and run log
- ✓ Frequency of Analysis: immediately following the highest standard analyzed and daily prior to sample analysis.

✓ Field/rinse blanks are non-detected for all analytes

Per Loring QAPP:

- Sample results with associated blank contamination will be qualified as follows:

Method Type	Blank Result	Sample Result	Action
PFAS, Organics, and Wet Chemistry	< LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ	≤ 2x blank: Qualify non-detect (U) at reported result. ≥ 2x-5x blank: J+
	≥ LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ and < blank result	Qualify non-detect (U) at reported result
		≥ LOQ and ≥ blank result	≤ 2x blank: Qualify non-detect (U) at reported result. 2x-5x blank: J+
Metals	≤ LOQ	≤ LOD and < 5x blank result	Qualify non-detect (U) at LOD.
		LOD < Sample Result ≤ LOQ and < 5x blank result	Qualify non-detect (U) at reported result.
		> LOQ	< 5x blank result; qualify estimated (J+)
	> LOQ	≤ LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result ≤ LOQ	Qualify non-detect (U) at reported result
		> LOQ but < 5x blank result	Qualify estimated (J+)
		≥ 5x blank result	No qualification

ICBs/CCBs see below

MASS CALIBRATION

- ✓ Verified to be ±0.2 amu of true value

Bile Salt Interference Check and Qualitative Identification Standard

- ✓ Provided and requirements met
- ✓ 1.0 minute between RTs of bile salt and PFOS
- ✓ Qualitative Identification Standard to confirm RTs

All acceptable

ICAL

- ✓ Initial Calibration Data Curve Evaluation (Form VI) and run log
- ✓ Lowest standard should be at or below LOQ
- ✓ %RSD <20% or relative standard error (RSE) <20%
- ✓ If %RSD > 20% but <30% J/UJ
- ✓ If %RSD >30% J/R

See below

INSTRUMENT PERFORMANCE CHECK PER DRAFT METHOD 1633

- ✓ Concentration equal to LOQ
- ✓ Analyzed after ICAL and daily before samples
- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

CCAL

- ✓ Continuing Calibration Data (Form VII) and run log
- ✓ Continuing calibration standard analyzed on each working day, prior to sample analyses.
- ✓ Calibration verification/continuing calibration standard been analyzed after every 10 samples and at the end of each analytical sequence
- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

ENVIRONMENTAL DATA SERVICES, LTD.

EXECUTIVE NARRATIVE

Sample Delivery Group: FC19782
Laboratory: SGS Orlando
Site: Loring AFB
Sampling dates: 10/17/2024 – 10/18/2024, and 10/21/2024
Number of Samples: 42
Test Method: USEPA Method 1633
Analysis: per- and polyfluoroalkyl substances (PFAS)

Quality Assurance Project Plan: Draft TO 1048 Quality Program Plan, September 2023 (QAPP).

Validation Guidelines: United States Department of Defense (DOD) Environmental Data Quality Workgroup (EDQW), General Validation Guidelines, November 2019; United States Department of Defense Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances analysis by QSM Table B-24, Environmental Data Quality Workgroup, October 18, 2022

Table 1 provides a summary of the major and minor data quality issues identified in this data set. All data are acceptable except those results which have been qualified with “R”, rejected. Data validation qualifiers along with associated descriptions are provided in Table 2. All data qualification related to this group of samples is detailed on the attached sheets.

All data users should note two facts. First, an “R” flag means that the associated value is unusable due to significant quality control (QC) problems, the data is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on any data tables even as a last resort. Second, no analyte concentration, even if it passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

DATA ASSESSMENT

1. NARRATIVE AND COMPLETENESS REVIEW

The case narrative was reviewed, and the data package was checked for completeness. No discrepancies were noted.

2. SAMPLE DELIVERY AND CONDITION

The samples arrived at the laboratory in acceptable condition. Proper custody was documented.

3. HOLDING TIME

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Proper sample handling and preservation also play a role in the chemical stability of analytes in the sample matrix. If samples are not collected and stored using proper containers and/or preservatives, data may not be valid.

No problems were found for this criterion.

4. CALIBRATION

Satisfactory instrument calibration is established to ensure that the instrument can produce acceptable quantitative data. An initial calibration demonstrates that the instrument can give acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance. Additionally, a continuing calibration is analyzed at the end of each 12-hour analytical sequence, denoted as a "closing" calibration verification and ascertains acceptable performance at the conclusion of the analytical sequence.

A) Initial Calibration

Percent relative standard deviation (%RSD) is calculated from the initial calibration and is used to indicate stability of a specific compound over the calibration range.

An RSD value outside the initial calibration limit indicates the potential for quantitation errors. For this reason, all positive and non-detected results are qualified as estimated. Severe performance failures (RSD >30%) requires rejection of all results. The following QC criteria have been applied for this project: The %RSD of initial calibration must be <20%.

No problems were found for this criterion.

B) Continuing Calibration

The Percent Recovery (%R) for all target analytes in the continuing calibration must be within 70-130%. All initial calibration verification (ICV) and continuing calibration verification (CCV) %Rs were with acceptance limits with the following exceptions.

No problems were found for this criterion.

C) Instrument Sensitivity Check

Prior to analysis an instrument sensitivity check (ISC) must be performed. The ISC must be at the limit of quantitation (LOQ). All analyte concentrations must be within ±30%. Note: the laboratory reports refer to the ISC as Low-Concentration Calibration Verification (LCV). The validator has determined that the low level CCV in the laboratory's report is equivalent to the method required ISC.

No problems were found for this criterion.

5. BLANK CONTAMINATION

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. When an equipment blank, or lab blank has an analyte detection, then all associated field samples are qualified per validation guidance as appropriate.

A) Method blank contamination:

No problems were found for this criterion.

B) Instrument blank contamination:

No problems requiring qualification of sample results were found for this criterion.

C) Field/Equipment blank contamination:

Sample LORNG_EB033_10172024 was submitted as an equipment blank in association with samples LORNG_LF2MW3_10172024 and LORNG_ASMW101_10172024. No problems were found for this criterion.

Sample LORNG_EB034_10172024 was submitted as an equipment blank in association with samples LORNG_JBW7336A_10172024 and LORNG_JBW7711_10172024. No problems were found for this criterion.

Sample LORNG_EB036_10172024was submitted as an equipment blank in association with sample LORNG_MMW0531_10172024. No problems were found for this criterion.

Sample LORNG_EB037_10172024 was submitted as an equipment blank in association with samples LORNG_JMW0962_10172024, LORNG_JBW7215B_10172024, and LORNG_JBW7304_10172024. No problems were found for this criterion.

*Sample LORNG_EB038_10182024 was submitted as an equipment blank in association with samples LORNG_J**M**W0982_10182024 and LORNG_J**M**W0982_10182024FD. No problems were found for this criterion.*

Sample LORNG_EB039_10182024 was submitted as an equipment blank in association with samples LORNG_JBW7339A_10182024, LORNG_JBW7339B_10182024, and LORNG_JMW0301C_10182024. No problems were found for this criterion.

Sample LORNG_EB041_10212024 was submitted as an equipment blank in association with samples LORNG_BW24001_10212024, LORNG_JBW7338B_10212024, and LORNG_MMW0330_10212024. No problems were found for this criterion.

Sample LORNG_EB042_10212024 was submitted as an equipment blank in association with samples LORNG_AA18MW-01_10212024 and LORNG_BW01005_10212024. No problems were found for this criterion.

6. EXTRACTED INTERNAL STANDARDS

All samples are spiked with labeled standard compounds prior to sample preparation and analyses to evaluate overall laboratory performance and efficiency of the analytical technique. The reported project samples had observed standard recoveries within the established limits in all cases with the following exceptions.

No problems requiring result qualification were found for this criterion with the following exception.

The observed isotope dilution standard recovery for 13C8-FOSA was greater than the upper acceptance limit during the analysis of sample LORNG_OW07001_10172024. The result reported for the associated target analyte in the impacted sample has been qualified "J-" on this basis.

7. NON-EXTRACTED INTERNAL STANDARDS

Non-extracted internal standard peak areas are used to quantify extracted internal standard recoveries. The reported project samples had non-extracted internal standard area counts within the established limits in all cases with the following exceptions.

No problems were found for this criterion.

8. COMPOUND IDENTIFICATION

The project target analyte compounds are identified on the LC/MS/MS by using the analytes retention time (RT). The retention time of each target analyte should be within ± 0.4 minutes of the predicted retention. Target analyte detections should display a signal-to-noise of ≥ 3:1, have proper peak integration, and display all ions at the correct retention times.

Target analyte detections should have passing ion ratios (50 - 150% of theoretical). Ion ratio failures could be caused by matrix interference and/or be the result of the presence of isomers in the sample at different ratios than the ratio of isomers present in the calibration standards.

Ion ratios were verified as part of Level 2B and Level 4 data validation. No anomalies were identified with the following exception.

The transition mass ratio was outside the established ratio limits for PFNS during the analysis of sample LORNG_AA18MW-01_10212024 indicating some degree of uncertainty in the qualitative identification of the analyte. The impacted result has been qualified "J" on this basis.

Additional target compound identification criterion was verified as part of the Level 4 data validation. No anomalies were identified.

9. COMPOUND QUANTIFICATION

Target compound quantitation was verified as part of the Level 4 data validation. No anomalies were identified.

Manual integrations were reviewed at the Stage 4 level. No anomalies were identified.

10. MATRIX SPIKE/MATRIX SPIKE DUPLICATE RECOVERY / MATRIX DUPLICATE

Matrix spike/matrix spike duplicate (MS/MSD) data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD data may be used in conjunction with other quality control criteria for additional qualification of data.

Sample LORNG_JBW7215B_10172024 was submitted for MS/MSD evaluation in association with this sample delivery group (SDG). Upon evaluation all accuracy and precision indicators were acceptable.

Sample LORNG_OW05005_10172024 was submitted for MS/MSD evaluation in association with this SDG. Upon evaluation all accuracy and precision indicators were acceptable or did not result in a need to qualify sample results.

Sample LORNG_BW01005_10212024 was submitted for MS/MSD evaluation in association with this SDG. Upon evaluation all accuracy and precision indicators were acceptable or did not result in a need to qualify sample results.

11. FIELD DUPLICATES

Field duplicates may be taken and analyzed as an indication of overall precision. These analyses measure both field and laboratory precision. A control limit of ≤ 30% for the Relative Percent Difference (RPD), shall be used when original and duplicate sample values are greater than or equal to the sample specific LOQ. For field duplicate analyses that do not meet the technical criteria, the action was applied to only the parent sample and its duplicate.

Samples LORNG_JMW0982_10182024 and LORNG_JMW0982_10182024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated.

Samples LORNG_JBW7737B_10172024 and LORNG_JBW7737B_10172024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated.

12. LABORATORY CONTROL SAMPLES

The Laboratory Control Sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. The LCS results are used to verify that the laboratory can perform the analysis in a clean matrix.

No problems were found for this criterion with the following exception. The recovery for NEtFOSAA was less than the lowest acceptance limit in the low level LCS associated with the samples listed in the table below. The results reported for the impacted analyte in the associated samples have been qualified "UJ" on this basis.

LORNG_JMW0301C_10182024	*LORNG_OW05005_10172024*
LORNG_MMW0330_10212024	*LORNG_OW05006_10212024*

13. DILUTIONS, RE-EXTRACTIONS & REANALYSIS

Samples may be re-analyzed for dilution, re-extraction and for other QC reasons. In such cases, the best result values are used.

Samples were analyzed as necessary to confirm results or bring analyte concentrations into the instrument's linear calibration range.

14. SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

Overall, the laboratory data generated met the project goals and quality control criteria, with the exceptions identified in this report and as summarized in Table 1.

15. OTHER

None.

Table 1
Review Elements Summary

	Were acceptance criteria met?		
	Yes	No	
Per-fluorinated Compounds		Major	Minor
Holding Time/Sample Handling	x		
Method Blanks	x		
Instrument Blanks	x		
Field Blanks	x		
Calibration Percent Relative Standard Deviation and Percent Difference	x		
Instrument Sensitivity Check	x		
Extracted Internal Standards			x
Non-Extracted Internal Standards	x		
Compound Identification			x
Matrix Spike/Matrix Spike Duplicate/Matrix Duplicate	x		
Laboratory Control Sample			x
Other Quality Control Data out of Specification	x		
Field Duplicate	x		

Major= Major data quality issue identified resulting in rejection of data.
Minor= Minor data quality issue identified resulting in the qualification of data. Data qualification should be used to inform the data users of data limitations.
NA = Not applicable

Table 2
Data Validation Qualifiers

Data Qualifier	Definition
U	The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided.

Table 3
PFAS Definitions Table

NO	CAS #	Target Name	Target Abbreviation
1	763051-92-9	11-Chloroeicosafluoro-3-oxaundecane-1-sulfonic acid	11Cl-PF3OUdS
2	914637-49-3	2H,2H,3H,3H-Perfluorooctanoic acid	5:3FTCA

Validator: GAP

Reviewer: DM

Date Validated: 01/30/2025

Reviewed: 2/7/2025

Project: Loring AFB

SDG: FC19782

LAB: SGS Orlando

Samples Collected: 10/17/2024 – 10/18/2024, and 10/21/2024

42 aqueous

SAMPLE RECEIPT AND CASE NARRATIVE REVIEW

- ✓ Traffic reports, chain-of-custody forms or SDG narrative do not indicate any problems with sample receipt, condition of the samples, analytical problems or special circumstances affecting the quality of the data.
- ✓ AFFF samples are to be shipped in HDPE containers with an unlined cap
- ✓ Shipment temp 0-6°C: recommended to freeze tissue samples upon receipt
- ✓ If temp upon receipt is greater than 6°C J/UJ all

Received on 10/23 at <6 C

HOLDING TIMES

- ✓ Recommended storage temp is ≤ -20°C
- ✓ Per method 1633: aqueous samples may be held in the lab for up to 90 days when stored at recommended temp and protected from light; when stored at 0-6 °C and protected from light samples can be held for up to 28 days (see method for additional details)
- ✓ Per method 1633: solid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C (see method for additional details)
- ✓ Per method 1633: biosolid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C; however, freezing is recommended (see method for additional details)

- ✓ Samples extracts should be stored at 0-4°C protected from light and analyzed within 90 days

- ✓ If hold time is exceeded qualify J/UJ
- ✓ If hold time is grossly exceeded (2X hold time) J/X

244 Table II. Sample Storage and Holding Time Requirements

Matrix Type	Stored at 0 - 6°C, protected from light		Stored at ≤ -20°C, protected from light	
	Holding Time	Caveat	Holding Time	Caveat
Aqueous	28 days	Precursor degradation occurs after 7 days	90 days	None
Solid and Tissue	90 days	Should be prepared as soon as possible if NFDHA is a target analyte	90 days	Should be prepared as soon as possible if NFDHA is a target analyte
Biosolid	90 days	Not recommended due to the production of gases due to microbiological activity	90 days	None

Samples collected 10/17/2024 – 10/18/2024, and 10/21/2024
Extracted 11/11
Analyzed 12/02; 12/03; 12/04 ok

Extracted Internal STANDARDS (EIS)

- ✓ Added to all QC and field samples
- ✓ Recoveries are within the limits as defined in QAPP; QSM 6.0 specified using lab derived limits with lower limits no less than 20%
- ✓ Detected for analytes qualified using an EIS percent recovery >200% should be qualified J-. Nod-detects should not be qualified.
- ✓ If EIS recovery is <10%; associated detected and non-detects should be qualified X
- ✓ EIS retention times should be within 0.4 minutes of standard; use professional judgment to qualify

EDS rules as Module 6 does not define all situations:

- **For EIS %R >200% J- positive results, no action on non-detects (per module 6)**
- **For EIS %Rs >lab limit J- positive results, no action on non-detects**
- **For EIS %Rs between lab limit; no action (per module 6)**
- **For EIS %Rs lower lab limit but >10%; J+ positive results, UJ non-detects**
- **For EIS %Rs <10% X positive and non-detected (per module 6)**

Per Loring QAPP:

Extracted Internal Standards	Preliminary in-house acceptance criteria of 20-150% to be used until in-house limits are generated and approved for project use. Lower limit of in-house acceptance criteria cannot be <20%

All ok except

LORNG_OW07001_10172024 FC19782-38

13C8-FOSA ↑ run 1 flag J-

13C2-4:2FTS ↑ run 1 ND; no action

LORNG_JBW7338B_1021202 FC19782-39

13C2-4:2FTS ↑ run 1 associated reported from run 2 ; no action

Non-Extracted Internal STANDARDS (NIS)

- ✓ Used to quantify EIS
- ✓ If low are counts are reported (<30%) detected and non-detected should be qualified X

ok

Laboratory Control Sample (LCS) and Low-Level Laboratory Control Sample (LLLCS)

- ✓ LCMS Lab Control Recovery (Form III), Form I, prep log, run log
- ✓ LCS prepared, extracted, analyzed, and reported once for every 20 field samples of a similar matrix, per SDG.
- ✓ Laboratory Control Samples were analyzed for all the target analytes that the samples are analyzed for.
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150% if lab limits have not been generated.
- ✓ If LCS or LLLCS %R is > upper limit; qualify detects J+; no action on non-detected

- ✓ If LCS or LLLCS %R is < lower limit; qualify detected J- and non-detected X

Use lab limits to evaluate per Loring QAPP

MS/MSD and Matrix Duplicate

- ✓ LCMS Matrix Spike Recovery (Form III)
- ✓ The Matrix Spike Samples were spiked and analyzed for all the target analytes that the samples are analyzed for (Same analytes as LCS).
- ✓ Per module 6: MS and MSD are applicable where the spike concentration is a least 3 times greater than the native analyte concentration **(3X rule)**
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150%.
- ✓ If MS or MSD %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If MS or MSD %R is < lower limit but >10%; qualify detected J- and non-detected UJ
- ✓ If MS or MSD %R is < 10%; qualify detected J- and non-detected X
- ✓ If MS/MSD RPD is out; qualify detected J and non-detected UJ
- ✓ For matrix duplicate; for concentrations of analytes that are equal to or greater than the LOQ, the RPD must be ≤30%; if out qualified detected J; no action on non-detects

Use lab limits to evaluate per Loring QAPP; RPD 30%

MS/MSD Sample:

LORNG_JBW7215B_10172024 FC19782-4 MS/MSD ok

BLANKS

- ✓ LCMS Method Blank Summary (Form IV), method blank Form I, prep log, run log
- ✓ Frequency of Analysis: method blank has been analyzed for every 20 (or less) samples of similar matrix or concentration or each extraction batch.
- ✓ Continuing Calibration Blanks (Form I) and run log
- ✓ Frequency of Analysis: immediately following the highest standard analyzed and daily prior to sample analysis.
- ✓ Field/rinse blanks are non-detected for all analytes

Per Loring QAPP:

- Sample results with associated blank contamination will be qualified as follows:

Method Type	Blank Result	Sample Result	Action
PFAS, Organics, and Wet Chemistry	< LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ	≤ 2x blank: Qualify non-detect (U) at reported result. ≥ 2x-5x blank: J+
	≥ LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ and < blank result	Qualify non-detect (U) at reported result
		≥ LOQ and ≥ blank result	≤ 2x blank: Qualify non-detect (U) at reported result. 2x-5x blank: J+
Metals	≤ LOQ	≤ LOD and < 5x blank result	Qualify non-detect (U) at LOD.
		LOD < Sample Result ≤ LOQ and < 5x blank result	Qualify non-detect (U) at reported result.
		> LOQ	< 5x blank result; qualify estimated (J+)
	> LOQ	≤ LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result ≤ LOQ	Qualify non-detect (U) at reported result
		> LOQ but < 5x blank result	Qualify estimated (J+)
		≥ 5x blank result	No qualification

MASS CALIBRATION

- ✓ Verified to be ±0.2 amu of true value

Bile Salt Interference Check and Qualitative Identification Standard

- ✓ Provided and requirements met
- ✓ 1.0 minute between RTs of bile salt and PFOS
- ✓ Qualitative Identification Standard to confirm RTs

All acceptable

ICAL

- ✓ Initial Calibration Data Curve Evaluation (Form VI) and run log
- ✓ Lowest standard should be at or below LOQ
- ✓ %RSD <20% or relative standard error (RSE) <20%
- ✓ If %RSD > 20% but <30% J/UJ
- ✓ If %RSD >30% J/R

See below

INSTRUMENT PERFORMANCE CHECK PER DRAFT METHOD 1633

- ✓ Concentration equal to LOQ
- ✓ Analyzed after ICAL and daily before samples
- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

CCAL

- ✓ Continuing Calibration Data (Form VII) and run log
- ✓ Continuing calibration standard analyzed on each working day, prior to sample analyses.

- ✓ Calibration verification/continuing calibration standard been analyzed after every 10 samples and at the end of each analytical sequence
- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

COMPOUND INDENTIFICATION

- ✓ RT within ±0.4 RRT units (review for Level 4)
- ✓ S/N ration 3:1 (review for Level 4)
- ✓ Ion response ratio with ±50% (review for Level 2B)
- ✓ If ion ratio is outside limit; qualify J

All ok except

LORNG_AA18MW-01_10212024 FC19782-23 PFNS FLAG J

Use IAG reason code

FIELD DUPLICATES

- ✓ Use QAPP defined criteria
- ✓ If outside acceptance criteria qualify J/UJ (MODULE FLAGS NONDETECTS TOO)

Loring AFB QAPP for aqueous and solid samples:

Field Duplicate	≤30% RPD or the absolute difference between analyte concentrations <LOQ

LORNG_JMW0982_10182024 and LORNG_JMW0982_10182024FD all ok

LORNG_JBW7737B_10172024 and LORNG_JBW7737B_10172024FD all ok

SEE FIELD DUPLICATE WORKSHEET

EXECUTIVE NARRATIVE

Sample Delivery Group: FC19898
Laboratory: SGS Orlando
Site: Loring AFB
Sampling dates: 10/22/2024 – 10/23/2024
Number of Samples: 27
Test Method: USEPA Method 1633
Analysis: per- and polyfluoroalkyl substances (PFAS)

Quality Assurance Project Plan: Draft TO 1048 Quality Program Plan, September 2023 (QAPP).

Validation Guidelines: United States Department of Defense (DOD) Environmental Data Quality Workgroup (EDQW), General Validation Guidelines, November 2019; United States Department of Defense Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances analysis by QSM Table B-24, Environmental Data Quality Workgroup, October 18, 2022

Table 1 provides a summary of the major and minor data quality issues identified in this data set. All data are acceptable except those results which have been qualified with “R”, rejected. Data validation qualifiers along with associated descriptions are provided in Table 2. All data qualification related to this group of samples is detailed on the attached sheets.

All data users should note two facts. First, an “R” flag means that the associated value is unusable due to significant quality control (QC) problems, the data is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on any data tables even as a last resort. Second, no analyte concentration, even if it passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

DATA ASSESSMENT

1. NARRATIVE AND COMPLETENESS REVIEW

The case narrative was reviewed, and the data package was checked for completeness. No discrepancies were noted.

2. SAMPLE DELIVERY AND CONDITION

The sample arrived at the laboratory in acceptable condition. Proper custody was documented.

3. HOLDING TIME

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Proper sample handling and preservation also play a role in the chemical stability of analytes in the sample matrix. If samples are not collected and stored using proper containers and/or preservatives, data may not be valid.

No problems were found for this criterion.

4. CALIBRATION

Satisfactory instrument calibration is established to ensure that the instrument can produce acceptable quantitative data. An initial calibration demonstrates that the instrument can give acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance. Additionally, a continuing calibration is analyzed at the end of each 12-hour analytical sequence, denoted as a "closing" calibration verification and ascertains acceptable performance at the conclusion of the analytical sequence.

A) Initial Calibration

Percent relative standard deviation (%RSD) is calculated from the initial calibration and is used to indicate stability of a specific compound over the calibration range.

An RSD value outside the initial calibration limit indicates the potential for quantitation errors. For this reason, all positive and non-detected results are qualified as estimated. Severe performance failures (RSD >30%) requires rejection of all results. The following QC criteria have been applied for this project: The %RSD of initial calibration must be <20%.

No problems were found for this criterion.

B) Continuing Calibration

The Percent Recovery (%R) for all target analytes in the continuing calibration must be within 70-130%. All initial calibration verification (ICV) and continuing calibration verification (CCV) %Rs were with acceptance limits with the following exceptions.

No problems were found for this criterion.

C) Instrument Sensitivity Check

Prior to analysis an instrument sensitivity check (ISC) must be performed. The ISC must be at the limit of quantitation (LOQ). All analyte concentrations must be within ±30%. Note: the laboratory reports refer to the ISC as Low-Concentration Calibration Verification (LCV). The validator has determined that the low level CCV in the laboratory's report is equivalent to the method required ISC.

No problems were found for this criterion.

5. BLANK CONTAMINATION

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. When an equipment blank, or lab blank has an analyte detection, then all associated field samples are qualified per validation guidance as appropriate.

A) Method blank contamination:

No problems were found for this criterion.

B) Instrument blank contamination:

No problems were found for this criterion with the following exceptions. PFOS was positively identified in two calibration blanks associated with the samples listed in the table below. Positive sample results reported for the impacted analyte in the associated samples have been evaluated and qualified as appropriate per validation guidance.

LORNG_BW06006_10222024	*LORNG_BW06009D_10232024*
LORNG_JBW7742A_10232024	*LORNG_BW05014I_10222024*
LORNG_OW16004_10222024	*LORNG_BW05014S_10222024*
LORNG_BW01010D_10232024	*LORNG_BW16003_10222024*
LORNG_BW05014D_10222024	*LORNG_BW19001_10222024*
LORNG_BW01010S_10232024	*LORNG_BW06009D_10232024*

C) Field/Equipment blank contamination:

Sample LORNG_EB043_10222024 was submitted as an equipment blank in association with samples LORNG_BW05014D_10222024, LORNG_BW05014I_10222024, and LORNG_BW05014S_10222024. No problems requiring qualification of sample results were found for this criterion.

Sample LORNG_EB044_10222024 was submitted as an equipment blank in association with samples LORNG_JMW1565_10222024, LORNG_BW16003_10222024, and LORNG_OW16004_10222024. No problems were found for this criterion.

Sample LORNG_EB045_10222024 was submitted as an equipment blank in association with samples LORNG_BW06006_10222024 and LORNG_BW19001_10222024. No problems were found for this criterion with the following exception. PFOS was positively identified. Positive sample results reported for the impacted analyte in the associated samples have been evaluated and qualified as appropriate per validation guidance.

Sample LORNG_EB046_10232024 was submitted as an equipment blank in association with samples LORNG_OW19001_10232024 and LORNG_WEST01_10232024. No problems were found for this criterion.

Sample LORNG_EB047_10232024 was submitted as an equipment blank in association with samples LORNG_RFW1145_35_10232024 and LORNG_RFW1145_75_10232024. No problems were found for this criterion.

Sample LORNG_EB048_10232024 was submitted as an equipment blank in association with samples LORNG_UNK-033_10232024 and LORNG_JBW7742A_10232024. No problems were found for this criterion.

Sample LORNG_EB049_10232024 was submitted as an equipment blank in association with samples LORNG_BW01010S_10232024 and LORNG_BW01010D_10232024. No problems were found for this criterion.

6. EXTRACTED INTERNAL STANDARDS

All samples are spiked with labeled standard compounds prior to sample preparation and analyses to evaluate overall laboratory performance and efficiency of the analytical technique. The reported project samples had observed standard recoveries within the established limits in all cases with the following exceptions.

No problems requiring result qualification were found for this criterion with the following exceptions.

The observed isotope dilution standard recovery for 13C3-PFBS was greater than the upper acceptance limit during the analysis of sample LORNG_BW05014D_10222024. The results reported for the associated target analytes in the impacted sample have been qualified "J-" on this basis.

The observed isotope dilution standard recovery for 13C4-PFBA was extremely low (less than 10%) during the analysis of sample LORNG_BW05014I_10222024. The result reported for the impacted analyte in the associated sample has been qualified rejected "R" on this basis.

7. NON-EXTRACTED INTERNAL STANDARDS

Non-extracted internal standard peak areas are used to quantify extracted internal standard recoveries. The reported project samples had non-extracted internal standard area counts within the established limits in all cases with the following exceptions.

No problems were found for this criterion.

8. COMPOUND IDENTIFICATION

The project target analyte compounds are identified on the LC/MS/MS by using the analytes retention time (RT). The retention time of each target analyte should be within ± 0.4 minutes of the predicted retention. Target analyte detections should display a signal-to-noise of ≥ 3:1, have proper peak integration, and display all ions at the correct retention times.

Target analyte detections should have passing ion ratios (50 - 150% of theoretical). Ion ratio failures could be caused by matrix interference and/or be the result of the presence of isomers in the sample at different ratios than the ratio of isomers present in the calibration standards.

Ion ratios were verified as part of the Level 2B data validation. No anomalies were identified with the following exceptions.

The transition mass ratios were outside the established ratio limits for PFDA during the analyses of samples LORNG_JMW8011_10222024 and LORNG_RFW1145_35_10232024 indicating some degree of uncertainty in the qualitative identification of the analyte. The impacted results have been qualified "J" on this basis.

The transition mass ratios were outside the established ratio limits for PFns during the analyses of the samples listed in the table below indicating some degree of uncertainty in the qualitative identification of the analyte. The impacted results have been qualified "J" on this basis.

LORNG_JMW8011_10222024	*LORNG_UNK-033_10232024*
LORNG_BSMW3S_10222024	*LORNG_JBW8004B_10222024*

Additional target compound identification criterion was not verified as part of the Level 2B data validation.

9. COMPOUND QUANTIFICATION

Target compound quantitation was not verified as part of the Level 2B data validation.

Manual integrations were not reviewed at the Stage 2B level.

10. MATRIX SPIKE/MATRIX SPIKE DUPLICATE RECOVERY / MATRIX DUPLICATE

Matrix spike/matrix spike duplicate (MS/MSD) data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD data may be used in conjunction with other quality control criteria for additional qualification of data.

Sample LORNG_JMW8011_10222024 was submitted for MS/MSD evaluation in association with this sample delivery group (SDG). Upon evaluation all accuracy and precision indicators were acceptable or did not result in a need to qualify sample results.

11. FIELD DUPLICATES

Field duplicates may be taken and analyzed as an indication of overall precision. These analyses measure both field and laboratory precision. A control limit of ≤ 30% for the Relative Percent Difference (RPD), shall be used when original and duplicate sample values are greater than or equal to the sample specific LOQ. For field duplicate analyses that do not meet the technical criteria, the action was applied to only the parent sample and its duplicate.

No sample were submitted as a field duplicate pair in association with this SDG.

12. LABORATORY CONTROL SAMPLES

The Laboratory Control Sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. The LCS results are used to verify that the laboratory can perform the analysis in a clean matrix.

No problems were found for this criterion with the following exception. The recovery for NEtFOSAA was less than the lowest acceptance limit in the low level LCS associated with the samples listed in the table below. The results reported for the impacted analyte in the associated samples have been qualified "J-" or "UJ" as appropriate on this basis.

LORNG_EB043_10222024	*LORNG_BW05014D_10222024*
LORNG_EB044_10222024	*LORNG_BW01010S_10232024*
LORNG_EB045_10222024	*LORNG_BW06009D_10232024*
LORNG_BW06006_10222024	*LORNG_BW05014I_10222024*
LORNG_JBW7742A_10232024	*LORNG_BW05014S_10222024*
LORNG_OW16004_10222024	*LORNG_BW16003_10222024*
LORNG_BW01010D_10232024	*LORNG_BW19001_10222024*

13. DILUTIONS, RE-EXTRACTIONS & REANALYSIS

Samples may be re-analyzed for dilution, re-extraction and for other QC reasons. In such cases, the best result values are used.

Samples were re-extracted and/or reanalyzed as necessary to confirm results or bring analyte concentration into the instrument's linear calibration range.

14. SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

Overall, the laboratory data generated met the project goals and quality control criteria, with the exceptions identified in this report and as summarized in Table 1.

15. OTHER

None.

Table 1
Review Elements Summary

	Were acceptance criteria met?		
	Yes	No	
Per-fluorinated Compounds		Major	Minor
Holding Time/Sample Handling	x		
Method Blanks	x		
Instrument Blanks			x
Field Blanks			x
Calibration Percent Relative Standard Deviation and Percent Difference	x		
Instrument Sensitivity Check	x		
Extracted Internal Standards		x	x
Non-Extracted Internal Standards	x		
Compound Identification			x
Matrix Spike/Matrix Spike Duplicate/Matrix Duplicate	x		
Laboratory Control Sample			x
Other Quality Control Data out of Specification	x		
Field Duplicate	NA		

Major= Major data quality issue identified resulting in rejection of data.
Minor= Minor data quality issue identified resulting in the qualification of data. Data qualification should be used to inform the data users of data limitations.
NA = Not applicable

Table 2
Data Validation Qualifiers

Data Qualifier	Definition
U	The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided.

DATA VALIDATION PFAS

Module 6; PFAS by QSM Table B-24; October 18, 2022

Validator: GAP

Reviewer: DM

Date Validated: 01/31/2025

Reviewed: 2/7/2025

Project: Loring AFB

SDG: FC19898

LAB: SGS Orlando

Samples Collected: 10/22/2024 – 10/23/2024

27 aqueous

SAMPLE RECEIPT AND CASE NARRATIVE REVIEW

- ✓ Traffic reports, chain-of-custody forms or SDG narrative do not indicate any problems with sample receipt, condition of the samples, analytical problems or special circumstances affecting the quality of the data.
- ✓ AFFF samples are to be shipped in HDPE containers with an unlined cap
- ✓ Shipment temp 0-6°C: recommended to freeze tissue samples upon receipt
- ✓ If temp upon receipt is greater than 6°C J/UJ all

Received on 10/25 at <6C

HOLDING TIMES

- ✓ Recommended storage temp is ≤ -20°C
- ✓ Per method 1633: aqueous samples may be held in the lab for up to 90 days when stored at recommended temp and protected from light; when stored at 0-6 °C and protected from light samples can be held for up to 28 days (see method for additional details)
- ✓ Per method 1633: solid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C (see method for additional details)
- ✓ Per method 1633: biosolid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C; however, freezing is recommended (see method for additional details)
- ✓ Samples extracts should be stored at 0-4°C protected from light and analyzed within 90 days

- ✓ If hold time is exceeded qualify J/UJ
- ✓ If hold time is grossly exceeded (2X hold time) J/X

244 Table II. Sample Storage and Holding Time Requirements

Matrix Type	Stored at 0 - 6°C, protected from light		Stored at ≤ -20°C, protected from light	
	Holding Time	Caveat	Holding Time	Caveat
Aqueous	28 days	Precursor degradation occurs after 7 days	90 days	None
Solid and Tissue	90 days	Should be prepared as soon as possible if NFDHA is a target analyte	90 days	Should be prepared as soon as possible if NFDHA is a target analyte
Biosolid	90 days	Not recommended due to the production of gases due to microbiological activity	90 days	None

Samples collected 10/22/2024 – 10/23/2024
Extracted 11/11
Analyzed 12/03; 12/05; 12/06 ok

Extracted Internal STANDARDS (EIS)

- ✓ Added to all QC and field samples
- ✓ Recoveries are within the limits as defined in QAPP; QSM 6.0 specified using lab derived limits with lower limits no less than 20%
- ✓ Detected for analytes qualified using an EIS percent recovery >200% should be qualified J-. Nod-detects should not be qualified.
- ✓ If EIS recovery is <10%; associated detected and non-detects should be qualified X
- ✓ EIS retention times should be within 0.4 minutes of standard; use professional judgment to qualify

EDS rules as Module 6 does not define all situations:

- **For EIS %R >200% J- positive results, no action on non-detects (per module 6)**
- **For EIS %Rs >lab limit J- positive results, no action on non-detects**
- **For EIS %Rs between lab limit; no action (per module 6)**
- **For EIS %Rs lower lab limit but >10%; J+ positive results, UJ non-detects**
- **For EIS %Rs <10% X positive and non-detected (per module 6)**

Per Loring QAPP:

Extracted Internal Standards	Preliminary in-house acceptance criteria of 20-150% to be used until in-house limits are generated and approved for project use. Lower limit of in-house acceptance criteria cannot be <20%

All ok except

LORNG_BW05014D_10222024 FC19898-2
13C3-PFBS ↑ runs 1 and 2 flag J-
13C3-HFPO-DA ↑ run 1 associated reported from run 2

LORNG_BW05014I_10222024 FC19898-3
13C4-PFBA <10% runs 1 and 2 flag R (not X per project QAPP)

Non-Extracted Internal STANDARDS (NIS)

- ✓ Used to quantify EIS
- ✓ If low are counts are reported (<30%) detected and non-detected should be qualified X

ok

Laboratory Control Sample (LCS) and Low-Level Laboratory Control Sample (LLLCS)

- ✓ LCMS Lab Control Recovery (Form III), Form I, prep log, run log
- ✓ LCS prepared, extracted, analyzed, and reported once for every 20 field samples of a similar matrix, per SDG.
- ✓ Laboratory Control Samples were analyzed for all the target analytes that the samples are analyzed for.
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150% if lab limits have not been generated.
- ✓ If LCS or LLLCS %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If LCS or LLLCS %R is < lower limit; qualify detected J- and non-detected X

Use lab limits to evaluate per Loring QAPP

MS/MSD and Matrix Duplicate

- ✓ LCMS Matrix Spike Recovery (Form III)
- ✓ The Matrix Spike Samples were spiked and analyzed for all the target analytes that the samples are analyzed for (Same analytes as LCS).
- ✓ Per module 6: MS and MSD are applicable where the spike concentration is a least 3 times greater than the native analyte concentration **(3X rule)**
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150%.
- ✓ If MS or MSD %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If MS or MSD %R is < lower limit but >10%; qualify detected J- and non-detected UJ
- ✓ If MS or MSD %R is < 10%; qualify detected J- and non-detected X
- ✓ If MS/MSD RPD is out; qualify detected J and non-detected UJ
- ✓ For matrix duplicate; for concentrations of analytes that are equal to or greater than the LOQ, the RPD must be ≤30%; if out qualified detected J; no action on non-detects

Use lab limits to evaluate per Loring QAPP; RPD 30%

MS/MSD Sample:

PFHxA	↑	**OK**	**OK**	**inconclusive; no action**
PFHxS	**ok; 4X rule**			
PFOS	**ok; 4x rule**			
PFDS	**ok**	↓	**ok**	**inconclusive; no action**

Matrix Duplicate:
none

BLANKS

- ✓ LCMS Method Blank Summary (Form IV), method blank Form I, prep log, run log
- ✓ Frequency of Analysis: method blank has been analyzed for every 20 (or less) samples of similar matrix or concentration or each extraction batch.
- ✓ Continuing Calibration Blanks (Form I) and run log
- ✓ Frequency of Analysis: immediately following the highest standard analyzed and daily prior to sample analysis.
- ✓ Field/rinse blanks are non-detected for all analytes

Per Loring QAPP:

- Sample results with associated blank contamination will be qualified as follows:

Method Type	Blank Result	Sample Result	Action
PFAS, Organics, and Wet Chemistry	< LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ	≤ 2x blank: Qualify non-detect (U) at reported result. ≥ 2x-5x blank: J+
	≥ LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ and < blank result	Qualify non-detect (U) at reported result
		≥ LOQ and ≥ blank result	≤ 2x blank: Qualify non-detect (U) at reported result. 2x-5x blank: J+
Metals	≤ LOQ	≤ LOD and < 5x blank result	Qualify non-detect (U) at LOD.
		LOD < Sample Result ≤ LOQ and < 5x blank result	Qualify non-detect (U) at reported result.
		> LOQ	< 5x blank result; qualify estimated (J+)
	> LOQ	≤ LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result ≤ LOQ	Qualify non-detect (U) at reported result
		> LOQ but < 5x blank result	Qualify estimated (J+)
		≥ 5x blank result	No qualification

ICBs/CCBs see below

MASS CALIBRATION

- ✓ Verified to be ±0.2 amu of true value

Bile Salt Interference Check and Qualitative Identification Standard

- ✓ Provided and requirements met
- ✓ 1.0 minute between RTs of bile salt and PFOS
- ✓ Qualitative Identification Standard to confirm RTs

All acceptable

ICAL

- ✓ Initial Calibration Data Curve Evaluation (Form VI) and run log
- ✓ Lowest standard should be at or below LOQ
- ✓ %RSD <20% or relative standard error (RSE) <20%
- ✓ If %RSD > 20% but <30% J/UJ
- ✓ If %RSD >30% J/R

See below

INSTRUMENT PERFORMANCE CHECK PER DRAFT METHOD 1633

- ✓ Concentration equal to LOQ
- ✓ Analyzed after ICAL and daily before samples
- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

CCAL

- ✓ Continuing Calibration Data (Form VII) and run log
- ✓ Continuing calibration standard analyzed on each working day, prior to sample analyses.
- ✓ Calibration verification/continuing calibration standard been analyzed after every 10 samples and at the end of each analytical sequence
- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

EXECUTIVE NARRATIVE

Sample Delivery Group: FC20141
Laboratory: SGS Orlando
Site: Loring AFB
Sampling dates: 11/04/2024
Number of Samples: 2
Test Method: USEPA Method 1633
Analysis: per- and polyfluoroalkyl substances (PFAS)

Quality Assurance Project Plan: Draft TO 1048 Quality Program Plan, September 2023 (QAPP).

Validation Guidelines: United States Department of Defense (DOD) Environmental Data Quality Workgroup (EDQW), General Validation Guidelines, November 2019; United States Department of Defense Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances analysis by QSM Table B-24, Environmental Data Quality Workgroup, October 18, 2022

Client Sample Identification	Laboratory Sample Identification	Matrix	Validation Stage
LORNG_BW05011D_11042024	FC20141-1	groundwater	S2BVM
LORNG_EB050_11042024	FC20141-2	equipment blank	S2BVM

Table 1 provides a summary of the major and minor data quality issues identified in this data set. All data are acceptable except those results which have been qualified with “R”, rejected. Data validation qualifiers along with associated descriptions are provided in Table 2. All data qualification related to this group of samples is detailed on the attached sheets.

All data users should note two facts. First, an “R” flag means that the associated value is unusable due to significant quality control (QC) problems, the data is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on any data tables even as a last resort. Second, no analyte concentration, even if it passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

DATA ASSESSMENT

1. NARRATIVE AND COMPLETENESS REVIEW

The case narrative was reviewed, and the data package was checked for completeness. No discrepancies were noted.

2. SAMPLE DELIVERY AND CONDITION

The sample arrived at the laboratory in acceptable condition. Proper custody was documented.

3. HOLDING TIME

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Proper sample handling and preservation also play a role in the chemical stability of analytes in the sample matrix. If samples are not collected and stored using proper containers and/or preservatives, data may not be valid.

No problems were found for this criterion.

4. CALIBRATION

Satisfactory instrument calibration is established to ensure that the instrument can produce acceptable quantitative data. An initial calibration demonstrates that the instrument can give acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance. Additionally, a continuing calibration is analyzed at the end of each 12-hour analytical sequence, denoted as a "closing" calibration verification and ascertains acceptable performance at the conclusion of the analytical sequence.

A) Initial Calibration

Percent relative standard deviation (%RSD) is calculated from the initial calibration and is used to indicate stability of a specific compound over the calibration range.

An RSD value outside the initial calibration limit indicates the potential for quantitation errors. For this reason, all positive and non-detected results are qualified as estimated. Severe performance failures (RSD >30%) requires rejection of all results. The following QC criteria have been applied for this project: The %RSD of initial calibration must be <20%.

No problems were found for this criterion.

B) Continuing Calibration

The Percent Recovery (%R) for all target analytes in the continuing calibration must be within 70-130%. All initial calibration verification (ICV) and continuing calibration verification (CCV) %Rs were with acceptance limits with the following exceptions.

No problems were found for this criterion.

C) Instrument Sensitivity Check

Prior to analysis an instrument sensitivity check (ISC) must be performed. The ISC must be at the limit of quantitation (LOQ). All analyte concentrations must be within ±30%. Note: the laboratory reports refer to the ISC as Low-Concentration Calibration Verification (LCV). The validator has determined that the low level CCV in the laboratory's report is equivalent to the method required ISC.

No problems were found for this criterion.

5. BLANK CONTAMINATION

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. When an equipment blank, or lab blank has an analyte detection, then all associated field samples are qualified per validation guidance as appropriate.

A) Method blank contamination:

No problems were found for this criterion.

B) Instrument blank contamination:

No problems requiring qualification of sample results were found for this criterion.

C) Field/Equipment blank contamination:

Sample LORNG_EB050_11042024 was submitted as an equipment blank in association with sample in this sample delivery group (SDG). No problems requiring qualification of sample results were found for this criterion.

6. EXTRACTED INTERNAL STANDARDS

All samples are spiked with labeled standard compounds prior to sample preparation and analyses to evaluate overall laboratory performance and efficiency of the analytical technique. The reported project samples had observed standard recoveries within the established limits in all cases with the following exceptions.

No problems were found for this criterion.

7. NON-EXTRACTED INTERNAL STANDARDS

Non-extracted internal standard peak areas are used to quantify extracted internal standard recoveries. The reported project samples had non-extracted internal standard area counts within the established limits in all cases with the following exceptions.

No problems were found for this criterion.

8. COMPOUND IDENTIFICATION

The project target analyte compounds are identified on the LC/MS/MS by using the analytes retention time (RT). The retention time of each target analyte should be within ± 0.4 minutes of the predicted retention. Target analyte detections should display a signal-to-noise of ≥ 3:1, have proper peak integration, and display all ions at the correct retention times.

Target analyte detections should have passing ion ratios (50 - 150% of theoretical). Ion ratio failures could be caused by matrix interference and/or be the result of the presence of isomers in the sample at different ratios than the ratio of isomers present in the calibration standards.

Ion ratios were verified as part of the Level 2B data validation. No anomalies were identified.

Additional target compound identification criterion was not verified as part of the Level 2B data validation.

9. COMPOUND QUANTIFICATION

Target compound quantitation was not verified as part of the Level 2B data validation.

Manual integrations were not reviewed at the Stage 2B level.

10. MATRIX SPIKE/MATRIX SPIKE DUPLICATE RECOVERY / MATRIX DUPLICATE

Matrix spike/matrix spike duplicate (MS/MSD) data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD data may be used in conjunction with other quality control criteria for additional qualification of data.

No sample was submitted for MS/MSD evaluation in association with this SDG.

11. FIELD DUPLICATES

Field duplicates may be taken and analyzed as an indication of overall precision. These analyses measure both field and laboratory precision. A control limit of ≤ 30% for the Relative Percent Difference (RPD), shall be used when original and duplicate sample values are greater than or equal to the sample specific LOQ. For field duplicate analyses that do not meet the technical criteria, the action was applied to only the parent sample and its duplicate.

No sample were submitted as a field duplicate pair in association with this SDG.

12. LABORATORY CONTROL SAMPLES

The Laboratory Control Sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. The LCS results are used to verify that the laboratory can perform the analysis in a clean matrix.

No problems were found for this criterion.

13. DILUTIONS, RE-EXTRACTIONS & REANALYSIS

Samples may be re-analyzed for dilution, re-extraction and for other QC reasons. In such cases, the best result values are used.

Samples were re-extracted and/or reanalyzed as necessary to confirm results.

14. SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

Overall, the laboratory data generated met the project goals and quality control criteria, with the exceptions identified in this report and as summarized in Table 1.

15. OTHER

None.

Table 1
Review Elements Summary

	Were acceptance criteria met?		
	Yes	No	
Per-fluorinated Compounds		Major	Minor
Holding Time/Sample Handling	x		
Method Blanks	x		
Instrument Blanks	x		
Field Blanks	x		
Calibration Percent Relative Standard Deviation and Percent Difference	x		
Instrument Sensitivity Check	x		
Extracted Internal Standards	x		
Non-Extracted Internal Standards	x		
Compound Identification	x		
Matrix Spike/Matrix Spike Duplicate/Matrix Duplicate	NA		
Laboratory Control Sample	x		
Other Quality Control Data out of Specification	x		
Field Duplicate	NA		

Major= Major data quality issue identified resulting in rejection of data.
Minor= Minor data quality issue identified resulting in the qualification of data. Data qualification should be used to inform the data users of data limitations.
NA = Not applicable

Table 2
Data Validation Qualifiers

Data Qualifier	Definition
U	**The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.**
J	**The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.**
J+	**The result is an estimated quantity, but the result may be biased high.**
J-	**The result is an estimated quantity, but the result may be biased low.**
UJ	**The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.**
R	**The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided.**

SAMPLE RECEIPT AND CASE NARRATIVE REVIEW

- ✓ Traffic reports, chain-of-custody forms or SDG narrative do not indicate any problems with sample receipt, condition of the samples, analytical problems or special circumstances affecting the quality of the data.
- ✓ AFFF samples are to be shipped in HDPE containers with an unlined cap
- ✓ Shipment temp 0-6°C: recommended to freeze tissue samples upon receipt
- ✓ If temp upon receipt is greater than 6°C J/UJ all

Received on 11/05 at <6C

HOLDING TIMES

- ✓ Recommended storage temp is ≤ -20°C
- ✓ Per method 1633: aqueous samples may be held in the lab for up to 90 days when stored at recommended temp and protected from light; when stored at 0-6 °C and protected from light samples can be held for up to 28 days (see method for additional details)
- ✓ Per method 1633: solid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C (see method for additional details)
- ✓ Per method 1633: biosolid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C; however, freezing is recommended (see method for additional details)
- ✓ Samples extracts should be stored at 0-4°C protected from light and analyzed within 90 days

- ✓ If hold time is exceeded qualify J/UJ
- ✓ If hold time is grossly exceeded (2X hold time) J/X

244 Table II. Sample Storage and Holding Time Requirements

Matrix Type	Stored at 0 - 6°C, protected from light		Stored at ≤ -20°C, protected from light	
	Holding Time	Caveat	Holding Time	Caveat
Aqueous	28 days	Precursor degradation occurs after 7 days	90 days	None
Solid and Tissue	90 days	Should be prepared as soon as possible if NFDHA is a target analyte	90 days	Should be prepared as soon as possible if NFDHA is a target analyte
Biosolid	90 days	Not recommended due to the production of gases due to microbiological activity	90 days	None

Samples collected 11/04/2024
Extracted 11/15
Analyzed 11/18; 11/19 ok

Extracted Internal STANDARDS (EIS)

- ✓ Added to all QC and field samples
- ✓ Recoveries are within the limits as defined in QAPP; QSM 6.0 specified using lab derived limits with lower limits no less than 20%
- ✓ Detected for analytes qualified using an EIS percent recovery >200% should be qualified J-. Nod-detects should not be qualified.
- ✓ If EIS recovery is <10%; associated detected and non-detects should be qualified X
- ✓ EIS retention times should be within 0.4 minutes of standard; use professional judgment to qualify

EDS rules as Module 6 does not define all situations:

- **For EIS %R >200% J- positive results, no action on non-detects (per module 6)**
- **For EIS %Rs >lab limit J- positive results, no action on non-detects**
- **For EIS %Rs between lab limit; no action (per module 6)**
- **For EIS %Rs lower lab limit but >10%; J+ positive results, UJ non-detects**
- **For EIS %Rs <10% X positive and non-detected (per module 6)**

Per Loring QAPP:

Extracted Internal Standards	Preliminary in-house acceptance criteria of 20-150% to be used until in-house limits are generated and approved for project use. Lower limit of in-house acceptance criteria cannot be <20%

All ok

Non-Extracted Internal STANDARDS (NIS)

- ✓ Used to quantify EIS
- ✓ If low are counts are reported (<30%) detected and non-detected should be qualified X

ok

Laboratory Control Sample (LCS) and Low-Level Laboratory Control Sample (LLLCS)

- ✓ LCMS Lab Control Recovery (Form III), Form I, prep log, run log
- ✓ LCS prepared, extracted, analyzed, and reported once for every 20 field samples of a similar matrix, per SDG.
- ✓ Laboratory Control Samples were analyzed for all the target analytes that the samples are analyzed for.
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150% if lab limits have not been generated.
- ✓ If LCS or LLLCS %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If LCS or LLLCS %R is < lower limit; qualify detected J- and non-detected X

Use lab limits to evaluate per Loring QAPP

OP6472-LLBS ok
OP6472-LLBS ok

OP6472-BS ok
OP6472-BS ok

MS/MSD and Matrix Duplicate

- ✓ LCMS Matrix Spike Recovery (Form III)
- ✓ The Matrix Spike Samples were spiked and analyzed for all the target analytes that the samples are analyzed for (Same analytes as LCS).
- ✓ Per module 6: MS and MSD are applicable where the spike concentration is a least 3 times greater than the native analyte concentration **(3X rule)**
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150%.
- ✓ If MS or MSD %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If MS or MSD %R is < lower limit but >10%; qualify detected J- and non-detected UJ
- ✓ If MS or MSD %R is < 10%; qualify detected J- and non-detected X
- ✓ If MS/MSD RPD is out; qualify detected J and non-detected UJ
- ✓ For matrix duplicate; for concentrations of analytes that are equal to or greater than the LOQ, the RPD must be ≤30%; if out qualified detected J; no action on non-detects

Use lab limits to evaluate per Loring QAPP; RPD 30%

MS/MSD Sample:
none

Matrix Duplicate:
none

BLANKS

- ✓ LCMS Method Blank Summary (Form IV), method blank Form I, prep log, run log
- ✓ Frequency of Analysis: method blank has been analyzed for every 20 (or less) samples of similar matrix or concentration or each extraction batch.
- ✓ Continuing Calibration Blanks (Form I) and run log
- ✓ Frequency of Analysis: immediately following the highest standard analyzed and daily prior to sample analysis.
- ✓ Field/rinse blanks are non-detected for all analytes

Per Loring QAPP:

- Sample results with associated blank contamination will be qualified as follows:

Method Type	Blank Result	Sample Result	Action
PFAS, Organics, and Wet Chemistry	< LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ	≤ 2x blank: Qualify non-detect (U) at reported result. ≥ 2x-5x blank: J+
	≥ LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ and < blank result	Qualify non-detect (U) at reported result
		≥ LOQ and ≥ blank result	≤ 2x blank: Qualify non-detect (U) at reported result. 2x-5x blank: J+
Metals	≤ LOQ	≤ LOD and < 5x blank result	Qualify non-detect (U) at LOD.
		LOD < Sample Result ≤ LOQ and < 5x blank result	Qualify non-detect (U) at reported result.
		> LOQ	< 5x blank result; qualify estimated (J+)
	> LOQ	≤ LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result ≤ LOQ	Qualify non-detect (U) at reported result
		> LOQ but < 5x blank result	Qualify estimated (J+)
		≥ 5x blank result	No qualification

COMPOUND INDENTIFICATION

- ✓ RT within ±0.4 RRT units (review for Level 4)
- ✓ S/N ration 3:1 (review for Level 4)
- ✓ Ion response ratio with ±50% (review for Level 2B)
- ✓ If ion ratio is outside limit; qualify J

All ok except

LORNG_JMW8011_10222024	FC19898-20	PFDA	flag J
		PFNS	flag J
LORNG_RFW1145_35_10232024	FC19898-22	PFDA	flag J
LORNG_BSMW3S_10222024	FC19898-1	PFNS	flag J

QA LEVEL I - DATA VERIFICATION CHECKLIST

Project Name: Loring AFB
Project Number: US-EI-775361701
Reviewing Company: WSP USA Environment & Infrastructure Inc
Project Manager: Scott Calkin
Data Evaluator: Tige Cunningham
Data Evaluation Date: 3/27/2025
Laboratory: BV Lab,SGS, and Katahdin Analytical
Lab Job #: BV Lab: C4N6160. SGS Lab: FC18081, FC18771, FC18996, FC19134, FC19318, FC19717, FC19917, and FC20138. Katahdin Lab: SR5400

Matrix: ☒ Aqueous ☒ Soil ☐ Sediment ☐ Waste ☐ Air ☐ Other:

Analytical Methods: See Table 1.

Samples comprised of Influent and Effluent samples from the on-site granular activated carbon (GAC) treatment system and investigation derived waste (IDW) characterization soil samples from drilling activities in 2024. The IDW soil samples were collected to produce the waste profile for the waste hauler/Landfill facility accepting the soil waste.

Sample Information: See Table 1.

Data Qualification: No qualifications required. Table 2 has final results.

Work Plan or QAPP reference: TO 1048 Quality Program Plan Rev 1, April 2024

Data Validation Guidance: DoD QSM 5.4 Quality Control Limits and Laboratory Quality Control Limits

Chain of Custody (COC) and Sample Receipt	**YES**	**NO**	**NA**	**COMMENT**
a) COC complete and correct? (Project location, contacts, sample IDs, sample dates, field QC samples, analyses identified, et c.)	☒	☐		
b) COC documents release of custody (signed and dated)?	☒	☐		
c) Field QC types provided (note types)?	☐	☐	☒	
d) Did the cooler contents match the COC?	☒	☐		
e) Were samples received in good condition?	☒	☐		
f) Were cooler temperatures within control limits?	☒	☐		

Data Package Information	**YES**	**NO**	**NA**	**COMMENT**
a) Laboratory name and location documented?	☒	☐		
b) All samples on COC reported in data package?	☒	☐		
c) Requested analytical methods used?	☒	☐		
d) Requested analyte list reported?	☒	☐		
e) Requested units reported?	☒	☐	☐	
f) Did the laboratory define the qualifiers used?	☒	☐		
g) Data package contains all information necessary to complete the data quality review?	☒	☐		

Analytical Assessment	**YES**	**NO**	**NA**	**COMMENT**
a) Solid samples reported on a dry-weight basis?	☒	☐	☐	

Analytical Assessment	YES	NO	NA	COMMENT
b) Were solid samples percent moisture criteria acceptable?	☒	☐	☐	
c) Were sample dilutions noted?	☒	☐		
d) Were detected concentrations less than the QL qualified by the laboratory?	☒	☐		
e) All detected sample results within the calibrated range?	☒	☐		
f) Did the laboratory satisfy the requested sensitivity requirements?	☒	☐		

Laboratory Case Narrative	YES	NO	NA	COMMENT
a) Do the laboratory narrative or laboratory qualifiers indicate deficiencies?	☒	☐	☐	No qualifiers added for deficiencies identified by the laboratory

Sample Preservation and Holding Time	YES	NO	NA	COMMENT
a) Were samples properly preserved?	☒	☐		
b) Were holding times met for sample preparation and/or extraction?	☒	☐	☐	
c) Were holding times met for sample analysis?	☒	☐		

Duplicates	YES	NO	NA	COMMENTS
a) Were field duplicates reported?	☐	☐	☒	
b) Was field duplicate RPD or absolute difference criteria acceptable?	☐	☐	☒	

Overall Evaluation	YES	NO	NA	COMMENTS
a) Any other technical problems that lead to data rejection identified by laboratory?	☐	☒		
b) Were data acceptable and usable, except where noted?	☒	☐		

Comments/Notes:

1 INTRODUCTION

WSP USA Environment & Infrastructure Inc. (WSP) collected one aqueous sample on 6 June 2024 from the former Loring Air Force Base, located in Limestone, Maine. WSP submitted the sample to SGS North America Inc. (SGS), located in Orlando, Florida, where it was received on 7 June 2024 and assigned to job number FC16237. SGS analyzed the sample for per- and polyfluoroalkyl substances (PFAS) using United States Environmental Protection Agency (EPA) Draft Method 1633.

The field sample identification (ID), sample collection date, and the laboratory sample ID are presented in Table 1.

Table 1: Field Sample Submitted to SGS

Field Sample ID	Collection Date and Time	Laboratory Sample ID
LORNG_RES07_06062024	**06/06/2024 07:45**	**FC16237-1**

2 DATA VALIDATION METHODOLOGY

WSP performed DoD Stage 4 validation on the sample reviewed in this report. The Stage 4 validation includes review of quality control (QC) results in the laboratory's analytical report and reported on QC summary forms and review of the raw analytical data. This data validation has been performed in general accordance with:

- WSP, 2023. Draft Quality Program Plan Addendum, Remedial Investigation, Per- and Polyfluoroalkyl Substances Response, Former Loring Air Force Base, Limestone Maine, May.
- Department of Defense (DoD), 2019. DoD General Data Validation Guidelines, September.
- DoD, 2021. DoD Department of Energy Consolidated Quality Systems Manual (QSM) for Environmental Laboratories Version 5.4, October.
- DoD, 2022. Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances Analysis by QSM Table B-24, October.
- EPA, 2023. 4th Draft EPA Method 1633, Analysis of PFAS in Aqueous, Solid, Biosolids, and Tissue Samples by Liquid Chromatography-Tandem Mass Spectrometry (LC-MS/MS), July.

The laboratory's certified analytical report and supporting documentation were reviewed to assess the following:

- Data package and electronic data deliverable completeness;
- Chain of custody (COC) compliance;
- Holding time compliance;
- Sample receipt condition;
- Mass Calibration;
- Initial calibration (ICAL), initial calibration verification (ICV), and continuing calibration verification (CCV) compliance with method specified criteria;
- Presence or absence of laboratory contamination as demonstrated by laboratory blanks;
- Accuracy and bias as demonstrated by recovery of laboratory control sample (LCS) and matrix spike (MS) samples;
- Extracted Internal Standard (EIS) and non-extracted internal standard (NIS) recoveries;
- Analytical precision as relative percent difference (RPD) of analyte concentration between laboratory duplicates, or MSs/MS duplicates (MSDs);
- Sampling and analytical precision as RPD of analyte concentration between field duplicates;

- Assessment of field contamination as demonstrated by field blanks; and
- Insofar as possible, the degree of conformance to method requirements and good laboratory practices.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

3 EXPLANATION OF DATA QUALITY INDICATORS

Summary explanation of the specific data quality indicators reviewed during data validation are presented below.

3.1 LABORATORY CONTROL SAMPLE RECOVERIES

LCSs are aliquots of analyte free matrices that are spiked with the analytes of interest for an analytical method, or a representative subset of those analytes. The spiked matrix is then processed through the same analytical procedures as the samples they accompany.

LCS recovery and precision are an indication of a laboratory's ability to successfully perform an analytical method in an interference free matrix.

3.2 MATRIX SPIKE RECOVERIES

MSs and MSDs are prepared by adding known amounts of the analytes of interest for an analytical method, or a representative subset of those analytes, to an aliquot of sample. The spiked sample is then processed through the same extraction, concentration, cleanup, and analytical procedures as the unspiked samples in an analytical batch.

MS recovery and precision are an indication of a laboratory's ability to successfully recover an analyte in the matrix of a specific sample or closely related sample matrices. It is important not to apply MS results for any specific sample to other samples without understanding how the sample matrices are related.

3.3 BLANK CONCENTRATIONS

Blank samples are aliquots of analyte free matrix that are used as negative controls to verify that the sample collection, storage, preparation, and analysis system does not produce false positive results.

Laboratory blanks are processed by the laboratory using the same procedures as the field samples. Target analytes should not be found in laboratory blanks.

3.4 LABORATORY AND FIELD DUPLICATES

Laboratory and field duplicate analyses verify acceptable method precision by the laboratory at the time of preparation and analysis and/or sampling precision at the time of collection.

4 DEFINITIONS OF QUALIFIERS THAT MAY BE ADDED DURING DATA VALIDATION

J The reported result was an estimated value.

J+ The reported result was an estimated value with a positive bias.

J- The reported result was an estimated value with a negative bias.

R The data are unusable. The sample results are rejected due to serious deficiencies in meeting quality control criteria. The analyte may or may not be present in the sample.

U The analyte was not detected and was reported as less than the limit of detection (LOD). The LOD has been adjusted for any dilution or concentration of the sample.

UJ The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

5 QUALIFICATION REASON CODES

The following reason codes were applied to the data during data validation:

CVHL High CCV recovery.

IVD ICV recovery is outside of limits.

TR The detected analyte concentration is less than the LOQ.

6 CHAIN OF CUSTODY AND SAMPLE RECEIPT CONDITION DOCUMENTATION

The sample was received at the laboratory under proper COC, intact, and at an average temperature less than the method-specified maximum of 6 degrees Celsius.

7 SPECIFIC DATA VALIDATION FINDINGS

Results from the sample reviewed in this report may be considered usable with the limitations and exceptions described in Sections 7.1 through 8.0.

7.1 PFAS BY EPA DRAFT METHOD 1633

PFAS results generated by Eurofins may be considered usable with the limitations described in Sections 7.1.1 through 7.1.14.

7.1.1 HOLDING TIMES

The sample was extracted within the method-specified maximum holding time of 28 days from sample collection and the extract was analyzed within the method-specified maximum hold time of 90 days from extraction.

7.1.2 MASS CALIBRATION FREQUENCY

A mass calibration verification was performed before the ICAL associated with the analysis of the sample reviewed in this report.

7.1.3 INITIAL CALIBRATION COMPLIANCE

Relative standard deviations between response factors for each target analyte were less than or equal to the method-specified maximum of 20% and/or relative standard errors were less than the method-specified maximum of 20% for all target analytes and EISs.

7.1.4 INITIAL CALIBRATION VERIFICATION ACCURACY

ICVs were analyzed after each initial calibration. Recoveries were between 70 and 130%, with the following exceptions:

- N-Methyl perfluorooctanesulfonamide (NMeFOSA [131%]), N-methyl perfluorooctanesulfonamidoethanol (NMeFOSE [158%]), and N-ethyl perfluorooctanesulfonamidoethnaol (NEtFOSE [159%]) recoveries were high in the mid-level ICV associated with the analysis of sample LORNG_RES07_06062024. Per the DoD data validation guidelines, WSP UJ qualified the non-detected NMeFOSA, NMeFOSE, and NEtFOSE results from sample LORNG_RES07_06062024 because of the high ICV recoveries. (UJ, IVD)
- NMeFOSE and NEtFOSE recoveries were high at 153% and 159%, respectively, in the ICV associated with the analysis of the MS and MSD reported in the laboratory report. The MS and MSD were performed on an unrelated sample and WSP did not qualify any data based on the high ICV recoveries.

7.1.5 INSTRUMENT SENSITIVITY CHECK COMPLIANCE

Instrument sensitivity checks (ISCs) were analyzed at the beginning of each analytical run, concentrations were equivalent to the LOQ, signal to noise ratios were greater than or equal to 3:1, and recoveries were within the method-specified 70 to 130% limits.

7.1.6 CONTINUING CALIBRATION VERIFICATION COMPLIANCE

CCVs were analyzed at the beginning of the analytical sequence after the ISC, after every ten or fewer samples, and at the end of the analytical sequence. Recoveries were within the method-specified 70 to 130% limits, with the following exceptions:

- 2H,2H,3H,3H-Perfluorooctanoic acid (131%) and 3-perfluoroheptyl propanoic acid (7:3 FTCA [137%, 136%)) recoveries were high in a CCVs associated with the analysis of the laboratory blank, LCS, and low-level LCS (LLCS) associated with the extraction of sample LORNG_RES07_06062024. The field sample was not associated with this CCV and WSP did not qualify any data based on the high CCV recoveries.

- 7:3 FTCA recoveries were high at 136% and 132% in CCVs bracketing the analysis of sample LORNG_RES07_06062024. Per the DoD data validation guidelines, WSP UJ qualified the non-detected 7:3 FTCA result from sample LORNG_RES07_06062024 because of the high CCV recoveries. (UJ, CVHL)

7.1.7 BILE SALT INTERFERENCE CHECKS

Bile salt interference checks were analyzed daily and retention times for the bile salts were at least one minute outside the retention times for linear or branched perfluorooctanesulfonic acid.

7.1.8 LABORATORY AND EQUIPMENT BLANK DETECTIONS

Target analytes were not detected in the laboratory blanks associated with the sample reviewed in this report, with the following exceptions:

- N-Ethyl perfluorooctanesulfonamide (NEtFOSA) was detected at a concentration of 0.0012 micrograms per liter (µg/L) in the initial calibration blank associated with the analysis of sample LORNG_RES07_06062024. NEtFOSA was not detected in the sample and data usability is not adversely affected by the blank detection.
- NEtFOSA was detected at concentrations of 0.0010 µg/L and 0.0015 µg/L in instrument blanks associated with the analysis off sample LORNG_RES07_06062024. NEtFOSA was not detected in the sample and data usability is not adversely affected by the blank detections.

7.1.9 LABORATORY CONTROL SAMPLE ACCURACY

LLCS and LCS were included with each extraction batch, LLCS spike concentrations were twice the LOQ, and LCS and LLCS recoveries were within the QAPP-specified 40 to 150% interim limits.

7.1.10 MATRIX SPIKE ACCURACY AND PRECISION

SGS did not perform MS analyses on the sample reviewed in this report.

7.1.11 DUPLICATE PRECISION

SGS did not perform a duplicate analysis on the sample reviewed in this report.

7.1.12 EXTRACTED INTERNAL STANDARD ACCURACY

EIS recoveries in the field sample were within the QAPP-specified 20 to 150% interim limits.

7.1.13 NON-EXTRACTED INTERNAL STANDARD ACCURACY

NIS recoveries were within the method-specified 50 to 200% limits.

7.1.14 STAGE 4 VALIDATION

WSP performed Stage 4 validation on sample LORNG_RES07_06062024. Detected results met all identification criteria and reported results matched the raw data.

7.1.15 DATA REPORTING AND ANALYTICAL PROCEDURES

SGS J qualified analytes with detected concentrations less than the LOQ. WSP agrees that these results are quantitatively uncertain and has maintained SGS' J qualifiers. (J, TR)

Data from the field sample are reported in nanograms per liter, while QC results are reported in µg/L. Spiked concentrations are correct and WSP did not qualify any data based on the unit mismatch.

8 FIELD DUPLICATE PRECISION

WSP did not collect a field duplicate with the sample reviewed in this report.

9 SUMMARY AND CONCLUSIONS

WSP evaluated a total of 40 data records from the field sample during this validation. Qualifier definitions are summarized in Section 4.0, reason codes are summarized in Section 5.0, and qualified data are summarized below.

- J: WSP J qualified 6 records (15%) because of detected concentrations less than the LOQ.
- UJ: WSP UJ qualified 4 records (10%) because of high ICV or CCV recoveries.

Data qualified during validation are summarized in Table 2.

1 INTRODUCTION

WSP USA Environment & Infrastructure Inc. (WSP) collected 39 surface water samples on 4 and 5 June 2024 from the former Loring Air Force Base, located in Limestone, Maine. WSP submitted the sample to SGS North America Inc. (SGS), located in Orlando, Florida, where they were received on 6 and 7 June 2024 and assigned to job numbers FC16206 and FC16234. SGS analyzed the sample for per- and polyfluoroalkyl substances (PFAS) using United States Environmental Protection Agency (EPA) Draft Method 1633. WSP also submitted a single sample to Bureau Veritas Canada, located in Mississauga, Ontario, Canada. The sample was received by the laboratory on 6 June 2024, assigned to job number C4H1011, and analyzed for PFAS using EPA Draft Method 1633.

The field sample identifications (IDs), sample collection dates, and laboratory sample IDs are presented in Table 1.

2 DATA VALIDATION METHODOLOGY

WSP performed DoD Stage 4 validation on 10% of the samples reviewed in this report and Stage 2B validation on the remaining data. The Stage 4 validation includes review of quality control (QC) results in the laboratory's analytical report and reported on QC summary forms and review of the raw analytical data and Stage 2B is the same as Stage 4 except it does not include review or validation of the raw analytical data. This data validation has been performed in general accordance with:

- WSP, 2024. Draft Quality Program Plan Addendum, Remedial Investigation, Per- and Polyfluoroalkyl Substances Response, Former Loring Air Force Base, Limestone Maine, April.
- Department of Defense (DoD), 2019. DoD General Data Validation Guidelines, September.
- DoD, 2021. DoD Department of Energy Consolidated Quality Systems Manual (QSM) for Environmental Laboratories Version 5.4, October.
- DoD, 2022. Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances Analysis by QSM Table B-24, October.
- EPA, 2023. 4th Draft EPA Method 1633, Analysis of PFAS in Aqueous, Solid, Biosolids, and Tissue Samples by Liquid Chromatography-Tandem Mass Spectrometry (LC-MS/MS), July.

The laboratory's certified analytical report and supporting documentation were reviewed to assess the following:

- Data package and electronic data deliverable completeness;
- Chain of custody (COC) compliance;
- Holding time compliance;
- Sample receipt condition;
- Mass Calibration;
- Initial calibration (ICAL), initial calibration verification (ICV), instrument sensitivity check (ISC), and continuing calibration verification (CCV) compliance with method specified criteria;
- ICS signal to noise ratios;
- Bile salt interference check;
- Presence or absence of laboratory contamination as demonstrated by laboratory blanks;
- Accuracy and bias as demonstrated by recovery of laboratory control sample (LCS) and matrix spike (MS) samples;
- Extracted Internal Standard (EIS) and non-extracted internal standard (NIS) recoveries;

- Analytical precision as relative percent difference (RPD) of analyte concentration between laboratory duplicates, or MSs/MS duplicates (MSDs);
- Sampling and analytical precision as RPD of analyte concentration between field duplicates;
- Assessment of field contamination as demonstrated by field blanks; and
- Insofar as possible, the degree of conformance to method requirements and good laboratory practices.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

3 EXPLANATION OF DATA QUALITY INDICATORS

Summary explanation of the specific data quality indicators reviewed during data validation are presented below.

3.1 LABORATORY CONTROL SAMPLE RECOVERIES

LCSs are aliquots of analyte free matrices that are spiked with the analytes of interest for an analytical method, or a representative subset of those analytes. The spiked matrix is then processed through the same analytical procedures as the samples they accompany.

LCS recovery and precision are an indication of a laboratory's ability to successfully perform an analytical method in an interference free matrix.

3.2 MATRIX SPIKE RECOVERIES

MSs and MSDs are prepared by adding known amounts of the analytes of interest for an analytical method, or a representative subset of those analytes, to an aliquot of sample. The spiked sample is then processed through the same extraction, concentration, cleanup, and analytical procedures as the unspiked samples in an analytical batch.

MS recovery and precision are an indication of a laboratory's ability to successfully recover an analyte in the matrix of a specific sample or closely related sample matrices. It is important not to apply MS results for any specific sample to other samples without understanding how the sample matrices are related.

3.3 BLANK CONCENTRATIONS

Blank samples are aliquots of analyte free matrix that are used as negative controls to verify that the sample collection, storage, preparation, and analysis system does not produce false positive results.

Laboratory blanks are processed by the laboratory using the same procedures as the field samples. Target analytes should not be found in laboratory blanks.

3.4 LABORATORY AND FIELD DUPLICATES

Laboratory and field duplicate analyses verify acceptable method precision by the laboratory at the time of preparation and analysis and/or sampling precision at the time of collection.

3.5 INTERLABORATORY SPLIT SAMPLES

Interlaboratory split samples are co-located samples that are sent to both the primary laboratory and to a secondary laboratory to confirm analytical precision between the two laboratories' results and comparability of results produced by the primary laboratory. Data from the split laboratory were not validated and no data are qualified based on interlaboratory split results. Results from the primary and split analyses are provided for comparative purposes only.

4 DEFINITIONS OF QUALIFIERS THAT MAY BE ADDED DURING DATA VALIDATION

J	The reported result was an estimated value.
J+	The reported result was an estimated value with a positive bias.
J-	The reported result was an estimated value with a negative bias.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting quality control criteria. The analyte may or may not be present in the sample.
U	The analyte was not detected and was reported as less than the limit of detection (LOD). The LOD has been adjusted for any dilution or concentration of the sample.
UJ	The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

5 QUALIFICATION REASON CODES

The following reason codes were applied to the data during data validation:

CVHL	High ISC or CCV recovery.
IAG	Ion abundance ratio is outside of limits.
IVD	ICV recovery is outside of limits.
MSD	Imprecision between M and MSD results.
MSH	High MS recovery. Result may be biased high.
TR	The detected analyte concentration is less than the LOQ.

6 CHAIN OF CUSTODY AND SAMPLE RECEIPT CONDITION DOCUMENTATION

The sample was received at the laboratory under proper COC, intact, and at an average temperature less than the method-specified maximum of 6 degrees Celsius.

7 SPECIFIC DATA VALIDATION FINDINGS

Results from the sample reviewed in this report may be considered usable with the limitations and exceptions described in Sections 7.1 through 8.0.

7.1 PFAS BY EPA DRAFT METHOD 1633

PFAS results generated by Eurofins may be considered usable with the limitations described in Sections 7.1.1 through 7.1.14.

7.1.1 HOLDING TIMES

The samples were extracted within the method-specified maximum holding time of 28 days from sample collection and the extracts were analyzed within the method-specified maximum hold time of 90 days from extraction.

7.1.2 MASS CALIBRATION FREQUENCY

A mass calibration verification was performed before the ICAL associated with the analysis of the sample reviewed in this report.

7.1.3 INITIAL CALIBRATION COMPLIANCE

Relative standard deviations between response factors for each target analyte were less than or equal to the method-specified maximum of 20% and/or relative standard errors were less than the method-specified maximum of 20% for all target analytes and EISs.

7.1.4 INITIAL CALIBRATION VERIFICATION ACCURACY

ICVs were analyzed after each initial calibration. Recoveries were between 70 and 130%, with the following exceptions:

- N-Methyl perfluorooctanesulfonamidoethanol (NMeFOSE), and N-ethyl perfluorooctanesulfonamidoethanol (NEtFOSE) recoveries were high at 170% and 158%, respectively, in the mid-level ICV associated with the analysis of samples LORNG_C1_ST_06042024, LORNG_C2_ST_06042024, LORNG_C2_ST_06042024FD, LORNG_C3_ST_06042024, LORNG_C3_ST_06042024FD, LORNG_ST07008_06042024, LORNG_ST13008_06042024, LORNG_ST13014_06042024, LORNG_ST13014_06042024FD, LORNG_ST13015_06042024, LORNG_ST16002_06042024, LORNG_ST16003_06042024, LORNG_ST16007_06042024,

LORNG_ST18013_06042024, LORNG_ST18013_06042024FD, LORNG_ST18014_06042024, LORNG_ST18016_06042024, LORNG_ST18017_06042024, and LORNG_ST21005_06042024. Per the DoD data validation guidelines, WSP UJ qualified the non-detected NMeFOSE and NEtFOSE results from the associated samples because of the high ICV recoveries. (UJ, IVD)

- N-Methyl perfluorooctanesulfonamide (NMeFOSA [131%]), NMeFOSE (158%), and NEtFOSE (159%) recoveries were high in the mid-level ICV associated with the undiluted analysis of sample LORNG_ST12001_06052024. Per the DoD data validation guidelines, WSP UJ qualified the non-detected NMeFOSA, NMeFOSE, and NEtFOSE results from sample LORNG_ST12001_06052024 because of the high ICV recoveries. (UJ, IVD)
- NMeFOSE and NEtFOSE recoveries were high at 153% and 159%, respectively, in the mid-level CCV associated with the analysis of sample LORNG_ST21018_06052024 and the 1:10 dilution analysis of sample LORNG_ST12001_06052024. Data limitations are summarized below.
  - Per the DoD data validation guidelines, WSP UJ qualified the non-detected NMeFOSE and NEtFOSE results from sample LORNG_ST21018_06052024 because of the high ICV recoveries. (UJ, IVD)
  - NMeFOSE and NEtFOSE were not reported from the associated analysis of sample LORNG_ST12001_06052024 and data usability is not adversely affected by the high ICV recoveries.
- N-Ethyl perfluorooctanesulfonamide (NEtFOSA) recovery was low at 66% in the mid-level ICV associated with the 1:5 dilution analyses of samples LORNG_ST08003_06052024 and LORNG_ST12006_06052024, and the 1:10 dilution analyses of samples LORNG_ST13017_0605202 and LORNG_ST21016_06052024. NEtFOSA was not reported from the associated analyses and data usability is not adversely affected by the low ICV recovery.

7.1.5 INSTRUMENT SENSITIVITY CHECK COMPLIANCE

ISCs were analyzed at the beginning of each analytical run, concentrations were equivalent to the LOQ, signal to noise ratios were greater than or equal to 3:1, and recoveries were within the method-specified 70 to 130% limits, with the following exception:

- Perfluorodecanesulfonic acid (PFDS) recovery was high at 133% in the ISC associated with the analysis of samples LORNG_C1_ST_06042024, LORNG_C2_ST_06042024, LORNG_C2_ST_06042024FD, LORNG_C3_ST_06042024, LORNG_C3_ST_06042024FD, LORNG_ST07008_06042024, LORNG_ST13008_06042024, LORNG_ST13014_06042024, LORNG_ST13014_06042024FD, LORNG_ST13015_06042024, LORNG_ST16002_06042024, LORNG_ST16003_06042024, LORNG_ST16007_06042024, LORNG_ST18013_06042024, LORNG_ST18013_06042024FD, LORNG_ST18014_06042024, LORNG_ST18016_06042024, LORNG_ST18017_06042024, and LORNG_ST21005_06042024. Per the DoD data validation guidelines, WSP UJ qualified the non-detected PFDS results from the associated samples because of the high ISC recovery. (UJ, CVHL)

7.1.6 CONTINUING CALIBRATION VERIFICATION COMPLIANCE

CCVs were analyzed at the beginning of the analytical sequence after the ISC, after every ten or fewer samples, and at the end of the analytical sequence. Recoveries were within the method-specified 70 to 130% limits, with the following exceptions:

- 1H,1H, 2H, 2H-Perfluorooctane sulfonic acid (6:2 FTS) recovery was high at 131% in a CCV associated with the analysis of samples LORNG_ST07008_06042024, LORNG_ST13008_06042024, LORNG_ST13014_06042024, LORNG_ST13014_06042024FD, LORNG_ST13015_06042024, LORNG_ST16003_06042024, and LORNG_ST21005_06042024. Per the DoD data validation guidelines, WSP UJ qualified the non-detected 6:2 FTS results from the associated samples because of the high CCV recovery. (UJ, CVHL)
- 3-Perfluoroheptyl propanoic acid (7:3 FTCA) recoveries were high at 136% in CCVs bracketing the analysis of sample LORNG_ST12001_06052024. Per the DoD data validation guidelines, WSP UJ qualified the non-detected 7:3 FTCA result from this sample because of the high CCV recoveries. (UJ, CVHL)

7.1.7 BILE SALT INTERFERENCE CHECKS

Bile salt interference checks were analyzed daily and retention times for the bile salts were at least one minute outside the retention times for linear or branched perfluorooctanesulfonic acid (PFOS).

7.1.8 LABORATORY AND EQUIPMENT BLANK DETECTIONS

Target analytes were not detected in the laboratory blanks associated with the sample reviewed in this report, with the following exceptions:

- NEtFOSA was detected at concentrations of 0.0012 micrograms per liter (µg/L), 0.0010 µg/L and 0.0015 µg/L in instrument blanks associated with the analysis of samples LORNG_ST12001_06052024 and LORNG_ST21018_06052024. NEtFOSA was not detected in the associated samples and data usability is not adversely affected by the blank detections.

7.1.9 LABORATORY CONTROL SAMPLE ACCURACY

LLCS and LCS were included with each extraction batch, LLCS spike concentrations were twice the LOQ, and LCS and LLCS recoveries were within the QAPP-specified 40 to 150% interim limits.

7.1.10 MATRIX SPIKE ACCURACY AND PRECISION

SGS performed MS and MSD analyses on samples LORNG_C1_ST_06042024, LORNG_ST12001_06052024, and LORNG_ST21004_06052024. Recoveries were within the QAPP-specified 40 to 150% interim limits and RPDs between MS and MSD results were less than 30%, with the following exceptions:

- PFOS recovery was high at 210% in the MS performed on sample LORNG_C1_ST_06042024. Additionally, the RPD between MS and MSD results for PFOS was high at 35%. WSP J+ qualified the detected PFOS result from sample LORNG_C1_ST_06042024 because of the high MS recovery and imprecision between MS and MSD results. (J+, MSH, MSD)
- Perfluorohexanoicacid (39%, MS), perfluorohexanesulfonic acid (33%, -9%), perfluoroheptanesulfonic acid (9%, 32%), PFOS (-3,119%, 4,658%), perfluorononanesulfonic acid (-178%, -133%), and perfluorodecanesulfonic acid (169%, MSD) recoveries were outside of limits in the MS and/or MSD performed on sample LORNG_ST12001_06052024. Due to high target analyte concentrations, the MS and MSD were analyzed at 1:10 dilutions, which reduced the spike concentrations to less than the elevated LOQs. Per the DoD data validation guidelines, data should not be qualified based on MS recoveries when the spike concentrations are less than the LOQ due to sample dilution.
- 3-Perfluoropropyl propanoic acid (3:3 FTCA) recovery was high at 161% in the MSD performed on sample LORNG_ST21004_06052024. 3:3 FTCA was not detected in the unspiked native sample and data usability is not adversely affected by the high MSD recovery.

7.1.11 EXTRACTED INTERNAL STANDARD ACCURACY

EIS recoveries in the field sample were within the laboratory-specified 20 to 180% limits for $^{13}C_2$-1H,1H,2H,2H-perfluorohexane sulfonic acid (4:2 FTS), $^{13}C_2$-6:2 FTS, and $^{13}C_2$-1H,1H, 2H,2H-perfluorodecane sulfonic acid (8:2 FTS), or the QAPP-specified 20 to 150% interim limits for the remaining EISs, with the following exceptions:

- Recoveries of the EIS $^{13}C_2$-4:2 FTS were high in the undiluted analyses of samples LORNG_ST08003_06052024 and LORNG_ST12006_06052024 at 185% and 181%, respectively. SGS chose to report the 4:2 FTS result from the 1:5 dilutions, which exhibited acceptable EIS recoveries, and data usability is not adversely affected by the high EIS recoveries.

- Recovery of the EIS $^{13}C_8$-perfluorooctanesulfonamide (PFOSA) was high at 156% in the undiluted analysis of sample LORNG_ST12001_06052024. SGS chose to report the PFOSA result from the 1:10 dilution, which exhibited acceptable EIS recovery, and data usability is not adversely affected by the high EIS recovery.
- Recoveries of the EIS $^{13}C_2$-4:2 FTS were high in the undiluted analyses of samples LORNG_ST21016_06052024 and LORNG_ST13017_06052024 at 239% and 210%, respectively. SGS chose to report the 4:2 FTS result from the 1:10 dilutions, which exhibited acceptable EIS recoveries, and data usability is not adversely affected by the high EIS recoveries.

7.1.12 NON-EXTRACTED INTERNAL STANDARD ACCURACY

NIS recoveries were within the method-specified 50 to 200% limits.

7.1.13 ION RATIOS

Ratios between primary and confirmation ions were within the QAPP-specified limits of 50 to 150% of the ion ratios measured in the midpoint calibration standard or daily CCV, with the following exceptions:

- Ion ratios for perfluorododecanoic acid (PFDoA) and PFOSA were high at 285% and 167%, respectively, in sample LORNG_ST12001_06052024. WSP J qualified the affected PFDoA and PFOSA results because the ion ratios were outside of limits. (J, IAG)
- The ion ratio for perfluorobutanesulfonic acid (PFBS) was high at 165% in sample LORNG_ST13008_06042024. WSP J qualified the affected PFBS result because the ion ratio was outside of limits. (J, IAG)
- The ion ratio for perfluoropentanesulfonic acid (PFPeS) was high at 152% in sample LORNG_ST13014_06042024FD. WSP J qualified the affected PFPeS result because the ion ratio was outside of limits. (J, IAG)
- Ion ratios for PFOSA were high in samples LORNG_ST16002_06042024 (180%), LORNG_ST16007_06042024 (310%), LORNG_ST18016_06042024 (160%), and LORNG_ST21018_06052024 (188%). WSP J qualified the affected PFOSA results because the ion ratios were outside of limits. (J, IAG)

7.1.14 STAGE 4 VALIDATION

WSP performed Stage 4 validation on samples LORNG_C1_ST_06042024, LORNG_C2_ST_06042024, LORNG_ST16007_06042024, and LORNG_ST18014_06042024. Detected results met all identification criteria and reported results matched the raw data.

7.1.15 DATA REPORTING AND ANALYTICAL PROCEDURES

SGS J qualified analytes with detected concentrations less than the LOQ. WSP agrees that these results are quantitatively uncertain and has maintained SGS' J qualifiers. (J, TR)

Data from the field sample are reported in nanograms per liter, while QC results are reported in µg/L. Spiked concentrations are correct and WSP did not qualify any data based on the unit mismatch.

8 FIELD DUPLICATE PRECISION

WSP collected field duplicates with samples LORNG_C3_ST_06042024, LORNG_ST08001_06052024, LORNG_ST11003_06052024, LORNG_ST13014_06042024, and LORNG_ST18013_06042024. RPDs between primary and field duplicate results were less than the QAPP-specified maximum of 30% or differences between primary and duplicate results were les than the LOQ, indicating acceptable sampling and analytical precision. Results from the primary samples and their field duplicate are presented in Table 4.

9 INTERLABORATORY SPLIT PRECISION

Sample LORNG_ST16002_06042024 was analyzed both by SGS and Bureau Verita Canada as an interlaboratory split. RPDs between the primary and split results were less than 30%, indicating acceptable analytical precision and comparability between results from the primary and split laboratories.

Results from the primary and split samples are presented in Tabe 5.

10 SUMMARY AND CONCLUSIONS

WSP evaluated a total of 1,560 data records from the field sample during this validation. Validated analytical results are presented in Table 2.

Qualifier definitions are summarized in Section 4.0, reason codes are summarized in Section 5.0, and qualified data are summarized below.

- J: WSP J qualified 220 records (14%) because of ion ratios outside of limits and/or detected concentrations less than the LOQ.
- J+: WSP J+ qualified 1 record (0.06%) because of high MS recovery and imprecision between MS and MSD results.
- UJ: WSP UJ qualified 70 records (4.5%) because of high ICV or CCV recoveries.

Data qualified during validation are summarized in Table 3.

Notes:
N = Normal Field Sample
FD = Field Duplicate
J = Concentration is estimated
J+ = Concentration is estimated; potential high bias
U = Analyte not detected at the associated detection limits
UJ = Analyte not detected and the associated detection limits are estimated
NG/L = nanograms per liter
PFAS = Per and Polyfluoroalkyl Substance
SDG = Sample Delivery Group

Notes:

U = Analyte not detected at the associated detection limits

J = Analyte is estimated

J+ = Analyte is estimated; potential high bias

UJ = Analyte not detected; reporting limits estimated

NG/L = nanograms per liter

CVHL = High ISC or CCV recovery.

IAG = Transition ion ratio outside limits

IVD = ICV recovery is outside of limits.

MSH = MS/MSD recovery greater than the upper control limit

MSD = RPD between the MS/MSD is greater than control limit.

TR = Analyte concentration is less than LOQ

Notes:
U = Analyte not detected at the associated detection limits
J = Analyte is estimated
UJ = Analyte not detected; reporting limits estimated
NG/L = nanograms per liter
NC = not calculated.
CVHL = High ISC or CCV recovery.
IVD = ICV recovery is outside of limits.
RPD = relative percent difference between parent sample and field duplicate.
TR = Analyte concentration is less than LOQ

Sample Information: See Table 1.

Data Qualification: No qualifications required. Table 2 has final results.

Work Plan or QAPP reference: TO 1048 Quality Program Plan Rev 1, April 2024

Data Validation Guidance: DoD QSM 5.4 Quality Control Limits and Laboratory Quality Control Limits

Chain of Custody (COC) and Sample Receipt	YES	NO	NA	COMMENT
a) COC complete and correct? (Project location, contacts, sample IDs, sample dates, field QC samples, analyses identified, et c.)	☒	☐		
b) COC documents release of custody (signed and dated)?	☒	☐		
c) Field QC types provided (note types)?	☐	☐	☒	
d) Did the cooler contents match the COC?	☒	☐		
e) Were samples received in good condition?	☒	☐		
f) Were cooler temperatures within control limits?	☒	☐		

Data Package Information	YES	NO	NA	COMMENT
a) Laboratory name and location documented?	☒	☐		
b) All samples on COC reported in data package?	☒	☐		
c) Requested analytical methods used?	☒	☐		
d) Requested analyte list reported?	☒	☐		
e) Requested units reported?	☒	☐	☐	
f) Did the laboratory define the qualifiers used?	☒	☐		
g) Data package contains all information necessary to complete the data quality review?	☒	☐		

Analytical Assessment	YES	NO	NA	COMMENT
a) Solid samples reported on a dry-weight basis?	☒	☐	☐	
b) Were solid samples percent moisture criteria acceptable?	☒	☐	☐	
c) Were sample dilutions noted?	☒	☐		

Analytical Assessment	YES	NO	NA	COMMENT
d) Were detected concentrations less than the QL qualified by the laboratory?	☒	☐		
e) All detected sample results within the calibrated range?	☒	☐		
f) Did the laboratory satisfy the requested sensitivity requirements?	☒	☐		

Laboratory Case Narrative	YES	NO	NA	COMMENT
a) Do the laboratory narrative or laboratory qualifiers indicate deficiencies?	☒	☐	☐	1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13

Sample Preservation and Holding Time	YES	NO	NA	COMMENT
a) Were samples properly preserved?	☒	☐		
b) Were holding times met for sample preparation and/or extraction?	☒	☐	☐	
c) Were holding times met for sample analysis?	☒	☐		

Blanks	YES	NO	NA	COMMENTS
a) Are any analytes detected in the associated preparation/method blank(s)?	☐	☒		
b) Are any analytes detected in the associated trip blank(s)?	☐	☐	☒	
c) Are any analytes detected in the associated field or equipment/rinsate blank(s)?	☐	☒	☐	

Duplicates	YES	NO	NA	COMMENTS
a) Were field duplicates reported?	☐	☒	☐	
b) Was field duplicate RPD or absolute difference criteria acceptable?	☐	☐	☒	

Overall Evaluation	YES	NO	NA	COMMENTS
a) Any other technical problems that lead to data rejection identified by laboratory?	☐	☒		
b) Were data acceptable and usable, except where noted?	☒	☐		

Comments/Notes:

1) According to the case narrative for SDG FC16222, the matrix spike and/or matrix spike duplicate recoveries for perfluorobutanesulfonic acid (PFBS), perfluorohexanesulfonic acid (PFHxS), perfluorohexanoic acid (PFHxA), perfluorooctanesulfonic acid (PFOS), and perfluoropentanesulfonic acid (PFPeS) were outside of control limits. The associated sample is not part of SDG FC16222 and has no effect on the reported data.

2) According to the case narrative for SDG FC16678, the duplicate RPDs for 2h,2h,3h,3h-perfluorooctanoic acid (5:3-FTCA), 3-perfluoroheptyl propanoic acid (7:3-FTCA), PFBS, perfluorododecanesulfonic acid (PFDoS), and perfluoro-4-methoxybutanoic acid (PFMBA) were high. The associated sample is not part of SDG FC16678 and has no effect on the reported data.

3) According to the case narrative for SDG FC16720 and FC16786, the matrix spike recoveries for PFHxS and PFOS were outside of control limits. The associated sample is not part of SDG FC16720 and FC16786 and has no effect on the reported data.

4) According to the case narrative for SDG FC16720 and FC16786, the RPD in the laboratory duplicate for 8:2 fluorotelomer sulfonic acid (8:2-FTS) was outside of control limits. The associated sample is not part of SDG FC16720 and FC16786 and has no effect on the reported data.

5) According to the case narrative for SDG 16586, the RPD in the MS/MSD for 4:2 fluorotelomer sulfonic acid (4:2-FTS) was outside of control limits. The associated sample is not part of SDG FC16586 and has no effect on the reported data.

6) According to the case narrative for SDG 16586, the percent recovery in the ICV for n-methyl-heptadecafluorooctane sulfonamide (NMeFOSA) was high associated with sample LORNG_SR_IDW_01_06262024.

7) According to the case narrative for SDG FC17160, the recoveries in the LLCS for n-ethyl perfluorooctanesulfonamidoacetic acid (NEtFOSAA) and hexafluoropropylene oxide dimer acid (HFPO-DA) were outside of control limits associated with sample LORNG_IDW-EFF06_07122024.

8) According to the case narrative for SDG 17268, the recoveries in the LLCS for n-methyl-heptadecafluorooctane sulfonamidoethanol (NMeFOSE) and perfluorodecanoic acid (PFDA) were outside control limits associated with sample LORNG_IDW-EFF07_07162024.

9) According to the case narrative for SDG 17268, the RPD in the laboratory duplicate for perfluoroheptanoic acid (PFHpA) is outside of control limits. The associated sample is not part of SDG 17268 and has no effect on the reported data.

10) According to the case narrative for SDG 15489, the percent recovery in the ICV for 8:2-FTS and n-methyl perfluorooctanesulfonamidoacetic acid (NMeFOSAA) were outside of control limits associated with the samples LORNG_FB03_05072024 and LORNG_FB04_05072024.

11) According to the case narrative for SDG 15489, the percent recovery in the MS for PFHxS is outside of control limits. The associated sample is not part of SDG 15489 and has no effect on the reported data.

12) According to the case narrative for SDG 14693, the recoveries in the MS and/or MSD for 3-perfluoropropyl propanoic acid (3:3FTCA), PFOS, and perfluoro-3-methoxypropanoic acid (PFMPA) were outside control limits. The associated sample is not part of SDG 14693 and has no effect on the reported data.

13) According to the case narrative for SDG 14693, the RPD in the MS/MSD for 4:2-FTS was outside control limits. The associated sample is not part of SDG 14693 and has no effect on the reported data.

Data Validation Report
Loring PFAS Remedial Investigation
August – October 2024 Ecological Abiotic Sampling Program
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Soil, sediment, porewater, and surface water samples were collected at the Former Loring Air Force Base in Limestone, Maine, in August, September, and October 2024 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. Samples were submitted to SGS North America (SGS) located in Orlando, Florida, or Bureau Veritas Environmental Laboratory (BV) located in Mississauga, Ontario, Canada, for analysis.

SGS analyzed 163 samples and 22 equipment blanks, and BV analyzed 10 samples and 1 equipment blank, for PFAS by Method 1633, liquid chromatography tandem mass spectrometry compliant with Table B-24 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.4 (USDoD, 2021).

Sample event information included in this data validation report is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Summary of Data Validation Actions
- Table 4 – Summary of Field Duplicate Results
- Table 5 – Acronyms and Abbreviations

Data quality reviews were completed as described in the Draft Quality Program Plan (QPP) Remedial Investigation PFAS Response (WSP, 2024) and the final Method 1633 (USEPA, 2024). Data validation levels are established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019). PFAS data were validated using Stage 2B procedures. Ten percent of the PFAS data collected during the remedial investigation were validated using Stage 4 procedures. Validation checklists, documentation of sample recalculations, and qualification justification documentation are stored in the WSP project file.

Stage 2B data validation includes review of sample results forms, chain of custody (COC) and supporting records, laboratory receipt checklists, analytical holding time compliance, sample related quality control (QC) data forms (method blanks, laboratory control samples [LCS], matrix spike/matrix spike duplicates [MS/MSD], field and laboratory duplicates, extracted internal standards [EIS] and non-extracted internal standards [NIS], QC sample frequency checks, initial calibration summaries, continuing calibration verification summaries, instrument mass calibration /tuning summaries, and sample preparation logs.

Stage 4 data validation includes all reviews performed in Stage 2B as well as review of raw data and chromatograms, target analyte identification confirmation, and recalculation of QC and sample results.

Data review and qualification actions were completed based on DoD Data Validation Guidelines Module 6 for PFAS (USDoD, 2022), general procedures described in National USEPA Data Review and Validation Guidelines (USEPA, 2020), and method specifications in the DoD QSM 5.4 and/or the final Method 1633. QC limits presented in the DoD QSM 5.4, Method 1633, and/or the QPP were used during the data evaluation. Data qualifications were completed, if necessary, in accordance with the USEPA guidelines and the professional judgment of the validator using the following qualifiers:

J = Analyte present; concentration is estimated
J+ = Analyte present; concentration is estimated with potential high bias
J- = Analyte present; concentration is estimated with potential low bias
U = Analyte not detected at the associated detection limits
UJ = Analyte was not detected at the associated detection limits; however, the associated detection limit should be considered an estimate.
R = Sample result is considered unusable for project objectives

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

Validation reason codes were applied to results associated with QC measurements outside project QC goals where validation qualifiers were added to results. Final results are presented in Table 2. The validation qualification actions and associated validation reason codes applied to sample results are summarized in Table 3. The following data validation reason codes were applied to one or more sample results:

EBG = Equipment blank contamination greater than reporting limit
EBL = Equipment blank contamination less than reporting limit
EISH = Extracted internal standard response greater than upper control limit
EISL = Extracted internal standard response less than upper control limit
FDD = Field duplicate relative percent difference (RPD) criteria exceeded
IAG = Ion abundance ratio outside calculated limits
LBL = Laboratory blank contamination less than reporting limit
MSL = Matrix spike recovery less than lower control limit
PJ = Professional judgment
SNL = Signal-to-noise ratio less than 10:1 for ions used for quantitation

2.0 DATA VALIDATION QUALIFICATION ACTION SUMMARY

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the DoD QSM 5.4, the QPP, and/or analytical method. Unless specified below, results are interpreted to be usable as reported by the laboratory.

2.1 PFAS

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
  QC Blanks
* Instrument Performance/Tuning
* LCS
  MS/MSD
  Field Duplicates
  Extracted Internal Standard Recovery
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
  Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
  Miscellaneous

* QC criteria were met for this parameter.

2.1.1 QC Blanks

C4V9681

Perfluorohexanesulfonic acid (PFHxS) was detected in the laboratory blank for batch 9714145 (0.000043 J mg/kg) associated with a subset of samples. The detection of PFHxS in sample E-A-SD01W_00-0.5-20241003FD was reported at a concentration less than the LOQ but greater than the LOD and the result was qualified as not-detected (U) at the reported concentration with reason code LBL.

FC19899

Perfluorooctanesulfonic acid (PFOS) was detected in laboratory instrument blank IBLK 9Q2729.d associated with a subset of samples. The detection of PFOS in sample E-A-PW01I_20241022 was reported at a concentration less than the LOD and the result was qualified as not-detected (U) at the LOD with reason code LBL.

FC18138

Perfluorohexanoic acid (PFHxA) and perfluorononanoic acid (PFNA) were detected in equipment blank LORNG_EB201_08142024 (2.0 J ng/l and 0.66 ng/l, respectively) associated with a subset of samples. The detection of PFHxA in sample E-A-PW01Q_20240814 was reported at a concentration less than the LOQ but greater than the LOD and the result was qualified as not-detected (U) at the reported concentration with reason code EBL. The detection of PFNA in sample E-A-PW01Q_20240814 was reported at a concentration less than the LOD and the result was qualified as not-detected (U) at the LOD with reason code EBL.

PFHxA and PFNA were detected in equipment blank LORNG_EB201_08142024 (2.0 J ng/l and 0.66 ng/l, respectively) associated with a subset of samples. The detection of PFHxA in sample E-A-PW01R_20240814 was reported at a concentration greater than the LOQ but less than five times the blank concentration and the result was qualified as estimated with potential high bias (J+) at the reported concentration with reason code EBL. The detection of PFNA in sample E-A-PW01R_20240814 was reported at a concentration less than the LOD and the result was qualified as not-detected (U) at the LOD with reason code EBL.

Perfluoroheptanoic acid (PFHpA), perfluorooctanoic acid (PFOA), and PFOS were detected in equipment blank LORNG_EB201_08142024 (3.9 ng/l, 19.4 ng/l, and 9.8 ng/l, respectively) associated with a subset of samples. The detection of PFHpA in sample E-A-PW01Q_20240814 was reported at a concentration less than the LOD and the result was qualified as not-detected (U) at the LOD with reason code EBG. The detection of PFOA in sample E-A-PW01Q_20240814 was reported at a concentration less than the LOQ but greater than the LOD and the result was qualified as not-detected (U) at the reported concentration with reason code EBG. The detection of PFOS in sample E-A-PW01Q_20240814 was reported at a concentration greater than the LOQ but less than five times the blank concentration and the result was qualified as estimated with potential high bias (J+) at the reported concentration with reason code EBG.

PFHpA, PFOA, and PFOS were detected in equipment blank LORNG_EB201_08142024 (3.9 ng/l, 19.4 ng/l, and 9.8 ng/l, respectively) associated with a subset of samples. The detection of PFHpA in sample E-A-PW01R_20240814 was reported at a concentration less than the LOQ but greater than the LOD and the result was qualified as not-detected (U) at the reported concentration with reason code EBG. The detections of PFOA and PFOS in sample E-A-PW01R_20240814 were reported at concentrations greater than the LOQ but less than five times the blank concentration and the results were qualified as estimated with potential high bias (J+) at the reported concentrations with reason code EBG.

FC18225

PFOS was detected in equipment blank LORNG_EB204_08162024 (0.76 ng/l) associated with a subset of samples. The detection of PFOS in sample E-A-PW01C_20240816 was reported at a concentration less than the LOQ but greater than the LOD and the result was qualified as not-detected (U) at the reported concentration with reason code EBL.

2.1.2 MS/MSD

The following samples were used as the solid media MS/MSDs:

E-A-SD01U_00-0.5-20241003
E-A-SD01W_00-0.5-20241003
E-A-SO01N_00-02_20240814
E-A-SD01PB_00-0.3_20240819
E-A-SD01K_00-01_20240912
E-T-SO01P_00-02_20240920

All results were within Method 1633 recovery and relative percent difference (RPD) limits with the following exception:

FC18127

Results for PFOS in sample E-A-SO01N_00-02_20240814 and associated field duplicate E-A-SO01N_00-02_20240814FD were qualified as estimated with potential low bias (J-) with reason code MSL based on low recoveries in the associated MS. The MS percent recovery for PFOS was 30.

The following samples were used as the aqueous media MS/MSDs:

E-A-PW01U_20241003
E-A-SW01W_20241003
E-A-PW01W_20241003
E-A-PW01R_20240814 (MS only)
E-A-PW01PB_20240819 (MS only)
E-A-SW01K_20240912
E-A-PW01X_20240913
E-A-SW02V_20241002
E-A-PW02Z_20241023 (MS only)
E-A-PW01H_20241024 (MS only)

All results were within Method 1633 recovery and RPD limits with the following exceptions:

FC18906

Results for the following compounds in sample E-A-SW01K_20240912 and associated field duplicate E-A-SW01K_20240912FD were qualified as estimated with potential low bias (J-) with reason code MSL based on low recoveries in the associated MS and/or MSD:

PFHpA [58]
PFOA [64]
Perfluorononanesulfonic acid (PFNS) [44/38]
Perfluorodecanesulfonic acid (PFDS) [24/15]

Perfluorooctane sulfonamide (PFOSA) [57]

Percent MS/MSD recoveries for these compounds ranged from 15 to 64 as indicated in brackets above. Control limits from Method 1633 were reported by the laboratory and used for evaluation and qualification of associated sample results.

2.1.3 Field Duplicates

Field duplicate results are summarized on Table 4. Field duplicates were collected and analyzed for the following soil and sediment samples:

E-A-SD01W_00-0.5-20241003
E-A-SO01N_00-02_20240814
E-A-SD01K_00-01_20240912
E-A-SD01M_00-01_20240910
E-A-SD01T_00-01_20240910
E-A-SD01X_00-01_20240912
E-T-SO01P_00-02_20240920
E-T-SO02P_00-02_20240920
E-T-SO01Q_00-02_20241002
E-T-SO02Q_00-02_20241002

All field duplicate RPDs for the solid media locations were within control limits specified in the QPP.

Field duplicates were collected and analyzed for the following aqueous media samples:

E-A-PW01U_20241003
E-A-SW01W_20241003
E-A-PW01W_20241003
E-A-SW01K_20240912
E-A-PW01J_20240912
E-A-SW01M_20240910
E-A-SW01T_20240910
E-A-SW01X_20240912
E-A-PW01X_20240913
E-A-SW02V_20241002
E-A-PW02L_20241021

All field duplicate RPDs for the aqueous media locations were within control limits specified in the QPP with the following exceptions:

FC18906

Results for PFNS and PFDS in sample E-A-SW01K_20240912 and associated field duplicate E-A-SW01K_20240912FD were qualified estimated (J) with reason code FDD based on RPDs greater than the control limit specified in the QPP.

2.1.4 Extracted Internal Standards

FC19899

The reporting limit for 1H,1H, 2H, 2H-perfluorohexane sulfonic acid (4:2FTS) in sample E-A-SW02U_20241023 was qualified estimated (UJ) with reason code EISH based on percent recovery of the associated extracted internal standard (EIS) that was greater than the QSM 5.4 Module 6 and Method 1633 control limit of 200 (215).

The reporting limit for 4:2FTS in sample E-A-SW03I_20241022 was qualified estimated (UJ) with reason code EISH based on percent recovery of the associated EIS that was greater than the QSM 5.4 Module 6 and Method 1633 control limit of 200 (208).

Reporting limits for the following compounds in sample E-A-SW03I_20241022 were qualified estimated (UJ) with reason code EISL based on percent recoveries of the associated EIS that were less than the Method 1633 control limits:

Perfluoroheptanesulfonic acid (PFHpS)
PFOS
PFNS
PFDS
Perfluorododecanesulfonic acid (PFDoS)
N-methyl perfluorooctanesulfonamidoacetic acid (NMeFOSAA)

Non-detect results for the following compounds in sample E-A-SW03I_20241022 were qualified rejected (R) with reason code EISL based on percent recoveries of the associated EIS that were less than 10:

Perfluorotetradecanoic acid (PFTeDA)
N-ethyl perfluorooctanesulfonamide (NEtFOSA)
N-methyl perfluorooctanesulfonamidoethanol (NMeFOSE)
N-ethyl perfluorooctanesulfonamidoethanol (NEtFOSE)

2.1.5 Compound Identification and Quantitation

The transition ion ratios were outside of the acceptance criteria for one or more compounds for the following samples and the results were qualified as estimated (J) with reason code IAG:

E-A-SW01B_20240815	E-T-SO02K_00-02_20240911

FC18126

The low concentration detection of perfluorodecanoic acid (PFDA) in sample E-A-SW01P_20240813 was qualified not detected (U) at the LOD with reason codes IAG and SNL using professional judgment based on a transition ion ratio outside the acceptance criteria and a signal-to-noise ratio (4.67) that was less than ten.

The low concentration detection of perfluoropentanoic acid (PFPeA) in sample E-A-SW01B_20240815 was qualified not detected (U) at the LOD with reason code SNL based on a signal-to-noise ratio (6.75) that was less than ten. The low concentration detection of PFHpA in sample E-A-SW01B_20240815 was qualified estimated (J) with reason code SNL using professional judgment based on a signal-to-noise ratio (2.92) that was slightly less than three.

The low concentration detection of PFPeA in sample E-A-SW01C_20240816 was qualified not detected (U) at the LOD with reason code SNL based on a signal-to-noise ratio (7.66) that was less than ten.

The low concentration detection of PFPeA in sample E-A-SW01F_20240816 was qualified not detected (U) at the LOD with reason code SNL based on a signal-to-noise ratio (8.45) that was less than ten.

The low concentration detection of PFHpS in sample E-A-SW01Q_20240814 was qualified not detected (U) at the LOD with reason code SNL based on a signal-to-noise ratio (2.08) that was less than three.

2.1.6 Miscellaneous

All reported results for samples E-A-PW01B_20240815-SD, E-A-PW01O_20240813-SD, and E-A-PW01P_20240813-SD were qualified rejected (R) due to the presence of sediment in the pore

water samples at the time of sample extraction. The samples were centrifuged and re-extracted without sediment, and the results of the second set of extractions have been reported in the final data set. Final results are reported with the following sample identifications: E-A-PW01B_20240815, E-A-PW01O_20240813, and E-A-PW01P_20240813.

Notes:

N = Normal Field Sample; FD = Field Duplicate

J = Concentration is estimated

J+ = Concentration is estimated; potential high bias

J- = Concentration is estimated; potential low bias

R = Data are unusable

U = Analyte not detected at the associated detection limits

UJ = Analyte not detected and the associated detection limits are estimated

MG/KG = milligrams per kilograms.

PFAS = Per and Polyfluoroalkyl Substance

SDG = Sample Delivery Group

Notes:

N = Normal Field Sample; FD = Field Duplicate

J = Concentration is estimated

J+ = Concentration is estimated; potential high bias

J- = Concentration is estimated; potential low bias

R = Data are unusable

U = Analyte not detected at the associated detection limits

UJ = Analyte not detected and the associated detection limits are estimated

MG/KG = milligrams per kilograms.

PFAS = Per and Polyfluoroalkyl Substance

SDG = Sample Delivery Group

Notes:

N = Normal Field Sample; FD = Field Duplicate

J = Concentration is estimated

J+ = Concentration is estimated; potential high bias

J- = Concentration is estimated; potential low bias

R = Data are unusable

U = Analyte not detected at the associated detection limits

UJ = Analyte not detected and the associated detection limits are estimated

MG/KG = milligrams per kilograms.

PFAS = Per and Polyfluoroalkyl Substance

SDG = Sample Delivery Group

Notes:

U = Analyte not detected at the associated detection limits

J = Analyte is estimated

J- = Analyte is estimated; potential low bias

J+ = Analyte is estimated; potential high bias

R = Date are unusable

UJ = Analyte not detected; reporting limits estimated

MG/KG = Milligram per kilogram

NG/L = Nanogram per liter

Reason Codes:

EBG = Detected in equipment blank at concentration greater than reporting limit

EBL = Detected in equipment blank at concentration less than reporting limit

EISH = Extracted internal standard response greater than upper control limit

EISL = Extracted internal standard response less than lower control limit

FDD = Field duplicate relative percent difference (RPD) criteria exceeded

IAG = Transition ion ratio outside limits

LBL = Laboratory blank contamination less than reporting limit

MSL = Matrix spike recovery low

PJ = Professional judgment

SNL = Signal to noise ratio low

Notes:
J = Concentration is estimated
J+ = Concentration is estimated; potential high bias
J- = Concentration is estimated; potential low bias
R = Data are unusable
U = Analyte not detected at the associated detection limits
UJ = Analyte not detected and the associated detection limits are estimated
NC = not calculated < LOQ
MG/KG = milligram per kilogram
NG/L = nanogram per liter
RPD = relative percent difference
SDG = Sample Delivery Group
FDD = Field duplicate relative percent difference (RPD) criteria exceeded
IAG = Transition ion ratio outside limits
MSL = Matrix spike recovery low

Data Validation Report
Loring PFAS Remedial Investigation
2024 Human Health Foraging Sampling Program
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Soil and groundwater samples were collected at the Former Loring Air Force Base in Limestone, Maine, in August and September 2024 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. Samples were submitted to SGS North America (SGS) located in Orlando, Florida, for analysis.

SGS analyzed 25 samples and 3 equipment blanks for PFAS by Method 1633, liquid chromatography tandem mass spectrometry compliant with Table B-24 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.4 (USDoD, 2021).

Sample event information included in this data validation report is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Summary of Data Validation Actions
- Table 4 – Field Duplicate RPD Summary
- Table 5 – Acronyms and Abbreviations

Data quality reviews were completed as described in the Draft Quality Program Plan (QPP) Remedial Investigation PFAS Response (WSP, 2024) and the final Method 1633 (USEPA, 2024). Data validation levels are established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019). PFAS data were validated using Stage 2B procedures. Ten percent of the PFAS data collected during the remedial investigation were validated using Stage 4 procedures. Validation checklists, documentation of sample recalculations, and qualification justification documentation are stored in the WSP project file.

Stage 2B data validation includes review of sample results forms, chain of custody (COC) and supporting records, laboratory receipt checklists, analytical holding time compliance, sample related quality control (QC) data forms (method blanks, laboratory control samples [LCS], matrix spike/matrix spike duplicates [MS/MSD], field and laboratory duplicates, extracted internal standards [EIS] and non-extracted internal standards [NIS], QC sample frequency checks, initial calibration summaries, continuing calibration verification summaries, instrument mass calibration /tuning summaries, and sample preparation logs.

Stage 4 data validation includes all reviews performed in Stage 2B as well as review of raw data and chromatograms, target analyte identification confirmation, and recalculation of QC and sample results.

Data review and qualification actions were completed based on DoD Data Validation Guidelines Module 6 for PFAS (USDoD, 2022), general procedures described in National USEPA Data Review and Validation Guidelines (USEPA, 2020), and method specifications in the DoD QSM 5.4 and/or the final Method 1633. QC limits presented in the DoD QSM 5.4, Method 1633, and/or the QPP were used during the data evaluation. Data qualifications were completed, if necessary, in accordance with the USEPA guidelines and the professional judgment of the validator using the following qualifiers:

J = Analyte present; concentration is estimated
J+ = Analyte present; concentration is estimated with potential high bias
J- = Analyte present; concentration is estimated with potential low bias
U = Analyte not detected at the associated detection limits
UJ = Analyte was not detected at the associated detection limits; however, the associated detection limit should be considered an estimate.
R = Sample result is considered unusable for project objectives

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

Validation reason codes were applied to results associated with QC measurements outside project QC goals where validation qualifiers were added to results. Final results are presented in Table 2. The validation qualification actions and associated validation reason codes applied to sample results are summarized in Table 3. The following data validation reason codes were applied to one or more sample results:

EBL = Equipment blank contamination less than reporting limit
IAG = Ion abundance ratio outside calculated limits
MSL = Matrix spike recovery less than lower control limit
SNL = Signal-to-noise ratio less than 10:1 for ions used for quantitation

2.0 DATA VALIDATION QUALIFICATION ACTION SUMMARY

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the DoD QSM 5.4, the QPP, and/or analytical method. Unless specified below, results are interpreted to be usable as reported by the laboratory.

2.1 PFAS

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
  QC Blanks
* Instrument Performance/Tuning
* LCS
  MS/MSD
* Field Duplicates
* Extracted Internal Standard Recovery
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
  Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
* Miscellaneous

* QC criteria were met for this parameter.

2.1.1 QC Blanks

Perfluorooctanoic acid (PFOA) was detected in equipment blank LORNG_EB033_09102024 (1.5 J ng/l) associated with a subset of samples. The detections of PFOA in samples F-GWA12_20240910, F-GWA13_20240910, and F-GWB12_20240910 were reported at concentrations less than the LOQ but greater than the LOD and the results were qualified as not-detected (U) at the reported concentrations with reason code EBL.

Perfluorooctane sulfonamide (PFOSA) was detected in equipment blank LORNG_EB033_09102024 (1.6 J ng/l) associated with a subset of samples. The detection of PFOSA in sample F-GWC12_20240910 was reported at a concentration less than the LOD and the result was qualified as not-detected (U) at the LOD. The detection of PFOSA in sample F-GWC13_20240910 was reported at a concentration less than the LOQ but greater than the LOD and the result was qualified as not-detected (U) at the reported result with reason code EBL.

2.1.2 MS/MSD

Sample F-HSA15_00-01_20240911 was used as the soil MS/MSD. All results were within Method 1633 recovery and relative percent difference (RPD) limits.

Sample F-GWA15_20240911 was used as the groundwater MS/MSD. All results were within Method 1633 recovery and RPD limits with the following exceptions:

Reporting limits for the following compounds in sample F-GWA15_20240911 and associated field duplicate F-GWA15_20240911FD were qualified as estimated (UJ) with reason code MSL based on low recoveries in the associated MS/MSD:

Perfluorotridecanoic acid (PFTrDA) [53/63]
Perfluorodecanesulfonic acid (PFDS) [57]
Perfluorododecanesulfonic acid (PFDoS) [22/25]
9-Chlorohexadecafluoro-3-oxanonane-1-sulfonic acid (9Cl-PF3ONS) [59/62]
11-Chlororeicosafluoro-3-oxaundecane-1-sulfonic acid (11Cl-PF3OUdS) [45/49]

Percent MS/MSD recoveries for these compounds ranged from 22 to 63 as indicated in brackets above. Control limits from Method 1633 were reported by the laboratory and used for evaluation and qualification of associated sample results.

2.1.3 Compound Identification and Quantitation

The transition ion ratios were outside of the acceptance criteria for one or more compounds for the following samples and the results were qualified as estimated (J) with reason code IAG:

F-HSA10_00-01_20240818	F-GWA12_20240910
F-HSA14_00-01_20240911	F-GWA15_20240911
F-HSC12_00-01_20240910	F-GWA15_20240911FD
F-HSC13_00-01_20240910	F-GWCS01_20240911

The low concentration detection of PFPeA in sample F-HSA10_00-01_20240818 was qualified not detected (U) at the LOD with reason code SNL based on a signal-to-noise ratio (8.79) that was less than ten.

Data Validation Report
Loring PFAS Remedial Investigation
2024 Fate & Transport LEAF Sampling Program
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Aqueous samples were collected at the Former Loring Air Force Base in Limestone, Maine, in November 2024 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. Samples were submitted to SGS North America (SGS) located in Orlando, Florida, for analysis.

SGS analyzed eight LEAF samples for PFAS by Method 1633, liquid chromatography tandem mass spectrometry compliant with Table B-24 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.4 (USDoD, 2021).

Sample event information included in this data validation report is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Summary of Data Validation Actions
- Table 4 – Acronyms and Abbreviations

Data quality reviews were completed as described in the Draft Quality Program Plan (QPP) Remedial Investigation PFAS Response (WSP, 2024) and the final Method 1633 (USEPA, 2024). Data validation levels are established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019). PFAS data were validated using Stage 2B procedures. Validation checklists, documentation of sample recalculations, and qualification justification documentation are stored in the WSP project file.

Stage 2B data validation includes review of sample results forms, chain of custody (COC) and supporting records, laboratory receipt checklists, analytical holding time compliance, sample related quality control (QC) data forms (method blanks, laboratory control samples [LCS], matrix spike/matrix spike duplicates [MS/MSD], field and laboratory duplicates, extracted internal standards [EIS] and non-extracted internal standards [NIS], QC sample frequency checks, initial calibration summaries, continuing calibration verification summaries, instrument mass calibration /tuning summaries, and sample preparation logs.

Data review and qualification actions were completed based on DoD Data Validation Guidelines Module 6 for PFAS (USDoD, 2022), general procedures described in National USEPA Data Review and Validation Guidelines (USEPA, 2020), and method specifications in the DoD QSM 5.4 and/or the final Method 1633. QC limits presented in the DoD QSM 5.4, Method 1633, and/or the QPP

were used during the data evaluation. Data qualifications were completed, if necessary, in accordance with the USEPA guidelines and the professional judgment of the validator using the following qualifiers:

J = Analyte present; concentration is estimated
J+ = Analyte present; concentration is estimated with potential high bias
J- = Analyte present; concentration is estimated with potential low bias
U = Analyte not detected at the associated detection limits
UJ = Analyte was not detected at the associated detection limits; however, the associated detection limit should be considered an estimate.
R = Sample result is considered unusable for project objectives

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

Validation reason codes were applied to results associated with QC measurements outside project QC goals where validation qualifiers were added to results. Final results are presented in Table 2. The validation qualification actions and associated validation reason codes applied to sample results are summarized in Table 3. The following data validation reason codes were applied to one or more sample results:

IAG = Ion abundance ratio outside calculated limits

2.0 DATA VALIDATION QUALIFICATION ACTION SUMMARY

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the DoD QSM 5.4, the QPP, and/or analytical method. Unless specified below, results are interpreted to be usable as reported by the laboratory.

2.1 PFAS

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance/Tuning
* LCS
* MS/MSD (not applicable)
* Field Duplicates (not applicable)
* Extracted Internal Standard Recovery

* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
  Compound Identification and Quantitation
* Miscellaneous

* QC criteria were met for this parameter.

2.1.1 Compound Identification and Quantitation

The result for perfluoroheptanoic acid (PFHpA) in sample LORNG_SB05041_0-2_100124 T8 was qualified estimated (J) with reason code IAG based on an ion abundance ratio that was outside the calculated limits.

1 INTRODUCTION

WSP USA Environment & Infrastructure Inc. (WSP) collected 4 forge (plant tissue) samples on 8 and 10 May 2024 from the former Loring Air Force Base, located in Limestone, Maine. WSP submitted the sample to Battelle Norwell Operations (Battelle), located in Norwell, Massachusetts, where they were received on 13 May 2024. Battelle assigned the samples to job numbers 24-0609 and analyzed them for per- and polyfluoroalkyl substances (PFAS) using United States Environmental Protection Agency (EPA) Draft Method 1633.

The field sample identifications (IDs), sample collection dates, and laboratory sample IDs are presented in Table 1.

2 DATA VALIDATION METHODOLOGY

WSP performed DoD Stage 4 validation on a minimum of 10 percent (%) of the field samples reviewed in this report and Stage 2B validation on the remaining field sample data. The Stage 4 validation includes review of quality control (QC) results in the laboratory's analytical report and reported on QC summary forms and review of the raw analytical data and Stage 2B is the same as Stage 4 except it does not include review or validation of the raw analytical data. This data validation has been performed in general accordance with:

- WSP, 2024. Draft Quality Program Plan Addendum, Remedial Investigation, Per- and Polyfluoroalkyl Substances Response, Former Loring Air Force Base, Limestone Maine, April.
- Department of Defense (DoD), 2019. DoD General Data Validation Guidelines, September.
- DoD, 2021. DoD Department of Energy Consolidated Quality Systems Manual (QSM) for Environmental Laboratories Version 5.4, October.
- DoD, 2022. Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances Analysis by QSM Table B-24, October.
- EPA, 2023. 4th Draft EPA Method 1633, Analysis of PFAS in Aqueous, Solid, Biosolids, and Tissue Samples by Liquid Chromatography-Tandem Mass Spectrometry (LC-MS/MS), July.

The laboratory's certified analytical report and supporting documentation were reviewed to assess the following:

- Data package and electronic data deliverable completeness;
- Chain of custody (COC) compliance;
- Holding time compliance;
- Sample receipt condition;
- Mass Calibration;
- Initial calibration (ICAL), initial calibration verification (ICV), instrument sensitivity check (ISC), and continuing calibration verification (CCV) compliance with method specified criteria;
- Presence or absence of laboratory contamination as demonstrated by laboratory blanks;
- Accuracy and bias as demonstrated by recovery of laboratory control sample (LCS) and matrix spike (MS) samples;
- Extracted Internal Standard (EIS) and non-extracted internal standard (NIS) recoveries;
- Analytical precision as relative percent difference (RPD) of analyte concentration between laboratory duplicates, or MSs/MS duplicates (MSDs);
- Sampling and analytical precision as RPD of analyte concentration between field duplicates;
- Assessment of field contamination as demonstrated by field blanks; and

– Insofar as possible, the degree of conformance to method requirements and good laboratory practices.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

3 EXPLANATION OF DATA QUALITY INDICATORS

Summary explanation of the specific data quality indicators reviewed during data validation are presented below.

3.1 LABORATORY CONTROL SAMPLE RECOVERIES

LCSs are aliquots of analyte free matrices that are spiked with the analytes of interest for an analytical method, or a representative subset of those analytes. The spiked matrix is then processed through the same analytical procedures as the samples they accompany.

LCS recovery and precision are an indication of a laboratory's ability to successfully perform an analytical method in an interference free matrix.

3.2 MATRIX SPIKE RECOVERIES

MSs and MSDs are prepared by adding known amounts of the analytes of interest for an analytical method, or a representative subset of those analytes, to an aliquot of sample. The spiked sample is then processed through the same extraction, concentration, cleanup, and analytical procedures as the unspiked samples in an analytical batch.

MS recovery and precision are an indication of a laboratory's ability to successfully recover an analyte in the matrix of a specific sample or closely related sample matrices. It is important not to apply MS results for any specific sample to other samples without understanding how the sample matrices are related.

3.3 BLANK CONCENTRATIONS

Blank samples are aliquots of analyte free matrix that are used as negative controls to verify that the sample collection, storage, preparation, and analysis system does not produce false positive results.

Equipment blanks are aliquots of analyte free water that are used to rinse sample collection equipment after decontamination. Equipment blanks assess contamination attributed to insufficient equipment decontamination procedures.

Laboratory blanks are processed by the laboratory using the same procedures as the field samples. Target analytes should not be found in laboratory blanks.

3.4 LABORATORY AND FIELD DUPLICATES

Laboratory and field duplicate analyses verify acceptable method precision by the laboratory at the time of preparation and analysis and/or sampling precision at the time of collection.

4 DEFINITIONS OF QUALIFIERS THAT MAY BE ADDED DURING DATA VALIDATION

J	The reported result was an estimated value.
J+	The reported result was an estimated value with a positive bias.
J-	The reported result was an estimated value with a negative bias.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting quality control criteria. The analyte may or may not be present in the sample.
U	The analyte was not detected and was reported as less than the limit of detection (LOD). The LOD has been adjusted for any dilution or concentration of the sample.
UJ	The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

5 QUALIFICATION REASON CODES

The following reason codes were applied to the data during data validation:

EISL	Low EIS recovery.
HAHL	Holding time: extraction to analysis holding time exceeded
ISL	Low NIS recovery
TR	The detected analyte concentration is less than the LOQ.

6 CHAIN OF CUSTODY AND SAMPLE RECEIPT CONDITION DOCUMENTATION

The samples were received at the laboratory under proper COC, intact, and at average temperatures less than the method-specified maximum of 6 degrees Celsius.

7 SPECIFIC DATA VALIDATION FINDINGS

Results from the samples reviewed in this report may be considered usable with the limitations and exceptions described in Sections 7.1 through 8.0.

7.1 PFAS BY EPA DRAFT METHOD 1633

PFAS results generated by Bettelle may be considered usable with the limitations described in Sections 7.1.1 through 7.1.16.

7.1.1 HOLDING TIMES

The samples were extracted within the method-specified maximum holding time of 28 days from sample collection. Except as noted below, the sample extracts were analyzed within the method-specified maximum hold time of 90 days from extraction.

- The samples collected May 8, 2024 were analyzed 92 days past extraction. The PFAS results of samples F-BIOAO2_FRN01_20240508, F-BIOCO4_FRN02_20240508, and BIOCO4_FRN01_20240508, all undetected, were qualified as estimated detection limit (UJ, HAHL).

7.1.2 MASS CALIBRATION FREQUENCY

Mass calibration verifications were performed before the ICALs associated with the analysis of the samples reviewed in this report.

7.1.3 INITIAL CALIBRATION COMPLIANCE

Relative standard deviations (RSDs) between response factors for each target analyte were less than or equal to the method-specified maximum of 20% and/or relative standard errors were less than the method-specified maximum of 20% for all target analytes and EISs.

7.1.4 INITIAL CALIBRATION VERIFICATION ACCURACY

ICVs were analyzed after each initial calibration. Recoveries of target analytes were between the acceptance limits of 70 and 130%.

7.1.5 INSTRUMENT SENSITIVITY CHECK COMPLIANCE

ISCs were analyzed at the beginning of each analytical sequence, concentrations were equivalent to the LOQ and signal to noise ratios were greater than or equal to 3:1. With one exception, the recoveries were within the method-specified 70 to 130% limits.

- The PFUnA_2 recovery was low at 65.42% in the ISC associated with the samples. Data quality is not affected and data qualifiers are not required because the ISC recovery of the quantitation ion for PFUnA is acceptable.

7.1.6 CONTINUING CALIBRATION VERIFICATION COMPLIANCE

CCVs were analyzed at the beginning of the analytical sequence after the ISC, after every ten or fewer samples, and at the end of the analytical sequence. Target analyte recoveries were within the method-specified 70 to 130% limits.

7.1.7 BILE SALT INTERFERENCE CHECKS

Bile salt interference checks were analyzed daily and retention times for the bile salts were at least one minute outside the retention times for linear or branched perfluorooctanesulfonic acid.

7.1.8 LABORATORY AND EQUIPMENT BLANK DETECTIONS

Target analytes were not detected in the laboratory blanks associated with the sample reviewed in this report. Equipment blanks were not collected with this data set.

7.1.9 LABORATORY CONTROL SAMPLE ACCURACY

LLCS and LCS were included with each extraction batch, LLCS spike concentrations were twice the LOQ. The LCS and LLCS recoveries were within the QAPP-specified 40 to 150% interim limits, with the following exceptions.

- The PFMPA and 3:3 FTCA recovery values in the LCS associated with the samples are above criteria at 180% and 160%, respectively. Neither PFMPA nor 3:3 FTCA were detected in the samples. Data usability is not adversely affected by the potential high analytical bias.
- The 3:3 FTCA recovery value in the LLCS associated with the samples is above criteria at 153%. 3:3 FTCA was detected in the samples. Data usability is not adversely affected by the potential high analytical bias.

7.1.10 MATRIX SPIKE ACCURACY AND PRECISION

Battelle performed MS and/or MSD analyses on sample F-BIOA02_FRN01_20240508. With the following exceptions, recoveries were within the QAPP-specified 40 to 150% interim limits and RPDs between MS and MSD results were less than 30%.

- The PFDoS MS recovery value is above criteria at 151%. Data qualifiers are not required because the MSD recovery is acceptable at 143%.
- The NFDHA MS and MSD recovery values are above criteria at 245 and 260%. Data qualifies are not required because the bias is high and NFDHA was not detected in sample F-BIOA02_FRN01_20240508.

7.1.11 LABORATORY DUPLICATE PRECISION

Battelle performed MSD analyses on sample F-BIOA02_FRN01_20240508. Precision between duplicate analyses was acceptable with RPDs less than 30% or differences between analyte concentrations less than the LOQ.

7.1.12 EXTRACTED INTERNAL STANDARD ACCURACY

EIS recoveries in the field samples were within the QAPP-specified limits of 20 to 150%, with the following exceptions:

- Recovery values of the EISs $^{13}C_3$-PFBS, $^{13}C_4$-4:2-FTS, and $^{13}C_2$-6:2-FTS were above criteria in sample F-BIOA02_FRN01_20240508 at 168, 358, and 236%, respectively. Data quality is not affected and data qualifiers are not required because the recoveries are high and neither PFBS, 4:2-FTS, nor 6:2-FTS were detected sample F-BIOA02_FRN01_20240508.
- Recovery values of the EISs $^{13}C_2$-4:2-FTS, $^{13}C_2$-6:2-FTS, and $^{13}C_2$-8:2-FTS were above criteria for samples F-BIOC04_FRN02_20240508 and F-BIOBP01_FRN01_20240510 with values ranging from 151 to 275%. Data quality is not affected, and data qualifiers are not required because the recoveries are high and 4:2-FTS, 6:2-FTS, and 8:2-FTS were not detected in samples F-BIOC04_FRN02_20240508 or F-BIOBP01_FRN01_20240510.
- Recoveries of the EIS d_3-MeFOSA and d_5-EtFOSA were below criteria for samples F-BIOC04_FRN02_20240508, F-BIOC05_FRN01_20240508, and F-BIOBP01_FRN01_20240510 with values ranging from 12 to 19%. WSP qualified the MeFOSA and EtFOSA results, all undetected, of samples F-BIOC04_FRN02_20240508, F-BIOC05_FRN01_20240508, and F-BIOBP01_FRN01_20240510 as estimated detection limit (UJ, EISL).
- Recovery values of the EISs $^{13}C_2$-4:2-FTS and $^{13}C_2$-6:2-FTS were above criteria for sample F-BIOC05_FRN01_20240508 at 259 and 281%. Data quality is not affected and data qualifiers are not required

because the recoveries are high and 4:2-FTS and 6:2-FTS were not detected in sample F-BIOC05_FRN01_20240508.

7.1.13 NON-EXTRACTED INTERNAL STANDARD ACCURACY

NISs were added to the samples, standards, and QC samples as required. With the following exceptions, the recoveries for field samples were within the method-specified 50 to 200% limits.

- Recovery of the NISs $^{13}C_4$-PFOA, $^{13}C_5$-PFNA, $^{13}C_2$-PFDA, $^{18}O_2$-PFHxS, and $^{13}C_4$-PFOAS were below criteria for samples F-BIOA02_FRN01_20240508, F-BIOC04_FRN02_20240508, and F-BIOC05_FRN01_20240508 with values ranging from 25 to 48%. Data limitations are summarized below.
- Recovery of the NISs $^{13}C_2$-PFHxA, $^{13}C_4$-PFOA, $^{13}C_5$-PFNA, $^{13}C_2$-PFDA, and $^{18}O_2$-PFHxS were below criteria for sample F-BIOBP01_FRN01_20240510 with values ranging from 30 to 48%. Data limitations are summarized below.
  - Following the DoD data validation guidelines, NIS recoveries between 30 and 50% do not require qualification.
  - Per the DoD data validation guidelines, WSP UJ qualified the PFDA results of samples F_BIOA02_FRN01_20240508 and F_BIOC05_FRN01_20240508 because the NIS recovery was below 30%. (UJ, ISL)
- Recoveries of the several NISs were below criteria in the MS and MSD analyses of sample F_BIOA02_FRN01_20240508, mimicking the recovery pattern of the original sample. WSP assessed the MSD based on target analyte recoveries and no data were qualified based on the low NIS recovery.

7.1.14 ION RATIOS

Ratios between primary and confirmation ions were within the QAPP-specified limits of 50 to 150% of the ion ratios measured in the midpoint calibration standard or daily CCV, with one exception.

- The ion ratio is below the 50% criteria for PFOA in the MSD analysis of sample F-BIOA02_FRN01_20240508. The sample was reanalyzed to verify the exceedance. Data qualifiers are not required for laboratory QC samples.

7.1.15 STAGE 4 VALIDATION

WSP perform Stage 4 validation on the samples in Battelle laboratory report 24-0609. The sample results were correctly calculated including mass or volume extracted and any dilution factors.

7.1.16 DATA REPORTING AND ANALYTICAL PROCEDURES

Battelle voluntarily revised the report to corrected errors in the MS/MSD reporting. No data reporting or analytical procedure anomalies were noted in Battelle report 24-0609.

8 FIELD DUPLICATE PRECISION

Field duplicates were not collected with this data set.

9 SUMMARY AND CONCLUSIONS

WSP evaluated a total of 384 data records from the field sample during this validation. Validated analytical results are presented in Table 2.

Qualifier definitions are summarized in Section 4.0, reason codes are summarized in Section 5.0, and qualified data are summarized below.

- UJ: WSP UJ qualified 120 records (31.2%) due to missing holding time and/or low EIS or NIS recoveries outside of limits.

Data qualified during validation are summarized in Table 3.

Notes:

U = Analyte not detected at the associated detection limits

J = Analyte is estimated

J- = Analyte is estimated; potential low bias

J+ = Analyte is estimated; potential high bias

R = Date are unusable

UJ = Analyte not detected; reporting limits estimated

NJ = Analyte has been tentatively identified and concentration is estimated

EISL = Low extracted internal standard recovery

HAHL = Holding time: extraction to analysis holding time exceeded

ISL = Low NIS recovery

NG/G = nanograms per gram

TR = Analyte concentration is less than LOQ

1 INTRODUCTION

WSP USA Environment & Infrastructure Inc. (WSP) collected 79 tissue samples between 13 August and 13 September 2024 from the former Loring Air Force Base, located in Limestone, Maine. WSP submitted the sample to Batelle Norwell Operations (Batelle), located in Norwell, Massachusetts, where they were received between 16 August and 18 September 2024. Batelle assigned the samples to sample delivery groups 24-0652, 24-0698, 24-0699, 24-0700, 24-0783, 24-0784, and 24-0885 and analyzed them for per- and polyfluoroalkyl substances (PFAS) using United States Environmental Protection Agency (EPA) Method 1633.

The field sample identifications (IDs), sample collection dates, and laboratory sample IDs are presented in Table 1.

2 DATA VALIDATION METHODOLOGY

WSP performed Department of Defense (DoD) Stage 2B validation on 100 percent (%) of Batelle's data for the samples reviewed in this report. The Stage 2B validation includes review of quality control (QC) results in the laboratory's analytical report and reported on QC summary forms. Stage 2B validation does not include review or validation of the raw analytical data. This data validation has been performed in general accordance with:

- WSP, 2024. Draft Quality Program Plan (QPP) Addendum, Remedial Investigation, Per- and Polyfluoroalkyl Substances Response, Former Loring Air Force Base, Limestone Maine, April.
- DoD, 2019. DoD General Data Validation Guidelines, September.
- DoD, 2021. DoD Department of Energy Consolidated Quality Systems Manual (QSM) for Environmental Laboratories Version 5.4, October.
- DoD, 2022. Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances Analysis by QSM Table B-24, October.
- EPA, 2024. Method 1633, Analysis of PFAS in Aqueous, Solid, Biosolids, and Tissue Samples by Liquid Chromatography-Tandem Mass Spectrometry (LC-MS/MS), January.

The laboratory's certified analytical report and supporting documentation were reviewed to assess the following:

- Data package and electronic data deliverable completeness;
- Chain of custody (COC) compliance;
- Holding time compliance;
- Sample receipt condition;
- Mass Calibration;
- Initial calibration (ICAL), initial calibration verification (ICV), instrument sensitivity check (ISC), and continuing calibration verification (CCV) compliance with method specified criteria;
- Signal to noise ratios for the ISC;
- Bile salt interference check;
- Presence or absence of laboratory contamination as demonstrated by laboratory blanks;
- Accuracy and bias as demonstrated by PFAS recovery in laboratory control sample (LCS) and matrix spike (MS) samples;
- Extracted Internal Standard (EIS) and non-extracted internal standard (NIS) recoveries;
- Analytical precision as relative percent difference (RPD) of analyte concentration between laboratory duplicates, or MS/MS duplicates (MSDs);

- Sampling and analytical precision as RPD of analyte concentration between field duplicates;
- Assessment of field contamination as demonstrated by field blanks; and
- Insofar as possible, the degree of conformance to method requirements and good laboratory practices.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

3 EXPLANATION OF DATA QUALITY INDICATORS

Summary explanation of the specific data quality indicators reviewed during data validation are presented below.

3.1 LABORATORY CONTROL SAMPLE RECOVERIES

LCSs are aliquots of analyte free matrices that are spiked with the analytes of interest for an analytical method, or a representative subset of those analytes. The spiked matrix is then processed through the same analytical procedures as the samples they accompany.

LCS recovery and precision are an indication of a laboratory's ability to successfully perform an analytical method in an interference free matrix.

3.2 MATRIX SPIKE RECOVERIES

MSs and MSDs are prepared by adding known amounts of the analytes of interest for an analytical method, or a representative subset of those analytes, to an aliquot of sample. The spiked sample is then processed through the same extraction, concentration, cleanup, and analytical procedures as the unspiked samples in an analytical batch.

MS recovery and precision are an indication of a laboratory's ability to successfully recover an analyte in the matrix of a specific sample or closely related sample matrices. It is important not to apply MS results for any specific sample to other samples without understanding how the sample matrices are related.

3.3 BLANK CONCENTRATIONS

Blank samples are aliquots of analyte free matrix that are used as negative controls to verify that the sample collection, storage, preparation, and analysis system does not produce false positive results.

Equipment blanks are aliquots of analyte free water that are used to rinse sample collection equipment after decontamination. Equipment blanks assess contamination attributed to insufficient equipment decontamination procedures.

Laboratory blanks are processed by the laboratory using the same procedures as the field samples. Target analytes should not be found in laboratory blanks.

3.4 LABORATORY AND FIELD DUPLICATES

Laboratory and field duplicate analyses verify acceptable method precision by the laboratory at the time of preparation and analysis and/or sampling precision at the time of collection.

4 DEFINITIONS OF QUALIFIERS THAT MAY BE ADDED DURING DATA VALIDATION

J	The reported result was an estimated value.
J+	The reported result was an estimated value with a positive bias.
J-	The reported result was an estimated value with a negative bias.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting quality control criteria. The analyte may or may not be present in the sample.
U	The analyte was not detected and was reported as less than the limit of detection (LOD). The LOD has been adjusted for any dilution or concentration of the sample.
UJ	The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

5 QUALIFICATION REASON CODES

The following reason codes were applied to the data during data validation:

EISH	High EIS recovery.
EISL	Low EIS recovery.
IAG	Ion transition ratio is outside of expected limits.
ISL	Low NIS recovery.
LCL	Low LCS recovery. Result may be biased low.
LDD	Imprecision between primary sample and laboratory duplicate results.
MSD	Imprecision between MS and MSD results.
MSH	High MS recovery. Result may be biased high.
MSL	Low MS recovery. Result may be biased low.
TR	The detected analyte concentration is less than the limit of quantitation (LOQ).

6 CHAIN OF CUSTODY AND SAMPLE RECEIPT CONDITION DOCUMENTATION

The samples were received at the laboratory under proper COC, intact, and at average temperatures less than the method-specified maximum of 6 degrees Celsius.

7 SPECIFIC DATA VALIDATION FINDINGS

Results from the samples reviewed in this report are considered usable with the limitations and exceptions described in Sections 7.1 through 8.0. Final validated results are presented in Table 2 and results qualified during validation are presented in Table 3 with applicable reason codes.

7.1 PFAS BY EPA DRAFT METHOD 1633

PFAS results generated by Batelle may be considered usable with the limitations described in Sections 7.1.1 through 7.1.14.

7.1.1 HOLDING TIMES

The samples were extracted within the method-specified maximum holding time of 90 days from sample preparation (filleting and/or grinding) and the extracts were analyzed within the method-specified maximum hold time of 90 days from extraction.

7.1.2 MASS CALIBRATION FREQUENCY

Mass calibration verifications were performed before the ICALs associated with the analysis of the samples reviewed in this report.

7.1.3 ION TRANSITIONS

Parent, quantification, and confirmation ion masses used for the analysis of the samples reviewed in this report matched the ions specified in EPA Method 1633 Table 10.

7.1.4 INITIAL CALIBRATION COMPLIANCE

Initial calibrations relative standard deviations between response factors for each target analyte were less than or equal to the method-specified maximum of 20% and/or relative standard errors were less than the method-specified maximum of 20% for all target analytes and EISs.

7.1.5 INITIAL CALIBRATION VERIFICATION ACCURACY

ICVs were analyzed after each initial calibration. Recoveries were between 70 and 130%.

7.1.6 INSTRUMENT SENSITIVITY CHECK COMPLIANCE

ISCs were analyzed at the beginning of each analytical run, concentrations were equivalent to the LOQ, signal to noise ratios were greater than or equal to 3:1, and recoveries were within the method-specified 70 to 130% limits.

7.1.7 CONTINUING CALIBRATION VERIFICATION COMPLIANCE

CCVs were analyzed at the beginning of the analytical sequence after the ISC, after every ten or fewer samples, and at the end of the analytical sequence. Recoveries were within the method-specified 70 to 130% limits, with the following exceptions:

- 11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid (11Cl-PF3OUdS) recovery was high at 131% in the closing CCV associated with the analysis of samples E-T-BIOA_PLT01_20240910, E-T-BIOF_PLT01_20240910, E-T-BIOI_PLT01_20240910, E-T-BIOJ_PLT01_20240910, and E-T-BIOP_PLT01_20240910. Based on the DoD data valuation guidelines, WSP UJ qualified the non-detect 11Cl-PF3OUdS results in the associated samples due to potential high analytical bias. (UJ, CVHL)
- Perfluorononanesulfonic acid (PFNS [59%]), perfluorodecanesulfonic acid (PFDS [64%]) and perfluorododecanesulfonic acid (PFDoDS [58%]) recoveries were low in the opening CCV associated with the dilution analysis of samples E-A-BIOF_FSH01_20240817, E-A-BIOG_FSH01_20240817, E-A-BIOK_FSH01_20240817, and E-A-BIOA_FSH01_20240820. PFNS, PFDS, and PFDoDS were not reported from the associated analyses and data usability is not adversely affected by the low CCV recoveries.
- PFNS recoveries were low at 66% and 59% in the opening and closing CCVs associated with the dilution analysis of samples E-T-BIOC_RNT01_20240911 and E-T-BIOC_RNT02_20240913. PFNS was not reported from the associated analyses and data usability is not adversely affected by the low CCV recoveries.

7.1.8 BILE SALT INTERFERENCE CHECKS

Bile salt interference checks were analyzed daily and retention times for the bile salts were at least one minute outside the retention times for linear or branched perfluorooctanesulfonic acid (PFOS).

7.1.9 LABORATORY AND CALIBRATION BLANK DETECTIONS

Target analytes were not detected in the laboratory and calibration blanks associated with the sample reviewed in this report.

7.1.10 LABORATORY CONTROL SAMPLE ACCURACY

Low-level LCS (LLLCS) and LCS were included with each extraction batch, LLLCS spike concentrations were twice the LOQ, and LCS and LLLCS recoveries were within method-specified limits, with the following exceptions:

- Perfluorobutanesulfonic acid (PFBS) and perfluoro-4-methoxybutanoic acid (PFMBA) recoveries were low at 46% and 30%, respectively, in the LCS associated with the extraction of samples E-T-BIOA_PLT01_20240910, E-T-BIOF_PLT01_20240910, E-T-BIOI_PLT01_20240910, E-T-BIOJ_PLT01_20240910, and E-T-BIOP_PLT01_20240910. WSP UJ qualified the non-detected PFBS and PFMBA results from the associated samples due to potential low analytical bias. (UJ, LCL)
- PFBS (56%), 4,8-dioxa-3H-perfluorononanoic acid (ADONA [174%]), and PFMBA (31%) recoveries were outside of limits in the LLLCS associated with the extraction of samples E-T-BIOA_PLT01_20240910, E-T-BIOF_PLT01_20240910, E-T-BIOI_PLT01_20240910, E-T-BIOJ_PLT01_20240910, and E-T-BIOP_PLT01_20240910. Data limitations are summarized below.
    - WSP UJ qualified the non-detect PFBS and PFMBA results from the associated samples due to potential low analytical bias. (UJ, LCL)

- ADONA was not detected in the associated samples and data usability is not adversely affected by the potential high analytical bias.

– 3-Perfluoroheptyl propanoic acid (7:3 FTCA) recovery was high at 181% in the LCS associated with the extraction of samples E-T-BIOD_RNT01_20240816, E-T-BIOI_RNT01_20240814, E-T-BIOJ_RNT01_20240815, E-T-BIOK_RNT01_20240814, E-T-BIOL_RNT01_20240814, E-T-BION_RNT01_20240813, E-T-BIOQ_RNT01_20240816, E-A-BIOC_INV01_20240816, E-T-BIOC_RNT01_20240911, E-T-BIOC_RNT02_20240913, E-T-BIOE_RNT01_20240911, E-T-BIOF_RNT01_20240912, and E-T-BIOP_RNT01_20240911. 7:3 FTCA was not detected in the associated samples and data usability is not adversely affected by the potential high analytical bias.

– 2H,2H,3H,3H-Perfluorooctanoic acid (5:3 FTCA) and 7:3 FTCA recoveries were high at 159% and 191%, respectively, in the LLLCS associated with the extraction of samples E-T-BIOD_RNT01_20240816, E-T-BIOI_RNT01_20240814, E-T-BIOJ_RNT01_20240815, E-T-BIOK_RNT01_20240814, E-T-BIOL_RNT01_20240814, E-T-BION_RNT01_20240813, E-T-BIOQ_RNT01_20240816, E-A-BIOC_INV01_20240816, E-T-BIOC_RNT01_20240911, E-T-BIOC_RNT02_20240913, E-T-BIOE_RNT01_20240911, E-T-BIOF_RNT01_20240912, and E-T-BIOP_RNT01_20240911. 5:3 FTCA and 7:3 FTCA were not detected in the associated samples and data usability is not adversely affected by the potential high analytical bias.

7.1.11 MATRIX SPIKE ACCURACY AND PRECISION

Batelle performed MS and/or MSD analyses on samples E-A-BIOT_PLT01_20240814, E-T-BIOC_INV02_20240815, E-T-BIOK_INV01_20240814, E-T-BIOI_RNT01_20240814, and E-T-BIOL_RNT01_20240814. Recoveries were within the method specified limits and RPDs between MS and MSD results were less than the QAPP specified maxima of 30%, with the following exceptions:

– 3-Perfluoropropyl propanoic acid (3:3 FTCA [168%, MS]), 5:3 FTCA (359%, 358%), 7:3 FTCA (472%, 569%), 9-chlorohexadecafluoro-3-oxanone-1-sulfonic acid (9Cl-PF3ONS [409%, 631%]), ADONA (232%, MSD), nonafluoro-3,6-dioxaheptanoic acid (NFDHA [319%, 312%]), perfluoro(2-ethoxyethane)sulfonic acid (PFEESA [299%, 255%]), perfluoro-3-methoxypropanoic acid (PFMPA [156%, MS]), perfluorododecanoic acid (PFDoDA [56%, MSD]), PFOS (0%, 0%), perfluoropentanesulfonic acid (PFPeS [3%,3%]), perfluorohexanesulfonic acid (PFHxS [0%, MS]), and PFDoDS (22%, MSD) recoveries were outside limits in the MS and/or MSD performed on sample E-T-BIOK_INV01_20240814. Additionally, RPDS between the MS and MSD results were high for 3:3 FTCA (74%), 9Cl-PF3ONS (43%), ADONA (38%), PFDoDS (34%), perfluoroheptanesulfonic acid (PFHpS [36%]), PFHxS (200%), PFMPA (56%), perfluorotetradecanoic acid (PFTeDA [48%]), and perfluorotridecanoic acid (PFTrDA [34%]). Data limitations are summarized below.

  - WSP R qualified and rejected the non-detect PFPeS result from the associated sample due to potential extremely low analytical bias. (R, MSL)
  - WSP J+ qualified the detected 3:3 FTCA, 5:3 FTCA, and 7:3 FTCA and results from the associated sample due to potential high analytical bias. (J+, MSH)
  - WSP J- qualified the detected PFDoDA and PFDoDS results from the associated sample due to potential low analytical bias. (J-, MSL)
  - WSP J qualified the detected 3:3 FTCA, PFDoDS, PFHpS, PFTeDA, PFTrDA, and PFHxS results from the associated sample due to potential analytical imprecision. (J, MSD)
  - PFHxS and PFOS were detected in the unspiked native sample at concentrations greater than four times the spike concentrations and data usability cannot be assessed based on MS recoveries.
  - 9Cl-PF3ONS, ADONA, NFDHA, PFEESA, and PFMPA were not detected in the unspiked native sample and data usability is not adversely affected by potential high analytical bias.

– PFMBA recovery was low at 52% in the MS performed on sample E-A-BIOT_PLT01_20240814. WSP UJ qualified the non-detected PFMBA result from the associated sample due to potential low analytical bias. (UJ, MSL)

- 5:3 FTCA(173%, MSD), 9Cl-PF3ONS (176%, MS), PFOS (299%, 174%), PFPeS (35%, MS), and PFHxS (211%, MS) recoveries were high in the MS and/or MSD performed on sample E-T-BIOC_INV02_20240815. Additionally, RPDs between MS and MSD results were high for perfluorooctanoic acid (PFOA [32%]), PFHxS (90%), and PFOS (53%). Data limitations are summarized below.
  - WSP J+ qualified the detected 5:3 FTCA result from the associated sample due to potential high analytical bias. (J+, MSH)
  - WSP J qualified the detected PFOA, PFHxS, and PFOS results from the associated sample due to potential analytical imprecision. (J, MSD)
  - PFPeS, PFHxS, and PFOS were detected in the unspiked native sample at concentrations greater than four times the spike concentrations and data usability cannot be assessed based on MS recoveries.
  - 9Cl-PF3ONS was not detected in the unspiked native sample and data usability is not adversely affected by potential high analytical bias.
- PFOS recovery was low at 51% in the MS performed on sampled E-T-BIOI_RNT01_20240814. Additionally, the RPD between MS and MSD results for PFOS was high at 33%. WSP J- qualified the detected PFOS result from the associated sample due potential low analytical bias and potential analytical imprecision. (J-, MSL/MSD)
- PFHxS (58%, MS), 5:3 FTCA (189%, 203%) and 7:3 FTCA (246%, 260%) recoveries were outside of limits in the MS and MSD performed on sampled E-T-BIOL_RNT01_20240814. Data limitations are summarized below.
  - WSP UJ qualified the non-detect PFHxS result from the associated sample due to potential low analytical bias. (UJ, MSL)
  - 5:3 FTCA and 7:3 FTCA were not detected in the unspiked native sampled and data usability is not adversely affected by potential high analytical bias.

7.1.12 LABORATORY DUPLICATE PRECISION

Batelle performed duplicate analyses on samples E-A-BIOT_PLT01_20240814, E-T-BIOC_INV02_20240815, ET_BIOE_INV01_20240818, E-T-BIOK_INV01_20240814, E-A-BIOH_INV01_20240819, E-A-BIOL_INV01_20240815, E-A-BIOF_FSH01_20240817, E-A-BIOJ_FSH01_20240815, E-T-BIOI_RNT01_20240814, E-T-BIOL_RNT01_20240814, and E-T-BIOF_RNT01_20240912. RPDs were less than the QPP-specified maximum of 30%, with the following exceptions:

- RPDs between perfluorooctanesulfonamide (PFOSA [50%]), 5:3 FTCA (41%), and 7:3 FTCA (60%) results were high in the duplicate analysis performed on sample E-T-BIOC_INV02_20240815. WSP J qualified the detect results in the associated sample due to potential analytical imprecision. (J, LDD)
- The RPD between PFOS results was high at 39% in the duplicate analysis performed on sample E-T-BIOE_INV01_20240818. WSP J qualified the detect PFOS result in the associated sample due to potential analytical imprecision. (J, LDD)
- The RPD between 5:3 FTCA results was high at 39% in the duplicate analysis performed on sample E-T-BIOK_INV01_20240814. WSP J qualified the detect 5:3 FTCA result in the associated sample due to potential analytical imprecision. (J, LDD)

7.1.13 EXTRACTED INTERNAL STANDARD ACCURACY

Based on professional judgement, WSP rejected results quantified against EISs with recoveries less than 10%, unless the method-specified lower limit was 5 or 10%, then WSP used half the lower limit (2 or 5%) as the recovery threshold for rejection.

EIS recoveries in the field samples were within the method specified limits, with the following exceptions:

- Recoveries of EISs $^{13}C_4$-perfluoroheptanoic acid (PFHpA) and $^{13}C_2$-PFTeDA were low at 7% and 19%, respectively, in the analysis of sample E-T-BIOD_INV02_20240815. WSP J+ qualified the detected PFHpA, PFTrDA. and PFTeDA results from the associated sample due to low EIS recoveries. (J+, EISL)
- Recovery of EIS D_9-N-ethyl perfluorooctanesulfonamidoethanol (NEtFOSE) was low at 3% in the analysis of sample E-A-BIOJ_FSH01_20240815. Based on professional judgement, WSP UJ qualified the non-detected NEtFOSE result from the associated sample due to low EIS recovery. (UJ, EISL)
- Recovery of EIS D_9-NEtFOSE was extremely low at 1% in the analysis of sample E-A-BIOPB_FSH01_20240820. WSP R qualified and rejected the non-detected NEtFOSE result from the associated sample due to extremely low EIS recovery. (R, EISL)
- Recoveries of EISs $^{13}C_4$-perfluorobutanoic acid (PFBA [4%]), $^{13}C_5$-perfluoropentanoic acid (PFPeA [7%]), $^{13}C_3$-PFBS (16%), and $^{13}C_3$-hexafluoropropylene oxide dimer acid (HFPO-DA [7%]) were low in the analysis of sample E-T-BIOI_PLT01_20240910. Data limitations are summarized below.
  - WSP UJ qualified the non-detected PFPeA, PFBS, HFPO-DA, ADONA, PFMPA, PFMBA, 9Cl-PF3ONS, 11Cl-PF3OUdS, and 3:3 FTCA results from the associated sample due to extremely low EIS recoveries. (UJ, EISL)
  - WSP J+ qualified the detected PFBA result from the associated sample due to low EIS recovery. (J+, EISL)
- Recoveries of EISs $^{13}C_4$-PFBA (4%), $^{13}C_5$-PFPeA (9%), $^{13}C_4$-PFHpA (16%) and $^{13}C_3$-HFPO-DA (5%) were low in the analysis of sample E-T-BIOA_PLT01_20240910. Data limitations are summarized below.
  - WSP R qualified and rejected the non-detected HFPO-DA, ADONA, 9Cl-PF3ONS, and 11Cl-PF3OUdS results from the associated sample due to extremely low EIS recoveries. (R, EISL)
  - WSP J+ qualified the detected PFBA and PFPeA results from the associated sample due to low EIS recoveries. (J+, EISL)
  - WSP UJ qualified the non-detected PFMPA, 3:3 FTCA, and PFHpA result from the associated sample due to low EIS recoveries. (UJ, EISL)
- Recoveries of EISs $^{13}C_5$-PFPeA and $^{13}C_3$-HFPO-DA were low at 5% and 13%, respectively, in the analysis of sample E-T-BIOJ_PLT01_20240910. WSP UJ qualified the non-detected PFPeA, PFMPA, PFMBA, 3:3 FTCA, HFPO-DA, ADONA, 9Cl-PF3ONS, and 11Cl-PF3OUdS results from the associated sample due to low EIS recoveries. (UJ, EISL)
- Recoveries of EISs $^{13}C_4$-PFBA (3%), $^{13}C_5$-PFPeA (7%), and $^{13}C_3$-HFPO-DA (16%) were outside of limits in the analysis of sample E-T-BIOP_PLT01_20240910. WSP J+ qualified the detected and UJ qualified the non-detected PFBA, PFPeA, PFMPA, PFMBA, 3:3 FTCA, HFPO-DA, ADONA, 9Cl-PF3ONS, and 11Cl-PF3OUdS results from the associated sample due to low EIS recoveries. (J+/UJ, EISL)
- Recoveries of EISs D_5- N-ethyl perfluorooctanesulfonamide (NEtFOSA) and D_9-NEtFOSE were low at 4% and 1%, respectively, in the analysis of sample E-T-BIOK_RNT01_20240814. Data limitations are summarized below.
  - WSP R qualified and rejected the non-detected NEtFOSE result from the associated sample due to extremely low EIS recovery. (R, EISL)
  - WSP UJ qualified the non-detect NEtFOSA result from the associated sample due to low EIS recovery. (UJ, EISL)
- Recovery of EIS D_9-NEtFOSE was extremely low at 1% in the analysis of sample E-T-BION_RNT01_20240813. WSP R qualified and rejected the non-detected NEtFOSE result from the associated sample due to extremely low EIS recoveries. (R, EISL)
- Recoveries of EISs $^{13}C_2$-6:2 fluorotelomer sulfonic acid (FTS) and D_9-NEtFOSE were outside of limits at 384% and 4%, respectively, in the analysis of sample E-T-BIOC_RNT01_20240911. Data limitations are summarized below.

  - WSP UJ qualified the non-detected NEtFOSE result from the associated sample due to low EIS recovery. (UJ, EISL)
  - WSP J- qualified the detected 6:2 FTS result from the associated sample due to high EIS recovery. (J-, EISH)

- Recovery of EISs $^{13}C_4$-PFHpA was low at 10% in the analysis of sample E-T-BIOC_INV01_20240815. WSP J+ qualified the detected PFHpA result from the associated sample due to low EIS recovery. (J+, EISL)
- Recoveries of EISs $^{13}C_4$-PFHpA and $^{13}C_2$-PFTeDA were low at 16% and 19%, respectively, in the analysis of sample E-T-BIOC_INV02_20240815. Data limitations are summarized below.
  - WSP J+ qualified the detect PFTrDA result from the associated sample due to low EIS recovery. (J+, EISL)
  - WSP UJ qualified the non-detect PFHpA and PFTeDA results from the associated sample due to low EIS recovery. (UJ, EISL)
- Recoveries of EISs $^{13}C_5$-PFPeA and $^{13}C_4$-PFHpA were outside limits at 208% and 24%, respectively, in the analysis of sample E-T-BIOD_INV01_20240815. Data limitations are summarized below.
  - WSP J- qualified the detect PFPeA result from the associated sample due to high EIS recovery (J-, EISH)
  - WSP UJ qualified the non-detected PFHpA result from the associated sample due to low EIS recovery. (UJ, EISL)
  - 3:3 FTCA, PFMBA, and PFMPA were not-detect in the associated sample and data usability is not adversely affect by high EIS recovery.
- Recovery of EIS $^{13}C_4$-PFHpA was low at 15% in the analysis of sample E-T-BIOI_INV01_20240816. WSP UJ qualified the non-detect PFHpA result from the associated sample due to low EIS recovery. (UJ, EISL)
- Recovery of EIS $^{13}C_4$-PFHpA was low at 13% in the analysis of sample E-T-BIOI_INV02_20240816. WSP UJ qualified the non-detect PFHpA result from the associated sample due to low EIS recovery. (UJ, EISL)
- Recoveries of the EISs $^{13}C_4$-PFHpA and $^{13}C_8$-PFOSA were outside of limits at 12% and 208%, respectively, in the analysis of sample E-T-BIOJ_INV01_20240816. Data limitations are summarized below.
  - WSP J+ qualified the detect PFHpA result from the associated sample due to low EIS recovery. (J+, EISL)
  - WSP J- qualified the detected PFOSA result from the associated sample due to high EIS recovery. (J-, EISH).
- Recoveries of the EISs $^{13}C_5$-PFPeA and $^{13}C_4$- PFHpA were outside limits at 187% and 14%, respectively, in the analysis of sample E-T-BIOK_INV01_20240814. Data limitations are summarized below.
  - WSP J- qualified the detect PFPeA result from the associated sample due to high EIS recovery. (J-, EISH)
  - The 3:3 FTCA result was previously J+ qualified because of high MS recovery. WSP changed the J+ qualifiers to a J qualifier because the high EIS recovery would result in potential low analytical bias. (J, EISH)
  - WSP UJ qualified the non-detect PFHpA result from the associated sample due to low EIS recovery (UJ, EISL)
  - PFMPA and PFMBA were not detected in the associated sample and data usability is not adversely affected by high EIS recoveries.
- Recoveries of EIS $^{13}C_4$-PFHpA were low in samples E-T-BIOM_INV01_20240816 (10%), E-T-BION_INV01_20240814 (11%), E-T-BIOO_INV01_20240814 (12%), and E-T-BIOQ_INV01_20240816 (10%) . WSP UJ qualified the non-detect PFHpA results from the associated samples due to low EIS recoveries. (UJ, EISL)

- Recoveries of EISs $^{13}C_4$-PFHpA and $^{13}C_2$-PFTeDA were low at 19% and 16%, respectively, in the analysis of sample E-T-BIOE_INV01_20240818. WSP UJ qualified the non-detect PFHpA, PFTrDA, and PFTeDA results from the associated sample due to low EIS recoveries. (UJ, EISL)
- Recoveries of EISs $^{13}C_5$-PFPeA (251%), $^{13}C_4$-PFHpA (21%), and $^{13}C_2$-PFTeDA (15%) were outside of limits in the standard analysis of sample E-T-BIOG_INV01_20240817. Data limitations are summarized below.
  - WSP J+ qualified the detected PFHpA, PFTrDA and PFTeDA results from the associated sample due to low EIS recoveries. (J+, EISL)
  - WSP J- qualified the detect PFPeA result from the associated sample due to high EIS recovery. (J-, EISH)
  - PFMPA and PFMBA were not detected in the associated sample and data usability is not adversely affected by high EIS recoveries.
  - 3:3 FTCA was reported from a dilution and the data usability is not adversely affected by high EIS recovery in the standard analysis.
- Recovery of EIS $^{13}C_2$-6:2 FTS was high at 341% in the dilution analysis of sample E-T-BIOG_INV01_20240817. WSP J- qualified the detect 6:2 FTS result from the associated sample due to high EIS recovery. (J-, EISH)
- Recoveries of EISs $^{13}C_5$-PFPeA (224%), $^{13}C_2$-PFTeDA (11%), and $^{13}C_2$-4:2 FTS (27%) were outside of limits in the analysis of sample E-T-BIOH_INV01_20240817. Data limitations are summarized below.
  - WSP J- qualified the detect PFPeA and 3:3 FTCA results from the associated sample due to high EIS recovery. (J-, EISH)
  - WSP J+ qualified the detect PFTrDA and PFTeDA results from the associated sample due to low EIS recovery. (J+, EISL)
  - WSP UJ qualified the non-detect 4:2-FTS result from the associated sample due to low EIS recovery. (UJ, EISL)
  - PFMPA and PFMBA were not detected in the associated sample and data usability is not adversely affected by high EIS recoveries.
- Recoveries of EISs $^{13}C_4$-PFHpA (10%), $^{13}C_2$-PFTeDA (10%), $^{13}C_8$-PFOSA (223%), and $^{13}C_5$-PFPeA (175%) were outside limits in the analysis of sample E-T-BIOH_INV02_20240817. Data limitations are summarized below.
  - WSP J- qualified the detect PFOSA, PFPeA, and 3:3 FTCA results from the associated sample due to high EIS recoveries. (J-, EISH)
  - WSP J+ qualified the detect PFHpA, PFTrDA, and PFTeDA results from the associated sample due to low EIS recoveries. (J+, EISL)
  - PFMP AND PFMBA were not detected in the associated sample and data usability is not adversely affected by high EIS recovery.
- Recoveries of EISs $^{13}C_5$-PFPeA (193%), $^{13}C_4$-PFHpA (15%), and $^{13}C_2$-PFTeDA (16%) were outside limits in the analysis of sample E-T-BIOJ_INV02_20240816. Data limitations are summarized below.
  - WSP J- qualified the detect PFPeA and 3:3 FTCA results from the associated sample due to high EIS recovery. (J-, EISH)
  - WSP J+ qualified the detect PFHpA, PFTrDA, and PFTeDA results from the associated sample due to low EIS recoveries. (J+, EISL)
  - PFMPA and PFMBA were not detected in the associated sample and data usability is not adversely affected by high EIS recovery.
- Recoveries of EISs $^{13}C_4$-PFHpA and $^{13}C_2$-PFTeDA were low at 21% and 15%, respectively, in the analysis of sample E-T-BIOL_INV01_20240819. Data limitations are summarized below.

  - WSP J+ qualified the detect PFTrDA and PFTeDA results from the associated sample due to low EIS recovery. (J+, EISL)
  - WSP UJ qualified the non-detected PFHpA result from the associated sample due to low EIS recovery. (UJ, EISL)

- Recoveries of EISs $^{13}C_7$-perfluoroundecanoic acid (PFUnA [194%]), $^{13}C_8$-PFOS (164%), $^{13}C_2$-4:2 FTS (376%), $^{13}C_2$-6:2 FTS (450%), and d_5-N-ethyl perfluorooctanesulfonamidoacetic acid (NEtFOSAA [289%]) were high in the analysis of sample E-A-BIOJ_INV01_20240815. Data limitations are summarized below.
  - WSP J- qualified the detected PFOS result from the associated sample due to high EIS recovery. (J-, EISH).
  - PFUnA, PFHpS, PFNS, PFDoDS, PFDS, 4:2 FTS, 6:2 FTS, and NEtFOSAA were not detected in the associated sample and data usability is not adversely affected by high EIS recoveries.
- Recoveries of EISs $^{13}C_2$-6:2 FTS (524%), $^{13}C_2$-8:2 FTS (399%), $^{13}C_8$-PFOSA (182%), and d_5-NEtFOSAA (264%) were high in the analysis of sample E-A-BIOK_INV01_20240816. WSP J- qualified the detected 6:2 FTS, 8:2 FTS, PFOSA, and NEtFOSAA results from the associated sample due to high EIS recoveries. (J-, EISH)
- Recoveries of EISs $^{13}C_2$-6:2 FTS and d_5-NEtFOSAA were high at 333% and 316%, respectively, in the analysis of sample E-A-BIOK_INV02_20240818. WSP J- qualified the detected 6:2 FTS and NEtFOSAA from the associated sample due to high EIS recoveries. (J-, EISH)
- Recovery of EIS $^{13}C_8$-PFOSA was high at 199% in the analysis of sample E-A-BIOK_FSH01_20240817. WSP J- qualified the detect PFOSA result from the associated sample due to high EIS recovery. (J-, EISH)
- Recoveries of EIS $^{13}C_4$-PFHpA were low in the analysis of samples E-T-BIOA_INV01_20240910 (19%), E-T-BIOB_INV01_20240910 (15%), and E-T-BIOP_INV01_20240910 (18%). WSP UJ qualified the non-detected PFHpA results from the associated samples due to low EIS recoveries. (UJ, EISL)
- Recovery of EIS d_5-NEtFOSAA was high at 245% in the analysis of sample E-T-BIOF_INV01_20240910. WSP J- qualified the detected NEtFOSAA result from the associated sample due to high EIS recovery. (J-, EISH)
- Recovery of EIS $^{13}C_3$-HFPO-DA was low at 19% in the analysis of sample E-T-BIOF_PLT01_20240910. WSP UJ qualified the non-detected HFPO-DA, ADONA, 9Cl-PF3ONS, and 11Cl-PF3OUdS results from the associated sample due to low EIS recovery. (UJ, EISL)
- Recovery of EIS $^{13}C_2$-6:2 FTS was high at 322% in the analysis of sample E-T-BIOC_RNT02_20240913. WSP J- qualified the detected 6:2 FTS result from the associated sample due to high EIS recovery. (J-, EISH)
- Recovery of EIS d_5-EtFOSA was high at 869% in the analysis of sample E-A-BIOP_PLT01_20240813. NEtFOSA was not detect in the associated sample data usability is not adversely affect by high EIS recovery.
- Recovery of EIS $^{13}C_3$-PFBS was high at 228% in the analysis of sample E-A-BIOU_PLT01_20240814. PFBS was not detected in the associated sample and data usability is not adversely affected by high EIS recovery.
- Recoveries of EISs d_5-NEtFOSAA and $^{13}C_3$-HFPO-DA were high at 237% and 390%, respectively, in the analysis of sample E-A-BIOB_INV01_20240817. NEtFOSAA, HFPO-DA, ADONA, 9Cl-PF3ONS, and 11Cl-PF3OUdS were not detected in the associated sample and data usability is not adversely affected by high EIS recoveries.
- Recoveries of EISs $^{13}C_2$-6:2 FTS (360%), d_5-NEtFOSAA (245%), and $^{13}C_3$-HFPO-DA (189%) were high in the analysis of sample E-A-BIOG_INV01_20240818. 6:2 FTS, NEtFOSAA, HFPO-DA, ADONA, 9Cl-PF3ONS, and 11Cl-PF3OUdS were not detected in the associated sample and data usability is not adversely affected by high EIS recoveries.
- Recoveries of EISs d_3- N-methyl perfluorooctanesulfonamidoacetic acid (NMeFOSAA [200%]), d_5-NEtFOSAA (239%) and $^{13}C_3$-HFPO-DA (193%) were high in the analysis of sample E-A-BIOH_INV01_20240819. NMeFOSAA, NEtFOSAA, HFPO-DA, ADONA, 9Cl-PF3ONS, and 11Cl-PF3OUdS were not detected in the associated sample and data usability is not adversely affected by high EIS recoveries.
- Recoveries of the EIS d_5-NEtFOSAA were high in the analysis of samples E-A-BION_INV01_20240815 (249%), E-A-BION_INV02_20240815 (246%), E-A-BIOCS_INV01_20240820 (237%), E-A-BIOE_INV01_20240819 (261%),

and E_A-BIOPB_INV01_20240820 (270%). NEtFOSAA was not detected in the associated samples and data usability is not adversely affected by high EIS recoveries.

- Recoveries of EISs $^{13}C_2$-6:2 FTS (374%) and d_5-NEtFOSAA (280%) were high at 374% and 280%, respectively, in the analysis of sample E-A-BIOA_INV02_20240820. 6:2 FTS and NEtFOSAA were not detected in the associated sample and data usability is not adversely affected by high EIS recoveries.
- Recoveries of EISs $^{13}C_5$-PFPeA (668%), $^{13}C_4$-PFHpA (301%) and $^{13}C_3$-HFPO-DA (358%) were high in the analysis of sample E-A-BIOC_INV01_20240816. PFPeA, PFHpA, HFPO-DA, ADONA, PFMPA, PFMBA, 9Cl-PF3ONS, 11Cl-PF3OUdS, and 3:3 FTCA were not detected in the associated sample and data usability is not adversely affected by high EIS recoveries.

7.1.14 NON-EXTRACTED INTERNAL STANDARD ACCURACY

NIS recoveries were within the method-specified 50 to 200% limits, with the following exception:

- Recoveries of NISs $^{13}C_3$-PFBA (38%), $^{13}C_2$-perfluorohexanoic acid (PFHxA [8%]), $^{13}C_4$-PFOA (14%), $^{13}C_5$--perfluorononanoic acid (PFNA [13%]), $^{13}C_2$- perfluorodecanoic acid (PFDA [25%]), $^{18}O_2$-PFHxS (25%), and $^{13}C_4$-PFOS (37%) were low in the analysis of sample E-T-BIOF_PLT01_20240910. Data limitations are summarized below.
  - WSP R qualified and rejected the non-detected PFPeA, PFHxA, PFHpA, HFPO-DA, ADONA, PFMPA, PFMBA, NFDHA, 9Cl-PF3ONS, 11Cl-PF3OUdS, PFEESA, 3:3 FTCA, 5:3 FTCA, and 7:3 FTCA results from the associated sample due to extremely low $^{13}C_2$-PFHxA recovery. (R, ISL)
  - WSP UJ qualified the non-detect PFOA, PFNA, PFDA, PFUnA, PFDoDA, PFTrDA, PFTeDA, PFBS, PFPeS, PFHxS, 4:2 FTS, 6:2 FTS, and 8:2 FTS results due to low $^{13}C_4$-PFOA, $^{13}C_5$-PFNA, $^{13}C_2$-PFDA, and $^{18}O_2$-PFHxS recoveries. (UJ, ISL)
  - $^{13}C_3$-PFBA and $^{13}C_4$-PFOS recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.
- Recoveries of NISs $^{13}C_2$-PFHxA (6%), $^{13}C_4$-PFOA (21%), $^{13}C_5$-PFNA (15%), $^{13}C_2$-PFDA (28%), $^{18}O_2$-PFHxS (34%), and $^{13}C_4$-PFOS (20%) were low in the analysis of sample E-T-BIOI_PLT01_20240910. Data limitations are summarized below.
  - WSP R qualified and rejected the non-detected PFPeA, PFHxA, PFHpA, HFPO-DA, ADONA, PFMPA, PFMBA, NFDHA, 9Cl-PF3ONS, 11Cl-PF3OUdS, PFEESA, 3:3 FTCA, 5:3 FTCA, and 7:3 FTCA results from the associated sample due to extremely low $^{13}C_2$-PFHxA- recovery. (R, ISL)
  - WSP UJ qualified the non-detect PFOA, PFNA, PFDA, PFUnA, PFDoDA, PFTrDA, PFTeDA, PFHpS, PFBS, PFOS, PFNS, PFDS, PFDoDS, PFOSA, NMeFOSA, NEtFOSA, NMeFOSAA, NEtFOSAA, NMeFOSE, and NEtFOSE results from the associated sample due to low $^{13}C_4$-PFOA, $^{13}C_5$-PFNA, $^{13}C_2$-PFDA, and $^{13}C_6$-PFOS recoveries. (UJ, ISL)
  - $^{18}O_2$-PFHxS recovery was greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.
- Recoveries of NISs $^{13}C_2$-PFHxA (7%), $^{13}C_4$-PFOA (19%), $^{13}C_5$-PFNA (12%), $^{13}C_2$-PFDA (25%), $^{18}O_2$-PFHxS (25%), and $^{13}C_4$-PFOS (39%) were low in the analysis of sample E-T-BIOJ_PLT01_20240910. Data limitations are summarized below.
  - WSP R qualified and rejected the non-detected PFPeA, PFHxA, PFHpA, HFPO-DA, ADONA, PFMPA, PFMBA, NFDHA, 9Cl-PF3ONS, 11Cl-PF3OUdS, PFEESA, 3:3 FTCA, 5:3 FTCA, and 7:3 FTCA results from the associated sample due to extremely low $^{13}C_2$-PFHxA recovery. (R, ISL)
  - WSP UJ qualified the non-detect and J qualified the detect PFOA, PFNA, PFDA, PFUnA, PFDoDA, PFTrDA, PFTeDA, PFBS, PFPeS, PFHxS, 4:2 FTS, 6:2 FTS, and 8:2 FTS results from the associated sample due to low $^{13}C_4$-PDFOA, $^{13}C_5$-PFNA, $^{13}C_2$-PFDA, and $^{18}O_2$-PFHxS recoveries. (UJ/J, ISL)

- $^{13}C_4$-PFOS recovery was greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.

– Recoveries of NISs $^{13}C_2$-PFHxA and $^{13}C_5$-PFNA were low at 7% and 47%, respectively, in the analysis of sample E-A-BIOC_INV01_20240816. Data limitations are summarized below.

  - WSP R qualified and rejected the non-detect PFPeA, PFHxA, PFHpA, HFPO-DA, ADONA, PFMPA, PFMBA, NFDHA, 9Cl-PF3ONS, 11Cl-PF3OUdS, PFEESA, 3:3 FTCA, 5:3 FTCA, and 7:3 FTCA results from the associated sample due to extremely low $^{13}C_2$-PFHxA recovery. (R, ISL)

  - $^{13}C_5$-PFNA recovery was greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.

– Recoveries of NISs $^{13}C_2$-PFHxA (11%), $^{13}C_4$-PFOA (48%), $^{13}C_2$-PFDA (45%), and $^{13}C_4$-PFOS (42%) were low in the analysis of sample E-A-BIOJ_INV01_20240815. Data limitations are summarized below.

  - WSP UJ qualified the non-detect and J qualified the detect PFPeA, PFHxA, PFHpA, HFPO-DA, ADONA, PFMPA, PFMBA, NFDHA, 9Cl-PF3ONS, 11Cl-PF3OUdS, PFEESA, 3:3 FTCA, 5:3 FTCA, and 7:3 FTCA results from the associated sample due to low $^{13}C_2$-PFHxA recovery. (UJ/J, ISL)

  - $^{13}C_4$-PFOA, $^{13}C_2$-PFDA, and $^{13}C_4$-PFOS recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.

– Recoveries of NISs $^{13}C_2$-PFHxA (22%), $^{13}C_4$-PFOA (46%), and $^{13}C_5$-PFNA (40%) were low in the analysis of sample E-T-BIOD_INV01_20240815. Data limitations are summarized below.

  - WSP UJ qualified the non-detect and J qualified the detect PFPeA, PFHxA, PFHpA, HFPO-DA, ADONA, PFMPA, PFMBA, NFDHA, 9Cl-PF3ONS, 11Cl-PF3OUdS, PFEESA, 3:3 FTCA, 5:3 FTCA, and 7:3 FTCA results from the associated sample due to low $^{13}C_2$-PFHxA recovery. (UJ/J, ISL)

  - $^{13}C_4$-PFOA and $^{13}C_5$-PFNA recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.

– Recoveries of NISs $^{13}C_2$-PFHxA (21%), $^{13}C_4$-PFOA (41%), and $^{13}C_5$-PFNA (40%) were low in the standard analysis of sample E-T-BIOI_INV01_20240816. Data limitations are summarized below.

  - WSP UJ qualified the non-detect and J qualified the detect PFPeA, PFHxA, PFHpA, HFPO-DA, Adona, PFMPA, PFMBA, NFDHA, 9Cl-PF3ONS, 11Cl-PF3OUdS, PFEESA, 3:3 FTCA, 5:3 FTCA, and 7:3 FTCA results from the associated sample due to low $^{13}C_2$-PFHxA recovery. (UJ/J, ISL)

  - $^{13}C_4$-PFOA and $^{13}C_5$-PFNA recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.

– Recoveries of NIS $^{13}C_2$-PFHxA were low in the analysis of sample E-A-BIOB_INV01_20240817 (14%), E-T-BIOK_INV01_20240814 (29%), E-T-BIOH_INV01_20240817 (22%), E-T-BIOJ_INV02_20240816 (25%), E-A-BIOG_INV01_20240818 (24%), and E-T-BIOB_INV01_20240910 (25%). WSP UJ qualified the non-detect and J qualified the detect PFPeA, PFHxA, PFHpA, HFPO-DA, ADONA, PFMPA, PFMBA, NFDHA, 9Cl-PF3ONS, 11Cl-PF3OUdS, PFEESA, 3:3 FTCA, 5:3 FTCA, and 7:3 FTCA results from the associated samples due to low $^{13}C_2$-PFHxA recoveries. (UJ/J, ISL)

– Recovery of NIS $^{13}C_2$-PFHxA was low at 21% in the standard analysis of sample E-T-BIOG_INV01_20240817. Data limitations are summarized below.

  - WSP UJ qualified the non-detect and J qualified the detect PFPeA, PFHxA, PFHpA, HFPO-DA, ADONA, PFMPA, PFMBA, NFDHA, 9Cl-PF3ONS, 11Cl-PF3OUdS, and PFEESA results from the associated sample due to low $^{13}C_2$-PFHxA recovery. (UJ/J, ISL)

  - 3:3 FTCA, 5:3 FTCA, and 7:3 FTCA were not reported from the associated analysis and data usability is not adversely affected by the low NIS recovery.

- Recoveries of NISs $^{13}C_2$-PFHxA (22%), $^{13}C_5$-PFNA (45%), and $^{13}C_4$-PFOS (45%) were low in the analysis of sample E-T-BIOP_INV01_20240910. Data limitations are summarized below.
  - WSP UJ qualified the non-detect and J qualified the detect PFPeA, PFHxA, PFHpA, HFPO-DA, ADONA, PFMPA, PFMBA, NFDHA, 9Cl-PF3ONS, 11Cl-PF3OUdS, PFEESA, 3:3 FTCA, 5:3 FTCA, and 7:3 FTCA results from the associated sample due to low $^{13}C_2$-PFHxA recovery. (UJ/J, ISL)
  - $^{13}C_5$-PFNA and $^{13}C_4$-PFOS recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.
- Recoveries of NISs $^{13}C_3$-PFBA (48%), $^{13}C_2$-PFHxA (14%), $^{13}C_4$-PFOA (26%), $^{13}C_5$-PFNA (31%), $^{13}C_2$-PFDA (34%), $^{18}O_2$-PFHxS (30%), and $^{13}C_4$-PFOS (30%) were low in the analysis of sample E-T-BIOA_PLT01_20240910. Data limitations are summarized below.
  - WSP UJ qualified the non-detect and J qualified the detect PFPeA, PFHxA, PFHpA, HFPO-DA, PFOA, ADONA, PFMPA, PFMBA, NFDHA, 9Cl-PF3ONS, 11Cl-PF3OUdS, PFEESA, 3:3 FTCA, 5:3 FTCA, and 7:3 FTCA results from the associated sample due to low $^{13}C_2$-PFHxA and $^{13}C_4$-PFOA recoveries. (UJ/J, ISL)
  - $^{13}C_3$-PFBA, $^{13}C_5$-PFNA, $^{18}O_2$-PFHxS, and $^{13}C_4$-PFOS recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.
- Recoveries of NISs $^{13}C_2$-PFHxA (11%), $^{13}C_4$-PFOA (15%), $^{13}C_5$-PFNA (17%), $^{13}C_2$-PFDA (25%), $^{18}O_2$-PFHxS (26%), and $^{13}C_4$-PFOS (30%) were low in the analysis of sample E-T-BIOP_PLT01_20240910. Data limitations are summarized below.
  - WSP UJ qualified the non-detect and J qualified the detect PFPeA, PFHxA, PFHpA, PFOA, PFNA, PFDA, PFUnA, PFDoDA, PFTrDA, PFTeDA, PFBS, PFPeS, PFHxS, 4:2 FTS, 6:2 FTS, 8:2 FTS, HFPO-DA, ADONA, PFMPA, PFMBA, NFDHA, 9Cl-PF3ONS, 11Cl-PF3OUdS, PFEESA, 3:3 FTCA, 5:3 FTCA, and 7:3 FTCA results from the associated sample due to low NIS recoveries. (UJ/J, ISL)
  - $^{13}C_4$-PFOS recovery was greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.
- Recoveries of NISs $^{13}C_2$-PFHxA (28%), $^{13}C_4$-PFOA (45%), $^{13}C_5$-PFNA (37%), $^{13}C_2$-PFDA (40%), $^{18}O_2$-PFHxS (39%), and $^{13}C_4$-PFOS (41%) were low in the analysis of sample E-T-BION_RNT01_20240813. Data limitations are summarized below.
  - WSP UJ qualified the non-detect PFPeA, PFHxA, PFHpA, HFPO-DA, ADONA, PFMPA, PFMBA, NFDHA, 9Cl-PF3ONS, 11Cl-PF3OUdS, PFEESA, 3:3 FTCA, 5:3 FTCA, and 7:3 FTCA results from the associated sample due to low $^{13}C_2$-PFHxA recovery. (UJ, ISL)
  - $^{13}C_4$-PFOA, $^{13}C_5$-PFNA, $^{13}C_2$-PFDA, $^{18}O_2$-PFHxS, and $^{13}C_4$-PFOS recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.
- Recoveries of NISs $^{13}C_2$-PFHxA (34%), $^{13}C_4$-PFOA (47%), $^{13}C_5$-PFNA (41%), $^{13}C_2$-PFDA (44%), $^{18}O_2$-PFHxS (26%), and $^{13}C_4$-PFOS (36%) were low in the standard analysis of sample E-T-BIOC_RNT01_20240911 Data limitations are summarized below.
  - WSP UJ qualified the non-detect and J qualified the detect PFBS, PFPeS, 4:2 FTS, 6:2 FTS, and 8:2 FTS results from the associated sample due to low $^{18}O_2$-PFHxS recovery. (UJ/J, ISL)
  - PFHxS was not reported from the associated analysis and data usability is not adversely affected by the low NIS recovery.
  - $^{13}C_2$-PFHxA, $^{13}C_4$-PFOA, $^{13}C_5$-PFNA, $^{13}C_2$-PFDA, and $^{13}C_4$-PFOS recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.

- Recoveries of NISs $^{13}C_2$-PFHxA (28%), $^{13}C_4$-PFOA (44%), $^{13}C_5$-PFNA (35%), $^{13}C_2$-PFDA (43%), $^{18}O_2$-PFHxS (28%), and $^{13}C_4$-PFOS (47%) were low in the standard analysis of sample E-T-BIOC_RNT02_20240913. Data limitations are summarized below.
  - WSP UJ qualified the non-detect and J qualified the detect PFPeA, PFHxA, PFHpA, HFPO-DA, ADONA, PFMPA, PFMBA, NFDHA, 9Cl-PF3ONS, 11Cl-PF3OUdS, PFEESA, 3:3 FTCA, 5:3 FTCA, 7:3 FTCA, PFBS, PFPeS, 4:2 FTS, 6:2 FTS, and 8:2 FTS results from the associated sample due to low $^{13}C_2$-PFHxA and $^{18}O_2$-PFHxS recoveries. (UJ/J, ISL)
  - PFHxS was not reported from the associated analysis and data usability is not adversely affected by the low NIS recovery.
  - $^{13}C_4$-PFOA, $^{13}C_5$-PFNA, $^{13}C_2$-PFDA, and $^{13}C_4$-PFOS recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.
- Recoveries of NISs $^{13}C_2$-PFHxA (27%), $^{13}C_4$-PFOA (39%), $^{13}C_5$-PFNA (30%), $^{13}C_2$-PFDA (33%), $^{18}O_2$-PFHxS (32%), and $^{13}C_4$-PFOS (31%) were low in the analysis of sample E-T-BIOF_RNT01_20240912. Data limitations are summarized below.
  - WSP UJ qualified the non-detect PFPeA, PFHxA, PFHpA, HFPO-DA, ADONA, PFMPA, PFMBA, NFDHA, 9Cl-PF3ONS, 11Cl-PF3OUdS, PFEESA, 3:3 FTCA, 5:3 FTCA, and 7:3 FTCA results from the associated sample due to low $^{13}C_2$-PFHxA recovery. (UJ, ISL)
  - $^{13}C_4$-PFOA, $^{13}C_5$-PFNA, $^{13}C_2$-PFDA, $^{18}O_2$-PFHxS, and $^{13}C_4$-PFOS recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.
- Recoveries of NISs $^{13}C_4$-PFOA and $^{13}C_2$-PFDA were low at 48% and 38%, respectively, in the analysis of sample E-A-BIOR_PLT01_20240814. Recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.
- Recovery of NIS $^{13}C_4$-PFOA was low at 49% in the analysis of sample E-A-BIOT_PLT01_20240814. Recovery was greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.
- Recoveries of NISs $^{13}C_2$-PFHxA and $^{13}C_4$-PFOS were low at 47% and 42%, respectively, in the analysis of sample E-A-BIOK_INV02_20240818. Recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.
- Recoveries of NISs $^{13}C_2$-PFHxA and $^{13}C_5$-PFNA were low at 43% and 49%, respectively, in the analysis of sample E-T-BIOC_INV01_20240815. Recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.
- Recoveries of NISs $^{13}C_2$-PFHxA (30%), $^{13}C_4$-PFOA (44%), $^{13}C_5$-PFNA (45%), and $^{13}C_4$-PFOS (41%) were low in the standard analysis of sample E-T-BIOJ_INV01_20240816. Recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.
- Recoveries of NIS $^{13}C_2$-PFHxA were low in the analysis of samples E-T-BIOM_INV01_20240816 (44%), E-T-BION_INV01_20240814 (36%), E-T-BIOO_INV01_20240814 (39%), E-A-BIOL_INV01_20240815 (38%), E-A-BION_INV02_20240815 (45%), E-A-BIOCS_INV01_20240820 (46%), E-A-BIOE_INV01_20240819 (34%), E-A-BIOL_INV01_20240815 (34%), E-A-BIOPB_INV01_20240820 (47%), E-A-BIOB_FSH01_20240815 (40%), E-A-BIOC_FSH01_20240817 (40%), E-A-BIOCS_FSH01_20240819 (41%), E-A-BIOE_FSH01_20240819(41%), E-A-BIOA_FSH01_20240820 (41%), E-A-BIOF_FSH01_20240817 (48%), E-A-BIOG_FSH01_20240817 (47%), E-A-BIOH_FSH01_20240818 (46%), E-A-BIOPB_FSH01_20240820 (45%), and E-T-BIOD_RNT01_20240816 (41%). Recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.
- Recovery of NIS $^{13}C_2$-PFHxA was low in the dilution analyses of samples E-T-BIOG_INV01_20240817 and E-T-BIOI_INV01_20240816 at 43% and 48%, respectively. Recoveries were greater than or equal to 30% and per

the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.

- Recoveries of NISs $^{13}C_2$-PFHxA and $^{13}C_4$-PFOS were low at 39% and 48%, respectively, in the analysis of sample E-T-BIOH_INV02_20240817. Recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.
- Recoveries of NISs $^{13}C_2$-PFHxA (39%), $^{13}C_4$-PFOA (39%), and $^{13}C_4$-PFOS (43%) were low in the analysis of sample E-A-BIOA_INV02_20240820. Recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.
- Recovery of NIS $^{13}C_4$-PFOS was low at 33% in the analysis of sample E-A-BIOK_FSH01_20240817. Recovery was greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.
- Recoveries of NISs $^{13}C_2$-PFHxA (39%), $^{13}C_5$-PFNA (39%), $^{13}C_2$-PFDA (47%), and $^{13}C_4$-PFOS (38%) were low in the analysis of sample E-T-BIOF_INV01_20240910. Recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.
- Recoveries of NISs $^{13}C_2$-PFHxA (31%), $^{13}C_4$-PFOA (43%), $^{13}C_5$-PFNA (39%), $^{13}C_2$-PFDA (40%), $^{18}O_2$-PFHxS (34%), and $^{13}C_4$-PFOS (47%) were low in the analysis of sample E-T-BIOI_RNT01_20240814. Recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.
- Recoveries of NISs $^{13}C_2$-PFHxA (36%), $^{13}C_5$-PFNA (43%), $^{13}C_2$-PFDA (44%), and $^{18}O_2$-PFHxS (46%) were low in the analysis of sample E-T-BIOJ_RNT01_20240815. Recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.
- Recoveries of NISs $^{13}C_2$-PFHxA (37%), $^{13}C_4$-PFOA (49%), and $^{13}C_5$-PFNA (42%) were low in the analysis of sample E-T-BIOK_RNT01_20240814. Recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.
- Recoveries of NISs $^{13}C_2$-PFHxA (36%), $^{13}C_5$-PFNA (46%), and $^{13}C_2$-PFDA (47%) were low in the analysis of sample E-T-BIOL_RNT01_20240814. Recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.
- Recoveries of NISs $^{13}C_2$-PFHxA (31%), $^{13}C_4$-PFOA (47%), $^{13}C_5$-PFNA (39%), $^{13}C_2$-PFDA (42%), and $^{18}O_2$-PFHxS (46%) were low in the analysis of sample E-T-BIOQ_RNT01_20240816. Recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.
- Recoveries of NISs $^{13}C_2$-PFHxA (33%), $^{13}C_5$-PFNA (43%), $^{13}C_2$-PFDA (44%), $^{18}O_2$-PFHxS (40%), and $^{13}C_4$-PFOS (40%) were low in the analysis of sample E-T-BIOE_RNT01_20240911. Recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.
- Recoveries of NISs $^{13}C_2$-PFHxA (31%), $^{13}C_4$-PFOA (48%), $^{13}C_5$-PFNA (36%), $^{13}C_2$-PFDA (37%), $^{18}O_2$-PFHxS (39%), and $^{13}C_4$-PFOS (35%) were low in the analysis of sample E-T-BIOP_RNT01_20240911. Recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.
- Recoveries of NISs $^{18}O_2$-PFHxS and $^{13}C_4$-PFOS were low at 48% and 46%, respectively, in the dilution analysis of sample E-T-BIOC_RNT02_20240913. Recoveries were greater than or equal to 30% and per the DoD data validation guidelines, WSP did not qualify data based on NIS recoveries unless the recoveries were less than 30%.

7.1.15 ION RATIOS

Batelle I qualified data when ion transition ratios were outside the QAPP-specified limits of 50 to 150% of the ion ratios measured in the midpoint calibration standard or daily CCV. WSP J qualified Batelle's I qualified results to indicate potential matrix interference or the presence of isomers in the sample with different ratios than present in the standard. (J, IAG)

7.1.16 STAGE 4 VALIDATION

WSP did not perform Stage 4 validation on the samples reviewed in this report.

7.1.17 DATA REPORTING AND ANALYTICAL PROCEDURES

Batelle J qualified analytes with detected concentrations less than the LOQ. WSP agrees that these results are quantitatively uncertain and has maintained Batelle's J qualifiers. (J, TR)

8 FIELD DUPLICATE PRECISION

WSP did not collect field duplicates with the samples reviewed in this report.

9 SUMMARY AND CONCLUSIONS

WSP evaluated a total of 3,120 target analyte results from the field sample during this validation. Final validated results are presented in Table 2 and results qualified during validation are presented in Table 3 with applicable reason codes

Qualifier definitions are summarized in Section 4.0, reason codes are summarized in Section 5.0, and qualified data are summarized below.

- R: WSP R qualified and rejected 64 records (2.0%) due to extremely low EIS, NIS, and/or MS recoveries.
- J+: WSP J+ qualified 28 records (0.90%) due to low EIS or high MS recoveries.
- J-: WSP J- qualified 26 records (0.83%) due to high EIS or low MS recoveries.
- J: WSP J qualified 225 records (7.2%) due to imprecision between primary and duplicate laboratory analyses or MS and MSD analyses, low NIS recoveries, detected concentrations less than the LOQ, and/or ion transition ratios out of limits
- UJ: WSP UJ qualified 260 records (8.3%) due to high CCV recoveries or low LCS, MS, EIS, and/or NIS recoveries.

Data qualified during validation are summarized in Table 3.

TABLE OF CONTENTS

1 Introduction 1
2 Data Validation Methodology 1
3 Explanation of Data Quality Indicators 2
3.1 Laboratory Control Sample Recoveries 2
3.2 Matrix Spike Recoveries 2
3.3 Blank Concentrations 2
3.4 Laboratory and Field Duplicates 2
4 Definitions of Qualifiers That May Be Added During Data Validation 3
5 Qualification Reason Codes 3
6 Chain of Custody and Sample Receipt Condition Documentation 4
7 Specific Data Validation Findings 4
7.1 PFAS by EPA Draft Method 1633 4
7.1.1 Holding Times 4
7.1.2 Mass Calibration Frequency 4
7.1.3 Ion Transitions 4
7.1.4 Initial Calibration Compliance 4
7.1.5 Initial Calibration Verification Accuracy 4
7.1.6 Instrument Sensitivity Check Compliance 5
7.1.7 Continuing Calibration Verification Compliance 5
7.1.8 Bile Salt Interference Checks 5
7.1.9 Laboratory and Calibration Blank Detections 5
7.1.10 Laboratory Control Sample Accuracy 5
7.1.11 Matrix Spike Accuracy and Precision 7
7.1.12 Laboratory Duplicate Precision 9
7.1.13 Extracted Internal Standard Accuracy 9
7.1.14 Non-Extracted Internal Standard Accuracy 10
7.1.15 Ion Ratios 14
7.1.16 Stage 4 Validation 14
7.1.17 Data Reporting and Analytical Procedures 14
8 Field Duplicate Precision 14
9 Summary and Conclusions 15

LIST OF ACRONYMS AND ABBREVIATIONS

%	percent
3:3 FTCA	3-perfluoropropyl propanoic acid
5:3 FTCA	3-perfluoropentyl propanoic acid
7:3 FTCA	3-perfluoroheptyl propanoic acid
9Cl-PF3ONS	9-chlorohexadecafluoro-3-oxanone-1-sulfonic acid
11Cl-PF3OUdS	11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid
ADONA	4,8-dioxa-3H-perfluorononanoic acid
Batelle	Batelle Norwell Operations
CCV	continuing calibration verification
COC	chain of custody
DoD	Department of Defense
EIS	extracted internal standard
EPA	United States Environmental Protection Agency
FTS	fluorotelomer sulfonic acid
HFPO-DA	hexafluoropropylene oxide dimer acid
ICAL	initial calibration
ICV	initial calibration verification
ID	identification
ISC	instrument sensitivity check
LCS	laboratory control sample
LLLCS	low-level laboratory control sample
LOD	limit of detection
LOQ	limit of quantitation
MS	matrix spike
MSD	matrix spike duplicate
NEtFOSA	N-ethyl perfluorooctanesulfonamide
NEtFOSAA	N-ethyl perfluorooctanesulfonamidoacetic acid
NEtFOSE	N-ethyl perfluorooctanesulfonamidoethanol
NFDHA	nonafluoro-3,6-dioxaheptanoic acid
NIS	non-extracted internal standard
NMeFOSE	N-methyl perfluorooctanesulfonamidoethanol
PFAS	per- and polyfluoroalkyl substances
PFBA	perfluorobutanoic acid
PFBS	perfluorobutanesulfonic acid
PFDA	perfluorodecanoic acid
PFDoDA	perfluorododecanoic acid
PFDoDS	perfluorododecanesulfonic acid
PFDS	perfluorodecanesulfonic acid
PFEESA	perfluoro(2-ethoxyethane)sulfonic acid

PFHpA	perfluoroheptanoic acid
PFHxA	perfluorohexanoic acid
PFHxS	perfluorohexanesulfonic acid
PFMBA	perfluoro-4-methoxybutanoic acid
PFMPA	perfluoro-3-methoxypropanoic acid
PFPeA	perfluoropentanoic acid
PFPeS	perfluoropentanesulfonic acid
PFOA	perfluorooctanoic acid
PFOS	perfluorooctanesulfonic acid
PFOSA	perfluorooctanesulfonamide
PFNA	perfluorononanoic acid
PFTrDA	perfluorotridecanoic acid
PFUnA	perfluoroundecanoic acid
QAPP	quality assurance project plan
QC	quality control
QSM	Quality Systems Manual
RPD	relative percent difference
WSP	WSP USA Environment & Infrastructure Inc.

1 INTRODUCTION

WSP USA Environment & Infrastructure Inc. (WSP) collected 74 tissue samples between 13 and 20 August 2024 from the former Loring Air Force Base, located in Limestone, Maine. WSP submitted the sample to Batelle Norwell Operations (Batelle), located in Norwell, Massachusetts, where they were received between 16 and 22 August 2024. Batelle assigned the samples to sample delivery groups 24-0653, 24-0668, 24-0669, 24-0679, 24-0680, 24-0681, and 24-0697, and analyzed them for per- and polyfluoroalkyl substances (PFAS) using United States Environmental Protection Agency (EPA) Method 1633.

The field sample identifications (IDs), sample collection dates, and laboratory sample IDs are presented in Table 1.

2 DATA VALIDATION METHODOLOGY

WSP performed Department of Defense (DoD) Stage 4 validation on a minimum of 10 percent (%) of the field samples reviewed in this report and Stage 2B validation on the remaining field sample data. The Stage 4 validation includes review of quality control (QC) results in the laboratory's analytical report and reported on QC summary forms and review of the raw analytical data. Stage 2B validation does not include review or validation of the raw analytical data. This data validation has been performed in general accordance with:

- WSP, 2024. Draft Quality Program Plan Addendum, Remedial Investigation, Per- and Polyfluoroalkyl Substances Response, Former Loring Air Force Base, Limestone Maine, April.
- DoD, 2019. DoD General Data Validation Guidelines, September.
- DoD, 2021. DoD Department of Energy Consolidated Quality Systems Manual (QSM) for Environmental Laboratories Version 5.4, October.
- DoD, 2022. Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances Analysis by QSM Table B-24, October.
- EPA, 2023. 4th Draft EPA Method 1633, Analysis of PFAS in Aqueous, Solid, Biosolids, and Tissue Samples by Liquid Chromatography-Tandem Mass Spectrometry (LC-MS/MS), July.

The laboratory's certified analytical report and supporting documentation were reviewed to assess the following:

- Data package and electronic data deliverable completeness;
- Chain of custody (COC) compliance;
- Holding time compliance;
- Sample receipt condition;
- Mass Calibration;
- Initial calibration (ICAL), initial calibration verification (ICV), instrument sensitivity check (ISC), and continuing calibration verification (CCV) compliance with method specified criteria;
- Signal to noise ratios for the ISC;
- Bile salt interference check;
- Presence or absence of laboratory contamination as demonstrated by laboratory blanks;
- Accuracy and bias as demonstrated by PFAS recovery in laboratory control sample (LCS) and matrix spike (MS) samples;
- Extracted Internal Standard (EIS) and non-extracted internal standard (NIS) recoveries;

- Analytical precision as relative percent difference (RPD) of analyte concentration between laboratory duplicates, or MS/MS duplicates (MSDs);
- Sampling and analytical precision as RPD of analyte concentration between field duplicates;
- Assessment of field contamination as demonstrated by field blanks; and
- Insofar as possible, the degree of conformance to method requirements and good laboratory practices.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

3 EXPLANATION OF DATA QUALITY INDICATORS

Summary explanation of the specific data quality indicators reviewed during data validation are presented below.

3.1 LABORATORY CONTROL SAMPLE RECOVERIES

LCSs are aliquots of analyte free matrices that are spiked with the analytes of interest for an analytical method, or a representative subset of those analytes. The spiked matrix is then processed through the same analytical procedures as the samples they accompany.

LCS recovery and precision are an indication of a laboratory's ability to successfully perform an analytical method in an interference free matrix.

3.2 MATRIX SPIKE RECOVERIES

MSs and MSDs are prepared by adding known amounts of the analytes of interest for an analytical method, or a representative subset of those analytes, to an aliquot of sample. The spiked sample is then processed through the same extraction, concentration, cleanup, and analytical procedures as the unspiked samples in an analytical batch.

MS recovery and precision are an indication of a laboratory's ability to successfully recover an analyte in the matrix of a specific sample or closely related sample matrices. It is important not to apply MS results for any specific sample to other samples without understanding how the sample matrices are related.

3.3 BLANK CONCENTRATIONS

Blank samples are aliquots of analyte free matrix that are used as negative controls to verify that the sample collection, storage, preparation, and analysis system does not produce false positive results.

Laboratory blanks are processed by the laboratory using the same procedures as the field samples. Target analytes should not be found in laboratory blanks.

3.4 LABORATORY AND FIELD DUPLICATES

Laboratory and field duplicate analyses verify acceptable method precision by the laboratory at the time of preparation and analysis and/or sampling precision at the time of collection.

4 DEFINITIONS OF QUALIFIERS THAT MAY BE ADDED DURING DATA VALIDATION

J	The reported result was an estimated value.
J+	The reported result was an estimated value with a positive bias.
J-	The reported result was an estimated value with a negative bias.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting quality control criteria. The analyte may or may not be present in the sample.
U	The analyte was not detected and was reported as less than the limit of detection (LOD). The LOD has been adjusted for any dilution or concentration of the sample.
UJ	The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

5 QUALIFICATION REASON CODES

The following reason codes were applied to the data during data validation:

CBG	The analyte was detected in the associated calibration blank and the concentration detected in the sample was greater than the LOD and less than five times the concentration detected in the blank.
CVHL	High ISC recovery.
EISH	High EIS recovery.
EISL	Low EIS recovery.
IAG	Ion transition ratio is outside of expected limits.
ISL	Low NIS recovery.
LCH	High LCS recovery. Result may be biased high.
LCL	Low LCS recovery. Result may be biased low.
MSD	Imprecision between MS and MSD results.
MSH	High MS recovery. Result may be biased high.
MSL	Low MS recovery. Result may be biased low.
TR	The detected analyte concentration is less than the limit of quantitation (LOQ).

6 CHAIN OF CUSTODY AND SAMPLE RECEIPT CONDITION DOCUMENTATION

The samples were received at the laboratory under proper COC, intact, and at average temperatures less than the method-specified maximum of 6 degrees Celsius.

7 SPECIFIC DATA VALIDATION FINDINGS

Results from the samples reviewed in this report are considered usable with the limitations and exceptions described in Sections 7.1 through 8.0. Final validated results are presented in Table 2 and results qualified during validation are presented in Table 3 with applicable reason codes.

7.1 PFAS BY EPA DRAFT METHOD 1633

PFAS results generated by Batelle may be considered usable with the limitations described in Sections 7.1.1 through 7.1.14.

7.1.1 HOLDING TIMES

The samples were extracted within the method-specified maximum holding time of 90 days from sample preparation (filleting and/or grinding) and the extracts were analyzed within the method-specified maximum hold time of 90 days from extraction.

7.1.2 MASS CALIBRATION FREQUENCY

Mass calibration verifications were performed before the ICALs associated with the analysis of the samples reviewed in this report.

7.1.3 ION TRANSITIONS

Parent, quantification, and confirmation ion masses used for the analysis of the samples reviewed in this report matched the ions specified in EPA Method 1633 Table 10.

7.1.4 INITIAL CALIBRATION COMPLIANCE

Initial calibrations relative standard deviations between response factors for each target analyte were less than or equal to the method-specified maximum of 20% and/or relative standard errors were less than the method-specified maximum of 20% for all target analytes and EISs.

7.1.5 INITIAL CALIBRATION VERIFICATION ACCURACY

ICVs were analyzed after each initial calibration. Recoveries were between 70 and 130%.

7.1.6 INSTRUMENT SENSITIVITY CHECK COMPLIANCE

ISCs were analyzed at the beginning of each analytical run, concentrations were equivalent to the LOQ, signal to noise ratios were greater than or equal to 3:1, and recoveries were within the method-specified 70 to 130% limits, with the following exception:

- 9-Chlorohexadecafluoro-3-oxanone-1-sulfonic acid (9Cl-PF3ONS) recovery was high at 132% in the ISC associated with the analysis of samples E-A-BIOK_PLT01_20240816, E-A-BIOK_PLT02_20240816, and E-A-BIOM_PLT01_20240816. Per DoD data validation guidelines, WSP UJ qualified the non-detect 9Cl-PF3ONS results from the associated samples due to high ISC recovery. (UJ, CVHL)

7.1.7 CONTINUING CALIBRATION VERIFICATION COMPLIANCE

CCVs were analyzed at the beginning of the analytical sequence after the ISC, after every ten or fewer samples, and at the end of the analytical sequence. Recoveries were within the method-specified 70 to 130% limits.

7.1.8 BILE SALT INTERFERENCE CHECKS

Bile salt interference checks were analyzed daily and retention times for the bile salts were at least one minute outside the retention times for linear or branched perfluorooctanesulfonic acid (PFOS).

7.1.9 LABORATORY AND CALIBRATION BLANK DETECTIONS

Target analytes were not detected in the laboratory and calibration blanks associated with the sample reviewed in this report, with the following exception:

- Perfluorooctanesulfonamide (PFOSA) was detected at a concentration of 0.164 nanograms per gram in the calibration blank associated with the analysis of samples E-T-BIOC_PLT01_20240815, E-T-BIOC_PLT02_20240815, E-T-BIOD_PLT01_20240815, E-T-BIOD_PLT02_20240815, and E-T-BIOG_PLT01_20240817. Data limitations are summarized below.
    - WSP J+ qualified the detected PFOSA results from samples, and E-T-BIOG_PLT01_20240817 because the detected concentrations were greater than the LOD but less than five times the concentration detected in the blank. (J+, CBG)
    - WSP U qualified the detected PFOSA results from samples E-T-BIOC_PLT01_20240815 and E-T-BIOC_PLT02_20240815 because the detected concentrations were greater than the LOD but less than the LOQ. (U, CBG)
    - PFOSA was not detected in the remaining associated samples and data usability is not adversely affected by the blank detection.

7.1.10 LABORATORY CONTROL SAMPLE ACCURACY

Low-level LCS (LLLCS) and LCS were included with each extraction batch, LLLCS spike concentrations were twice the LOQ, and LCS and LLLCS recoveries were within method-specified limits, with the following exceptions:

- Perfluorotridecanoic acid (PFTrDA [158%]), perfluoro-4-methoxybutanoic acid (PFMBA [33%]), 9Cl-PF3ONS (154%), and 11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid (11Cl-PF3OUdS [175%]) recoveries were outside limits in the LCS associated with the extraction of samples E-T-BIOC_PLT01_20240815, E-T-BIOC_PLT02_20240815, E-T-BIOD_PLT01_20240815, E-T-BIOD_PLT02_20240815, E-T-BIOG_PLT01_20240817, E-T-BIOG_PLT02_20240817, E-T-BIOH_PLT01_20240817, E-T-BIOH_PLT02_20240817, and E-T-BIOM_PLT01_20240815. Data limitations are summarized below.
    - WSP UJ qualified the non-detect PFMBA results from the associated samples due to potential low analytical bias. (UJ, LCL)

- PFTrDA, 9Cl-PF3ONS, and 11Cl-PF3OUdS were not detected in the associated samples and data usability is not adversely affected by potential high analytical bias.

– PFMBA and 11Cl-PF3OUdS recoveries were outside limits at 34% and 162%, respectively, in the LCS associated with the extraction of samples E-A-BIOB_PLT01_20240815, E-A-BIOC_PLT01_20240816, E-A-BIOD_PLT01_20240817, E-A-BIOE_PLT01_20240818, E-A-BIOF_PLT01_20240816, E-A-BIOG_PLT01_20240817, E-A-BIOH_PLT01_20240817, E-A-BIOI_PLT01_20240817, E-A-BIOJ_PLT01_20240816, and E-T-BIOQ_PLT01_20240816. Data limitations are summarized below.

  - WSP J- qualified the detected and UJ qualified the non-detect PFMBA results from the associated samples due to potential low analytical bias. (J-/UJ, LCL)
  - 11Cl-PF3OUdS was not detected in the associated samples and data usability is not adversely affected by potential high analytical bias.

– PFTrDA (157%), perfluorodecanesulfonic acid (PFDS [201%]), PFMBA (36%), and 11Cl-PF3OUdS (211%) recoveries were outside limits in the LCS associated with the extraction of samples E-A-BIOK_PLT01_20240816, E-A-BIOK_PLT02_20240816, E-A-BIOL-PLT01_20240815, E-A-BIOM_PLT01_20240816, E-A-BION_PLT01_20240815, E-A-BIOS_PLT01_20240817, E-A-BIOV_PLT01_20240815, and E-A-BIOX_PLT01_20240813. Data limitations are summarized below.

  - WSP J- qualified the detected and UJ qualified the non-detect PFMBA results from the associated samples due to potential low analytical bias. (J-/UJ, LCL)
  - WSP J+ qualified the detected PFTrDa result from sample E-A-BIOM_PLT01_20240816 due to potential high analytical bias. (J+, LCH)
  - WSP J+ qualified the detected PFDS results from samples E-A-BIOK_PLT01_20240816, E-A-BIOM_PLT01_20240816, and E-A-BIOK_PLT02_20240816 due to potential high analytical bias. (J+, LCH)
  - PFTrDA, PFDS, and 11Cl-PF3OUdS were not detected in the remaining associated samples and data usability is not adversely affected by potential high analytical bias.

– PFDS (168%), perfluorododecanesulfonic acid (PFDoDS [167%]), PFMBA (38%), and 11Cl-PF3OUdS (183%) recoveries were outside limits in the LLLCS associated with the extraction of samples E-A-BIOK_PLT01_20240816, E-A-BIOK_PLT02_20240816, E-A-BIOL-PLT01_20240815, E-A-BIOM_PLT01_20240816, E-A-BION_PLT01_20240815, E-A-BIOS_PLT01_20240817, E-A-BIOV_PLT01_20240815, and E-A-BIOX_PLT01_20240813. Data limitations are summarized below.

  - WSP J+ qualified the detected PFDoDS results from samples E-A-BIOK_PLT01_20240816 and E-A-BIOK_PLT02_20240816 due to potential high analytical bias. (J+, LCH)
  - The PFDS and PFMBA results from the associated samples were previously qualified due to low or high LCS recoveries and the data were not further qualified due to low or high LLLCS recoveries.
  - PFTrDA, PFDoDS, and 11Cl-PF3OUdS were not detected in the remaining associated samples and data usability is not adversely affected by potential high analytical bias.

– PFTrDA (167%), PFDoDS (174%), PFMBA (35%), 9Cl-PF3ONS (151%), and 11Cl-PF3OUdS (188%) recoveries were outside limits in the LLLCS associated with the extraction of samples E-T-BIOC_PLT01_20240815, E-T-BIOC_PLT02_20240815, E-T-BIOD_PLT01_20240815, E-T-BIOD_PLT02_20240815, E-T-BIOG_PLT01_20240817, E-T-BIOG_PLT02_20240817, E-T-BIOH_PLT01_20240817, E-T-BIOH_PLT02_20240817, and E-T-BIOM_PLT01_20240815. Data limitations are summarized below.

  - The PFMBA results from the associated samples were previously UJ qualified due to low LCS recovery and the data were not further qualified due to low LLLCS recovery.
  - PFTrDA, PFDoDS, 9Cl-PF3ONS, and 11Cl-PF3OUdS were not detected in the associated samples and data usability is not adversely affected by potential high analytical bias.

- 9Cl-PF3ONS recovery was high at 180% in the LLLCS associated with the extraction of samples E-A-BIOB_PLT01_20240815, E-A-BIOC_PLT01_20240816, E-A-BIOD_PLT01_20240817, E-A-BIOE_PLT01_20240818, E-A-BIOF_PLT01_20240816, E-A-BIOG_PLT01_20240817, E-A-BIOH_PLT01_20240817, E-A-BIOI_PLT01_20240817, E-A-BIOJ_PLT01_20240816, and E-T-BIOQ_PLT01_20240816. 9Cl-PF3ONS was not detected in the associated samples and data usability is not adversely affected by potential high analytical bias.

7.1.11 MATRIX SPIKE ACCURACY AND PRECISION

Batelle performed MS and/or MSD analyses on samples E-A-BIOR_INV02_20240817, E-A-BIOT_FSH01_20240813, E-A-BIOW_PLT01_20240814, E-A-BIOX_FSH01_20240813, E-A-BIOX_INV01_20240813, E-A-BIOX_PLT01_20240813, E-T-BIOE_PLT01_20240819, and E-T-BIOH_PLT02_20240817. Recoveries were within the method-specified limits and RPDs between MS and MSD results were less than the QAPP-specified maxima of 30%, with the following exceptions:

- PFOS (0%, MS) and 3-perfluoropentyl propanoic acid (5:3 FTCA [182%, 153%]) recoveries were outside limits in the MS and/or MSD performed on sample E-A-BIOW_PLT01_20240814. Additionally, the RPD between PFOS results was high at 200%. Data limitations are summarized below.
  - WSP J qualified the detected PFOS result from the associated sample due to potential analytical imprecision. (J, MSD)
  - PFOS was detected in the unspiked native sample at a concentration greater than four times the spike concentration and data usability cannot be assessed based on MS recoveries.
  - 5:3 FTCA was not detected in the unspiked native sample and data usability is not adversely affected by potential high analytical bias.
- PFOS (35%, MS) and 5:3 FTCA (178%, 162%) recoveries were outside limits in the MS and/or MSD performed on sample E-A-BIOX_INV01_20240813. Additionally, the RPD between PFOS results was high at 69%. Data limitations are summarized below.
  - WSP J- qualified the detected PFOS result from the associated sample due to potential low analytical bias. (J-, MSL)
  - WSP J+ qualified the detected 5:3 FTCA result from the associated sample due to potential high analytical bias. (J+, MSH)
  - WSP J qualified the detected PFOS result from the associated sample due to potential analytical imprecision. (J, MSD)
- Perfluorohexanesulfonic acid (PFHxS) and PFDoDS recoveries were low at 59% and 19%, respectively in the MS performed on sample E-A-BIOR_INV02_20240817. Additionally, the RPD between 3-perfluoropropyl propanoic acid (3:3 FTCA) results was high at 36%. Data limitations are summarized below.
  - WSP J- qualified the detected and UJ qualified the non-detect PFHxS and PFDoDS results from the associated sample due to potential low analytical bias. (J-/UJ, MSL)
  - 3:3 FTCA was not detected in the unspiked native sample and data usability is not adversely affected by potential analytical imprecision.
- PFTrDA (154%, MS), PFOS (33%, 624%), PFDoDS (22%, 21%), 6:2 fluorotelomer sulfonic acid (FTS [59%, MS]), 4,8-dioxa-3H-perfluorononanoic acid (ADONA [51%, MSD]), and 9Cl-PF3ONS (203%, 186%) recoveries were outside limits in the MS and/or MSD performed on sample E-A-BIOT_FSH01_20240813. Additionally, the RPD between PFOS results was high at 180%. Data limitations are summarized below.
  - WSP J+ qualified the detected PFTrDA result from the associated sample due to potential high analytical bias. (J+, MSH)
  - WSP J- qualified the detected and UJ qualified the non-detect 6:2 FTS, PFDoDS, and ADONA results from the associated sample due to potential low analytical bias. (J-/UJ, MSL)

- WSP J qualified the detected PFOS result from the associated sample due to potential analytical imprecision. (J, MSD)
- 9Cl-PF3ONS was not detected in the unspiked native sample and data usability is not adversely affected by potential high analytical bias.
- PFOS was detected in the unspiked native sample at a concentration greater than four times the spike concentration and data usability cannot be assessed based on MS recoveries.

– PFTrDA (196%, MS), perfluoropentanesulfonic acid (PFPeS [56%, 59%]), PFOS (413%, 661%), PFDoDS (18%, 19%), ADONA (48%, 49%), and 9Cl-PF3ONS (171%, MSD) recoveries were outside limits in the MS and/or MSD performed on sample E-A-BIOX_FSH01_20240813. Additionally, RPDs between PFTrDA (39%), PFOS (46%), and 6:2 FTS (31%) results were high. Data limitations are summarized below.

- WSP J+ qualified the detected PFTrDA result from the associated sample due to potential high analytical bias. (J+, MSH)
- WSP J- qualified the detected and UJ qualified the non-detect PFDoDS, ADONA, and PFPeS results from the associated sample due to potential low analytical bias. (J-/UJ, MSL)
- WSP J qualified the detected PFOS, PFTrDA, and 6:2 FTS results from the associated sample due to potential analytical imprecision. (J, MSD)
- 9Cl-PF3ONS was not detected in the unspiked native sample and data usability is not adversely affected by potential high analytical bias.
- PFOS was detected in the unspiked native sample at a concentration greater than four times the spike concentration and data usability cannot be assessed based on MS recoveries.

– Perfluorobutanesulfonic acid (PFBS [26%, 33%]), PFDS (156%, MSD), PFPeS (47%, 49%), PFOS (48%, MSD), PFDoDS (149%, MS), ADONA (151%, MSD), PFMBA (46%, 57%), perfluoro-3-methoxypropanoic acid (PFMPA [179%, 156%]), nonafluoro-3,6-dioxaheptanoic acid (NFDHA [52%, MS]), 9Cl-PF3ONS (259%, MSD), perfluoro(2-ethoxyethane)sulfonic acid (PFEESA [49%, 42%]), and 3-perfluoroheptyl propanoic acid (7:3 FTCA [363%, 466%]) were outside limits in the MS and/or MSD performed on sample E-T-BIOH_PLT02_20240817. Additionally, RPDs between PFOS (39%), PFDS (38%), NFDHA (49%), and 9Cl-PF3ONS (75%) results were high. Data limitations are summarized below.

- WSP J- qualified the detected and UJ qualified the non-detect PFBS, PFPeS, PFOS, PFMBA, NFDHA, and PFEESA results from the associated sample due to potential low analytical bias. (J-/UJ, MSL)
- WSP J qualified the detected PFOS result from the associated sample due to potential analytical imprecision. (J, MSD)
- PFDS, PFDoDS, ADONA, PFMPA, and 9Cl-PF3ONS were not detected in the unspiked native sample and data usability is not adversely affected by potential high analytical bias and/or potential analytical imprecision.

– PFBS (30%, 27%), PFDS (152%, MSD), PFDoDS (141%, MSD), PFMPA (572%, 587%), 11Cl-PF3OUdS (173%, MSD), 3:3 FTCA (344%, 339%), 5:3 FTCA (169%, 170%), and 7:3 FTCA (215%, MSD) recoveries were outside limits in the MS and/or MSD performed on sample E-A-BIOX_PLT01_20240813. Data limitations are summarized below.

- WSP UJ qualified the non-detect PFBS result from the associated sample due to potential low analytical bias. (UJ, MSL)
- PFDS, PFDoDS, PFMPA, 11Cl-PF3OUdS, 3:3 FTCA, 5:3 FTCA, and 7:3 FTCA were not detected in the unspiked native sample and data usability is not adversely affected by potential high analytical bias.

– ADONA (49%, MSD) and 11Cl-PF3OUdS (192%, 172%) recoveries were outside limits in the MS and/or MSD performed on sample E-T-BIOE_PLT01_20240819. Data limitations are summarized below.

- WSP UJ qualified the non-detect ADONA result from the associated sample due to potential low analytical bias. (UJ, MSL)

- 11Cl-PF3OUdS was not detected in the unspiked native sample and data usability is not adversely affected by potential high analytical bias.

7.1.12 LABORATORY DUPLICATE PRECISION

Batelle performed duplicate analyses on samples E-A-BIOW_PLT01_20240814, E-A-BIOZ_INV02_20240813, E-A-BIOR_INV02_20240817, E-A-BIOX_FSH01_20240813, E-T-BIOH_PLT02_20240817, E-A-BIOJ_PLT01_20240816, E-A-BIOX_PLT01_20240813, E-T-BIOB_PLT01_20240819, and E-T-BIOE_PLT01_20240819. Precision between duplicate analyses was acceptable, with RPDs less than 30% or differences between analyte concentrations less than the LOQ.

7.1.13 EXTRACTED INTERNAL STANDARD ACCURACY

EIS recoveries in the field samples were within the method-specified limits, with the following exceptions:

- Recoveries of the EISs $^{13}C_8$-PFOSA (13%) and $^{13}C_2$-perfluorododecanoic acid (PFDoDA) were low at 13% and 21%, respectively, in the analysis of sample E-T-BIOO_PLT01_20240814. WSP UJ qualified the non-detect PFOSA, PFDoDA, and PFTrDA results from the associated sample due to low EIS recoveries. (UJ, EISL)
- Recovery of the EIS $^{13}C_2$-PFDoDA was low at 33% in the analysis of sample E-A-BIOR_PLT02_20240814. WSP UJ qualified the non-detect PFDoDA and PFTrDA results from the associated sample due to low EIS recovery. (UJ, EISL)
- Recovery of the EIS d_9-N-ethyl perfluorooctanesulfonamidoethanol (NEtFOSE) was extremely low at 3% in the analysis of sample E-A-BIOO_INV01_20240813. WSP R qualified and rejected the non-detect NEtFOSE result from the associated sample due to extremely low EIS recovery. (R, EISL)
- Recovery of the EIS $^{13}C_8$-PFOSA was high at 187% in the analysis of sample E-A-BIOQ_FSH01_20240815. WSP J- qualified the detected PFOSA result from the associated sample due to high EIS recovery. (J-, EISH)
- Recoveries of the EISs $^{13}C_7$-perfluoroundecanoic acid (PFUnA [220%]), $^{13}C_2$-6:2 FTS (305%), and $^{13}C_2$-8:2 FTS (409%) were high in the analysis of sample E-T-BIOD_PLT01_20240815. PFUnA, 6:2 FTS, and 8:2 FTS were not detected in the associated sample and data usability is not adversely affected by the high EIS recoveries.
- Recoveries of the EISs $^{13}C_3$-PFBS and $^{13}C_3$-hexafluoropropylene oxide dimer acid (HFPO-DA) were low at 23% and 13%, respectively, in the analysis of sample E-T-BIOH_PLT01_20240817. WSP UJ qualified the non-detect PFBS, HFPO-DA, ADONA, 11Cl-PF3OUdS, and 9Cl-PF3ONS results from the associated sample due to low EIS recoveries. (UJ, EISL)
- Recoveries of the EISs $^{13}C_2$-8:2 FTS and $^{13}C_3$-HFPO-DA were outside limits at 213% and 6%, respectively, in the analysis of sample E-T-BIOH_PLT02_20240817. Data limitations are summarized below.
  - WSP R qualified and rejected the non-detect HFPO-DA, ADONA, 11Cl-PF3OUdS, and 9Cl-PF3ONS results from the associated sample due to extremely low EIS recovery. (R, EISL)
  - 8:2 FTS was not detected in the associated sample and data usability is not adversely affected by high EIS recovery.
- Recoveries of the EISs $^{13}C_5$-perfluoropentanoic acid (PFPeA [212%]), $^{13}C_4$-perfluoroheptanoic acid (PFHpA [242%]), and $^{13}C_2$-6:2 FTS (310%) were high in the analysis of sample E-T-BIOQ_PLT01_20240816. PFPeA, PFHpA, 6:2 FTS, PFMPA, PFMBA, and 3:3 FTCA were not detected in the associated sample and data usability is not adversely affected by high EIS recoveries.
- Recovery of the EIS $^{13}C_4$-PFHpA was high at 159% in the analysis of sample E-A-BIOE_PLT01_20240818. PFHpA was not detected in the associated sample and data usability is not adversely affected by high EIS recovery.
- Recoveries of the EISs $^{13}C_2$-PFDoDA and d_7-N-methyl perfluorooctanesulfonamidoethanol (NMeFOSE) were low at 22% and 4%, respectively, in the analysis of sample E-A-BIOF_PLT01_20240816. Data limitations are summarized below.

  - WSP R qualified and rejected the non-detect NMeFOSE result from the associated sample due to extremely low EIS recovery. (R, EISL)
  - WSP UJ qualified the non-detect PFDoDA and PFTrDA results from the associated sample due to low EIS recovery. (UJ, EISL)
- Recoveries of the EISs d_5-N-ethyl perfluorooctanesulfonamide (NEtFOSA), d_7-NMeFOSE, and d_9-NEtFOSE were all extremely low at 4% in the analysis of sample E-A-BIOG_PLT01_20240817. WSP R qualified and rejected the non-detect NEtFOSA, NMeFOSE, and NEtFOSE results from the associated sample due to extremely low EIS recoveries. (R, EISL)
- Recoveries of the EISs $^{13}C_3$-PFBS (24%), $^{13}C_4$-PFHpA (184%), $^{13}C_8$-PFOS (178%), and d_5-N-ethyl perfluorooctanesulfonamidoacetic acid (NEtFOSAA [368%]) were outside limits in the analysis of sample E-A-BIOJ_PLT01_20240816. Data limitations are summarized below.
  - WSP UJ qualified the non-detect PFBS result from the associated sample due to low EIS recovery. (UJ, EISL)
  - WSP J- qualified the detected PFOS result from the associated sample due to high EIS recovery. (J-, EISH)
  - PFHpA, PFDS, PFDoDS, perfluoroheptanesulfonic acid, perfluorononanesulfonic acid, and NEtFOSAA were not detected in the associated sample and data usability is not adversely affected by high EIS recoveries.
- Recovery of the EIS $^{13}C_4$-PFHpA was high at 153% in the analysis of sample E-A-BIOV_PLT01_20240815. PFHpA was not detected in the associated sample and data usability is not adversely affected by high EIS recovery.
- Recovery of the EIS $^{13}C_2$-PFDoDA was low at 12% in the analysis of sample E-A-BIOCS_PLT01_20240819. WSP UJ qualified the non-detect PFDoDA and PFTrDA results from the associated sample due to low EIS recovery. (UJ, EISL)
- Recovery of the EISs $^{13}C_4$-PFHpA and d_5-NEtFOSAA were low at 17% and 23%, respectively, in the analysis of sample E-T-BIOB_PLT01_20240819. WSP UJ qualified the non-detect PFHpA and NEtFOSAA results from the associated samples due to low EIS recoveries. (UJ, EISL)
- Recovery of the EIS $^{13}C_3$-HFPO-DA was high at 262% in the analysis of sample E-A-BIOV_INV01_20240814. HFPO-DA, ADONA, 9Cl-PF3ONS, and 11Cl-PF3OUdS were not detected in the associated sample and data usability is not adversely affected by high EIS recovery.

7.1.14 NON-EXTRACTED INTERNAL STANDARD ACCURACY

NIS recoveries were within the method-specified 50 to 200% limits, with the following exceptions:

- Recoveries of the NISs $^{13}C_3$-perfluorobutanoic acid (PFBA [29%]), $^{13}C_2$-perfluorohexanoic acid (PFHxA [7%]), $^{13}C_4$-perfluorooctanoic acid (PFOA [35%]), $^{13}C_5$-perfluorononanoic acid (PFNA [42%]), and $^{18}O_2$-PFHxS (37%) were low in the analysis of sample E-T-BIOQ_PLT01_20240816. Data limitations are summarized below.
  - WSP R qualified and rejected the non-detect 11Cl-PF3OUdS, 3:3 FTCA, 5:3 FTCA, 7:3 FTCA, 9Cl-PF3ONS, ADONA, HFPO-DA, NFDHA, PFMBA, PFEESA, PFHpA, PFHxA, PFMPA, and PFPeA results from the associated sample due to extremely low NIS recovery. (R, ISL)
  - WSP J qualified the detected PFBA result from the associated sample due to low NIS recovery. (J, ISL)
  - The remaining affected NIS recoveries were greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.
- Recoveries of the NISs $^{13}C_2$-PFHxA (37%), $^{13}C_4$-PFOA (14%), $^{13}C_5$-PFNA (37%), and $^{13}C_2$-perfluorodecanoic acid (PFDA [35%]) were low in the analysis of sample E-T-BIOK_PLT01_20240814. Data limitations are summarized below.

  - WSP UJ qualified the non-detect PFOA result from the associated sample due to low NIS recovery. (UJ, ISL)
  - The remaining affected NIS recoveries were greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.

- Recoveries of the NISs $^{13}C_2$-PFHxA (32%), $^{13}C_4$-PFOA (14%), and $^{13}C_2$-PFDA (48%) were low in the analysis of sample E-T-BION_PLT01_20240814. Data limitations are summarized below.
  - WSP UJ qualified the non-detect PFOA result from the associated sample due to low NIS recovery. (UJ, ISL)
  - The remaining affected NIS recoveries were greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.
- Recoveries of the NISs $^{13}C_4$-PFOA and $^{13}C_5$-PFNA were low at 28% and 47%, respectively, in the analysis of sample E-T-BIOL_PLT01_20240814. Data limitations are summarized below.
  - WSP UJ qualified the non-detect PFOA result from the associated sample due to low NIS recovery. (UJ, ISL)
  - The remaining affected NIS recovery was greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.
- Recovery of the NIS $^{13}C_2$-PFHxA was low at 24% in the analysis of sample E-A-BIOV_INV01_20240814. WSP J qualified the detected and UJ qualified the non-detect PFPeA, PFHxA, PFHpA, HFPO-DA, ADONA, 9Cl-PF3ONS, 11Cl-PF3OUdS, 3:3 FTCA, 5:3 FTCA, 7:3 FTCA, NFDHA, PFEESA, PFMPA, and PFMBA results from the associated sample due to low NIS recovery. (J/UJ, ISL)
- Recoveries of the NISs $^{13}C_3$-PFBA (28%), $^{13}C_2$-PFHxA (19%), $^{13}C_4$-PFOA (39%), $^{13}C_5$-PFNA (36%), and $^{18}O_2$-PFHxS (38%) were low in the analysis of sample E-T-BIOC_PLT01_20240815. Data limitations are summarized below.
  - WSP J qualified the detected and UJ qualified the non-detect 11Cl-PF3OUdS, 3:3 FTCA, 5:3 FTCA, 7:3 FTCA, 9Cl-PF3ONS, ADONA, HFPO-DA, NFDHA, PFEESA, PFBA, PFHpA, PFHxA, PFMBA, PFMPA, and PFPeA results from the associated sample due to low NIS recoveries. (J/UJ, ISL)
  - The remaining affected NIS recoveries were greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.
- Recoveries of the NISs $^{13}C_3$-PFBA (32%), $^{13}C_2$-PFHxA (15%), $^{13}C_4$-PFOA (30%), $^{13}C_5$-PFNA (38%), and $^{18}O_2$-PFHxS (44%) were low in the analysis of sample E-T-BIOC_PLT02_20240815. Data limitations are summarized below.
  - WSP J qualified the detected and UJ qualified the non-detect 11Cl-PF3OUdS, 3:3 FTCA, 5:3 FTCA, 7:3 FTCA, 9Cl-PF3ONS, ADONA, HFPO-DA, NFDHA, PFEESA, PFHpA, PFHxA, PFMBA, PFMPA, and PFPeA results from the associated sample due to low NIS recoveries. (J/UJ, ISL)
  - The remaining affected NIS recoveries were greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.
- Recoveries of the NISs $^{13}C_2$-PFHxA (18%), $^{13}C_4$-PFOA (41%), $^{13}C_5$-PFNA (45%), and $^{18}O_2$-PFHxS (39%) were low in the analysis of sample E-T-BIOD_PLT01_20240815. Data limitations are summarized below.
  - WSP UJ qualified the non-detect 11Cl-PF3OUdS, 3:3 FTCA, 5:3 FTCA, 7:3 FTCA, 9Cl-PF3ONS, ADONA, HFPO-DA, NFDHA, PFEESA, PFHpA, PFHxA, PFMBA, PFMPA, and PFPeA results from the associated sample due to low NIS recoveries. (UJ, ISL)
  - The remaining affected NIS recoveries were greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.
- Recoveries of the NISs $^{13}C_3$-PFBA (40%), $^{13}C_2$-PFHxA (11%), $^{13}C_4$-PFOA (23%), $^{13}C_5$-PFNA (31%), $^{13}C_2$-PFDA (44%), and $^{18}O_2$-PFHxS (36%) were low in the analysis of sample E-T-BIOD_PLT02_20240815. Data limitations are summarized below.

- WSP UJ qualified the non-detect 11Cl-PF3OUdS, 3:3 FTCA, 5:3 FTCA, 7:3 FTCA, 9Cl-PF3ONS, ADONA, HFPO-DA, NFDHA, PFEESA, PFHpA, PFHxA, PFMBA, PFMPA, PFOA, and PFPeA results from the associated sample due to low NIS recoveries. (UJ, ISL)
- The remaining affected NIS recoveries were greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.

– Recoveries of the NISs $^{13}C_2$-PFHxA and $^{13}C_4$-PFOA were low at 18% and 34%, respectively, in the analysis of sample E-T-BIOG_PLT01_20240817. Data limitations are summarized below.

- WSP J qualified the detected and UJ qualified the non-detect 11Cl-PF3OUdS, 3:3 FTCA, 5:3 FTCA, 7:3 FTCA, 9Cl-PF3ONS, ADONA, HFPO-DA, NFDHA, PFEESA, PFHpA, PFHxA, PFMBA, PFMPA, and PFPeA results from the associated sample due to low NIS recoveries. (J/UJ, ISL)
- The remaining affected NIS recovery was greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.

– Recoveries of the NISs $^{13}C_3$-PFBA (30%), $^{13}C_2$-PFHxA (14%), $^{13}C_4$-PFOA (25%), $^{13}C_5$-PFNA (30%), $^{13}C_2$-PFDA (44%), and $^{18}O_2$-PFHxS (45%) were low in the analysis of sample E-T-BIOG_PLT02_20240817. Data limitations are summarized below.

- WSP J qualified the detected and UJ qualified the non-detect 11Cl-PF3OUdS, 3:3 FTCA, 5:3 FTCA, 7:3 FTCA, 9Cl-PF3ONS, ADONA, HFPO-DA, NFDHA, PFEESA, PFHpA, PFHxA, PFMBA, PFMPA, PFOA, and PFPeA results from the associated sample due to low NIS recoveries. (J/UJ, ISL)
- The remaining affected NIS recoveries were greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.

– Recovery of the NIS $^{13}C_2$-PFHxA was low at 19% in the analysis of sample E-T-BIOH_PLT01_20240817. WSP J qualified the detected and UJ qualified the non-detect 11Cl-PF3OUdS, 3:3 FTCA, 5:3 FTCA, 7:3 FTCA, 9Cl-PF3ONS, ADONA, HFPO-DA, NFDHA, PFEESA, PFHpA, PFHxA, PFMBA, PFMPA, and PFPeA results from the associated sample due to low NIS recoveries. (J/UJ, ISL)

– Recoveries of the NISs $^{13}C_2$-PFHxA (13%), $^{13}C_4$-PFOA (39%), $^{13}C_5$-PFNA (36%), $^{13}C_2$-PFDA (47%), and $^{13}C_4$-PFOS (43%) were low in the analysis of sample E-T-BIOH_PLT02_20240817. Data limitations are summarized below.

- WSP J qualified the detected and UJ qualified the non-detect 11Cl-PF3OUdS, 3:3 FTCA, 5:3 FTCA, 7:3 FTCA, 9Cl-PF3ONS, ADONA, NFDHA, PFEESA, PFHpA, PFHxA, PFMBA, PFMPA, and PFPeA results from the associated sample due to low NIS recoveries. (J/UJ, ISL)
- The HFPO-DA, ADONA, 9Cl-PF3ONS, and 11Cl-PF3OUdS results from the associated sample were previously rejected due to extremely low EIS recovery and the data was not further qualified based on NIS recovery.
- The remaining affected NIS recoveries were greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.

– Recovery of the NISs $^{13}C_2$-PFHxA and $^{13}C_2$-PFDA were low at 23% and 36%, respectively, in the analysis of sample E-T-BIOM_PLT01_20240815. Data limitations are summarized below.

- WSP UJ qualified the non-detect 11Cl-PF3OUdS, 3:3 FTCA, 5:3 FTCA, 7:3 FTCA, 9Cl-PF3ONS, ADONA, HFPO-DA, NFDHA, PFEESA, PFHpA, PFHxA, PFMBA, PFMPA, and PFPeA results from the associated sample due to low NIS recoveries. (UJ, ISL)
- The remaining affected NIS recovery was greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.

– Recoveries of the NISs $^{13}C_3$-PFBA (26%), $^{13}C_2$-PFHxA (31%), and $^{13}C_4$-PFOS (44%) were low in the analysis of sample E-A-BIOC_PLT01_20240816. Data limitations are summarized below.

- WSP UJ qualified the non-detect PFBA result from the associated sample due to low NIS recovery. (UJ, ISL)

  - The remaining affected NIS recoveries were greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.

- Recoveries of the NISs $^{13}C_3$-PFBA (49%), $^{13}C_2$-PFHxA (27%), and $^{13}C_4$-PFOS (39%) were low in the analysis of sample E-A-BIOH_PLT01_20240817. Data limitations are summarized below.
  - WSP UJ qualified the non-detect 11Cl-PF3OUdS, 3:3 FTCA, 5:3 FTCA, 7:3 FTCA, 9Cl-PF3ONS, ADONA, HFPO-DA, NFDHA, PFEESA, PFHpA, PFHxA, PFMBA, PFMPA, and PFPeA results from the associated sample due to low NIS recoveries. (UJ, ISL)
  - The remaining affected NIS recoveries were greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.
- Recoveries of the NISs $^{13}C_3$-PFBA and $^{13}C_2$-PFHxA were low at 31% and 24%, respectively, in the analysis of sample E-A-BIOS_PLT01_20240817. Data limitations are summarized below.
  - WSP UJ qualified the non-detect 11Cl-PF3OUdS, 3:3 FTCA, 5:3 FTCA, 7:3 FTCA, 9Cl-PF3ONS, ADONA, HFPO-DA, NFDHA, PFEESA, PFHpA, PFHxA, PFMBA, PFMPA, and PFPeA results from the associated sample due to low NIS recoveries. (UJ, ISL)
  - The remaining affected NIS recovery was greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.
- Recoveries of the NISs $^{13}C_2$-PFHxA (30%), $^{13}C_4$-PFOA (33%), $^{13}C_5$-PFNA (47%), and $^{18}O_2$-PFHxS (28%) were low in the analysis of sample E-T-BIOB_PLT01_20240819. Data limitations are summarized below.
  - WSP UJ qualified the non-detect PFBS, PFPeS, PFHxS, 4:2FTS, 6:2FTS, and 8:2 FTS results from the associated sample due to low NIS recoveries. (UJ, ISL)
  - The remaining affected NIS recoveries were greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.
- Recoveries of the NISs $^{13}C_4$-PFOA and $^{13}C_5$-PFNA were low at 41% and 22%, respectively, in the analysis of sample E-T-BIOE_PLT01_20240819. Data limitations are summarized below.
  - WSP UJ qualified the non-detect PFNA result from the associated sample due to low NIS recovery. (UJ, ISL)
  - The remaining affected NIS recovery was greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.
- Recovery of the NIS $^{13}C_4$-PFOA was low at 45% in the analysis of sample E-T-BIOO_PLT01_20240814. The NIS recovery was greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.
- Recoveries of the NISs $^{13}C_2$-PFHxA and $^{13}C_4$-PFOS were low at 41% and 44%, respectively, in the analysis of sample E-A-BIOJ_PLT01_20240816. The affected NIS recoveries were greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.
- Recovery of the NIS $^{13}C_2$-PFHxA was low at 33% in the analysis of sample E-A-BIOB_PLT01_20240815. The NIS recovery was greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.
- Recovery of the NIS $^{13}C_2$-PFHxA was low at 32% in the analysis of sample E-A-BIOD_PLT01_20240817. The NIS recovery was greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.
- Recovery of the NIS $^{13}C_2$-PFHxA was low at 46% in the analysis of sample E-A-BIOL-PLT01_20240815. The NIS recovery was greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.

- Recoveries of the NISs $^{13}C_4$-PFOA and $^{13}C_2$-PFDA were low at 48% and 46%, respectively, in the analysis of sample E-A-BIOO_INV01_20240813. The affected NIS recoveries were greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.
- Recovery of the NIS $^{13}C_2$-PFHxA was low at 46% in the analysis of sample E-A-BIOY_INV01_20240813. The NIS recovery was greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.
- Recovery of the NIS $^{13}C_4$-PFOA was low at 48% in the analysis of sample E-A-BIOP_FSH01_20240813. The NIS recovery was greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.
- Recovery of the NIS $^{13}C_4$-PFOA was low at 48% in the analysis of sample E-A-BIOT_FSH01_20240813. The NIS recovery was greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.
- Recovery of the NIS $^{13}C_2$-PFHxA was low at 36% in the analysis of sample E-A-BIOV_PLT01_20240815. The NIS recovery was greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.
- Recovery of the NIS $^{13}C_2$-PFHxA was low at 34% in the analysis of sample E-A-BIOX_PLT01_20240813. The NIS recovery was greater than or equal to 30% and per the DoD data validation guidelines, no data were qualified based on NIS recoveries between 30 and 50%.

7.1.15 ION RATIOS

Batelle I qualified data when ion transition ratios were outside the QAPP-specified limits of 50 to 150% of the ion ratios measured in the midpoint calibration standard or daily CCV. WSP J qualified Batelle's I qualified results to indicate potential matrix interference or the presence of isomers in the sample with different ratios than present in the standard. (J, IAG)

7.1.16 STAGE 4 VALIDATION

WSP performed Stage 4 validation on samples E-A-BIOW_PLT01_20240814, E-A-BIOZ_PLT01_20240813, E-T-BIOK_PLT01_20240814, E-T-BION_PLT01_20240814, E-T-BIOO_PLT01_20240814, E-A-BIOQ_PLT01_20240814, E-A-BIOR_PLT02_20240814, E-T-BIOL_PLT01_20240814, E-A-BIOO_INV01_20240813, E-A-BIOP_INV01_20240814, E-A-BIOP_INV02_20240815, E-A-BIOQ_INV01_20240814, E-A-BIOR_INV01_20240815, E-A-BIOU_INV01_20240814, E-A-BIOV_INV01_20240814, and E-A-BIOX_INV01_20240813. The sample results were correctly calculated including mass or volume extracted and any dilution factors.

7.1.17 DATA REPORTING AND ANALYTICAL PROCEDURES

Batelle J qualified analytes with detected concentrations less than the LOQ. WSP agrees that these results are quantitatively uncertain and has maintained Batelle's J qualifiers. (J, TR)

8 FIELD DUPLICATE PRECISION

WSP did not collect field duplicates with the samples reviewed in this report.

9 SUMMARY AND CONCLUSIONS

WSP evaluated a total of 2,960 target analyte results from the field sample during this validation. Final validated results are presented in Table 2 and results qualified during validation are presented in Table 3 with applicable reason codes

Qualifier definitions are summarized in Section 4.0, reason codes are summarized in Section 5.0, and qualified data are summarized below.

- R: WSP R qualified and rejected 23 records (0.78%) due to extremely low EIS or NIS recoveries.
- J+: WSP J+ qualified 12 records (0.41%) due to detections in an associated calibration blank and/or high LCS or MS recoveries.
- J-: WSP J- qualified 12 records (0.41%) due to high EIS recoveries and/or low LCS or MS recoveries.
- J: WSP J qualified 232 records (7.8%) due to imprecision between MS and MSD results, low NIS recoveries, detected concentrations less than the LOQ, or ion transition ratios outside of expected limits.
- UJ: WSP UJ qualified 198 records (6.7%) due to high ISC recovery or low LCS, MS, EIS, and/or NIS recoveries.

Data qualified during validation are summarized in Table 3.

1 INTRODUCTION

WSP USA Environment & Infrastructure Inc. (WSP) collected 8 aqueous samples on 24 and 25 October 2024 from the former Loring Air Force Base, located in Limestone, Maine. WSP submitted the samples to SGS North America, Inc. (SGS), located in Orlando, Florida, where they were received on 9 and 10 May 2024 and assigned to job number FC20069. SGS analyzed the samples for per- and polyfluoroalkyl substances (PFAS) using United States Environmental Protection Agency (EPA) Method 1633.

A list of these samples by field sample identification (ID), sample collection date, and the laboratory sample IDs is presented in Table 1.

2 DATA VALIDATION METHODOLOGY

WSP performed Department of Defense (DoD) State 2B validation on the field samples associated with this report. The Stage 2B validation includes review of quality control (QC) results in the laboratory's analytical report and reported on QC summary forms but does not include review or validation of the raw analytical data. This data validation has been performed in general accordance with:

- WSP, 2024. Draft Quality Program Plan Addendum, Revision 1, Remedial Investigation, Per- and Polyfluoroalkyl Substances Response, Former Loring Air Force Base, Limestone Maine, April.
- DoD, 2019. DoD General Data Validation Guidelines, September.
- DoD, 2021. DoD Department of Energy Consolidated Quality Systems Manual (QSM) for Environmental Laboratories Version 5.4, October.
- DoD, 2022. Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances Analysis by QSM Table B-24, October.
- EPA, 2023. 4th Draft EPA Method 1633, Analysis of PFAS in Aqueous, Solid, Biosolids, and Tissue Samples by Liquid Chromatography-Tandem Mass Spectrometry (LC-MS/MS), July.

The laboratory's certified analytical report and supporting documentation were reviewed to assess the following:

- Data package and electronic data deliverable completeness;
- Chain of custody (COC) compliance;
- Holding time compliance;
- Sample receipt condition;
- Mass Calibration;
- Initial calibration (ICAL), initial calibration verification (ICV), and continuing calibration verification (CCV) compliance with method specified criteria;
- Signal to noise ratios for the instrument sensitivity check (ISC);
- Bile salt interference check;
- Presence or absence of laboratory contamination as demonstrated by laboratory blanks;
- Accuracy and bias as demonstrated by recovery of laboratory control sample (LCS) and matrix spike (MS) samples;
- Extracted Internal Standard (EIS) and non-extracted internal standard (NIS) recoveries;
- Analytical precision as relative percent difference (RPD) of analyte concentration between laboratory duplicates, or MSs/MS duplicates (MSDs);

- Sampling and analytical precision as RPD of analyte concentration between field duplicates;
- Assessment of field contamination as demonstrated by field blanks; and
- Insofar as possible, the degree of conformance to method requirements and good laboratory practices.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

3 EXPLANATION OF DATA QUALITY INDICATORS

Summary explanation of the specific data quality indicators reviewed during data validation are presented below.

3.1 LABORATORY CONTROL SAMPLE RECOVERIES

LCSs are aliquots of analyte free matrices that are spiked with the analytes of interest for an analytical method, or a representative subset of those analytes. The spiked matrix is then processed through the same analytical procedures as the samples they accompany.

LCS recovery and precision are an indication of a laboratory's ability to successfully perform an analytical method in an interference free matrix.

3.2 MATRIX SPIKE RECOVERIES

MSs and MSDs are prepared by adding known amounts of the analytes of interest for an analytical method, or a representative subset of those analytes, to an aliquot of sample. The spiked sample is then processed through the same extraction, concentration, cleanup, and analytical procedures as the unspiked samples in an analytical batch.

MS recovery and precision are an indication of a laboratory's ability to successfully recover an analyte in the matrix of a specific sample or closely related sample matrices. It is important not to apply MS results for any specific sample to other samples without understanding how the sample matrices are related.

3.3 BLANK CONCENTRATIONS

Blank samples are aliquots of analyte free matrix that are used as negative controls to verify that the sample collection, storage, preparation, and analysis system does not produce false positive results.

Laboratory blanks are processed by the laboratory using the same procedures as the field samples. Target analytes should not be found in laboratory blanks.

3.4 LABORATORY AND FIELD DUPLICATES

Laboratory and field duplicate analyses verify acceptable method precision by the laboratory at the time of preparation and analysis and/or sampling precision at the time of collection.

4 DEFINITIONS OF QUALIFIERS THAT MAY BE ADDED DURING DATA VALIDATION

J	The reported result was an estimated value.
J+	The reported result was an estimated value with a positive bias.
J-	The reported result was an estimated value with a negative bias.
NJ	The analyte has been tentatively identified as present and the concentration is estimated.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting quality control criteria. The analyte may or may not be present in the sample.
U	The analyte was not detected and was reported as less than the limit of detection (LOD). The LOD has been adjusted for any dilution or concentration of the sample.
UJ	The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

5 QUALIFICATION REASON CODES

The following reason codes were applied to the data during data validation:

EISH	High EIS recovery.
LCL	Low LCS recovery.
LDD	Imprecision between primary and laboratory duplicate results.
MSL	Low MS recovery.
TR	The detected analyte concentration is less than the LOQ.

6 CHAIN OF CUSTODY AND SAMPLE RECEIPT CONDITION DOCUMENTATION

The samples were received at the laboratory under proper COC, intact, properly preserved, and at average temperatures less than the method-specified maximum of 6 degrees Celsius (°C).

7 SPECIFIC DATA VALIDATION FINDINGS

Results from these samples may be considered usable with the limitations and exceptions described in Sections 7.1 through 9.0.

7.1 PFAS BY EPA METHOD 1633

PFAS results generated by SGS may be considered usable with the limitations described in Sections 7.1.1 through 7.1.15.

7.1.1 HOLDING TIMES

The samples were extracted for PFAS within the method-specified maximum holding time of 28 days from sample collection when stored at temperatures between 0 and 6 °C. Extracts were analyzed within the method-specified maximum hold time of 90 days from extraction.

7.1.2 MASS CALIBRATION FREQUENCY

Mass calibration verifications were performed before the ICALs associated with the analysis of the samples reviewed in this report.

7.1.3 ION TRANSITIONS

Parent, quantification, and confirmation ion masses used for the analysis of the samples reviewed in this report matched the ions specified in EPA Method 1633 Table 10.

7.1.4 INITIAL CALIBRATION COMPLIANCE

Relative standard deviations between response factors for each target analyte were less than or equal to the method-specified maximum of 20 percent (%) and/or relative standard errors were less than the method-specified maximum of 20% for all target analytes and EISs.

7.1.5 INITIAL CALIBRATION VERIFICATION ACCURACY

ICVs were analyzed after each initial calibration. Recoveries were between 70 and 130%.

7.1.6 INSTRUMENT SENSITIVITY CHECK COMPLIANCE

ISCs were analyzed at the beginning of each analytical run, concentrations were equivalent to the LOQ, signal to noise ratios were greater than or equal to 3:1, and recoveries were within the method-specified 70 to 130% limits.

7.1.7 CONTINUING CALIBRATION VERIFICATION COMPLIANCE

CCVs were analyzed at the beginning of the analytical sequence after the ISC, after every ten or fewer samples, and at the end of the analytical sequence. Recoveries were within the method-specified 70 to 130% limits.

7.1.8 BILE SALT INTERFERENCE CHECKS

Bile salt interference checks were analyzed daily and retention times for the bile salts were at least one minute outside the retention times for linear or branched perfluorooctanesulfonic acid (PFOS).

7.1.9 LABORATORY AND CALIBRATION BLANK DETECTIONS

Target analytes were not detected in the laboratory or calibration blanks associated with the samples reviewed in this report, with the following exception:

- Perfluorotetradecanoic acid (PFTeDA) was detected at a concentration of 0.00051 micrograms per liter in the calibration blank associated with the analysis of samples LORNG_LYS01007D_10252024, LORNG_LYS01007S_10242024, LORNG_LYS05012D_10242024, LORNG_LYS05012S_10242024, LORNG_LYS07007D_10252024, LORNG_LYS07007DDUP_10252024, and LORNG_LYS07007SDUP_10252024. PFTeDA was not detected in the associated samples and data usability is not adversely affected by the blank detection.

7.1.10 LABORATORY CONTROL SAMPLE ACCURACY

Low level LCS (LLCS) and LCS were included with each extraction batch, (LLCS) spike concentrations were twice the LOQ, and LCS and LLCS recoveries were within the method-specified limits, with the following exceptions:

- Perfluorohexanoic acid (PFHxA [69%]), perfluoroheptanoic acid (PFHpA [69%]), perfluorononanoic acid (PFNA [69%]), and N-methyl perfluorooctanesulfonamidoethanol (NMeFOSE [65%]) recoveries were low in the LLCS associated with the analysis of all samples reviewed in this report. Data limitations are summarized below.
    - WSP J- qualified the detected and UJ qualified the non-detect PFHxA, PFHpA, PFNA, and NMeFOSE results from sample LORNG_LYS07007S_10252024 due to potential low analytical bias. (J-/UJ, LCL)
    - PFHxA, PFHpA, PFNA, and NMeFOSE were not reported from the associated analysis in the remaining associated samples and data usability is not adversely affected by potential low analytical bias.

7.1.11 MATRIX SPIKE ACCURACY

SGS performed MS analyses on sample LORNG_LYS07007S_10252024. MS recoveries were within the method-specified limits, with the following exceptions:

- Perfluorohexanesulfonic acid (PFHxS [219%]), perfluoroheptanesulfonic acid (PFHpS [55%]), PFOS (-948%), perfluorononanesulfonic acid (PFNS [62%]), perfluorodecanesulfonic acid (PFDS [59%]), and 6:2 fluorotelomer sulfonic acid (FTS [62%]) were outside limits in the MS performed on sample LORNG_LYS07007S_10252024. Data limitations are summarized below.
    - WSP J- qualified the detected and UJ qualified the non-detect PFHpS, PFNS, PFDS, and 6:2 FTS results from the associated sample due to potential low analytical bias. (J-/UJ, MSL)

  - PFHxS and PFOS were detected in the unspiked native sample at concentrations greater than four times the spike concentrations and data usability cannot be assessed based on MS recoveries.

- PFHpA (54%), perfluorododecanoic acid (PFDoDA [69%]), PFHxS (-123%), PFOS (0%), and perfluorooctanesulfonamide (PFOSA [68%]) were low in the MS performed on sample LORNG_LYS07007S_10252024. Data limitations are summarized below.
  - PFHpA, PFDoDA, and PFOSA were not reported from the associated instrument in the unspiked native sample, and no data were qualified based on MS recoveries.
  - PFHxS and PFOS were detected in the unspiked native sample at concentrations greater than four times the spike concentrations and data usability cannot be assessed based on MS recoveries.

7.1.12 DUPLICATE PRECISION

SGS performed a duplicate analysis on sample LORNG_LYS07007SDUP_10252024. Precision between duplicate analyses was acceptable, with RPDs less than 30% or differences between analyte concentrations less than the LOQ, with the following exceptions:

- RPDs between PFHpS and 6:2 FTS results were high at 59% and 31%, respectively, in the duplicate analysis of sample LORNG_LYS07007SDUP_10252024. WSP J qualified the detected PFHpS and 6:2 FTS results from sample LORNG_LYS07007SDUP_10252024 because of potential analytical imprecision. (J, LDD)

7.1.13 EXTRACTED INTERNAL STANDARD ACCURACY

EIS recoveries in the field samples were within the method-specified limits, with the following exceptions:

- Recovery of the EISs $^{13}C_4$-PFHpA and $^{13}C_8$-PFOSA were high at 131% and 135%, respectively, in the standard analysis of sample LORNG_LYS01007S_10242024. Data limitations are summarized below.
  - WSP J- qualified the detected PFOSA result from the associated sample due to high EIS recovery. (J-, EISH)
  - PFHpA was not reported from the associated analysis and data usability is not adversely affected by high EIS recovery.
- Recovery of the EIS $^{13}C_8$-PFOS was high at 132% in the 1:10 dilution analysis of sample LORNG_LYS07007S_10252024. Data limitations are summarized below.
  - WSP J- qualified the detected PFOS result from the associated sample due to high EIS recovery. (J-, EISH)
  - PFHpS, PFNS, PFDS, and perfluorododecanesulfonic acid (PFDoDS) were not reported from the associated analysis and data usability is not adversely affected by high EIS recovery.
- Recoveries of the EISs $^{13}C_8$-PFOS and $^{13}C_8$-PFOSA were high at 132% and 145%, respectively, in the reanalysis of sample LORNG_LYS01007D_10252024. PFOS, PFHpS, PFNS, PFDS, PFDoDS, and PFOSA were not reported from the associated analysis and data usability is not adversely affected by high EIS recoveries.
- Recoveries of the EISs $^{13}C_4$-PFHpA (134%), $^{13}C_6$-perfluorodecanoic acid (PFDA [132%]), and $^{13}C_3$-hexafluoropropylene oxide dimer acid (HFPO-DA [135%]) were high in the 1:10 dilution analysis of sample LORNG_LYS01007D_10252024. PFDA, PFHpA, HFPO-DA, 4,8-dioxa-3H-perfluorononanoic acid, 9-chlorohexadecafluoro-3-oxanone-1-sulfonic acid, and 11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid were not reported from the associated analysis and data usability is not adversely affected by high EIS recoveries.
- Recoveries of the EISs $^{13}C_3$-perfluorobutanesulfonic acid (PFBS [153%]), $^{13}C_3$-PFHxS (140%), and $^{13}C_8$-PFOSA (132%) were high in the 1:10 dilution reanalysis of sample LORNG_LYS01007S_10242024. PFBS, PFHxS, perfluoropentanesulfonic acid (PFPeS), and PFOSA were not reported from the associated analysis and data usability is not adversely affected by high EIS recoveries.

- Recoveries of the EISs $^{13}C_3$-PFBS (184%), $^{13}C_3$-PFHxS (168%), and $^{13}C_2$-4:2 FTS (207%) were high in the 1:10 dilution reanalysis of sample LORNG_LYS05012D_10242024. PFBS, PFHxS, PFPeS, and 4:2 FTS were not reported from the associated analysis and data usability is not adversely affected by high EIS recoveries.
- Recoveries of the EiSs $^{13}C_3$-PFHxS and $^{13}C_8$-PFOSA were high at 142% and 138%, respectively, in the reanalysis of sample LORNG_LYS05012S_10242024. PFHxS, PFPeS, and PFOSA were not reported from the associated analysis and data usability is not adversely affected by high EIS recoveries.
- Recovery of the EIS $^{13}C_9$-PFNA was high at 131% in the initial 1:10 dilution analysis of sample LORNG_LYS05012S_10242024. PFNA was not reported from the associated analysis and data usability is not adversely affected by high EIS recovery.
- Recoveries of the EISs $^{13}C_3$-PFBS and $^{13}C_3$-PFHxS were high at 140% and 134%, respectively, in the 1:10 dilution reanalysis of sample LORNG_LYS05012S_10242024. PFBS, PFHxS, and PFPeS were not reported from the associated analysis and data usability is not adversely affected by high EIS recoveries.
- Recoveries of the EISs $^{13}C_7$-perfluoroundecanoic acid (PFUnA [156%]), $^{13}C_2$-PFDoDA (143%), $^{13}C_2$-PFTeDA (141%), $^{13}C_8$-PFOS (134%), $^{13}C_8$-PFOSA (166%), d_3-N-methyl perfluorooctanesulfonamide (NMeFOSA [137%]), d_5-N-ethyl perfluorooctanesulfonamide (NEtFOSA [139%]), d_7-NMeFOSE (154%), and d_9-N-ethyl perfluorooctanesulfonamidoethanol (NEtFOSE [160%]) were high in the reanalysis of sample LORNG_LYS07007DDUP_10252024. Data limitations are summarized below.
  - NMeFOSE was not detected in the associated sample and data usability is not adversely affected by high EIS recovery.
  - PFUnA, PFTeDA, perfluorotridecanoic acid (PFTrDA), PFDoDA, PFOS, PFHpS, PFNS, PFDS, PFDoDS, PFOSA, NEtFOSE, NEtFOSA, and NMeFOSA were not reported from the associated analysis and data usability is not adversely affected by high EIS recoveries.
- Recoveries of the EISs $^{13}C_8$-PFOS (134%), $^{13}C_8$-PFOSA (149%), d_5- N-ethyl perfluorooctanesulfonamidoacetic acid (NEtFOSAA [144%]), d_7-MeFOSE (138%), and d_9-EtFOSE (135%) were high in the initial standard analysis of sample LORNG_LYS07007SDUP_10252024. PFOS, PFHpS, PFNS, PFDS, PFDoDS, PFOSA, NEtFOSAA, NMeFOSE, and NEtFOSE were not reported from the associated analysis and data usability is not adversely affected by high EIS recoveries.
- Recoveries of the EISs $^{13}C_7$-PFUnA (166%), $^{13}C_2$-PFDoDA (142%), $^{13}C_2$-PFTeDA (140%), $^{13}C_8$-PFOSA (178%), d_7-NMeFOSE (164%), and d_9-NEtFOSE (171%) were high in the standard reanalysis of sample LORNG_LYS07007SDUP_10252024. PFUnA, PFTeDA, PFTrDA, PFDoDA, PFOSA, NMeFOSE, and NEtFOSE were not reported from the associated analysis and data usability is not adversely affected by high EIS recoveries.
- Recovery of the EIS $^{13}C_8$-perfluorooctanoic acid (PFOA) was high at 136% in the initial 1:10 dilution analysis of sample LORNG_LYS07007SDUP_10252024. PFOA was not reported from the associated analysis and data usability is not adversely affected by high EIS recovery.
- Recoveries of the EISs $^{13}C_3$-PFBS (136%), $^{13}C_3$-PFHxS (163%), $^{13}C_8$-PFOS (141%), and d_5-NEtFOSAA (143%) were high in the 1:10 dilution reanalysis of sample LORNG_LYS07007SDUP_10252024. PFBS, PFHxS, PFPeS, PFOS, PFHpS, PFNS, PFDS, PFDoDS, and NEtFOSAA were not reported from the associated analysis and data usability is not adversely affected by high EIS recoveries.

7.1.14 NON-EXTRACTED INTERNAL STANDARD ACCURACY

NIS recoveries were within the method-specified 50 to 200% limits.

7.1.15 DATA REPORTING AND ANALYTICAL PROCEDURES

SGS J qualified analytes with detected concentrations less than the LOQ. WSP agrees that these results are quantitatively uncertain and has maintained SGS's J qualifiers. (J, TR)

8 FIELD DUPLICATE PRECISION

There were no field duplicates collected with the samples reviewed in this report.

9 SUMMARY AND CONCLUSIONS

WSP evaluated a total of 320 data records from field samples during this validation. Qualifier definitions are summarized in Section 4.0, reason codes are summarized in Section 5.0, and qualified data are summarized below.

- J-: WSP J- qualified 7 records (2.2%) due to high EIS recoveries or low LCS or MS recoveries.
- J/UJ: WSP J qualified 18 records (5.6%) due to low LCS or MS recoveries, imprecision between primary and laboratory duplicate results, and/or detected concentrations less than the LOQ.

Final results are summarized in Table 2 and data qualified during validation are summarized in Table 3.

1 INTRODUCTION

WSP USA Environment & Infrastructure Inc. (WSP) collected 15 tissue samples between 21 May and 18 August 2024 from the former Loring Air Force Base, located in Limestone, Maine. WSP submitted the sample to Batelle Norwell Operations (Batelle), located in Norwell, Massachusetts, where they were received on 30 May and 21 August 2024. Batelle assigned the samples to sample delivery groups 24-0507, 24-0610, and 24-0666 and analyzed them for per- and polyfluoroalkyl substances (PFAS) using United States Environmental Protection Agency (EPA) Method 1633.

The field sample identifications (IDs), sample collection dates, and laboratory sample IDs are presented in Table 1.

2 DATA VALIDATION METHODOLOGY

WSP performed Department of Defense (DoD) Stage 2B validation on 100 percent (%) of Batelle's data for the samples reviewed in this report. The Stage 2B validation includes review of quality control (QC) results in the laboratory's analytical report and reported on QC summary forms. Stage 2B validation does not include review or validation of the raw analytical data. This data validation has been performed in general accordance with:

- WSP, 2024. Draft Quality Program Plan Addendum, Remedial Investigation, Per- and Polyfluoroalkyl Substances Response, Former Loring Air Force Base, Limestone Maine, April.
- DoD, 2019. DoD General Data Validation Guidelines, September.
- DoD, 2021. DoD Department of Energy Consolidated Quality Systems Manual (QSM) for Environmental Laboratories Version 5.4, October.
- DoD, 2022. Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances Analysis by QSM Table B-24, October.
- EPA, 2023. 4th Draft EPA Method 1633, Analysis of PFAS in Aqueous, Solid, Biosolids, and Tissue Samples by Liquid Chromatography-Tandem Mass Spectrometry (LC-MS/MS), July.

The laboratory's certified analytical report and supporting documentation were reviewed to assess the following:

- Data package and electronic data deliverable completeness;
- Chain of custody (COC) compliance;
- Holding time compliance;
- Sample receipt condition;
- Mass Calibration;
- Initial calibration (ICAL), initial calibration verification (ICV), instrument sensitivity check (ISC), and continuing calibration verification (CCV) compliance with method specified criteria;
- Signal to noise ratios for the ICS;
- Bile salt interference check;
- Presence or absence of laboratory contamination as demonstrated by laboratory blanks;
- Accuracy and bias as demonstrated by PFAS recovery in laboratory control sample (LCS) and matrix spike (MS) samples;
- Extracted Internal Standard (EIS) and non-extracted internal standard (NIS) recoveries;
- Analytical precision as relative percent difference (RPD) of analyte concentration between laboratory duplicates, or MS/MS duplicates (MSDs);

- Sampling and analytical precision as RPD of analyte concentration between field duplicates;
- Assessment of field contamination as demonstrated by field blanks; and
- Insofar as possible, the degree of conformance to method requirements and good laboratory practices.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

3 EXPLANATION OF DATA QUALITY INDICATORS

Summary explanation of the specific data quality indicators reviewed during data validation are presented below.

3.1 LABORATORY CONTROL SAMPLE RECOVERIES

LCSs are aliquots of analyte free matrices that are spiked with the analytes of interest for an analytical method, or a representative subset of those analytes. The spiked matrix is then processed through the same analytical procedures as the samples they accompany.

LCS recovery and precision are an indication of a laboratory's ability to successfully perform an analytical method in an interference free matrix.

3.2 MATRIX SPIKE RECOVERIES

MSs and MSDs are prepared by adding known amounts of the analytes of interest for an analytical method, or a representative subset of those analytes, to an aliquot of sample. The spiked sample is then processed through the same extraction, concentration, cleanup, and analytical procedures as the unspiked samples in an analytical batch.

MS recovery and precision are an indication of a laboratory's ability to successfully recover an analyte in the matrix of a specific sample or closely related sample matrices. It is important not to apply MS results for any specific sample to other samples without understanding how the sample matrices are related.

3.3 BLANK CONCENTRATIONS

Blank samples are aliquots of analyte free matrix that are used as negative controls to verify that the sample collection, storage, preparation, and analysis system does not produce false positive results.

Equipment blanks are aliquots of analyte free water that are used to rinse sample collection equipment after decontamination. Equipment blanks assess contamination attributed to insufficient equipment decontamination procedures.

Laboratory blanks are processed by the laboratory using the same procedures as the field samples. Target analytes should not be found in laboratory blanks.

3.4 LABORATORY AND FIELD DUPLICATES

Laboratory and field duplicate analyses verify acceptable method precision by the laboratory at the time of preparation and analysis and/or sampling precision at the time of collection.

4 DEFINITIONS OF QUALIFIERS THAT MAY BE ADDED DURING DATA VALIDATION

J The reported result was an estimated value.

J+ The reported result was an estimated value with a positive bias.

J- The reported result was an estimated value with a negative bias.

R The data are unusable. The sample results are rejected due to serious deficiencies in meeting quality control criteria. The analyte may or may not be present in the sample.

U The analyte was not detected and was reported as less than the limit of detection (LOD). The LOD has been adjusted for any dilution or concentration of the sample.

UJ The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

5 QUALIFICATION REASON CODES

The following reason codes were applied to the data during data validation:

EISL Low EIS recovery.

MSL Low MS recovery. Result may be biased low.

NISL Low NIS recovery.

TR The detected analyte concentration is less than the LOQ.

6 CHAIN OF CUSTODY AND SAMPLE RECEIPT CONDITION DOCUMENTATION

The samples were received at the laboratory under proper COC, intact, and at average temperatures less than the method-specified maximum of 6 degrees Celsius.

7 SPECIFIC DATA VALIDATION FINDINGS

Results from the samples reviewed in this report are considered usable with the limitations and exceptions described in Sections 7.1 through 8.0. Final validated results are presented in Table 2 and results qualified during validation are presented in Table 3 with applicable reason codes.

7.1 PFAS BY EPA DRAFT METHOD 1633

PFAS results generated by Batelle may be considered usable with the limitations described in Sections 7.1.1 through 7.1.14.

7.1.1 HOLDING TIMES

The samples were extracted within the method-specified maximum holding time of 28 days from sample collection and the extracts were analyzed within the method-specified maximum hold time of 90 days from extraction.

7.1.2 MASS CALIBRATION FREQUENCY

Mass calibration verifications were performed before the ICALs associated with the analysis of the samples reviewed in this report.

7.1.3 ION TRANSITIONS

Parent, quantification, and confirmation ion masses used for the analysis of the samples reviewed in this report matched the ions specified in EPA Method 1633 Table 10.

7.1.4 INITIAL CALIBRATION COMPLIANCE

Initial calibrations relative standard deviations between response factors for each target analyte were less than or equal to the method-specified maximum of 20% and/or relative standard errors were less than the method-specified maximum of 20% for all target analytes and EISs.

7.1.5 INITIAL CALIBRATION VERIFICATION ACCURACY

ICVs were analyzed after each initial calibration. Recoveries were between 70 and 130%.

7.1.6 INSTRUMENT SENSITIVITY CHECK COMPLIANCE

ISCs were analyzed at the beginning of each analytical run, concentrations were equivalent to the LOQ, signal to noise ratios were greater than or equal to 3:1, and recoveries were within the method-specified 70 to 130% limits.

7.1.7 CONTINUING CALIBRATION VERIFICATION COMPLIANCE

CCVs were analyzed at the beginning of the analytical sequence after the ISC, after every ten or fewer samples, and at the end of the analytical sequence. Recoveries were within the method-specified 70 to 130% limits.

7.1.8 BILE SALT INTERFERENCE CHECKS

Bile salt interference checks were analyzed daily and retention times for the bile salts were at least one minute outside the retention times for linear or branched perfluorooctanesulfonic acid (PFOS).

7.1.9 LABORATORY AND CALIBRATION BLANK DETECTIONS

Target analytes were not detected in the laboratory and calibration blanks associated with the sample reviewed in this report.

7.1.10 LABORATORY CONTROL SAMPLE ACCURACY

Low-level LCS (LLCS) and LCS were included with each extraction batch, LLCS spike concentrations were twice the LOQ, and LCS and LLCS recoveries were within the quality assurance project plan (QAPP)-specified 40 to 150% limits, with the following exceptions:

- Perfluoro-4-methoxybutanoic acid (PFMBA [152%]), 3-perfluoropropyl propanoic acid (3:3 FTCA [152%]), and 3-perfluoroheptyl propanoic acid (7:3 FTCA [157%]) recoveries were high in the LCS associated with the analysis of samples F-BIOA02_CTS01_20240521 and F-BIOC03_CTS01_20240521. PFMBA, 3:3 FTCA, and 7:3 FTCA were not detected in the associated samples and data usability is not adversely affected by potential high analytical bias.
- Perfluoro-3-methoxypropanoic acid (PFMPA) and 3:3 FTCA recoveries were high at 176% and 165%, respectively, in the LCS associated with the analysis of samples F-BIOA02_LBT01_20240521, F-BIOA07_LBT01_20240522, F-BIOB01_CTS01_20240522, F-BIOB08_LBT01_20240522, F-BIOC06_CTS01_20240521, F-BIOC09_CTS01_20240523, and F-BIOCS01_CTS01_20240523. PFMPA and 3:3 FTCA were not detected in the associated samples and data usability is not adversely affected by potential high analytical bias.
- PFMPA recovery was high at 153% in the LLCS associated with the analysis of samples F-BIOA02_LBT01_20240521, F-BIOA07_LBT01_20240522, F-BIOB01_CTS01_20240522, F-BIOB08_LBT01_20240522, F-BIOC06_CTS01_20240521, F-BIOC09_CTS01_20240523, and F-BIOCS01_CTS01_20240523. PFMPA was not detected in the associated samples and data usability is not adversely affected by potential high analytical bias.
- 7:3 FTCA recovery was high at 173% in the LCS associated with the analysis of samples F-BIOA10_BLB01_20240818, F-BIOA10_LBT01_20240818, F-BIOB10_BLB01_20240817, F-BIOC10_BLB01_20240817, F-BIOC10_LBT01_20240818, and F-BIOC11_BLB02_20240818. 7:3 FTCA was not detected in the associated samples and data usability is not adversely affected by potential high analytical bias.
- Perfluorohexanoic acid (PFHxA [201%]), perfluorotridecanoic acid (PFTrDA [159%]), and 7:3 FTCA (196%) recoveries were high in the LCS associated with the analysis of samples F-BIOA10_BLB01_20240818, F-BIOA10_LBT01_20240818, F-BIOB10_BLB01_20240817, F-BIOC10_BLB01_20240817, F-BIOC10_LBT01_20240818, and F-BIOC11_BLB02_20240818. PFHxA, PFTrDA, and 7:3 FTCA were not detected in the associated samples and data usability is not adversely affected by potential high analytical bias.

7.1.11 MATRIX SPIKE ACCURACY AND PRECISION

Batelle performed MS and/or MSD analyses on sample F-BIOC09_CTS01_20240523. Recoveries were within the QAPP-specified 40 to 150% limits and RPDs between MS and MSD results were less than the QAPP-specified maximum of 30%, with the following exceptions:

- 7:3 FTCA recovery was high at 164% in the MS and perfluorododecanesulfonic acid (PFDoDS) recovery was low at 38% in the MSD performed on sample F-BIOC09_CTS01_20240523. Additionally, RPDs between perfluorotetradecanoic acid (PFTeDA) and PFTrDA results were high at 34% and 46%, respectively. Data limitations are summarized below.
    - WSP UJ qualified the non-detect PFDoDS result from the associated sample due to potential low analytical bias. (UJ, MSL)
    - 7:3 FTCA was not detected in the unspiked native sample and data usability is not adversely affected by potential high analytical bias.
    - PFTeDA and PFTrDA were not detected in the unspiked native sample and data usability is not adversely affected by potential analytical imprecision.

7.1.12 LABORATORY DUPLICATE PRECISION

Batelle did not perform duplicate analyses on the samples reviewed in this report.

7.1.13 EXTRACTED INTERNAL STANDARD ACCURACY

EIS recoveries in the field samples were within the QAPP-specified 20 to 150% limits, with the following exceptions:

- Recoveries of the EISs d_5-N-ethyl perfluorooctanesulfonamide (d_5-NEtFOSA) and d_3-N-methyl perfluorooctanesulfonamide (d_3-NMeFOSA) were low at 9% and 11%, respectively, in the analysis of sample F-BIOA02_CTS01_20240521. Data limitations are summarized below.
  - WSP R qualified and rejected the non-detect NEtFOSA result from the associated sample due to extremely low EIS recovery. (R, EISL)
  - WSP UJ qualified the non-detect NMeFOSA result from the associated sample due to low EIS recovery. (UJ, EISL)
- Recovery of the EIS d_5-NEtFOSA was low at 14% in the analysis of sample F-BIOC03_CTS01_20240521. WSP UJ qualified the non-detect NEtFOSA result from the associated sample due to low EIS recovery. (UJ, EISL)
- Recoveries of the EISs $^{13}C_2$-4:2 fluorotelomer sulfonic acid (FTS [293%]), $^{13}C_2$-6:2 FTS (286%), $^{13}C_2$-perfluorododecanoic acid (PFDoDA [19%]), $^{13}C_3$-perfluorobutanesulfonic acid (PFBS [152%]), d_3-NMeFOSA (18%), d_5-NEtFOSA (15%), and d_9-N-ethyl perfluorooctanesulfonamidoethanol (NEtFOSE [18%]) were outside limits in the analysis of sample F-BIOA02_LBT01_20240521. Data limitations are summarized below.
  - WSP UJ qualified the non-detect PFDoDA, NMeFOSA, NEtFOSA, and NEtFOSE results from the associated sample due to low EIS recoveries. (UJ, EISL)
  - 4:2 FTS, 6:2 FTS, and PFBS were not detected in the associated sample and data usability is not adversely affected by high EIS recoveries.
- Recoveries of the EISs $^{13}C_2$-4:2 FTS (369%), $^{13}C_2$-6:2 FTS (271%), $^{13}C_2$-8:2 FTS (263%), $^{13}C_3$-PFBS (189%), and d_5-NEtFOSA (14%) were outside limits in the analysis of sample F-BIOA07_LBT01_20240522. Data limitations are summarized below.
  - WSP UJ qualified the non-detect NEtFOSA result from the associated sample due to low EIS recovery. (UJ, EISL)
  - 4:2 FTS, 6:2 FTS, 8:2 FTS, and PFBS were not detected in the associated sample and data usability is not adversely affected by high EIS recoveries.
- Recovery of the EIS $^{13}C_2$-4:2 FTS (169%), $^{13}C_2$-6:2 FTS (157%), $^{13}C_2$-8:2 FTS (194%), d_3-NMeFOSA (13%), d_5-NEtFOSA (7%), d_7-N-methyl perfluorooctanesulfonamidoethanol (d_7-NMeFOSE [17%]), and d_9-NEtFOSE (8%) were outside limits in the analysis of sample F-BIOB08_LBT01_20240522. Data limitations are summarized below.
  - WSP R qualified and rejected the non-detect NEtFOSA and NEtFOSE results from the associated sample due to extremely low EIS recoveries. (R, EISL)
  - WSP UJ qualified the non-detect NMeFOSA and NMeFOSE results from the associated sample due to low EIS recoveries. (UJ, EISL)
  - 4:2 FTS, 6:2 FTS, and 8:2 FTS were not detected in the associated sample and data usability is not adversely affected by high EIS recoveries.
- Recoveries of the EISs $^{13}C_2$-4:2 FTS (241%), $^{13}C_2$-6:2 FTS (219%), $^{13}C_2$-8:2 FTS (162%), d_3-NMeFOSA (13%), and d_5-NEtFOSA (11%) were outside limits in the analysis of sample F-BIOC06_CTS01_20240521. Data limitations are summarized below.

  - WSP UJ qualified the non-detect NMeFOSA and NEtFOSA results from the associated sample due to low EIS recoveries. (UJ, EISL)
  - 4:2 FTS, 6:2 FTS, and 8:2 FTS were not detected in the associated sample and data usability is not adversely affected by high EIS recoveries.

- Recoveries of the EISs $^{13}C_2$-4:2 FTS (207%), $^{13}C_2$-6:2 FTS (191%), $^{13}C_2$-8:2 FTS (166%), d_3-NMeFOSA (11%), and d_5-NEtFOSA (10%) were outside limits in the analysis of sample F-BIOC09_CTS01_20240523. Data limitations are summarized below.
  - WSP UJ qualified the non-detect NMeFOSA and NEtFOSA results from the associated sample due to low EIS recoveries. (UJ, EISL)
  - 4:2 FTS, 6:2 FTS, and 8:2 FTS were not detected in the associated sample and data usability is not adversely affected by high EIS recoveries.
- Recoveries of the EISs d_3-NMeFOSA and d_5-NEtFOSA were low at 14% and 12%, respectively, in the analysis of sample F-BIOA10_BLB01_20240818. WSP UJ qualified the non-detect NMeFOSA and NEtFOSA results from the associated sample due to low EIS recoveries. (UJ, EISL)
- Recoveries of the EISs $^{13}C_2$-4:2 FTS (8%), $^{13}C_4$-perfluorobutanoic acid (PFBA [4%]), $^{13}C_5$-PFHxA (17%), $^{13}C_5$-perfluoropentanoic acid (PFPeA [10%]), and d_5-NEtFOSA (15%) were low in the analysis of sample F-BIOA10_LBT01_20240818. Data limitations are summarized below.
  - WSP R qualified the non-detect 4:2 FTS and PFBA results from the associated sample due to extremely low EIS recoveries. (R, EISL)
  - WSP UJ qualified the non-detect 3:3 FTCA, 3-perfluoropentyl propanoic acid (5:3 FTCA), 7:3 FTCA, NEtFOSA, nonafluoro-3,6-dioxaheptanoic acid (NFDHA), perfluoro(2-ethoxyethane)sulfonic acid (PFEESA), PFHxA, PFMBA, PFMPA, and PFPeA results from the associated sample due to low EIS recoveries. (UJ, EISL)
- Recoveries of the EISs $^{13}C_2$-6:2 FTS (157%), d_3-NMeFOSA (13%), and d_5-NEtFOSA (11%) were outside limits in the analysis of sample F-BIOC10_BLB01_20240817. Data limitations are summarized below.
  - WSP UJ qualified the non-detect NMeFOSA and NEtFOSA results from the associated sample due to low EIS recoveries. (UJ, EISL)
  - 6:2 FTS was not detected in the associated sample and data usability is not adversely affected by high EIS recovery.
- Recoveries of the EISs $^{13}C_2$-PFDoDA (19%), $^{13}C_2$-PFTeDA (18%), $^{13}C_4$-PFBA (19%), and d_5-NEtFOSA (16%) were low in the analysis of sample F-BIOC10_LBT01_20240818. WSP UJ qualified the non-detect PFDoDA, PFTeDA, PFTrDA, PFBA, and NEtFOSA results from the associated sample due to low EIS recoveries. (UJ, EISL)
- Recovery of the EIS $^{13}C_2$-4:2 FTS was high at 198% in the analysis of sample F-BIOB01_CTS01_20240522. 4:2 FTS was not detected in the associated sample and data usability is not adversely affected by high EIS recovery.
- Recoveries of the EISs $^{13}C_2$-4:2 FTS and $^{13}C_2$-6:2 FTS were high at 223% and 219%, respectively, in the analysis of sample F-BIOCS01_CTS01_20240523. 4:2 FTS and 6:2 FTS were not detected in the associated sample and data usability is not adversely affected by high EIS recoveries.
- Recoveries of the EISs $^{13}C_2$-6:2 FTS and $^{13}C_4$-perfuoroheptanoic acid (PFHpA) and were high at 151% and 157%, respectively, in the analysis of sample F-BIOB10_BLB01_20240817. 6:2 FTS and PFHpA were not detected in the associated sample and data usability is not adversely affected by high EIS recoveries.
- Recoveries of the EISs $^{13}C_2$-6:2 FTS and $^{13}C_4$-PFHpA were high at 168% and 152%, respectively, in the analysis of sample F-BIOC11_BLB02_20240818. 6:2 FTS and PFHpA were not detected in the associated sample and data usability is not adversely affected by high EIS recoveries.

7.1.14 NON-EXTRACTED INTERNAL STANDARD ACCURACY

NIS recoveries were within the method-specified 50 to 200% limits, with the following exception:

- Recoveries of the NISs $^{13}C_2$-perfluorodecanoic acid (PFDA [33%]), $^{13}C_2$-PFHxA (41%), $^{13}C_3$-PFBA (49%), $^{13}C_4$-perfluorooctanoic acid (PFOA [34%]), $^{13}C_4$-PFOS (47%), $^{13}C_5$-perfluorononanoic acid (PFNA [31%]), and $^{18}O_2$-perfluorohexanesulfonic acid (PFHxS [30%]) recoveries were low in the analysis of sample F-BIOA02_LBT01_20240521. Data limitations are summarized below.
  - WSP UJ qualified the non-detect NEtFOSA, NEtFOSE, NMeFOSA, and PFDoDA results from the associated sample due to low NIS recoveries because the associated EIS recoveries were also low. (UJ, NISL)
  - Recoveries of the EISs associated with the remaining associated analytes were within limits in the associated sample and no data were qualified based on low NIS recoveries.
- Recoveries of the NISs $^{13}C_2$-PFDA (22%), $^{13}C_2$-PFHxA (32%), $^{13}C_4$-PFOA (20%), $^{13}C_4$-PFOS (30%), $^{13}C_5$-PFNA (16%), and $^{18}O_2$-PFHxS (18%) were low in the analysis of sample F-BIOA07_LBT01_20240522. Data limitations are summarized below.
  - WSP UJ qualified the non-detect 4:2 FTS, 6:2 FTS, 8:2 FTS, 11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid, 9-chlorohexadecafluoro-3-oxanonane-1-sulfonic acid, 4,8-dioxa-3H-perfluorononanoic acid, hexafluoropropylene oxide dimer acid, NEtFOSA, N-ethyl perfluorooctanesulfonamidoacetic acid, NEtFOSE, PFBS, perfluoropentanesulfonic acid (PFPeS), PFHxS, NMeFOSA, N-methyl perfluorooctanesulfonamidoacetic acid, NMeFOSE, PFDA, PFDoDA, PFDoS, perfluorodecanesulfonic acid, perfluoroheptanesulfonic acid, PFNA, perfluorononanesulfonic acid, PFOA, PFOS, perfluorooctanesulfonamide, PFTeDA, PFTrDA, and perfluoroundecanoic acid (PFUnA) results from the associated sample due to low NIS recoveries. (UJ, NISL)
  - Recoveries of the EISs associated with the remaining associated analytes were within limits in the associated sample and no data were qualified based on low NIS recoveries.
- Recovery of the NISs $^{13}C_2$-PFDA (33%), $^{13}C_4$-PFOA (45%), $^{13}C_4$-PFOS (34%), and $^{13}C_5$-PFNA (33%) were low in the analysis of sample F-BIOB01_CTS01_20240522. Recoveries of the EISs associated with the associated analytes were within limits in the associated sample and no data were qualified based on low NIS recoveries.
- Recoveries of the NISs $^{13}C_2$-PFDA (17%), $^{13}C_2$-PFHxA (24%), $^{13}C_3$-PFBA (49%), $^{13}C_4$-PFOA (14%), $^{13}C_4$-PFOS (34%), $^{13}C_5$-PFNA (17%), and $^{18}O_2$-PFHxS (16%) were low in the analysis of sample F-BIOB08_LBT01_20240522. Data limitations are summarized below.
  - WSP UJ qualified the non-detect 4:2 FTS, 6:2 FTS, 8:2 FTS, PFBS, PFPeS, PFHxS, PFHpA, PFHxA, 5:3 FTCA, 7:3 FTCA, NFDHA, PFEESA, PFPeA, 3:3 FTCA, PFMPA, PFMBA, PFDA, PFDoDA, PFNA, PFOA, PFTeDA, PFTrDA, and PFUnA results from the associated sample due to low NIS recoveries. (UJ, NISL)
  - WSP UJ qualified the NMeFOSA and NMeFOSE results from the associated sample due to low NIS recoveries because the associated EIS recoveries were also low. (UJ, NISL)
  - The NEtFOSA and NEtFOSE results in the associated sample were previously rejected due to extremely low EIS recoveries and the data was not further qualified based on NIS recoveries.
  - Recoveries of the EISs associated with the remaining associated analytes were within limits in the associated sample and no data were qualified based on low NIS recoveries.
- Recoveries of the NISs $^{13}C_2$-PFDA (37%), $^{13}C_4$-PFOS (43%), $^{13}C_5$-PFNA (36%), and $^{18}O_2$-PFHxS (41%) were low in the analysis of sample F-BIOC06_CTS01_20240521. Data limitations are summarized below.
  - WSP UJ qualified the non-detect NEtFOSA and NMeFOSA results from the associated sample due to low NIS recoveries because the associated EIS recoveries were also low. (UJ, NISL)
  - Recoveries of the EISs associated with the remaining associated analytes were within limits in the associated sample and no data were qualified based on low NIS recoveries.

- Recoveries of the NISs $^{13}C_2$-PFDA (36%), $^{13}C_4$-PFOA (44%), $^{13}C_4$- PFOS (41%), $^{13}C_5$-PFNA (37%), and $^{18}O_2$-PFHxS (46%) were low in the analysis of sample F-BIOC09_CTS01_20240523. Data limitations are summarized below.
  - WSP UJ qualified the non-detect NEtFOSA and NMeFOSA results from the associated sample due to low NIS recoveries because the associated EIS recoveries were also low. (UJ, NISL)
  - Recoveries of the EISs associated with the remaining associated analytes were within limits in the associated sample and no data were qualified based on low NIS recoveries.
- Recoveries of the NISs $^{13}C_2$-PFDA (36%), $^{13}C_4$-PFOA (44%), $^{13}C_4$-PFOS (39%), $^{13}C_5$-PFNA (39%), and $^{18}O_2$-PFHxS (43%) were low in the analysis of sample F-BIOCS01_CTS01_20240523. Recoveries of the EISs associated with the associated analytes were within limits in the associated sample and no data were qualified based on low NIS recoveries.
- Recovery of the NIS $^{13}C_2$-PFHxA was low at 43% in the analysis of sample F-BIOA10_BLB01_20240818. Recoveries of the EISs associated with the associated analytes were within limits in the associated sample and no data were qualified based on low NIS recoveries.
- Recoveries of the NISs $^{13}C_2$-PFDA (28%), $^{13}C_2$-PFHxA (22%), $^{13}C_3$-PFBA (31%), $^{13}C_4$-PFOA (22%), $^{13}C_4$-PFOS (43%), $^{13}C_5$-PFNA (26%), and $^{18}O_2$-PFHxS (43%) were low in the analysis of sample F-BIOA10_LBT01_20240818. Data limitations are summarized below.
  - WSP UJ qualified the non-detect 3:3 FTCA, 5:3 FTCA, 7:3 FTCA, NFDHA, PFDA, PFDoDA, PFEESA, PFHpA, PFHxA, PFMBA, PFMPA, PFNA, PFOA, PFPeA, PFTeDA, PFTrDA, and PFUnA results from the associated sample due to extremely low NIS recoveries. (UJ, NISL)
  - WSP UJ qualified the NEtFOSA result from the associated sample due to low NIS recovery because the associated EIS recovery was also low. (UJ, NISL)
  - The 4:2 FTS and PFBA results in the associated sample were previously rejected due to extremely low EIS recoveries and the data was not further qualified based on NIS recoveries.
  - Recoveries of the EISs associated with the remaining associated analytes were within limits in the associated sample and no data were qualified based on low NIS recoveries.
- Recoveries of the NISs $^{13}C_2$- PFDA (43%), $^{13}C_2$-PFHxA (22%), $^{13}C_3$-PFBA (47%), $^{13}C_4$-PFOA (29%), and $^{13}C_5$-PFNA (41%) were low in the analysis of sample F-BIOC10_LBT01_20240818. Data limitations are summarized below.
  - WSP UJ qualified the non-detect 3:3 FTCA, 5:3 FTCA, 7:3 FTCA, NFDHA, PFEESA, PFHpA, PFHxA, PFMBA, PFMPA, PFOA, and PFPeA results from the associated sample due to extremely low NIS recoveries. (UJ, NISL)
  - WSP UJ qualified the PFBA, PFDODA, PFTEA, and PFTRIA results from the associated sample due to low NIS recoveries because the associated EIS recoveries were also low. (UJ, NISL)
  - Recoveries of the EISs associated with the remaining associated analytes were within limits in the associated sample and no data were qualified based on low NIS recoveries.
- Recovery of the NIS $^{13}C_2$-PFHxA was low at 41% in the analysis of sample F-BIOB10_BLB01_20240817. Recoveries of the EISs associated with the associated analytes were within limits in the associated sample and no data were qualified based on low NIS recoveries.
- Recovery of the NIS $^{13}C_2$-PFHxA was low at 41% in the analysis of sample F-BIOC10_BLB01_20240817. Recoveries of the EISs associated with the associated analytes were within limits in the associated sample and no data were qualified based on low NIS recoveries.
- Recovery of the NIS $^{13}C_2$-PFHxA was low at 47% in the analysis of sample F-BIOC11_BLB02_20240818. Recoveries of the EISs associated with the associated analytes were within limits in the associated sample and no data were qualified based on low NIS recoveries.

7.1.15 ION RATIOS

Ratios between primary and confirmation ions were within the QAPP-specified limits of 50 to 150% of the ion ratios measured in the midpoint calibration standard or daily CCV.

7.1.16 STAGE 4 VALIDATION

WSP did not perform Stage 4 validation on the samples reviewed in this report.

7.1.17 DATA REPORTING AND ANALYTICAL PROCEDURES

Batelle J qualified analytes with detected concentrations less than the LOQ. WSP agrees that these results are quantitatively uncertain and has maintained Batelle's J qualifiers. (J, TR)

8 FIELD DUPLICATE PRECISION

WSP did not collect field duplicates with the samples reviewed in this report.

9 SUMMARY AND CONCLUSIONS

WSP evaluated a total of 600 target analyte results from the field sample during this validation. Final validated results are presented in Table 2 and results qualified during validation are presented in Table 3 with applicable reason codes

Qualifier definitions are summarized in Section 4.0, reason codes are summarized in Section 5.0, and qualified data are summarized below.

- R: WSP R qualified and rejected 5 records (0.83%) due to extremely low EIS recoveries.
- J: WSP J qualified 8 records (1.3%) due to detected concentrations less than the LOQ.
- UJ: WSP UJ qualified 103 records (17%) due to low MS, EIS, and/or NIS recoveries.

Data qualified during validation are summarized in Table 3.

1 INTRODUCTION

WSP USA Environment & Infrastructure Inc. (WSP) collected 13 tissue samples between 10 and 11 September 2024 from the former Loring Air Force Base, located in Limestone, Maine. WSP submitted the sample to Batelle Norwell Operations (Batelle), located in Norwell, Massachusetts, where they were received on 13 September 2024. Batelle assigned the samples to sample delivery group 24-0773 and analyzed them for per- and polyfluoroalkyl substances (PFAS) using United States Environmental Protection Agency (EPA) Method 1633.

The field sample identifications (IDs), sample collection dates, and laboratory sample IDs are presented in Table 1.

2 DATA VALIDATION METHODOLOGY

WSP performed Department of Defense (DoD) Stage 2B validation on 100 percent (%) of Batelle's data for the samples reviewed in this report. The Stage 2B validation includes review of quality control (QC) results in the laboratory's analytical report and reported on QC summary forms. Stage 2B validation does not include review or validation of the raw analytical data. This data validation has been performed in general accordance with:

- WSP, 2024. Draft Quality Program Plan Addendum, Remedial Investigation, Per- and Polyfluoroalkyl Substances Response, Former Loring Air Force Base, Limestone Maine, April.
- DoD, 2019. DoD General Data Validation Guidelines, September.
- DoD, 2021. DoD Department of Energy Consolidated Quality Systems Manual (QSM) for Environmental Laboratories Version 5.4, October.
- DoD, 2022. Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances Analysis by QSM Table B-24, October.
- EPA, 2023. 4th Draft EPA Method 1633, Analysis of PFAS in Aqueous, Solid, Biosolids, and Tissue Samples by Liquid Chromatography-Tandem Mass Spectrometry (LC-MS/MS), July.

The laboratory's certified analytical report and supporting documentation were reviewed to assess the following:

- Data package and electronic data deliverable completeness;
- Chain of custody (COC) compliance;
- Holding time compliance;
- Sample receipt condition;
- Mass Calibration;
- Initial calibration (ICAL), initial calibration verification (ICV), instrument sensitivity check (ISC), and continuing calibration verification (CCV) compliance with method specified criteria;
- Signal to noise ratios for the ICS;
- Bile salt interference check;
- Presence or absence of laboratory contamination as demonstrated by laboratory blanks;
- Accuracy and bias as demonstrated by PFAS recovery in laboratory control sample (LCS) and matrix spike (MS) samples;
- Extracted Internal Standard (EIS) and non-extracted internal standard (NIS) recoveries;
- Analytical precision as relative percent difference (RPD) of analyte concentration between laboratory duplicates, or MS/MS duplicates (MSDs);

- Sampling and analytical precision as RPD of analyte concentration between field duplicates;
- Assessment of field contamination as demonstrated by field blanks; and
- Insofar as possible, the degree of conformance to method requirements and good laboratory practices.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

3 EXPLANATION OF DATA QUALITY INDICATORS

Summary explanation of the specific data quality indicators reviewed during data validation are presented below.

3.1 LABORATORY CONTROL SAMPLE RECOVERIES

LCSs are aliquots of analyte free matrices that are spiked with the analytes of interest for an analytical method, or a representative subset of those analytes. The spiked matrix is then processed through the same analytical procedures as the samples they accompany.

LCS recovery and precision are an indication of a laboratory's ability to successfully perform an analytical method in an interference free matrix.

3.2 MATRIX SPIKE RECOVERIES

MSs and MSDs are prepared by adding known amounts of the analytes of interest for an analytical method, or a representative subset of those analytes, to an aliquot of sample. The spiked sample is then processed through the same extraction, concentration, cleanup, and analytical procedures as the unspiked samples in an analytical batch.

MS recovery and precision are an indication of a laboratory's ability to successfully recover an analyte in the matrix of a specific sample or closely related sample matrices. It is important not to apply MS results for any specific sample to other samples without understanding how the sample matrices are related.

3.3 BLANK CONCENTRATIONS

Blank samples are aliquots of analyte free matrix that are used as negative controls to verify that the sample collection, storage, preparation, and analysis system does not produce false positive results.

Equipment blanks are aliquots of analyte free water that are used to rinse sample collection equipment after decontamination. Equipment blanks assess contamination attributed to insufficient equipment decontamination procedures.

Laboratory blanks are processed by the laboratory using the same procedures as the field samples. Target analytes should not be found in laboratory blanks.

3.4 LABORATORY AND FIELD DUPLICATES

Laboratory and field duplicate analyses verify acceptable method precision by the laboratory at the time of preparation and analysis and/or sampling precision at the time of collection.

4 DEFINITIONS OF QUALIFIERS THAT MAY BE ADDED DURING DATA VALIDATION

J	The reported result was an estimated value.
J+	The reported result was an estimated value with a positive bias.
J-	The reported result was an estimated value with a negative bias.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting quality control criteria. The analyte may or may not be present in the sample.
U	The analyte was not detected and was reported as less than the limit of detection (LOD). The LOD has been adjusted for any dilution or concentration of the sample.
UJ	The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

5 QUALIFICATION REASON CODES

The following reason codes were applied to the data during data validation:

EISL	Low EIS recovery.
EMPC	Ion transition ratio is outside of expected limits.
LCH	High LCS recovery. Result may be biased high.
NISL	Low NIS recovery.
TR	The detected analyte concentration is less than the LOQ.

6 CHAIN OF CUSTODY AND SAMPLE RECEIPT CONDITION DOCUMENTATION

The samples were received at the laboratory under proper COC, intact, and at average temperatures less than the method-specified maximum of 6 degrees Celsius.

7 SPECIFIC DATA VALIDATION FINDINGS

Results from the samples reviewed in this report are considered usable with the limitations and exceptions described in Sections 7.1 through 8.0. Final validated results are presented in Table 2 and results qualified during validation are presented in Table 3 with applicable reason codes.

7.1 PFAS BY EPA DRAFT METHOD 1633

PFAS results generated by Batelle may be considered usable with the limitations described in Sections 7.1.1 through 7.1.14.

7.1.1 HOLDING TIMES

The samples were extracted within the method-specified maximum holding time of 28 days from sample collection and the extracts were analyzed within the method-specified maximum hold time of 90 days from extraction.

7.1.2 MASS CALIBRATION FREQUENCY

Mass calibration verifications were performed before the ICALs associated with the analysis of the samples reviewed in this report.

7.1.3 ION TRANSITIONS

Parent, quantification, and confirmation ion masses used for the analysis of the samples reviewed in this report matched the ions specified in EPA Method 1633 Table 10.

7.1.4 INITIAL CALIBRATION COMPLIANCE

Initial calibrations relative standard deviations between response factors for each target analyte were less than or equal to the method-specified maximum of 20% and/or relative standard errors were less than the method-specified maximum of 20% for all target analytes and EISs.

7.1.5 INITIAL CALIBRATION VERIFICATION ACCURACY

ICVs were analyzed after each initial calibration. Recoveries were between 70 and 130%.

7.1.6 INSTRUMENT SENSITIVITY CHECK COMPLIANCE

ISCs were analyzed at the beginning of each analytical run, concentrations were equivalent to the LOQ, signal to noise ratios were greater than or equal to 3:1, and recoveries were within the method-specified 70 to 130% limits.

7.1.7 CONTINUING CALIBRATION VERIFICATION COMPLIANCE

CCVs were analyzed at the beginning of the analytical sequence after the ISC, after every ten or fewer samples, and at the end of the analytical sequence. Recoveries were within the method-specified 70 to 130% limits.

7.1.8 BILE SALT INTERFERENCE CHECKS

Bile salt interference checks were analyzed daily and retention times for the bile salts were at least one minute outside the retention times for linear or branched perfluorooctanesulfonic acid (PFOS).

7.1.9 LABORATORY AND CALIBRATION BLANK DETECTIONS

Target analytes were not detected in the laboratory and calibration blanks associated with the sample reviewed in this report.

7.1.10 LABORATORY CONTROL SAMPLE ACCURACY

Low-level LCS (LLCS) and LCS were included with each extraction batch, LLCS spike concentrations were twice the LOQ, and LCS and LLCS recoveries were within the quality assurance project plan (QAPP)-specified 40 to 150% limits, with the following exceptions:

- Perfluorohexanoic acid (PFHxA [160%]), 3-perfluoropentyl propanoic acid (5:3 FTCA [154%]), and 3-perfluoroheptyl propanoic acid (7:3 FTCA [168%]) recoveries were high in the LLCS associated with the analysis of the samples reviewed in this report. Data limitations are summarized below.
  - WSP J+ qualified the detected PFHxA result from sample F-BIOC13_CTR01_20240910 due to potential high analytical bias. (J+, LCH)
  - PFHxA was not detected in the remaining associated samples, 5:3 FTCA and 7:3 FTCA were not detected in any of the associated samples, and data usability is not adversely affected by potential high analytical bias.
- 5:3 FTCA and 7:3 FTCA recoveries were high at 204% and 202%, respectively, in the LCS associated with the analysis of the samples reviewed in this report. 5:3 FTCA and 7:3 FTCA were not detected in the associated samples and data usability is not adversely affected by potential high analytical bias.

7.1.11 MATRIX SPIKE ACCURACY AND PRECISION

Batelle did not perform MS and MSD analyses on the samples reviewed in this report.

7.1.12 LABORATORY DUPLICATE PRECISION

Batelle did not perform duplicate analyses on the samples reviewed in this report.

7.1.13 EXTRACTED INTERNAL STANDARD ACCURACY

EIS recoveries in the field samples were within the QAPP-specified 20 to 150% limits, with the following exceptions:

- Recoveries of the EISs d_5-N-ethyl perfluorooctanesulfonamide (d_5-NEtFOSA [11%]), d_3-N-methyl perfluorooctanesulfonamide (d_3-NMeFOSA [10%]), and d_9-N-ethyl perfluorooctanesulfonamidoethanol (d_9-NEtFOSE [9%]) were low in the analysis of sample F-BIOA15_CTR01_20240911. Data limitations are summarized below.
  - WSP R qualified and rejected the non-detect N-ethyl perfluorooctanesulfonamidoethanol (NEtFOSE) result from the associated sample due to extremely low EIS recovery. (R, EISL)
  - WSP UJ qualified the non-detect perfluorooctanesulfonamide (NEtFOSA) and N-methyl perfluorooctanesulfonamide (NMeFOSA) results from the associated sample due to low EIS recoveries. (UJ, EISL)
- Recoveries of the EISs d_5-NEtFOSA and d_3-NMeFOSA were low at 9% and 12%, respectively, in the analysis of sample F-BIOA15_CTR02_20240911. Data limitations are summarized below.
  - WSP R qualified and rejected the non-detect NEtFOSA result from the associated sample due to extremely low EIS recovery. (R, EISL)
  - WSP UJ qualified the non-detect NMeFOSA result from the associated sample due to low EIS recovery. (UJ, EISL)
- Recoveries of the EISs 13C6-perfluorodecanoic acid (13C6-PFDA [18%]), 13C7-perfluoroundecanoic acid (13C7-PFUnA [6%]), 13C8-PFOS (11%), D3-NMeFOSA (3%), D5-NEtFOSA (2%), d5-N-ethyl perfluorooctanesulfonamidoacetic acid (d5-NEtFOSAA [16%]) were low in the analysis of sample F-BIOB12_CTR01_20240910. Additionally, the EISs 13C2-perfluorododecanoic acid (13C2-PFDoDA), 13C2-perfluorotetradecanoic acid (13C2-PFTeDA), D7-N-methyl perfluorooctanesulfonamidoethanol (D7-NMeFOSE), and D9-NEtFOSE failed to recover. Data limitations are summarized below.
  - WSP R qualified and rejected the non-detect perfluorododecanoic acid (PFDoDA), perfluorotridecanoic acid (PFTeDA), perfluoroundecanoic acid (PFUnA), NEtFOSA, NMeFOSA, NMeFOSE, and NEtFOSE results from the associated sample due to extremely low EIS recoveries. (R, EISL)
  - WSP UJ qualified the non-detect perfluorodecanoic acid (PFDA), perfluorodecanesulfonic acid (PFDS), perfluorododecanesulfonic acid ((PFDoS), perfluoroheptanesulfonic acid (PFHpS), perfluorononanesulfonic acid (PFNS), perfluorooctanesulfonic acid (PFOS), and NEtFOSAA results from the associated sample due to low EIS recoveries. (UJ, EISL)
- Recoveries of the EISs d_5-NEtFOSA (7%), d_3-NMeFOSA (6%), and d_9-NEtFOSE (10%) were low in the analysis of sample F-BIOC12_CTR01_20240910. Data limitations are summarized below.
  - WSP R qualified and rejected the non-detect NEtFOSA and NMEFOSA results from the associated sample due to extremely low EIS recoveries. (R, EISL)
  - WSP UJ qualified the non-detect NEtFOSE result from the associated sample due to low EIS recovery. (UJ, EISL)
- Recoveries of the EISs 13C2-6:2 fluorotelomer sulfonic acid (FTS [153%]), D3-MeFOSA (10%), D5-EtFOSA (6%), and D9-EtFOSE (14%) were outside limits in the analysis of sample FBIOCS01_CTR01_20240911. Data limitations are summarized below.
  - WSP R qualified and rejected the non-detect NEtFOSA result from the associated sample due to extremely low EIS recovery. (R, EISL)
  - WSP UJ qualified the non-detect NEtFOSE and NMeFOSA results from the associated sample due to low EIS recoveries. (UJ, EISL)
  - 6:2 FTS was not detected in the associated sample and data usability is not adversely affected by high EIS recovery.
- Recoveries of the EISs d_5-NEtFOSA and d_3-NMeFOSA were both low at 10% in the analysis of sample F-BIOA12_CTR01_20240910. WSP UJ qualified the non-detect NEtFOSA and NMeFOSA results from the associated sample due to low EIS recoveries. (UJ, EISL)

- Recoveries of the EISs d_5-NEtFOSA and d_3-NMeFOSA were low at 15% and 16%, respectively, in the analysis of sample F-BIOA12_CTR02_20240910. WSP UJ qualified the non-detect NEtFOSA and NMeFOSA results from the associated sample due to low EIS recoveries. (UJ, EISL)
- Recovery of the EIS $^{13}C_2$-PFDoDA was low at 14% in the analysis of sample F-BIOA13_LBT01_20240910. WSP UJ qualified the non-detect PFDoDA result from the associated sample due to low EIS recovery. (UJ, EISL)
- Recoveries of the EISs $^{13}C_2$-PFDoDA and $^{13}C_8$-perfluorooctanesulfonamide ($^{13}C_8$-PFOSA) were low at 10% and 16%, respectively, in the analysis of sample F-BIOA14_LBT01_20240911. WSP UJ qualified the non-detect PFDoDA and perfluorooctane sulfonamide (PFOSA) results from the associated sample due to low EIS recoveries. (UJ, EISL)
- Recoveries of the EISS 13C2-6:2 FTS (161%), d3-NMeFOSA (14%), and d5-NEtFOSA (17%) were outside limits in the analysis of sample F-BIOC13_CTR01_20240910. Data limitations are summarized below.
  - WSP UJ qualified the non-detect NEtFOSA and NMeFOSA results from the associated sample due to low EIS recoveries. (UJ, EISL)
  - 6:2 FTS was not detected in the associated sample and data usability is not adversely affected by high EIS recovery.
- Recoveries of the EISs D3-MeFOSA and D5-EtFOSA were low at 15% and 16%, respectively, in the analysis of sample F-BIOC14_CTR01_20240910. WSP UJ qualified the non-detect NEtFOSA and NMeFOSA results from the associated sample due to low EIS recoveries. (UJ, EISL)
- Recovery of the EIS 13C2-PFDoDA was low at 12% in the analysis of sample F-BIOC15_LBT01_20240911. WSP UJ qualified the non-detect PFDoDA result from the associated sample due to low EIS recovery. (UJ, EISL)
- Recoveries of the EISs 13C2-8:2FTS and 13C5-perfluoropentanoic acid (PFPeA) were high at 255% and 178%, respectively, in the analysis of sample F-BIOB13_LBT01_20240910. 3-perfluoropropyl propanoic acid, 8:2 FTS, perfluoro-4-methoxybutanoic acid, perfluoro-3-methoxypropanoic acid, and PFPeA were not detected in the associated sample and data usability is not adversely affected by high EIS recoveries.

7.1.14 NON-EXTRACTED INTERNAL STANDARD ACCURACY

NIS recoveries were within the method-specified 50 to 200% limits, with the following exception:

- Recoveries of the NISs 13C2-PFHxA (43%), 13C4-perfluorooctanoic acid (13C4-PFOA [46%]), 13C5-perfluorononanoic acid (13C5-PFNA [43%]), and 13C4-PFOS (44%) were low in the analysis of sample F-BIOA12_CTR02_20240910. Data limitations are summarized below.
  - WSP UJ qualified the non-detect NEtFOSA and NMeFOSA results from the associated sample due to low NIS recoveries because the associated EIS recoveries were also low. (UJ, NISL)
  - Recoveries of the EISs associated with the remaining associated analytes were within limits in the associated sample and no data were qualified based on low NIS recoveries.
- Recoveries of the NISs 13C3-perfluorobutanoic acid (13C3-PFBA [37%]), 13C2-PFHxA (9%), 13C4-PFOA (11%), 13C5-PFNA (13%), 13C2-PFDA (16%), 18O2-perfluorohexanesulfonic acid (18O2-PFHxS [17%]), and 13C4-PFOS (23%) were low in the analysis of sample F-BIOA13_LBT01_20240910. Data limitations are summarized below.
  - WSP UJ qualified all non-detect results except for PFBA from the associated sample due to low NIS recoveries. (UJ, EISL)
  - Recoveries of the EISs associated with the remaining associated analytes were within limits in the associated sample and no data were qualified based on low NIS recoveries.
- Recoveries of the NISs 13C2-PFHxA (9%), 13C4-PFOA (11%), 13C5-PFNA (11%), 13C2-PFDA (18%), 18O2-PFHxS (17%), and 13C4-PFOS (21%) were low in the analysis of sample F-BIOA14_LBT01_20240911. WSP UJ qualified all non-detect results except for PFBA from the associated sample due to low NIS recoveries. (UJ, NISL)

- Recoveries of the NISs 13C2-PFHxA (43%), 13C4-PFOA (44%), 13C5-PFNA (40%), 13C2-PFDA (48%), 18O2-PFHxS (46%), and 13C4-PFOS (48%) were low in the analysis of sample F-BIOA15_CTR01_20240911. Data limitations are summarized below.
  - WSP UJ qualified the non-detect NEtFOSA and NMeFOSA results from the associated sample due to low NIS recoveries because the associated EIS recoveries were also low. (UJ, NISL)
  - The NEtFOSE result in the associated sample was previously rejected due to extremely low EIS recovery and the data was not further qualified based on low NIS recovery.
  - Recoveries of the EISs associated with the remaining associated analytes were within limits in the associated sample and no data were qualified based on low NIS recoveries.
- Recoveries of the NISs 13C2-PFHxA (46%), 13C4-PFOA (48%), 13C5-PFNA (42%), and 13C4-PFOS (47%) were low in the analysis of sample F-BIOA15_CTR02_20240911. Data limitations are summarized below.
  - WSP UJ qualified the non-detect NMeFOSA result from the associated sample due to low NIS recovery because the associated EIS recovery was also low. (UJ, NISL)
  - The NEtFOSE result in the associated sample was previously rejected due to extremely low EIS recovery and the data was not further qualified based on low NIS recovery.
  - Recoveries of the EISs associated with the remaining associated analytes were within limits in the associated sample and no data were qualified based on low NIS recoveries.
- Recoveries of the NISs 13C3-PFBA (43%), 13C2-PFHxA (8%), 13C4-PFOA (8%), 13C5-PFNA (10%), 13C2-PFDA (13%), 18O2-PFHxS (15%), and 13C4-PFOS (17%) were low in the analysis of sample F-BIOB13_LBT01_20240910. Data limitations are summarized below.
  - WSP UJ qualified all non-detect results except for PFBA from the associated sample due to low NIS recoveries. (UJ, NISL)
  - Recoveries of the EISs associated with the remaining associated analytes were within limits in the associated sample and no data were qualified based on low NIS recoveries.
- Recoveries of the NISs 13C5-PFNA and 13C4-PFOS were both low at 43% in the analysis of sample F-BIOC12_CTR01_20240910. Data limitations are summarized below.
  - WSP UJ qualified the non-detect NEtFOSE result from the associated sample due to low NIS recovery because the associated EIS recovery was also low. (UJ, NISL)
  - The NEtFOSA and NMeFOSA results in the associated sample were previously rejected due to extremely low EIS recoveries and the data was not further qualified based on low NIS recoveries.
  - Recoveries of the EISs associated with the remaining associated analytes were within limits in the associated sample and no data were qualified based on low NIS recoveries.
- Recoveries of the NISs 13C2-PFHxA (47%), 13C5-PFNA (38%), 13C2-PFDA (48%), 18O2-PFHxS (48%), and 13C4-PFOS (43%) were low in the analysis of sample F-BIOC13_CTR01_20240910. Data limitations are summarized below.
  - WSP UJ qualified the non-detect NEtFOSA and NMeFOSA results from the associated sample due to low NIS recovery because the associated EIS recoveries were also low. (UJ, NISL)
  - Recoveries of the EISs associated with the remaining associated analytes were within limits in the associated sample and no data were qualified based on low NIS recoveries.
- Recoveries of the NISs 13C2-PFHxA (49%), 13C5-PFNA (47%), and 13C4-PFOS (47%) were low in the analysis of samples F-BIOC14_CTR01_20240910. Data limitations are summarized below.
  - WSP UJ qualified the non-detect NEtFOSA and NMeFOSA results from the associated sample due to low NIS recovery because the associated EIS recoveries were also low. (UJ, NISL)

    - Recoveries of the EISs associated with the remaining associated analytes were within limits in the associated sample and no data were qualified based on low NIS recoveries.

- Recoveries of the NISs 13C2-PFHxA (9%), 13C4-PFOA (11%), 13C5-PFNA (13%), 13C2-PFDA (19%), 18O2-PFHxS (16%), and 13C4-PFOS (20%) were low in the analysis of sample F-BIOC15_LBT01_20240911. Data limitations are summarized below.
    - WSP UJ qualified all non-detect results except for PFBA from the associated sample due to low NIS recoveries. (UJ, NISL)
    - Recoveries of the EISs associated with the remaining associated analytes were within limits in the associated sample and no data were qualified based on low NIS recoveries.
- Recoveries of the NISs 13C5-PFNA and 13C4-PFOS were low at 49% and 47%, respectively, in the analysis of sample F-BIOCS01_CTR01_20240911. Data limitations are summarized below.
    - WSP UJ qualified the non-detect NEtFOSE and NMeFOSA results from the associated sample due to low NIS recovery because the associated EIS recoveries were also low. (UJ, NISL)
    - The NEtFOSA result in the associated sample was previously rejected due to extremely low EIS recovery and the data was not further qualified based on low NIS recovery.
    - Recoveries of the EISs associated with the remaining associated analytes were within limits in the associated sample and no data were qualified based on low NIS recoveries.
- Recoveries of the NISs 13C2-PFHxA and 13C5-PFNA were low at 48% and 44%, respectively, in the analysis of sample F-BIOA12_CTR01_20240910. Recoveries of the EISs associated with the remaining associated analytes were within limits in the associated sample and no data were qualified based on low NIS recoveries.

7.1.15 ION RATIOS

Batelle I qualified data when ion transition ratios were outside the QAPP-specified limits of 50 to 150% of the ion ratios measured in the midpoint calibration standard or daily CCV. WSP J qualified Batelle's I qualified results to indicate potential matrix interference or the presence of isomers in the sample with different ratios than present in the standard. (J, EMPC)

7.1.16 STAGE 4 VALIDATION

WSP did not perform Stage 4 validation on the samples reviewed in this report.

7.1.17 DATA REPORTING AND ANALYTICAL PROCEDURES

Batelle J qualified analytes with detected concentrations less than the LOQ. WSP agrees that these results are quantitatively uncertain and has maintained Batelle's J qualifiers. (J, TR)

8 FIELD DUPLICATE PRECISION

WSP did not collect field duplicates with the samples reviewed in this report.

9 SUMMARY AND CONCLUSIONS

WSP evaluated a total of 520 target analyte results from the field sample during this validation. Final validated results are presented in Table 2 and results qualified during validation are presented in Table 3 with applicable reason codes

Qualifier definitions are summarized in Section 4.0, reason codes are summarized in Section 5.0, and qualified data are summarized below.

- R: WSP R qualified and rejected 13 records (2.5%) due to extremely low EIS recoveries.
- J+: WSP J+ qualified one record (0.19%) due to high LCS recovery.
- J: WSP J qualified 22 records (4.2%) due to detected concentrations less than the LOQ or ion transition ratios outside of expected limits.
- UJ: WSP UJ qualified 177 records (34%) due to low EIS and/or NIS recoveries.

Data qualified during validation are summarized in Table 3.

1 INTRODUCTION

WSP USA Environment & Infrastructure Inc. (WSP) collected 15 aqueous samples, including one field duplicate and three equipment blanks, and 14 solid samples, including one field duplicate, between 8 and 23 May 2024 from the former Loring Air Force Base, located in Limestone, Maine. WSP submitted the sample to SGS North America Inc. (SGS), located in Orlando, Florida, where they were received on 14 and 25 May 2024. SGS assigned the samples to job numbers FC15635 and FC15948 and analyzed them for per- and polyfluoroalkyl substances (PFAS) using United States Environmental Protection Agency (EPA) Draft Method 1633.

The field sample identifications (IDs), sample collection dates, and laboratory sample IDs are presented in Table 1.

2 DATA VALIDATION METHODOLOGY

WSP performed DoD Stage 4 validation on a minimum of 10 percent (%) of the field samples reviewed in this report and Stage 2B validation on the remaining field sample data. The Stage 4 validation includes review of quality control (QC) results in the laboratory's analytical report and reported on QC summary forms and review of the raw analytical data and Stage 2B is the same as Stage 4 except it does not include review or validation of the raw analytical data. This data validation has been performed in general accordance with:

- WSP, 2024. Draft Quality Program Plan Addendum, Remedial Investigation, Per- and Polyfluoroalkyl Substances Response, Former Loring Air Force Base, Limestone Maine, April.
- Department of Defense (DoD), 2019. DoD General Data Validation Guidelines, September.
- DoD, 2021. DoD Department of Energy Consolidated Quality Systems Manual (QSM) for Environmental Laboratories Version 5.4, October.
- DoD, 2022. Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances Analysis by QSM Table B-24, October.
- EPA, 2023. 4th Draft EPA Method 1633, Analysis of PFAS in Aqueous, Solid, Biosolids, and Tissue Samples by Liquid Chromatography-Tandem Mass Spectrometry (LC-MS/MS), July.

The laboratory's certified analytical report and supporting documentation were reviewed to assess the following:

- Data package and electronic data deliverable completeness;
- Chain of custody (COC) compliance;
- Holding time compliance;
- Sample receipt condition;
- Mass Calibration;
- Initial calibration (ICAL), initial calibration verification (ICV), instrument sensitivity check (ISC), and continuing calibration verification (CCV) compliance with method specified criteria;
- Presence or absence of laboratory contamination as demonstrated by laboratory blanks;
- Accuracy and bias as demonstrated by recovery of laboratory control sample (LCS) and matrix spike (MS) samples;
- Extracted Internal Standard (EIS) and non-extracted internal standard (NIS) recoveries;
- Analytical precision as relative percent difference (RPD) of analyte concentration between laboratory duplicates, or MSs/MS duplicates (MSDs);
- Sampling and analytical precision as RPD of analyte concentration between field duplicates;

- Assessment of field contamination as demonstrated by field blanks; and
- Insofar as possible, the degree of conformance to method requirements and good laboratory practices.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

3 EXPLANATION OF DATA QUALITY INDICATORS

Summary explanation of the specific data quality indicators reviewed during data validation are presented below.

3.1 LABORATORY CONTROL SAMPLE RECOVERIES

LCSs are aliquots of analyte free matrices that are spiked with the analytes of interest for an analytical method, or a representative subset of those analytes. The spiked matrix is then processed through the same analytical procedures as the samples they accompany.

LCS recovery and precision are an indication of a laboratory's ability to successfully perform an analytical method in an interference free matrix.

3.2 MATRIX SPIKE RECOVERIES

MSs and MSDs are prepared by adding known amounts of the analytes of interest for an analytical method, or a representative subset of those analytes, to an aliquot of sample. The spiked sample is then processed through the same extraction, concentration, cleanup, and analytical procedures as the unspiked samples in an analytical batch.

MS recovery and precision are an indication of a laboratory's ability to successfully recover an analyte in the matrix of a specific sample or closely related sample matrices. It is important not to apply MS results for any specific sample to other samples without understanding how the sample matrices are related.

3.3 BLANK CONCENTRATIONS

Blank samples are aliquots of analyte free matrix that are used as negative controls to verify that the sample collection, storage, preparation, and analysis system does not produce false positive results.

Equipment blanks are aliquots of analyte free water that are used to rinse sample collection equipment after decontamination. Equipment blanks assess contamination attributed to insufficient equipment decontamination procedures.

Laboratory blanks are processed by the laboratory using the same procedures as the field samples. Target analytes should not be found in laboratory blanks.

3.4 LABORATORY AND FIELD DUPLICATES

Laboratory and field duplicate analyses verify acceptable method precision by the laboratory at the time of preparation and analysis and/or sampling precision at the time of collection.

4 DEFINITIONS OF QUALIFIERS THAT MAY BE ADDED DURING DATA VALIDATION

J	The reported result was an estimated value.
J+	The reported result was an estimated value with a positive bias.
J-	The reported result was an estimated value with a negative bias.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting quality control criteria. The analyte may or may not be present in the sample.
U	The analyte was not detected and was reported as less than the limit of detection (LOD). The LOD has been adjusted for any dilution or concentration of the sample.
UJ	The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

5 QUALIFICATION REASON CODES

The following reason codes were applied to the data during data validation:

CVHL	High CCV recovery.
EBL	A target analyte was detected in the associated equipment blank at a concentrations less than the limit of quantitation (LOQ).
EISH	High EIS recovery.
IAG	Ion abundance ratio is outside of limits.
IVD	ICV recovery is outside of limits.
MSL	Low MS recovery. Result may be biased low.
TR	The detected analyte concentration is less than the LOQ.

6 CHAIN OF CUSTODY AND SAMPLE RECEIPT CONDITION DOCUMENTATION

The samples were received at the laboratory under proper COC, intact, and at average temperatures less than the method-specified maximum of 6 degrees Celsius.

7 SPECIFIC DATA VALIDATION FINDINGS

Results from the samples reviewed in this report may be considered usable with the limitations and exceptions described in Sections 7.1 through 8.0.

7.1 PFAS BY EPA DRAFT METHOD 1633

PFAS results generated by SGS may be considered usable with the limitations described in Sections 7.1.1 through 7.1.16.

7.1.1 HOLDING TIMES

The samples were extracted within the method-specified maximum holding time of 28 days from sample collection and the extracts were analyzed within the method-specified maximum hold time of 90 days from extraction.

7.1.2 MASS CALIBRATION FREQUENCY

Mass calibration verifications were performed before the ICALs associated with the analysis of the samples reviewed in this report.

7.1.3 INITIAL CALIBRATION COMPLIANCE

Relative standard deviations between response factors for each target analyte were less than or equal to the method-specified maximum of 20% and/or relative standard errors were less than the method-specified maximum of 20% for all target analytes and EISs.

7.1.4 INITIAL CALIBRATION VERIFICATION ACCURACY

ICVs were analyzed after each initial calibration. Recoveries of target analytes were between 70 and 130%, with the following exceptions:

- N-Ethyl perfluorooctanesulfonamide (NEtFOSA) recovery was low at 67.3% in the mid-level ICV associated with the analysis of samples in SGS report FC15635. WSP UJ qualified the non-detected NEtFOSA results from samples F-GWA02_20240508, F-GWC04_20240508, F-GWPB01_20240510, F-HSA0200-01_20240508, F-HSC04_00-01_20240508, F-HSC05_00-10_20240508, and F-HSPB01_00-01_20240510 because of the low ICV recovery. (UJ, IVD)

- N-Methyl perfluorooctanesulfonamidoethanol (NMeFOSE) and N-ethyl perfluorooctanesulfonamidoethanol (NEtFOSE) recoveries were high at 139% and 144%, respectively, in the mid-level ICV associated with samples F-GWA02-01_20240521, F-GWA02-02_20240521, F-GWC03_20240521, and F-SWSC01_20240523. Following the DoD data validation guidelines, WSP UJ qualified the NEtFOSE and NMeFOSE results from the associated samples because of the high ICV recoveries. (UJ, IVD)
- NMeFOSE and NEtFOSE recoveries were high at 151% and 156%, respectively, in the mid-level ICV associated with samples F-GWA07_20240522, F-GWB01_20240522, F-GWC09_20240523, and F-GWDUP01_20240522. Following DoD data validation guidelines, WSP UJ qualified the NEtFOSE and NMeFOSE results from the associated samples because of the high ICV recoveries. (UJ, IVD)

7.1.5 INSTRUMENT SENSITIVITY CHECK COMPLIANCE

ISCs were analyzed at the beginning of each analytical sequence, concentrations were equivalent to the LOQ, signal to noise ratios were greater than or equal to 3:1, and recoveries were within the method-specified 70 to 130% limits.

7.1.6 CONTINUING CALIBRATION VERIFICATION COMPLIANCE

CCVs were analyzed at the beginning of the analytical sequence after the ISC, after every ten or fewer samples, and at the end of the analytical sequence. Target analyte recoveries were within the method-specified 70 to 130% limits, with the following exceptions:

- N-Methyl perfluorooctanesulfonamide (NMeFOSA) recovery was high at 133% in a CCV associated with the analysis of samples F-GWA02-01_20240521, F-HSA02-01_00-01_20240521, F-HSB01_00-01_20240522, F-HSDUP01_00-01_20240522, F-HSB08_00-01_20240522, and F-SWSC01_20240523. Per the DoD data validation guidelines, WSP UJ qualified the non-detected NMeFOSA results from the associated samples because of the high CCV recovery. (UJ, CVHL)
- NMeFOSA recovery was high at 144% in a CCV associated with the analysis of samples F-SWSC01_20240523, F-GWC03_20240521, and F-HSC03_00-01_20240521. Per the DoD data validation guidelines, WSP UJ qualified the non-detected NMeFOSA results from the associated samples because of the high CCV recovery. (UJ, CVHL)

7.1.7 BILE SALT INTERFERENCE CHECKS

Bile salt interference checks were analyzed daily and retention times for the bile salts were at least one minute outside the retention times for linear or branched perfluorooctanesulfonic acid.

7.1.8 LABORATORY AND EQUIPMENT BLANK DETECTIONS

Target analytes were not detected in the laboratory blanks or equipment blanks associated with the sample reviewed in this report, with the following exceptions:

- NEtFOSA was detected in two instrument blanks associated with the water samples at concentrations of 0.0012 and 0.0011 nanograms per liter (ng/L). NEtFOSA was not detected in the associated samples and data usability is not adversely affected by the instrument blank detections.
- NEtFOSA was detected in two instrument blanks associated with the soil sample analyses at concentrations of 0.12 and 0.10 milligrams per kilogram. NEtFOSA was not detected in the associated samples and data usability is not adversely affected by the instrument blank detections.
- Perfluorooctanoic acid (PFOA) and perfluorooctanesulfonamide (PFOSA) were detected at concentrations of 0.47 and 1.7 ng/L, respectively, in equipment blank LORNG_EB016_05222024, associated with samples F-GWA02-01_20240521, F-GWA02-02_20240521, F-GWC03_20240521, F-GWC06_20240521, F-HSA02-01_00-01_20240521, F-HSA02-02_00-01_20240521, F-HSC03_00-01_20240521, and F-HSC06_00-01_20240521. Data limitations are summarized below.

- WSP U qualified the detected PFOA result from sample F-GWA02-01_20240521 at the detected concentration of 1.1 ng/L because the concentration detected in the sample was greater than the LOD but less than the LOQ. (U, EBL)
- WSP U qualified the PFOSA detections in samples F-GWA02-01_20240521 and F-GWC06_20240521 at their respective LODs of 1.9 ng/L and 2.0 ng/L because the concentrations detected in the samples were less than the LODs. (U, EBL)
- WSP J+ qualified the detected PFOSA result from sample F-GWC03_20240521 because the concentration detected in the sample was greater than both the LOQ and two times the concentration detected in the blank, and less than five times the concentration detected in the blank. (J+, EBL)
- WSP U qualified the PFOSA detection in samples F-HSC03_00-01_20240521 and F-HSC06_00-01_20240521 at their respective LODs of 0.00095 milligrams per kilogram (mg/kg) and 0.00077 mg/kg because the concentrations detected in the samples were less than the LOD. (U, EBL)
- The remaining associated PFOA and PFOSA results either were not detections, or the detected concentrations were greater than both the LOQ and five times the concentrations detected in the blank and data usability is not adversely affected by the blank detections.

7.1.9 LABORATORY CONTROL SAMPLE ACCURACY

LLCS and LCS were included with each extraction batch, LLCS spike concentrations were twice the LOQ. The LCS and LLCS recoveries were within the QAPP-specified 40 to 150% interim limits, with the following exceptions.

- The NEtFOSA and NEtFOSE recovery values in the water LCS associated with analysis of samples F-GWA02-01_20240521, F-GWA02-02_20240521, F-GWA07_20240522, F-GWB01_20240522, F-GWDUP01_20240522, F-GWC03_20240521, F-GWC06_20240521, and F-GWC09_20240523 are above criteria at 165% and 151%, respectively. Neither NEtFOSA nor NEtFOSE were detected in the associated samples and data usability is not adversely affected by the potential high analytical bias.
- The NEtFOSA recovery values in the water LLCS associated with analysis of samples F-GWA02-01_20240521, F-GWA02-02_20240521, F-GWA07_20240522, F-GWB01_20240522, F-GWDUP01_20240522, F-GWC03_20240521, F-GWC06_20240521, and F-GWC09_20240523 is above criteria at 159%. NEtFOSA was detected in the associated samples and data usability is not adversely affected by the potential high analytical bias.

7.1.10 MATRIX SPIKE ACCURACY AND PRECISION

SGS performed MS and/or MSD analyses on samples F-GWC09_20240523 and F-HSC09_00-01_20240523. Recoveries were within the QAPP-specified 40 to 150% interim limits and RPDs between MS and MSD results were less than 30%, with the following exceptions:

- The NEtFOSA and NEtFOSE MS and MSD recovery values are above criteria with values ranges from 151 to 182% in the spiked analyses of sample F-GWC09_20240523. Data qualifiers are not required because the bias is high and neither NEtFOSA nor NEtFOSE were detected in the unspiked sample.
- The perfluorododecanesulfonic acid (PFDoS) MS and MSD recovery values are below criteria at 34 and 35% in the spiked analyses of sample F-GWC09_20240523. WSP UJ qualified the undetected PFDoS result from sample F- GWC09_20240523 because of the low MS and MSD recoveries. (UJ, MSL)

7.1.11 LABORATORY DUPLICATE PRECISION

SGS performed MSD analyses on samples F-GWC09_20240523 and F-HSC09_00-01_20240523. Precision between duplicate analyses was acceptable, with RPDs less than 30% or differences between analyte concentrations less than the LOQ.

7.1.12 EXTRACTED INTERNAL STANDARD ACCURACY

EIS recoveries in the field samples were within the QAPP-specified limits of 20 to 150%, with the following exceptions:

- Recovery values of the EISs $^{13}C_2$-4:2-fluorotelomersulfonic acid (FTS) and $^{13}C_2$-6:2-FTS were above criteria in the undiluted analyses of samples F-GWC04_20240508, F-GWA02_01_20240521, F-SWSC01_20240523, F-GWA07_20240522, F-GWB01_20240522, F-GWC09_202423, and F-GWDUP01_20240522 with values ranging from 153 to 355%. Data quality is not affected, and data qualifiers are not required because the recoveries are high and neither 4:2-FTS nor 6:2-FTS were detected in the affected samples.
- Recovery values of the EISs $^{13}C_2$-4:2-FTS, $^{13}C_2$-6:2-FTS, and $^{13}C_2$-8:2-FTS were above criteria for samples F-HSC04_00-01_20240508 and F-HSA07_20240522 with values ranging from 155 to 289%. Data quality is not affected, and data qualifiers are not required because the recoveries are high and 4:2-FTS, 6:2-FTS, and 8:2-FTS were detected in samples F-HSC04_00-01_20240508 or F-HSA07_20240522.
- Recovery values of the EISs $^{13}C_2$-4:2-FTS, $^{13}C_2$-6:2-FTS, and $^{13}C_2$-8:2-FTS were above criteria with values ranging from 153 to 298% in the undiluted analyses of sample F-GWC03_20240521. Data quality is not affected, and data qualifiers are not required because the recoveries are high and neither 4:2 FTS nor 6:2 FTS were detected in sample F-GWC03_20240521.
- The $^{13}C_2$-4:2-FTS recovery value is above criteria in the undiluted analyses of samples F-GWC06_20240521 at 239%. Data quality is not affected, and data qualifiers are not required because the recovery is high and 4:2-FTS was not detected in sample F-GWC06_20240521.
- Recoveries of the EIS d_3-MeFOSA and d_5-EtFOSA were below criteria at 17 and 13% in the original analysis of sample F-HSDUP01-00-01_20250522 and the $^{13}C_2$-4:2-FTS recovery is low at 19% in the reanalysis of sample F-HSDUP01_00-01_20250522. Data quality is not affected, and data qualifiers are not required because the analytes associated with the low EIS recoveries were reported from the analysis with acceptable EIS recovery.

7.1.13 NON-EXTRACTED INTERNAL STANDARD ACCURACY

NIS recoveries were within the method-specified 50 to 200% limits.

7.1.14 ION RATIOS

Ratios between primary and confirmation ions were within the QAPP-specified limits of 50 to 150% of the ion ratios measured in the midpoint calibration standard or daily CCV.

7.1.15 STAGE 4 VALIDATION

WSP perform Stage 4 validation on the samples in SGS laboratory report FC15635. The sample results were correctly calculated including mass or volume extracted, percent solids, and any dilution factors.

7.1.16 DATA REPORTING AND ANALYTICAL PROCEDURES

SGS J qualified analytes with detected concentrations less than the LOQ. WSP agrees that these results are quantitatively uncertain and has maintained SGS' J qualifiers. (J, TR)

Data from the aqueous field sample are reported in ng/L, while QC results are reported in micrograms per liter. Spiked concentrations are correct and WSP did not qualify any data based on the unit mismatch.

8 FIELD DUPLICATE PRECISION

WSP collected field duplicates with samples F-GWB01_20240522 and F-HSB01_00-01_20240522. RPD values between primary and field duplicate results were less than the QAPP-specified maximum of 30% or differences between primary and duplicate results were less than the LOQ, indicating acceptable sampling and analytical precision. Results from the primary samples and their field duplicate are presented in Table 4.

9 SUMMARY AND CONCLUSIONS

WSP evaluated a total of 1,040 data records from the field sample during this validation. Validated analytical results are presented in Table 2.

Qualifier definitions are summarized in Section 4.0, reason codes are summarized in Section 5.0, and qualified data are summarized below.

- J: WSP J qualified 119 records (11%) because of detected concentrations less than the LOQ.
- J+: WSP J+ qualified 1 record (0.096%) because of a detection in an associated equipment blank.
- U: WSO U qualified 5 records (0.48%) because if detections in an associated equipment blank.
- UJ: WSP UJ qualified 32 records (1.1%) because of ICV or CCV recoveries outside of limits or low MS/MSD recoveries.

Data qualified during validation are summarized in Table 3.

1 INTRODUCTION

WSP USA Environment & Infrastructure Inc. (WSP) collected 109 aqueous samples, including 8 field duplicates and 11 equipment blanks, between 10 May and 25 June 2024 from the former Loring Air Force Base, located in Limestone, Maine. WSP submitted the sample to SGS North America Inc. (SGS), located in Orlando, Florida, where they were received on 17 May, 14 June, and 28 June 2024. SGS assigned the samples to job numbers FC15756, FC16453, and FC16855 and analyzed them for per- and polyfluoroalkyl substances (PFAS) using United States Environmental Protection Agency (EPA) Draft Method 1633. WSP also submitted three samples to Bureau Veritas Canada, located in Mississauga, Ontario, Canada. The samples were received by the laboratory on 17 May 2024, assigned to job number C4E8929, and analyzed for PFAS using EPA Draft Method 1633.

The field sample identifications (IDs), sample collection dates, and laboratory sample IDs are presented in Table 1.

2 DATA VALIDATION METHODOLOGY

WSP performed DoD Stage 2B validation on 100 percent (%) of SGS' data for the samples reviewed in this report. The Stage 2B validation includes review of quality control (QC) results in the laboratory's analytical report and reported on QC summary forms. Stage 2B validation does not include review or validation of the raw analytical data. This data validation has been performed in general accordance with:

- WSP, 2024. Draft Quality Program Plan Addendum, Remedial Investigation, Per- and Polyfluoroalkyl Substances Response, Former Loring Air Force Base, Limestone Maine, April.
- Department of Defense (DoD), 2019. DoD General Data Validation Guidelines, September.
- DoD, 2021. DoD Department of Energy Consolidated Quality Systems Manual (QSM) for Environmental Laboratories Version 5.4, October.
- DoD, 2022. Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances Analysis by QSM Table B-24, October.
- EPA, 2023. 4th Draft EPA Method 1633, Analysis of PFAS in Aqueous, Solid, Biosolids, and Tissue Samples by Liquid Chromatography-Tandem Mass Spectrometry (LC-MS/MS), July.

The laboratory's certified analytical report and supporting documentation were reviewed to assess the following:

- Data package and electronic data deliverable completeness;
- Chain of custody (COC) compliance;
- Holding time compliance;
- Sample receipt condition;
- Mass Calibration;
- Initial calibration (ICAL), initial calibration verification (ICV), instrument sensitivity check (ISC), and continuing calibration verification (CCV) compliance with method specified criteria;
- Signal to noise ratios for the ICS;
- Bile salt interference check;
- Presence or absence of laboratory contamination as demonstrated by laboratory blanks;
- Accuracy and bias as demonstrated by PFAS recovery in laboratory control sample (LCS) and matrix spike (MS) samples;
- Extracted Internal Standard (EIS) and non-extracted internal standard (NIS) recoveries;

- Analytical precision as relative percent difference (RPD) of analyte concentration between laboratory duplicates, or MS/MS duplicates (MSDs);
- Sampling and analytical precision as RPD of analyte concentration between field duplicates;
- Assessment of field contamination as demonstrated by field blanks; and
- Insofar as possible, the degree of conformance to method requirements and good laboratory practices.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

3 EXPLANATION OF DATA QUALITY INDICATORS

Summary explanation of the specific data quality indicators reviewed during data validation are presented below.

3.1 LABORATORY CONTROL SAMPLE RECOVERIES

LCSs are aliquots of analyte free matrices that are spiked with the analytes of interest for an analytical method, or a representative subset of those analytes. The spiked matrix is then processed through the same analytical procedures as the samples they accompany.

LCS recovery and precision are an indication of a laboratory's ability to successfully perform an analytical method in an interference free matrix.

3.2 MATRIX SPIKE RECOVERIES

MSs and MSDs are prepared by adding known amounts of the analytes of interest for an analytical method, or a representative subset of those analytes, to an aliquot of sample. The spiked sample is then processed through the same extraction, concentration, cleanup, and analytical procedures as the unspiked samples in an analytical batch.

MS recovery and precision are an indication of a laboratory's ability to successfully recover an analyte in the matrix of a specific sample or closely related sample matrices. It is important not to apply MS results for any specific sample to other samples without understanding how the sample matrices are related.

3.3 BLANK CONCENTRATIONS

Blank samples are aliquots of analyte free matrix that are used as negative controls to verify that the sample collection, storage, preparation, and analysis system does not produce false positive results.

Equipment blanks are aliquots of analyte free water that are used to rinse sample collection equipment after decontamination. Equipment blanks assess contamination attributed to insufficient equipment decontamination procedures.

Laboratory blanks are processed by the laboratory using the same procedures as the field samples. Target analytes should not be found in laboratory blanks.

3.4 LABORATORY AND FIELD DUPLICATES

Laboratory and field duplicate analyses verify acceptable method precision by the laboratory at the time of preparation and analysis and/or sampling precision at the time of collection.

3.5 INTERLABORATORY SPLIT SAMPLES

Interlaboratory split samples are co-located samples that are sent to both the primary laboratory and to a secondary laboratory to confirm analytical precision between the two laboratories' results and comparability of results produced by the primary laboratory. Data from the split laboratory were not validated and no data are qualified based on interlaboratory split results. Results from the primary and split analyses are provided for comparative purposes only.

4 DEFINITIONS OF QUALIFIERS THAT MAY BE ADDED DURING DATA VALIDATION

J	The reported result was an estimated value.
J+	The reported result was an estimated value with a positive bias.
J-	The reported result was an estimated value with a negative bias.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting quality control criteria. The analyte may or may not be present in the sample.
U	The analyte was not detected and was reported as less than the limit of detection (LOD). The LOD has been adjusted for any dilution or concentration of the sample.
UJ	The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

5 QUALIFICATION REASON CODES

The following reason codes were applied to the data during data validation:

CVHL	High CCV recovery.
EISH	High EIS recovery.
IAG	Ion abundance ratio is outside of limits.
IVD	ICV recovery is outside of limits.
MSL	Low MS recovery. Result may be biased low.
TR	The detected analyte concentration is less than the LOQ.

6 CHAIN OF CUSTODY AND SAMPLE RECEIPT CONDITION DOCUMENTATION

The samples were received at the laboratory under proper COC, intact, and at average temperatures less than the method-specified maximum of 6 degrees Celsius.

7 SPECIFIC DATA VALIDATION FINDINGS

Results from the samples reviewed in this report are considered usable with the limitations and exceptions described in Sections 7.1 through 8.0. Final validated results are summarized on Table 2. Results qualified during validation are summarized on Table 3 with applicable reason codes.

7.1 PFAS BY EPA DRAFT METHOD 1633

PFAS results generated by Eurofins may be considered usable with the limitations described in Sections 7.1.1 through 7.1.14.

7.1.1 HOLDING TIMES

The samples were extracted within the method-specified maximum holding time of 28 days from sample collection and the extracts were analyzed within the method-specified maximum hold time of 90 days from extraction.

7.1.2 MASS CALIBRATION FREQUENCY

Mass calibration verifications were performed before the ICALs associated with the analysis of the samples reviewed in this report.

7.1.3 INITIAL CALIBRATION COMPLIANCE

Relative standard deviations between response factors for each target analyte were less than or equal to the method-specified maximum of 20% and/or relative standard errors were less than the method-specified maximum of 20% for all target analytes and EISs.

7.1.4 INITIAL CALIBRATION VERIFICATION ACCURACY

ICVs were analyzed after each initial calibration. Recoveries were between 70 and 130%, with the following exceptions:

SDG FC15756

- N-Ethyl perfluorooctanesulfonamide (NEtFOSA) recovery was low at 67.3% in the mid-level ICV associated with the analysis of samples LORNG_JBW7347B_05132024, LORNG_JBW7347B_05132024FD,

LORNG_JBW8009_05102024, and LORNG_JMW3501_05132024. WSP UJ qualified the non-detected NEtFOSA results from the associated samples because if the low ICV recovery. (UJ, IVD)

- NEtFOSA recovery was low at 60% in the mid-level ICV associated with the analysis of samples LORNG_BW05008_05142024, LORNG_BW05011D_05142024, LORNG_BW05011S_05152024, LORNG_BW10007_05152024, LORNG_EBGB_BW002_05132024, LORNG_GC_BW002D_05152024, LORNG_JBW7203B_05102024, LORNG_JBW7326A_05142024, LORNG_JBW7326B_05142024, LORNG_JBW7345B_05152024, LORNG_JBW7614_05152024, LORNG_JMW-0416B_05132024, LORNG_JMW-0505_05132024, LORNG_JMW-0602_05152024, LORNG_JMW-0602_05152024FD, LORNG_JMW-0603_05142024, LORNG_JMW0682_05152024, LORNG_JMW-0806_05142024, LORNG_JMW0982_05132024, LORNG_JMW0982_05132024FD, LORNG_JMW1762_05152024, LORNG_JMW3601_05152024, LORNG_JMW6001_05142024, LORNG_JMW6001_05142024FD, LORNG_LF2MW2_05152024, LORNG_MMW0009_05132024, LORNG_MMW0132_05142024, LORNG_MMW0422_05132024, LORNG_NP_OW001_05152024, LORNG_OW02002_05142024, LORNG_OW10007_05152024, LORNG_OW20001_05102024, LORNG_OW20003_05152024, LORNG_OW20004_05102024, LORNG_OW20004_05102024FD, LORNG_OW20005_05102024, LORNG_OW24001_05152024, LORNG_UNK-036_05142024, LORNG_USMW013_05142024, and LORNG_USMW019_05152024. WSP UJ qualified the non-detected NEtFOSA results from the associated samples because of the low ICV recovery. (UJ, IVD)

SDG FC16855

- N-Methyl perfluorooctanesulfonamide (NMeFOSA) recovery was high at 132% in the mid-level ICV associated with the analysis of samples LORNG_LYS01007D_06192024 (1:10 dilution) and LORNG_USMW012_06182024. Data limitations are summarized below.
  - Per the DoD data validation guidelines, WSP UJ qualified the non-detected NMeFOSA result from sample LORNG_USMW012_06182024 because of the high ICV recovery. (UJ, IVD)
  - NMeFOSA was not reported from the 1:10 dilution analysis of sample LORNG_LYS01007D_06192024 and WSP did not qualify the NMeFOSA result due to the high ICV recovery.
- NEtFOSA recovery was low at 61% in the mid-level ICV associated with the analysis of the 1:10 dilution of sample LORNG_GC_BW002D_05152024. NEtFOSA was not reported from the associated analysis and data usability is not adversely affected by the low ICV recovery.
- N-Methyl perfluorooctanesulfonamidoethanol (NMeFOSE) and N-ethyl perfluorooctanesulfonamidoethanol (NEtFOSE) recoveries were high at 144% and 139%, respectively, in the mid-level ICV associated with the analysis of equipment blank LORNG_EB014_05152024. Equipment blanks were not qualified based on the high ICV recoveries.
- NMeFOSA (132%), NMeFOSE (152%), and NEtFOSE (161%) recoveries were high in the mid-level ICV associated with the analysis of equipment blanks LORNG_EB009_05142024 and LORNG_EB011_05142024 and the confirmation analysis of sample LORNG_EBGB_BW002_05132024. Equipment blanks resuls were not qualified based on the high ICV recoveries.

7.1.5 INSTRUMENT SENSITIVITY CHECK COMPLIANCE

ISCs were analyzed at the beginning of each analytical run, concentrations were equivalent to the LOQ, signal to noise ratios were greater than or equal to 3:1, and recoveries were within the method-specified 70 to 130% limits.

7.1.6 CONTINUING CALIBRATION VERIFICATION COMPLIANCE

CCVs were analyzed at the beginning of the analytical sequence after the ISC, after every ten or fewer samples, and at the end of the analytical sequence. Recoveries were within the method-specified 70 to 130% limits, with the following exceptions:

- N-Ethyl perfluorooctanesulfonamidoacetic acid (NEtFOSAA) recovery was high at 135% in a CCV associated with the analysis of sample LORNG_JMW3501_05132024. Per the DoD data validation guidelines, WSP UJ qualified the non-detected NEtFOSAA result from the associated sample because of the high CCV recovery. (UJ, CVHL)
- 3-Perfluoroheptyl propanoic acid (7:3 FTCA) recovery was high at 132% in a CCV associated with the 1:10 dilution analyses of samples LORNG_LYS07007D_06192024, LORNG_LYS07007DDUP_06192024, and LORNG_MMW8015_06182024. 7:3 FTCA was not reported from the associated analyses and data usability is not adversely affected by the high CCV recovery.

7.1.7 BILE SALT INTERFERENCE CHECKS

Bile salt interference checks were analyzed daily and retention times for the bile salts were at least one minute outside the retention times for linear or branched perfluorooctanesulfonic acid (PFOS).

7.1.8 LABORATORY AND EQUIPMENT BLANK DETECTIONS

Target analytes were not detected in the laboratory blanks associated with the sample reviewed in this report, with the following exceptions:

- Perfluorooctanoic acid (PFOA) was detected at a concentration of 1.1 nanograms per liter (ng/L) in equipment blank LORNG_EB009_05142024, associated with sample LORNG_BW05011D_05142024. Target analytes were not detected in sample LORNG_BW05011D_05142024 and data usability is not adversely affected by the blank detection.
- PFOS was detected at a concentration of 2.4 ng/L in equipment blank LORNG_EB011_05142024, associated with samples LORNG_JMW-0806_05142024 and LORNG_OW02002_05142024. The PFOS concentrations detected in the associated samples were greater than five times the concentration detected in the blank and data usability is not adversely affected by the blank detection.
- PFOS was detected at a concentration of 0.83 ng/L in equipment blank LORNG_EB025_06122024, associated with sample LORNG_JMW0301C_06122024. The PFOS concentration detected in the associated sample was greater than five times the concentration detected in the blank and data usability is not adversely affected by the blank detection.
- NEtFOSA was detected at concentrations of 0.0010 micrograms per liter (µg/L) in the instrument blank associated with the re-extraction analysis of sample LORNG_BW06006_06112024HS. NEtFOSA was not reported from the associated analysis and data usability is not adversely affected by the blank detection.
- NEtFOSA was detected at concentrations of 0.0011 µg/L in the instrument blank analyzed immediately after the ICAL and before the ICV, but not directly associated with any project samples. Based on professional judgement, WSP did not qualify any data based on the blank detection.
- NEtFOSA was detected at a concentration of 0.0012 µg/L in the instrument blank associated with the analysis of sample LORNG_OW20004_05102024. NEtFOSA was not detected in the associated sample and data usability is not adversely affected by the blank detection.
- NEtFOSA was detected at a concentration of 0.0013 µg/L in instrument blanks associated with the analysis of samples LORNG_AA07MW-01_06112024, LORNG_BW05007_06102024, LORNG_BW07003_06112024, LORNG_JBW7345B_05152024, LORNG_JBW7614_05152024, LORNG_JMW-0602_05152024FD, LORNG_JMW0682_05152024, LORNG_JMW3601_05152024, LORNG_LF2MW2_05152024, LORNG_OW01004_06102024, LORNG_OW07003_06112024, LORNG_OW20001_05102024, LORNG_OW20003_05152024, LORNG_OW24001_05152024, LORNG_RFW1145_35_06112024, LORNG_RFW1145_75_06112024, and LORNG_USMW019_05152024. NEtFOSA was not detected in the associated samples and data usability is not adversely affected by the blank detection.
- NEtFOSA was detected at a concentration of 0.0014 µg/L in an instrument blank associated with the analysis of samples LORNG_AA07MW-01_06112024 (1:10 dilution), LORNG_BW01007_06102024,

LORNG_BW07003_06112024 (1:10 dilution), LORNG_OW01004_06102024 (1:5 dilution), LORNG_OW07003_06112024 (1:10 dilution), LORNG_RFW1145_35_06112024 (1:10 dilution), and LORNG_RFW1145_75_06112024 (1:5 dilution). NEtFOSA either was not reported from the associated analyses or was not detected in the associated sample. Data usability is not adversely affected by the blank detection.

- NEtFOSA was detected at a concentration of 0.0017 µg/L in an equipment blank associated with the analysis of samples LORNG_AA07MW-02_06252024 (1:5 dilution), LORNG_AA07MW-02_06252024FD (1:5 dilution), LORNG_BW06006_06132024 (1:2 dilution), LORNG_JBW8003B_06182024 (1:5 dilution), LORNG_LYS01007S_06192024 (1:10 dilution), LORNG_LYS05012D_06192024 (1:10 dilution), LORNG_LYS07007D_06192024 (1:10 dilution), LORNG_LYS07007DDUP_06192024 (1:10 dilution), LORNG_LYS07007S_06192024 (1:10 dilution), LORNG_LYS07007SDUP_06192024 (1:10 dilution), LORNG_MMW8015_06182024 (1:10 dilution), LORNG_OW01002_06142024 (1:2 dilution), LORNG_SB/OW12001_06142024 (1:5 dilution), and LORNG_USMW021_06142024. NEtFOSA either was not reported from the associated analyses or was not detected in the associated samples and data usability is not adversely affected by the blank detection.
- NEtFOSA was detected at a concentration of 0.0018 µg/L in an instrument blank associated with the analysis of samples LORNG_LYS01007D_06192024 (1:10 dilution) and LORNG_USMW012_06182024. NEtFOSA either was not reported from the associated analysis or was not detected in the associated sample and data usability is not adversely affected by the blank detection.
- NEtFOSA was detected at a concentration of 0.0021 µg/L in an instrument blank associated with the analysis of samples LORNG_AA07MW-02_06252024, LORNG_AA07MW-02_06252024FD, LORNG_BSMW3S_06182024, LORNG_BW06006_06132024, LORNG_FMW3410_06132024, LORNG_JBW7338B_06212024, LORNG_JBW7339A_06132024, LORNG_JBW7339B_06132024, LORNG_JBW8003B_06182024, LORNG_JEBS-4_06212024, LORNG_JMW0010_06132024, LORNG_JMW2680_06122024, LORNG_JPZ7601_06132024, LORNG_JPZ7602_06132024, LORNG_LORNG-UNK-026_06122024, LORNG_LYS01007D_06192024, LORNG_LYS07007DDUP_06192024, LORNG_LYS01007S_06192024, LORNG_LYS05012D_06192024, LORNG_LYS05012S_06192024, LORNG_LYS07007D_06192024, LORNG_LYS07007S_06192024, LORNG_LYS07007SDUP_06192024, LORNG_MMW0531_06132024, LORNG_MMW8015_06182024, LORNG_OW01002_06142024, LORNG_OW07001_06242024, and LORNG_SB/OW12001_06142024. NEtFOSA was not detected in the associated samples and data usability is not adversely affected by the blank detection.
- NEtFOSA was detected at a concentration of 0.0027 µg/L in an instrument blank associated with the analysis of samples LORNG_LYS07007D_06192024 (undiluted and 1:10 dilution), LORNG_LYS07007DDUP_06192024 (1:10 dilution), and LORNG_OW07001_06242024. NEtFOSA either was not reported from the associated analyses or was not detected in the associated samples and data usability is not adversely affected by the blank detection.

7.1.9 LABORATORY CONTROL SAMPLE ACCURACY

LLCS and LCS were included with each extraction batch, LLCS spike concentrations were twice the LOQ, and LCS and LLCS recoveries were within the QAPP-specified 40 to 150% interim limits.

7.1.10 MATRIX SPIKE ACCURACY AND PRECISION

SGS performed MS and/or MSD analyses on samples LORNG_BW01007_06102024, LORNG_BW05008_05142024, LORNG_BSMW3S_06182024, LORNG_JBW7203B_05102024, LORNG_JBW7347B_05132024, LORNG_JBW8003B_06182024, LORNG_JMW8011_06112024, and LORNG_OW20004_05102024FD. Recoveries were within the QAPP-specified 40 to 150% interim limits and RPDs between MS and MSD results were less than 30%, with the following exceptions:

- Perfluorohexanoic acid (PFHxA [235%, 162%]), PFOA (317%, MS), perfluoropentanesulfonic acid (PFPeS [10%, -11%]), PFHxS (-631%, -1,326%), and PFOS (-1,154%, -1,001%) recoveries were outside of limits in the MS and/or MSD performed on sample LORNG_JMW8011_06112024. Additionally, the RPD between MS and MSD results for NEtFOSAA was high at 32%. Data limitations are summarized below.

- The PFPeS result from sample LORNG_JMW8011_06112024 was qualified J- because of the low MS recoveries with reason code MSL.
- The PFHxA (0.392 µg/L), PFOA (0.318 µg/L), PFHxS (2.04 µg/L), and PFOS (2.26 µg/L) concentrations detected in the unspiked native sample were more than three times the spike concentrations of 0.0225 µg/L to 0.0248 µg/L and it is not possible to assess data usability for these analytes in this sample based on the MS recoveries.
- NEtFOSAA was not detected in the unspiked native sample and data usability is not adversely affected by the potential analytical imprecision.

– PFHxA (38%, MSD), PFOA (170%, MSD), perfluorohexanesulfonic acid (PFHxS [380%, 306%]), and PFOS (594%, 352%) recoveries were outside of limits in the MS and/or MSD performed on sample LORNG_JBW8003B_06182024. Additionally, RPDs between MS and MSD results were high for 4:2 FTS and NEtFOSAA at 38% and 54%, respectively. Data limitations are summarized below.

- PFHxA (0.158 µg/L), PFOA (0.143 µg/L), PFHxS (0.750 µg/L), and PFOS (0.900 µg/L) concentrations detected in the unspiked native sample were greater than three times the spike concentrations of 0.00216 µg/L to 0.00236 µg/L and it is not possible to assess data usability for these analytes in this sample based on the MS recoveries.
- 4:2 FTS and NEtFOSAA were not detected in the unspiked native sample and data usability is not adversely affected by the potential analytical imprecision.

– PFHxS and PFOS recoveries were outside of limits at 214% and -4%, respectively, in the MS performed on sample LORNG_BW01007_06102024. The PFHxS and PFOS concentrations detected in the unspiked native sample, at 0.465 µg/L and 0.432 µg/L, respectively, were more than three times the spike concentrations of 0.0233 µg/L and 0.0237 µg/L and it is not possible to assess data usability for these analytes in this sample based on the MS recoveries.

7.1.11 LABORATORY DUPLICATE PRECISION

SGS performed duplicate analyses on samples LORNG_BW05007_06102024, LORNG_JBW7326A_05142024, and LORNG_OW20005_05102024. Precision between duplicate analyses was acceptable, with RPDs less than 30% or differences between analyte concentrations less than the LOQ.

7.1.12 EXTRACTED INTERNAL STANDARD ACCURACY

EIS recoveries in the field samples were within the laboratory-specified 20 to 180% limits for $^{13}C_2$-1H,1H,2H,2H-perfluorohexane sulfonic acid (4:2 FTS), $^{13}C_2$-6:2 FTS, and $^{13}C_2$-1H,1H, 2H,2H-perfluorodecane sulfonic acid (8:2 FTS), or the QAPP-specified 20 to 150% interim limits for the remaining EISs, with the following exceptions:

– Recovery of the EIS $^{13}C_2$-4:2 FTS was high at 185% in the undiluted analysis of sample LORNG_LYS07007DDUP_06192024. WSP J qualified the detected 4:2 FTS result from this sample because of the high EIS recovery. (J, EISH)

– Recoveries of the EISs d_7-NMeFOSE and d_9-NEtFOSE were high in the 1:5 dilution analyses of samples LORNG_AA07MW-02_06252024FD (152%, 169%) and LORNG_JBW8003B_06182024 (160%, 190%), the 1:2 dilution analysis of sample LORNG_BW06006_06132024 (161%, 156%), and the 1:10 dilution analyses of samples LORNG_LYS07007D_06192024 (194%, 206%) and LORNG_LYS05012D_06192024 (163%, 182%). NMeFOSE and NEtFOSE were not reported from the associated analyses and data usability is not adversely affected by the high EIS recoveries.

– Recovery of the EIS $^{13}C_4$-perfluorobutanoic acid (PFBA) was extremely low at 2% in the original extraction of sample LORNG_BW06006_06112024HS. SGS re-extracted the sample and reported the PFBA result from the re-extraction. Data usability is not adversely affected by the low EIS recovery.

- Recoveries of the EISs $^{13}C_2$-4:2 FTS and $^{13}C_2$-6:2 FTS were high at 214% and 183%, respectively, in the undiluted analyses of sample LORNG_GC_BW002D_05152024. SGS chose to report the 4:2 FTS and 6:2 FTS result from the 1:10 dilution, which exhibited acceptable EIS recoveries, and data usability is not adversely affected by the high EIS recoveries.
- Recovery of the EIS $^{13}C_2$-6:2 FTS was high at 191% in the undiluted analysis of sample LORNG_LYS07007D_06192024. 6:2 FTS was not reported from the associated analysis and data usability is not adversely affected by the high EIS recovery.
- Recoveries of the EISs d_5-NEtFOSA (159%), d_7-NMeFOSE (200%), and d_9-NEtFOSE (226%) were high in the 1:10 dilution performed on sample LORNG_LYS07007DDUP_06192024. NEtFOSA, NMeFOSE, and NEtFOSE were not reported from the associated analysis and data usability is not adversely affected by the high EIS recoveries.
- Recoveries of the EISs d_7-NMeFOSE (192%), d_9-NEtFOSE (237%), $^{13}C_2$-8:2 FTS (189%), and $^{13}C_3$-hexafluoropropylene oxide dimer acid (HFPO-DA [163%]) were high in the 1:10 dilution analysis of sample LORNG_LYS07007SDUP_06192024. NMeFOSE, NEtFOSE, 8:2 FTS, HFPO-DA, 4,8-dioxa-3H-perfluorononanoic acid (ADONA), 9-chlorohexadecafluoro-3-oxanonane-1-sulfonic acid (9Cl-PF3ONS), and 11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid (11Cl-PF3OUdS) were not reported from the associated analysis and data usability is not adversely affected by the high EIS recoveries.
- Recovery of the EIS d_9-NEtFOSE was high at 191% in the 1:10 dilution analysis of sample LORNG_MMW8015_06182024. NEtFOSE was not reported from the associated analysis and data usability is not adversely affected by the high EIS recovery.
- Recovery of the EIS d_7-NMeFOSE was high at 158% in the 1:5 dilution analysis of sample LORNG_SB/OW12001_06142024. NMeFOSE was not reported from the 1:5 dilution and data usability is not adversely affected by the high EIS recovery.

7.1.13 NON-EXTRACTED INTERNAL STANDARD ACCURACY

NIS recoveries were within the method-specified 50 to 200% limits, with the following exception:

- Recovery of the NIS $^{13}C_2$-perfluorodecanoic acid (PFDA) was high at 207% in the 1:10 dilution analysis of sample LORNG_MMW8015_06182024. PFDA, perfluoroundecanoic acid, perfluorododecanoic acid, perflurotridecanoic acid, and perfluorotetradecanoic acid were not reported from this analysis and data usability is not adversely affected by the high NIS recovery.

7.1.14 ION RATIOS

Ratios between primary and confirmation ions were within the QAPP-specified limits of 50 to 150% of the ion ratios measured in the midpoint calibration standard or daily CCV, with the following exceptions:

- Ion ratios for PFHxA were high in samples LORNG_JMW1762_05152024 (152%), LORNG_MMW0009_05132024 (189%), LORNG_OW02002_05142024 (211%), LORNG_OW20001_05102024 (156%), LORNG_OW20005_05102024 (159%), LORNG_UNK-034_280_06112024 (195%), and LORNG_USMW013_05142024 (252%). WSP J qualified the detected PFHxA results from these samples because the ion ratios were outside of limits. (J, IAG)
- Ion ratios for perfluoroheptanoic acid (PFHpA) were high in samples LORNG_BW10007_05152024 and LORNG_EBGB_BW002_05132024 at 161% and 151%, respectively. WSP J qualified the detected PFHpA results from these samples because the ion ratios were outside of limits. (J, IAG)
- Ion ratios for PFDA and perfluorooctanesulfonamide (PFOSA) were high at 186% and 156%, respectively, in sample LORNG_RFW1145_75_06112024. WSP J qualified the detected PFDA and PFOSA results from this sample because the ion ratios were outside of limits. (J, IAG)
- The ion ratio for perfluorobutanesulfonic acid (PFBS) was high at 174% in sample LORNG_UNK-034_80_06112024. WSP J qualified the detected PFBS result from this sample because the ion ratio was outside of limits. (J, IAG)

- Ion ratios for perfluorononanesulfonc acid (PFNS) were low in samples LORNG_BSMW3S_06182024 (49%), LORNG_JBW8003B_06182024 (43%), LORNG_JBW8004B_06112024 (39%), and LORNG_LYS05012S_06192024 (45%). WSP J qualified the detected PFNS results from these samples because the ion ratios were outside of limits. (J, IAG)
- Ion ratios for PFNS and PFOSA were outside of limits in samples LORNG_AA07MW-01_06112024 (49%, 156%), LORNG_BW01007_06102024 (44%, 200%),LORNG_JBW7339A_06132024 (38%, 151%), LORNG_LYS01007S_06192024 (34%, 169%), and LORNG_OW01002_06142024 (38%, 183%). WSP J qualified the detected PFNS and PFOSA results from these samples because the ion ratios were outside of limits. (J, IAG)
- Ion ratios for PFNS (39%), perfluorodecanesulfonic acid (PFDS [39%]), and PFOSA (156%) were outside of limits in sample LORNG_OW01004_06102024. WSP J qualified the detected PFNS, PFDS, and PFOSA results from this sample because the ion ratios were outside of limits. (J, IAG)
- Ion ratios for PFDS and PFOSA were outside of limits at 34% and 166%, respectively, in sample LORNG_RFW1145_35_06112024. WSP J qualified the detected PFDS and PFOSA results from this sample because the ion ratios were outside of limits. (J, IAG)
- Ion ratios for PFOSA were high in samples LORNG_AA07MW-02_06252024FD (151%), LORNG_BW07003_06112024 (203%), LORNG_BW12005_06102024 (155%), LORNG_JBW7339B_06132024 (157%), LORNG_JMW-0602_05152024 (183%), LORNG_JPZ7602_06132024 (189%),LORNG_LYS01007D_06192024 (160%), LORNG_LYS05012D_06192024 (274%), and LORNG_OW07003_06112024 (197%). WSP J qualified the detected PFOSA result from these samples because the ion ratios were outside of limits. (J, IAG)

7.1.15 STAGE 4 VALIDATION

WSP did not perform Stage 4 validation on the samples reviewed in this report.

7.1.16 DATA REPORTING AND ANALYTICAL PROCEDURES

SGS J qualified analytes with detected concentrations less than the LOQ. WSP agrees that these results are quantitatively uncertain and has maintained SGS' J qualifiers. (J, TR)

Data from the field sample are reported in ng/L, while QC results are reported in µg/L. Spiked concentrations are correct and WSP did not qualify any data based on the unit mismatch.

8 FIELD DUPLICATE PRECISION

WSP collected field duplicates with samples LORNG_AA07MW-02_06252024, LORNG_AA20MW-02_06112024, LORNG_BW01008_06122024, LORNG_JBW7347B_05132024, LORNG_JMW-0602_05152024, LORNG_JMW0982_05132024, LORNG_JMW6001_05142024, and LORNG_OW20004_05102024. RPDs between primary and field duplicate results were less than the QAPP-specified maximum of 30% or differences between primary and duplicate results were less than the LOQ, indicating acceptable sampling and analytical precision. Results from the primary samples and their field duplicate are presented in Table 4.

9 INTERLABORATORY SPLIT PRECISION

Samples LORNG_BW10007_05152024, LORNG_JBW7326A_05142024, and LORNG_JBW7345B_05152024 were analyzed both by SGS and Bureau Verita Canada as interlaboratory splits. RPDs between the primary and split results were less than 30%, indicating acceptable analytical precision and comparability between results from the primary and split laboratories.

Results from the primary and split samples are presented in Tabe 5.

10 SUMMARY AND CONCLUSIONS

WSP evaluated a total of 4,040 data records from the field sample during this validation. Validated analytical results are presented in Table 2.

Qualifier definitions are summarized in Section 4.0, reason codes are summarized in Section 5.0, and qualified data are summarized below.

- J: WSP J qualified 375 records (9.3%) because of EIS recoveries outside of limits, ion ratios outside of limits and/or detected concentrations less than the LOQ.
- J-: WSP J- qualified one record (0.02%) because of low MS recovery.
- UJ: WSP UJ qualified 46 records (1.1%) because of ICV recoveries outside of limits or high CCV recoveries.

Data qualified during validation are summarized in Table 3.

SDG	Method	Fraction	Lab Sample ID	Field Sample ID	Parameter Name	Lab Result	Lab Qualifier	Validated Result	Validation Qualifier	Val Reason Code	Result Units

Notes:

U = Analyte not detected at the associated detection limits

J = Analyte is estimated

J- = Analyte is estimated; potential low bias

J+ = Analyte is estimated; potential high bias

R = Date are unusable

UJ = Analyte not detected; reporting limits estimated

NJ = Analyte has been tentatively identified and concentration is estimated

CVHL = High ISC or CCV recovery.

EISL = Low extracted internal standard recovery

IAG = Transition ion ratio outside limits

IVD = ICV recovery is outside of limits.

MSL = Matrix spike recovery low

NG/L = nanograms per liter

TR = Analyte concentration is less than LOQ

1 INTRODUCTION

WSP USA Environment & Infrastructure Inc. (WSP) collected 172 aqueous samples, including 18 field duplicates and 9 equipment blanks between 2May 2024 and 7 June 2024 from the former Loring Air Force Base, located in Limestone, Maine. WSP submitted the samples to SGS North America Inc. (SGS), located in Orlando, Florida, where they were received between 7 May 2024 and 12 June 2024 and assigned to job numbers FC15432, FC15647, FC15852, FC15912, FC15948A, FC16137, FC16207, FC16236, and FC16337. SGS analyzed the samples for per- and polyfluoroalkyl substances (PFAS) using United States Environmental Protection Agency (EPA) Draft Method 1633.

The field sample identifications (ID), sample collection dates, and the laboratory sample IDs are presented in Table 1.

2 DATA VALIDATION METHODOLOGY

WSP performed DoD Stage 2B validation on the samples reviewed in this report. The Stage 2B validation includes review of quality control (QC) results in the laboratory's analytical report and reported on QC summary forms. This data validation has been performed in general accordance with:

- WSP, 2024. Draft Quality Program Plan Addendum Revision 1, Remedial Investigation, Per- and Polyfluoroalkyl Substances Response, Former Loring Air Force Base, Limestone Maine, April.
- Department of Defense (DoD), 2019. DoD General Data Validation Guidelines, September.
- DoD, 2021. DoD Department of Energy Consolidated Quality Systems Manual (QSM) for Environmental Laboratories Version 5.4, October.
- DoD, 2022. Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances Analysis by QSM Table B-24, October.
- EPA, 2023. 4th Draft EPA Method 1633, Analysis of PFAS in Aqueous, Solid, Biosolids, and Tissue Samples by Liquid Chromatography-Tandem Mass Spectrometry (LC-MS/MS), July.

The laboratory's certified analytical report and supporting documentation were reviewed to assess the following:

- Data package and electronic data deliverable completeness;
- Chain of custody (COC) compliance;
- Holding time compliance;
- Sample receipt condition;
- Mass Calibration;
- Initial calibration (ICAL), initial calibration verification (ICV), and continuing calibration verification (CCV) compliance with method specified criteria;
- Signal to noise ratios for the ICS;
- Bile salt interference check;
- Presence or absence of laboratory contamination as demonstrated by laboratory blanks;
- Accuracy and bias as demonstrated by recovery of laboratory control sample (LCS) and matrix spike (MS) samples;
- Extracted Internal Standard (EIS) and non-extracted internal standard (NIS) recoveries;
- Analytical precision as relative percent difference (RPD) of analyte concentration between laboratory duplicates, or MSs/MS duplicates (MSDs);

- Sampling and analytical precision as RPD of analyte concentration between field duplicates;
- Assessment of field contamination as demonstrated by field blanks; and
- Insofar as possible, the degree of conformance to method requirements and good laboratory practices.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

3 EXPLANATION OF DATA QUALITY INDICATORS

Summary explanation of the specific data quality indicators reviewed during data validation are presented below.

3.1 LABORATORY CONTROL SAMPLE RECOVERIES

LCSs are aliquots of analyte free matrices that are spiked with the analytes of interest for an analytical method, or a representative subset of those analytes. The spiked matrix is then processed through the same analytical procedures as the samples they accompany.

LCS recovery and precision are an indication of a laboratory's ability to successfully perform an analytical method in an interference free matrix.

3.2 MATRIX SPIKE RECOVERIES

MSs and MSDs are prepared by adding known amounts of the analytes of interest for an analytical method, or a representative subset of those analytes, to an aliquot of sample. The spiked sample is then processed through the same extraction, concentration, cleanup, and analytical procedures as the unspiked samples in an analytical batch.

MS recovery and precision are an indication of a laboratory's ability to successfully recover an analyte in the matrix of a specific sample or closely related sample matrices. It is important not to apply MS results for any specific sample to other samples without understanding how the sample matrices are related.

3.3 BLANK CONCENTRATIONS

Blank samples are aliquots of analyte free matrix that are used as negative controls to verify that the sample collection, storage, preparation, and analysis system does not produce false positive results.

Equipment blanks are aliquots of analyte free water that are used to rinse sample collection equipment after decontamination. Equipment blanks assess contamination attributed to insufficient equipment decontamination procedures.

Laboratory blanks are processed by the laboratory using the same procedures as the field samples. Target analytes should not be found in laboratory blanks.

3.4 LABORATORY AND FIELD DUPLICATES

Laboratory and field duplicate analyses verify acceptable method precision by the laboratory at the time of preparation and analysis and/or sampling precision at the time of collection.

4 DEFINITIONS OF QUALIFIERS THAT MAY BE ADDED DURING DATA VALIDATION

J	The reported result was an estimated value.
J+	The reported result was an estimated value with a positive bias.
J-	The reported result was an estimated value with a negative bias.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting quality control criteria. The analyte may or may not be present in the sample.
U	The analyte was not detected and was reported as less than the limit of detection (LOD). The LOD has been adjusted for any dilution or concentration of the sample.
UJ	The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

5 QUALIFICATION REASON CODES

The following reason codes were applied to the data during data validation:

CVHL	High ISC or CCV recovery.
IAG	Ion abundance ratio is outside of limits.
IVD	ICV recovery is outside of limits.
TR	The detected analyte concentration is less than the limit of quantitation (LOQ).

6 CHAIN OF CUSTODY AND SAMPLE RECEIPT CONDITION DOCUMENTATION

The samples were received at the laboratory under proper COC, intact, and at an average temperature less than the method-specified maximum of 6 degrees Celsius.

7 SPECIFIC DATA VALIDATION FINDINGS

Results from the samples reviewed in this report may be considered usable with the limitations and exceptions described in Sections 7.1 through 8.0.

7.1 PFAS BY EPA DRAFT METHOD 1633

PFAS results generated by Eurofins may be considered usable with the limitations described in Sections 7.1.1 through 7.1.14.

7.1.1 HOLDING TIMES

The samples were extracted within the method-specified maximum holding time of 28 days from sample collection and the extracts were analyzed within the method-specified maximum hold time of 90 days from extraction.

7.1.2 MASS CALIBRATION FREQUENCY

A mass calibration verification was performed before the ICAL associated with the analysis of the samples reviewed in this report.

7.1.3 INITIAL CALIBRATION COMPLIANCE

Relative standard deviations between response factors for each target analyte were less than or equal to the method-specified maximum of 20% and/or relative standard errors were less than the method-specified maximum of 20% for all target analytes and EISs.

7.1.4 INITIAL CALIBRATION VERIFICATION ACCURACY

ICVs were analyzed after each initial calibration. Recoveries were between 70 and 130%, with the following exceptions:

- n-Ethyl-perfluorooctanesulfonamide (NEtFOSA) recovery was low at 65.4% in the mid-level ICV associated with the analysis of samples LORNG_044-RW01_05032024, LORNG_BW18003_05032024, LORNG_BW18007_05032024, LORNG_EBGB_OW002_05032024, LORNG_JBW7107_05022024, LORNG_JBW7327_45_05022024, LORNG_JBW7327_45_05022024FD, LORNG_BW05006_05022024, LORNG_EBGB_BW001_05022024, LORNG_JBW7105_0502202, LORNG_JMW3102_05022024, and LORNG_USMW004_05022024. Per the DoD data validation guidelines, WSP UJ qualified the non-detected NEtFOSA results from the associated samples because of the high ICV recoveries. (UJ, IVD)
- NEtFOSA recovery was low at 67.3% associated with the analysis of samples LORNG_BB_OW002_05092024, LORNG_JMW0991_05092024, LORNG_JMW7913_05092024, LORNG_JMW7916_05092024, LORNG_LF3MW4_05092024, LORNG_BB_BW001_05092024, LORNG_JMW0681_05092024, LORNG_JPZ0686_05092024, LORNG_OW16002_05092024, LORNG_USMW025_05092024, LORNG_USMW025_05092024FD, LORNG_BW17004_05102024, LORNG_JBW7203A_05102024, LORNG_OW20002_05102024, LORNG_OW23001_05102024, LORNG_SB/OW16001_05092024, and LORNG_SB/OW16001_05092024FD. Per the DoD data validation guidelines, WSP UJ qualified the non-detected NEtFOSA results from the associated samples because of the high ICV recoveries. (UJ, IVD)
- n-Ethyl perfluorooctanesulfonamidoethanol (NEtFOSE) and n-methyl perfluorooctanesulfonamidoethanol (NMeFOSE) recoveries were high at 144.2% and 139.0% respectively, associated with the analysis of samples LORNG_BW14005_05162024, LORNG_BW18009_05162024, LORNG_LF2MW1_05162024, LORNG_LF3MW3_05162024, LORNG_LF3MW3_05162024FD, LORNG_MMW0010_05162024, LORNG_MMW0010_05162024FD, LORNG_BW01006_05162024, LORNG_BW17005_05162024, LORNG_JPZ0349_05162024, LORNG_MMW0011_05162024, LORNG_OW22003_05162024, LORNG_SB/OW17001_05162024, LORNG_AA18MW-02_05162024, LORNG_JBW7710_05162024, LORNG_JMW1981_05162024, LORNG_MMW0124_05162024, LORNG_RFW-38_05162024, LORNG_043-MW03_05172024, LORNG_JBW7316_05172024, LORNG_JMW0961_05172024, and

LORNG_JPZ1780_05172024. Per the DoD data validation guidelines, WSP UJ qualified the non-detected NEtFOSE and NMeFOSE from the associated samples because of high ICV recoveries. (UJ, IVD)

- NEtFOSE (161%), n-methyl-perfluorooctanesulfonamide (NMeFOSA [132%]), and NMeFOSE (152%) recoveries were high in the mid-level ICV associated with the analysis of samples LORNG_BB_OW001_05212024, LORNG_BW08003_05212024, LORNG_BW13002_05212024, LORNG_BW18004_05212024, LORNG_JBW7734_05212024, LORNG_JBW7734_05212024FD, LORNG_UNK-044_05212024, LORNG_BW20001_05212024, LORNG_CBW02_05222024, LORNG_JBW7738A_0521202, LORNG_OW17002_05222024, LORNG_OW21005_05212024, LORNG_OW21005_05212024FD, LORNG_RFW1144_05212024, LORNG_BW13003_05222024, LORNG_BW17006_05222024, LORNG_JBW7341B_05222024, LORNG_JBW7737A_05222024, LORNG_JBW7737A_05222024FD, LORNG_JPZ7704_05222024, LORNG_OW17003_05222024, LORNG_BW06008_05222024, LORNG_JBW7737B_05222024, LORNG_JBW7737B_05222024FD, LORNG_JMW1960_05222024, LORNG_OW05004_05222024, LORNG_BW09001_05202024HS, LORNG_BW10006_05202024, LORNG_BW10006_05202024FD, LORNG_JBW7305_107_05202024, LORNG_JBW7714_05202024, LORNG_JBW7350_05172024, LORNG_JMW-0406_05172024, LORNG_JMW7322_05172024, LORNG_JPZ0606_05172024, LORNG_MMW0007B_05172024, LORNG_OW14004_05172024, LORNG_JBW7305_33_05202024, LORNG_MMW0423_05172024, LORNG_OW10005_05202024, LORNG_OW20006_05202024, LORNG_OW20007_05202024, LORNG_UNK-042_05202024, LORNG_BW03002_05212024, LORNG_BW10008_05212024, LORNG_BW18010_05212024, LORNG_JBW7403_05212024, LORNG_JMW0445_05202024, LORNG_MMW0017_05202024, LORNG_MMW0330_05212024, and LORNG_OW22001_05162024. Per the DoD data validation guidelines, WSP UJ qualified the non-detected analyte results from the associated samples because of the high ICV recoveries. (UJ, IVD)
- NEtFOSE and NMeFOSE recoveries were high at 144% and 139% respectively, in the mid-level ICV associated with the analysis of samples LORNG_MMW3402R_05232024, LORNG_JMW0683_05232024, LORNG_RFW1147_05232024, LORNG_USGS2_125_05232024, LORNG_USGS2_40_05232024, LORNG_BW07001_05232024, LORNG_BW07002_05232024, LORNG_BW09001_0523202, LORNG_OW09001_05232024, and LORNG_OW09001_05232024FD. Per the DoD data validation guidelines, WSP UJ qualified the non-detected NEtFOSE and NMeFOSE results from the associated samples because of high ICV recoveries. (UJ, IVD)
- NEtFOSE (163%), NMeFOSA (135%), and NMeFOSE (157%) recoveries were high in the mid-level ICV associated with analysis of samples LORNG_BW01009_05242024, LORNG_JBW7738B_05242024, LORNG_JPZ0348_05242024, LORNG_OW08002_05242024, LORNG_OW08002_05242024FD, LORNG_OW12002_05242024, LORNG_UNK-TC01_06032024, LORNG_JBW7348_06032024, LORNG_JBW7348_06032024FD, LORNG_JMW0880_06032024, LORNG_MMW0020_150_06032024, LORNG_MMW0020_60_06032024, LORNG_BW06007_06032024, LORNG_BW06007_06032024FD, LORNG_BW13001_06032024, LORNG_JBW7215B_06032024, and LORNG_JBW7336A_06032024. Per the DoD data validation guidelines, WSP UJ qualified the non-detected NEtFOSE, NMeFOSA, and NMeFOSE results from the associated samples because of high ICV recoveries. (UJ, IVD)
- NMeFOSA (131%), NMeFOSE (158%), and NEtFOSE (159%) recoveries were high in the mid-level ICV associated with the analysis of samples LORNG_AA11MW-01_06042024, LORNG_AA11MW-02_06042024, LORNG_BW12006_06042024, LORNG_JBW7753A_06052024, and LORNG_OW08001_06052024. Data limitations are summarized below.
    - Per the DoD data validation guidelines, WSP UJ qualified the non-detected NMeFOSA results from the associated samples because of the high ICV recovery. (UJ, IVD)
    - Per the DoD data validation guidelines, WSP UJ qualified the non-detected NMeFOSE results from samples LORNG_AA11MW-01_06042024, LORNG_BW12006_06042024, and LORNG_OW08001_06052024 because of the high ICV recovery. (UJ, IVD)
    - Per the DoD data validation guidelines, WSP UJ qualified the non-detected NEtFOSE results from samples LORNG_AA11MW-01_06042024 and LORNG_BW12006_06042024 because of the high ICV recovery.

- The remaining MeFOSE and/or EtFOSE results were not reported from the associated analyses and data usability is not adversely affected by the high ICV recoveries.

- NMeFOSE and NEtFOSE recoveries were high at 153% and 159%, respectively, in the mid-level ICV associated with the 1:2 dilution analysis of sample LORNG_BW12006_06042024 and the 1:10 dilution analyses of samples LORNG_AA11MW-02_06042024, LORNG_JBW7753A_06052024, and LORNG_OW08001_06052024. Data limitations are summarized below.
  - Per the DoD data validation guidelines, WSP UJ qualified the non-detected NMeFOSE results from the 1:10 dilution analyses of samples LORNG_AA11MW-02_06042024 and LORNG_JBW7753A_06052024 because of the high ICV recovery. (UJ, IVD)
  - Per the DoD data validation guidelines, WSP UJ qualified the non-detected NEtFOSE result from the 1:10 dilution analyses of samples LORNG_AA11MW-02_06042024, LORNG_JBW7753A_06052024, and LORNG_OW08001_06052024 because of the high ICV recoveries. (UJ, IVD)
  - NMeFOSE and NEtFOSE were not reported from the associated analysis of sample LORNG_BW12006_06042024 and NMeFOSE was not reported from the associated analysis of sample LORNG_OW08001_06052024. Data usability is not adversely affected by the high ICV recoveries.
- NEtFOSE and NMeFOSE recoveries were high at 171% and 158% respectively, in the mid-level ICV associated with the analysis of LORNG_AA18MW-01_06042024, LORNG_JMW1565_06042024, LORNG_JPZ0342_06042024, LORNG_OW07002_06042024, and LORNG_USMW003_06042024. Per the DoD data validation guidelines, WSP UJ qualified the non-detected NEtFOSE and NMeFOSE results from the associated samples because of the high ICV recoveries. (UJ, IVD)

7.1.5 INSTRUMENT SENSITIVITY CHECK COMPLIANCE

Instrument sensitivity checks (ISCs) were analyzed at the beginning of each analytical run, concentrations were equivalent to the LOQ, signal to noise ratios were greater than or equal to 3:1, and recoveries were within the method-specified 70 to 130% limits, with the follow exceptions:

- n-Ethyl perfluorooctanesulfonamidoacetic acid (NEtFOSAA) recovery was high at 132% in the ISC associated with the analysis of samples LORNG_JMW0683_05232024, LORNG_RFW1147_05232024, LORNG_USGS2_125_05232024, LORNG_USGS2_40_05232024, LORNG_BW07002_05232024, and LORNG_BW09001_0523202. Per the DoD data validation guidelines, WSP UJ qualified the non-detected NEtFOSAA results from the associated samples because of the high ISC recovery. (UJ, CVHL)
- Perfluorodecanesulfonic acid (PFDS) recovery was high at 133.4% in the ISC associated with the analysis of samples LORNG_AA18MW-01_06042024, LORNG_JMW1565_06042024, LORNG_JPZ0342_06042024, LORNG_OW07002_06042024, and LORNG_USMW003_06042024. Per the DoD data validation guidelines, WSP UJ qualified the non-detected PFDS results from the associated samples because of the high ISC recovery. (UJ, CVHL)

7.1.6 CONTINUING CALIBRATION VERIFICATION COMPLIANCE

CCVs were analyzed at the beginning of the analytical sequence after the ISC, after every ten or fewer samples, and at the end of the analytical sequence. Recoveries were within the method-specified 70 to 130% limits, with the following exceptions:

- NMeFOSA recoveries were high at 144%, 142%, and 132% in CCVs associated with the analysis of samples LORNG_JMW0683_05232024, LORNG_MMW3402R_05232024, LORNG_RFW1147_05232024, LORNG_USGS2_125_05232024, LORNG_USGS2_40_05232024, LORNG_BW07002_05232024, and LORNG_BW09001_05232024. Per the DoD data validation guidelines, WSP UJ qualified the non-detected NMeFOSA results from the associated samples because of the high CCV recovery. (UJ, CVHL)
- 3-Perfluoroheptyl propanoic acid (7:3FTCA) recovery were high at 137%, 136%, and 133% in CCVs associated with the analysis of samples LORNG_AA11MW-01_06042024, LORNG_AA11MW-02_06042024,

LORNG_BW12006_06042024, LORNG_JBW7753A_06052024, and LORNG_OW08001_06052024. Per the DoD data validation guidelines, WSP UJ qualified the non-detected 7:3FTCA results from the associated samples because of the high CCV recoveries. (UJ, CVHL)

7.1.7 BILE SALT INTERFERENCE CHECKS

Bile salt interference checks were analyzed daily and retention times for the bile salts were at least one minute outside the retention times for linear or branched perfluorooctanesulfonic acid (PFOS).

7.1.8 LABORATORY AND EQUIPMENT BLANK DETECTIONS

Target analytes were not detected in the laboratory blanks associated with the samples reviewed in this report, with the following exceptions:

- PFOS was detected at a concentration of 0.51 nanograms per liter (ng/L) in equipment blank LORNG_EB021_06062024 associated with samples LORNG_BW18008_06062024, LORNG_FMW3413_06062024, LORNG_JMW0882_06062024, LORNG_JMW0882_06062024FD, LORNG_JMW1982_06062024, LORNG_OW05002_06062024, LORNG_OW05002_06062024FD, LORNG_BW20002_06062024, LORNG_JBW7335A_06062024, LORNG_JMW1684_06062024, LORNG_JMW1684_06062024FD, LORNG_BW05009_06062024, LORNG_BW06005_06062024, LORNG_OW05003_06062024, and LORNG_OW05003_06062024FD. PFOS was detected in the associated samples at concentrations greater than five times the concentration detected in the equipment blank and data usability is not adversely affected by the blank detection.

7.1.9 LABORATORY CONTROL SAMPLE ACCURACY

LLCS and LCS were included with each extraction batch, LLCS spike concentrations were twice the LOQ, and LCS and LLCS recoveries were within the QAPP-specified 40 to 150% interim limits, with the following exceptions:

- NEtFOSA recoveries were high in the LLCS and LCS, associated with the extraction of samples LORNG_RFW-38_05162024, LORNG_043-MW03_05172024, LORNG_JBW7316_05172024, LORNG_JMW0961_05172024, and LORNG_JPZ1780_05172024 at 239% and 228% respectively. NEtFOSA was not detected in the associated samples and data usability is not adversely affected by the potential high analytical bias.
- NEtFOSA recoveries were high in the LLCS and LCS associated with the extraction of sample LORNG_OW22001_05162024 at 168% and 184% respectively. NEtFOSA was not detected in the associated sample and data usability is not adversely affected by potential high analytical bias.
- NEtFOSA and NEtFOSE recoveries were high at 166% and 151% respectively, in the LLCS associated with the extraction of samples LORNG_JMW0683_05232024, LORNG_MMW3402R_05232024, LORNG_RFW1147_05232024, LORNG_USGS2_125_05232024, LORNG_USGS2_40_05232024, LORNG_BW07002_05232024, and LORNG_BW09001_05232024. NEtFOSA and NEtFOSE were not detected in the associated samples and data usability is not adversely affected by potential high analytical bias.
- NEtFOSA recovery was high at 159% in the LCS associated with the extraction of samples LORNG_JMW0683_05232024, LORNG_MMW3402R_05232024, LORNG_RFW1147_05232024, LORNG_USGS2_125_05232024, LORNG_USGS2_40_05232024, LORNG_BW07002_05232024, and LORNG_BW09001_05232024. NEtFOSA was not detected in the associated samples and data usability is not adversely affected by potential high analytical bias.
- NEtFOSA recoveries were high in the LLCS and LCS associated with the extraction of samples LORNG_BW07001_05232024, LORNG_OW09001_05232024, and LORNG_OW09001_05232024FD at 162% and 152%, respectively. NEtFOSA was not detected in the associated samples and data usability is not adversely affected by potential high analytical bias.

7.1.10 MATRIX SPIKE AND MATRIX SPIKE DUPLICATE ACCURACY AND PRECISION

SGS performed MS and/or MSD analyses on samples LORNG_EBGB_BW001_05022024, LORNG_JMW0991_05092024, LORNG_LF3MW3_05162024FD, LORNG_JPZ1780_05172024, LORNG_BB_OW001_05212024, LORNG_OW05004_05222024, LORNG_BW07001_05232024, LORNG_JMW0880_06032024, LORNG_JBW7215B_06032024, LORNG_JPZ0342_06042024, and LORNG_JMW1684_06062024FD. Recoveries were within the QAPP-specified 40 to 150% interim limits and RPDs between MS and MSD results were less than 30%, with the following exceptions:

- PFOS recoveries were high at 192% and 158% in the MS and MSD preformed on sample LORNG_OW05004_05222024. The PFOS concentrations detected in the unspiked native sample, at 0.115 µg/L was more than three times the spike concentrations 0.023 and 0.0227 µg/L, and it is not possible to assess data usability for this analyte in this sample based on the MS recoveries.
- Perfluorohexanoic acid (PFHxA) and perfluorohexanesulfonic acid (PFHxS) recoveries were high at 154% and 327% respectively, performed on sample LORNG_JPZ0342_06042024. The PFHxA and PFHxS concentrations detected in the unspiked native sample, at 0.0789 µg/L and 0.305 µg/L, respectively, were more than three times the spike concentrations of 0.0227 µg/L and 0.0208 µg/L, respectively, and it is not possible to assess data usability for these analytes in this sample based on the MS recoveries.
- NEtFOSA recovery was high at 240% in the MS performed on sample LORNG_LF3MW3_05162024FD. NEtFOSA was not detected in the unspiked native sample and data usability is not adversely affected by the potential high analytical bias.
- Perfluorododecanesulfonic acid (PFDoS [217%, MS]), NEtFOSA (196%,225%), and 11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid (11Cl-PF3OUdS [205%, MS]) recoveries were high in the MS and/or MSD performed on sample LORNG_JPZ1780_05172024. Additionally, RPDs between the MS and MSD results were high for perfluorotridecanoic acid (34%), PFDS, (50%), PFDoS, (94%), and 11Cl-PF3OUdS (88%). These analytes were not detected in the unspiked native sample and data usability is not adversely affected by potential high analytical bias and/or analytical imprecision.
- NEtFOSA recoveries were high in the MS and MSD performed on sample LORNG_BW07001_05232024 at 160% and 167%, respectively. NEtFOSA was not detected in the unspiked native sample and data usability is not adversely affected by the potential high analytical bias.

7.1.11 DUPLICATE PRECISION

SGS performed a duplicate analysis on sample LORNG_MMW0010_05162024, LORNG_BW08003_05212024, LORNG_OW07002_06042024, and LORNG_BW05009_06062024. RPDs between primary and duplicate results were less than 30% or differences between detected concentrations were less than the LOQ. A summary of field duplicate results is presented in Table 4.

7.1.12 EXTRACTED INTERNAL STANDARD ACCURACY

EIS recoveries in the field samples were within the laboratory-specified 20 to 180% limits for $^{13}C_2$-1H,1H,2H,2H-perfluorohexane sulfonic acid (4:2 FTS), $^{13}C_2$-1H,1H, 2H, 2H-perfluorooctane sulfonic acid (6:2 FTS), and $^{13}C_2$-1H,1H, 2H,2H-perfluorodecane sulfonic acid, or the QAPP-specified 20 to 150% interim limits for the remaining EISs, with the following exceptions:

- Recovery of the EIS $^{13}C_2$-6:2 FTS was high at 193% in the undiluted analysis of sample LORNG_BW05009_06062024 SGS chose to report the 6:2 FTS result from the 1:5 dilution, which exhibited acceptable EIS recoveries, and data usability is not adversely affected by the high EIS recovery.
- Recovery of the EIS $^{13}C_2$-4:2 FTS was high in the undiluted analyses of samples LORNG_CBW02_05222024 (195%), LORNG_OW10005_05202024 (301%), and LORNG_JMW0445_05202024 (182%). SGS chose to report the

4:2FTS from 1:10 dilutions, which exhibited acceptable EIS recoveries, and data usability is not adversely affected by the high EIS recoveries

- Recoveries of the EISs ^{13}C2-4:2 FTS and ^{13}C2-6:2 FTS were high at 247% and 215%, respectively, in the undiluted analysis of sample LORNG_MMW3402R_05232024. SGS chose to report 4:2 FTS and 6:2 FTS from the 1:10 dilution, which exhibited acceptable EIS recoveries, and data usability is not adversely affected by the high EIS recoveries.
- Recoveries of the EIS D_7-NMeFOSE and D_9-NEtFOSE were high at 162% and 168% respectively, in the undiluted analysis of sample LORNG_AA11MW-02_06042024. SGS chose to report NMeFOSE and NEtFOSE from the 1:10 dilution, which exhibited acceptable EIS recoveries, and data usability is not adversely affected by the high EIS recoveries.
- Recoveries of the EIS D_7-NMeFOSE and D_9-NEtFOSE were both high at 154% in the undiluted analysis of sample LORNG_JBW7753A_06052024. SGS chose to report NMeFOSE and NEtFOSE from the 1:10 dilution, which exhibited acceptable EIS recoveries, and data usability is not adversely affected by the high EIS recoveries.
- Recovery of the D_9-NEtFOSE was high at 153% in the undiluted analysis of sample LORNG_OW08001_06052024. SGS chose to report NEtFOSE from the 1:10 dilution, which exhibited acceptable EIS recoveries, and data usability is not adversely affected by the high EIS recovery.

7.1.13 NON-EXTRACTED INTERNAL STANDARD ACCURACY

NIS recoveries were within the method-specified 50 to 200% limits.

7.1.14 ION RATIO

Ratios between primary and confirmation ions were within the QAPP-specified limits of 50 to 150% of the ion ratios measured in the midpoint calibration standard or daily CCV, with the following exceptions:

- The ion ratio for perfluorobutanesulfonic acid (PFBS) was high at 167% in sample LORNG_JBW7327_45_05022024FD. WSP J qualified the affected PFBS result because the ion ratio was outside of limits. (J, IAG)
- The ion ratio for perfluorooctanesulfonamide (PFOSA) was high at 180% in sample LORNG_OW16002_05092024. WSP J qualified the affected PFOSA result because the ion ratio was outside of limits. (J, IAG)
- The ion ratio for PFHxA was high at 188% in sample LORNG_BW18009_05162024. WSP J qualified the affected PFHxA result because the ion ratio was outside of limits. (J, IAG)
- The ion ratio for perfluorodecanoic acid (PFDA) was high at 153% in the sample LORNG_LF3MW3_05162024FD. WSP J qualified the affected PFDA result because the ion ratio was outside of limits. (J, IAG)
- The ion ratio for PFHxA was high at 200% in the sample LORNG_OW17003_05222024. WSP J qualified the affected PFHxA result because the ion ratio was outside of limits. (J, IAG)
- The ion ratios for perfluorononanesulfonic acid (PFNS) and PFOSA were outside of limits at 44.7% and 194% respectively, in the sample LORNG_JBW7737B_05222024. WSP J qualified the affected PFNS and PFOSA results because the ion ratios were outside of limits. (J, IAG)
- The ion ratio for PFOSA was high at 151% in the sample LORNG_JBW7737B_05222024FD. WSP J qualified the affected PFOSA result because the ion ratio was outside of limits. (J, IAG)
- The ion ratio for PFOSA was high at 154% in the sample LORNG_BW20001_05212024. WSP J qualified the affected PFOSA result because the ion ratio was outside of limits. (J, IAG)

- The ion ratios for PFNS and PFOSA were outside of limits at 28.0% and 237% respectively, in the sample LORNG_JMW-0406_05172024. WSP J qualified the affected PFNS and PFOSA results because the ion ratios were outside of limits. (J, IAG)
- The ion ratio for PFNS was low at 36.5% in the sample LORNG_OW05004_05222024. WSP J qualified the affected PFNS result because the ion ratio was outside of limits. (J, IAG)
- The ion ratio for perfluoroheptanesulfonic acid (PFHpS) was low at 47.8% in the sample LORNG_BW10006_05202024. WSP J qualified the affected PFHpS result because the ion ratio was outside of limits. (J, IAG)
- The ion ratio for PFOSA was high at 189% in the sample LORNG_BW07001_05232024. WSP J qualified the affected PFOSA result because the ion ratio was outside of limits. (J, IAG)
- The ion ratio for PFNS was low at 46.0% in the sample LORNG_OW08002_05242024FD. WSP J qualified the affected PFNS result because the ion ratio was outside of limits. (J, IAG)
- The ion ratio for PFNS was low at 47.8% in the sample LORNG_BW06007_06032024. WSP J qualified the affected PFNS result because the ion ratio was outside of limits. (J, IAG)
- The ion ratio for PFNS was low at 46.5% in the sample LORNG_BW06007_06032024FD. WSP J qualified the affected PFNS result because the ion ratio was outside of limits. (J, IAG)
- The ion ratio for PFOSA was high at 151% in the sample LORNG_OW08002_05242024. WSP J qualified the affected PFOSA result because the ion ratio was outside of limits. (J, IAG)
- The ion ratio for PFNS was low at 46.7% in the sample LORNG_AA11MW-02_06042024. WSP J flagged the detection for PFNS in the associated sample because the ion ratio was outside of limits. (J, IAG)
- The ion ratio for PFOSA was high at 159% in the sample LORNG_OW08001_06052024. WSP J flagged the detection for PFOSA in the associated sample because the ion ratio was outside of limits. (J, IAG)
- The ion ratio for PFOSA was high at 216% in the sample LORNG_JMW1665_06072024. WSP J qualified the affected PFOSA result because the ion ratio was outside of limits. (J, IAG)

7.1.15 DATA REPORTING AND ANALYTICAL PROCEDURES

SGS J qualified analytes with detected concentrations less than the LOQ. WSP agrees that these results are quantitatively uncertain and has maintained SGS' J qualifiers. (J, TR)

Data from the field sample are reported in ng/L while QC results are reported in micrograms per liter. Spiked concentrations are correct and WSP did not qualify any data based on the unit mismatch.

8 FIELD DUPLICATE PRECISION

WSP collected field duplicates with samples LORNG_USMW025_05092024, LORNG_SB/OW16001_05092024, LORNG_LF3MW3_05162024, LORNG_MMW0010_05162024, LORNG_JBW7734_05212024, LORNG_OW21005_05212024, LORNG_JBW7327_45_05022024, LORNG_JBW7737A_05222024, LORNG_JBW7737B_05222024, LORNG_BW10006_05202024, LORNG_OW09001_05232024, LORNG_OW08002_05242024, LORNG_JBW7348_06032024, LORNG_BW06007_06032024, LORNG_JMW0882_06062024, LORNG_OW05002_06062024, LORNG_JMW1684_06062024, and LORNG_OW05003_06062024. RPDs between primary and field duplicate results were less than the QAPP-specified maximum of 30% or differences between concentrations were less than the average RL, indicating acceptable sampling and analytical precision. Results from the primary samples and their field duplicate are presented in Table 4.

9 SUMMARY AND CONCLUSIONS

WSP evaluated a total of 6,520 data records from the field sample during this validation. Qualifier definitions are summarized in Section 4.0, reason codes are summarized in Section 5.0, and qualified data are summarized below.

- WSP J qualified 686 records (10.5%) because of detected concentrations less than the LOQ and/or ion ratios were outside of limits.
- UJ: WSP UJ qualified 345 records (5.3%) because of high and low ICV, CCV, and/or ISC recoveries.

Data qualified during validation are summarized in Table 3.

Notes:

U = Analyte not detected at the associated detection limits

J = Analyte is estimated

UJ = Analyte not detected; reporting limits estimated

NG/L = nanograms per liter

CVHL = High ISC or CCV recovery.

IAG = Transition ion ratio outside limits

IVD = ICV recovery is outside of limits.

TR = Analyte concentration is less than LOQ

Notes:

U = Analyte not detected at the associated detection limits

J = Analyte is estimated

UJ = Analyte not detected; reporting limits estimated

NG/L = nanograms per liter

IAG = Transition ion ratio outside limits

IVD = ICV recovery is outside of limits.

RPD = relative percent difference between parent sample and field duplicate.

TR = Analyte concentration is less than LOQ

1 INTRODUCTION

WSP USA Environment & Infrastructure Inc. (WSP) collected 46 aqueous samples, including 6 equipment blanks, one field blank, and 3 field duplicates, between 3 and 9 May 2024 from the former Loring Air Force Base, located in Limestone, Maine. WSP submitted the samples to SGS North America, Inc. (SGS), located in Orlando, Florida, where they were received between 9 and 10 May 2024 and assigned to job numbers FC15544 and FC15576. SGS analyzed the samples for per- and polyfluoroalkyl substances (PFAS) using United States Environmental Protection Agency (EPA) Draft Method 1633.

A list of these samples by field sample identification (ID), sample collection date, and the laboratory sample IDs is presented in Table 1.

2 DATA VALIDATION METHODOLOGY

WSP performed Department of Defense (DoD) State 4 validation on a minimum of 10 percent (%) of primary field samples analyzed by SGS and Stage 2B validation on the remaining samples. The Stage 4 validation includes review of the quality control (QC) results in the laboratory's analytical report and reported in QC summary forms as well as recalculated checks and review of the instruments raw data outputs. The Stage 2B validation includes review of quality control (QC) results in the laboratory's analytical report and reported on QC summary forms but does not include review or validation of the raw analytical data. Data from equipment and field blanks did not undergo validation because results from these samples are only used to assess data usability for field samples. This data validation has been performed in general accordance with:

- WSP, 2024. Draft Quality Program Plan Addendum, Revision 1, Remedial Investigation, Per- and Polyfluoroalkyl Substances Response, Former Loring Air Force Base, Limestone Maine, April.
- DoD, 2019. DoD General Data Validation Guidelines, September.
- DoD, 2021. DoD Department of Energy Consolidated Quality Systems Manual (QSM) for Environmental Laboratories Version 5.4, October.
- DoD, 2022. Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances Analysis by QSM Table B-24, October.
- EPA, 2023. 4th Draft EPA Method 1633, Analysis of PFAS in Aqueous, Solid, Biosolids, and Tissue Samples by Liquid Chromatography-Tandem Mass Spectrometry (LC-MS/MS), July.

The laboratory's certified analytical report and supporting documentation were reviewed to assess the following:

- Data package and electronic data deliverable completeness;
- Chain of custody (COC) compliance;
- Holding time compliance;
- Sample receipt condition;
- Mass Calibration;
- Initial calibration (ICAL), initial calibration verification (ICV), and continuing calibration verification (CCV) compliance with method specified criteria;
- Bile salt standard;
- Presence or absence of laboratory contamination as demonstrated by laboratory blanks;
- Accuracy and bias as demonstrated by recovery of laboratory control sample (LCS) and matrix spike (MS) samples;

- Extracted Internal Standard (EIS) and non-extracted internal standard (NIS) recoveries;
- Analytical precision as relative percent difference (RPD) of analyte concentration between laboratory duplicates, or MSs/MS duplicates (MSDs);
- Sampling and analytical precision as RPD of analyte concentration between field duplicates;
- Assessment of field contamination as demonstrated by field blanks; and
- Insofar as possible, the degree of conformance to method requirements and good laboratory practices.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

3 EXPLANATION OF DATA QUALITY INDICATORS

Summary explanation of the specific data quality indicators reviewed during data validation are presented below.

3.1 LABORATORY CONTROL SAMPLE RECOVERIES

LCSs are aliquots of analyte free matrices that are spiked with the analytes of interest for an analytical method, or a representative subset of those analytes. The spiked matrix is then processed through the same analytical procedures as the samples they accompany.

LCS recovery and precision are an indication of a laboratory's ability to successfully perform an analytical method in an interference free matrix.

3.2 MATRIX SPIKE RECOVERIES

MSs and MSDs are prepared by adding known amounts of the analytes of interest for an analytical method, or a representative subset of those analytes, to an aliquot of sample. The spiked sample is then processed through the same extraction, concentration, cleanup, and analytical procedures as the unspiked samples in an analytical batch.

MS recovery and precision are an indication of a laboratory's ability to successfully recover an analyte in the matrix of a specific sample or closely related sample matrices. It is important not to apply MS results for any specific sample to other samples without understanding how the sample matrices are related.

3.3 BLANK CONCENTRATIONS

Blank samples are aliquots of analyte free matrix that are used as negative controls to verify that the sample collection, storage, preparation, and analysis system does not produce false positive results.

Equipment blanks are prepared by passing analyte free water through or over sample collection equipment and collecting the water in sample containers. Equipment blanks are analyzed for the analytical suite required for the project. Equipment blanks are used to monitor for possible sample contamination during the sample collection process and serve as a check on the effectiveness of field decontamination procedures.

Laboratory blanks are processed by the laboratory using the same procedures as the field samples. Target analytes should not be found in laboratory blanks.

3.4 LABORATORY AND FIELD DUPLICATES

Laboratory and field duplicate analyses verify acceptable method precision by the laboratory at the time of preparation and analysis and/or sampling precision at the time of collection.

4 DEFINITIONS OF QUALIFIERS THAT MAY BE ADDED DURING DATA VALIDATION

J	The reported result was an estimated value.
J+	The reported result was an estimated value with a positive bias.
J-	The reported result was an estimated value with a negative bias.
NJ	The analyte has been tentatively identified as present and the concentration is estimated.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting quality control criteria. The analyte may or may not be present in the sample.
U	The analyte was not detected and was reported as less than the limit of detection (LOD). The LOD has been adjusted for any dilution or concentration of the sample.
UJ	The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

5 QUALIFICATION REASON CODES

The following reason codes were applied to the data during data validation:

EBL	The analyte was detected in the associated equipment blank and the concentration detected in the sample was less than the limit of quantitation (LOQ).
EISH	High EIS recovery.
IVD	ICV recovery outside limits.
TR	The detected analyte concentration is less than the LOQ.

6 CHAIN OF CUSTODY AND SAMPLE RECEIPT CONDITION DOCUMENTATION

The samples were received at the laboratory under proper COC, intact, properly preserved, and at average temperatures less than the method-specified maximum of 6 degrees Celsius (°C).

7 SPECIFIC DATA VALIDATION FINDINGS

Results from these samples may be considered usable with the limitations and exceptions described in Sections 7.1 through 9.0.

7.1 PFAS BY EPA DRAFT METHOD 1633

PFAS results generated by SGS may be considered usable with the limitations described in Sections 7.1.1 through 7.1.15.

7.1.1 HOLDING TIMES

The samples were extracted for PFAS within the method-specified maximum holding time of 28 days from sample collection when stored at temperatures between 0 and 6 °C. Extracts were analyzed within the method-specified maximum hold time of 90 days from extraction.

7.1.2 MASS CALIBRATION FREQUENCY

According to the laboratory's notes, the analytical instrument underwent mass calibration to the instrument's manufacturer's specifications and using the manufacturer's recommended standard less than a year before the samples reviewed in this report were analyzed. The laboratory report included an instrument tuning and mass calibration check that indicated instrument masses were within specification.

7.1.3 INITIAL CALIBRATION COMPLIANCE

Relative standard deviations between response factors for each target analyte were less than or equal to the method-specified maximum of 20% and/or relative standard errors were less than the method-specified maximum of 20% for all target analytes and EISs.

7.1.4 INITIAL CALIBRATION VERIFICATION ACCURACY

ICVs were analyzed after each initial calibration. Recoveries were between 70 and 130%, with the following exceptions:

- Ethyl perfluorooctanesulfonamide (EtFOSA) recovery was low at 69% in the ICV associated with the analysis of samples LORNG_BW16002_05032024, LORNG_GC_BW001_05062024, LORNG_JBW7327_158_05032024, LORNG_JBW7327_265_05062024, LORNG_JMW-0241A_05062024, LORNG_MMW0006_05062024,

LORNG_UNK-23001_05072024, LORNG_USMW024_05032024, equipment blank LORNG_EB001_05062024, and field blank LORNG_FB02_05032024. Data limitations are summarized below.

- WSP UJ qualified the non-detect EtFOSA results from the associated field samples due to the low ICV recovery. (UJ, IVD)
- WSP does not qualify data from equipment or field blanks and data usability is not adversely affected by low ICV recovery.

– EtFOSA recovery was low at 61% in the ICV associated with the standard analysis of samples LORNG_BB_BW002_05072024, LORNG_MMW0018B_05072024, LORNG_MMW0018B_05072024FD, LORNG_NP_BW001D_05072024, LORNG_NP_BW001S_05072024, LORNG_BW02002_05082024, LORNG_BW03001_05072024, LORNG_BW05010_05072024, LORNG_BW22001_05072024, LORNG_JBW7314_05072024, LORNG_OW16003_05072024, LORNG_JMW0941_05082024, LORNG_MMW0002_05082024, and LORNG_BW02001_05082024, and equipment blanks LORNG_EB005_05092024 and LORNG_EB006_05092024. Data limitations are summarized below.

- WSP UJ qualified the non-detect EtFOSA results from the associated field samples due to the low ICV recovery. (UJ, IVD)
- WSP does not qualify data from equipment blanks and data usability is not adversely affected by low ICV recovery.

– Ethyl perfluorooctanesulfonamidoethanol (EtFOSE) and methyl perfluorooctanesulfonamidoethanol (MeFOSE) recoveries were high at 144% and 139%, respectively, in the ICV associated with the confirmation analysis of sample LORNG_BW16002_05032024 and equipment blanks LORNG_EB003_05072024 and LORNG_EB004_05092024. EtFOSE and MeFOSE were not reported from the associated analysis of sample LORNG_BW16002_05032024 and WSP does not qualify data from equipment blanks. Data usability is not adversely affected by high ICV recoveries.

7.1.5 INSTRUMENT SENSITIVITY CHECK COMPLIANCE

Instrument sensitivity checks (ISCs) were analyzed at the beginning of each analytical run, concentrations were equivalent to the LOQ, signal to noise ratios were greater than or equal to 3:1, and recoveries were within the method-specified 70 to 130% limits.

7.1.6 CONTINUING CALIBRATION VERIFICATION COMPLIANCE

CCVs were analyzed at the beginning of the analytical sequence after the ISC, after every ten or fewer samples, and at the end of the analytical sequence. Recoveries were within the method-specified 70 to 130% limits.

7.1.7 BILE SALT INTERFERENCE CHECKS

Bile salt interference checks were analyzed daily and retention times for the bile salts were at least one minute outside the retention times for linear or branched perfluorooctanesulfonic acid (PFOS).

7.1.8 LABORATORY, EQUIPMENT, AND FIELD BLANK DETECTIONS

Target analytes were not detected in the laboratory, equipment, and field blanks associated with the samples reviewed in this report, with the following exceptions:

– Perfluorooctanoic acid (PFOA) and PFOS were detected at concentrations of 0.77 nanograms per liter (ng/L) and 0.56 ng/L, respectively, in equipment blank LORNG_EB003_05072024, associated with samples LORNG_JMW0992_05072024, LORNG_BW03001_05072024, LORNG_MMW0018B_05072024, and LORNG_MMW0018B_05072024FD. Data limitations are summarized below.

- WSP U qualified the PFOA results from the associated samples at their respective LODs because the detected concentrations were less than the LOD. (U, EBL)
- WSP U qualified the PFOS result from sample LORNG_JMW0992_05072024 at the LOD of 2.0 ng/L because the detected concentration was less than the LOD. (U, EBL)
- PFOS either was not detected in the remaining associated samples or the detected concentrations were greater than five times the concentration detected in the blank and data usability is not adversely affected by the blank detection.

– Perfluorooctanesulfonamide (PFOSA) was detected at a concentration of 1.3 ng/L in equipment blank LORNG_EB004_05092024, associated with samples LORNG_LF2MW3_05082024, LORNG_BW02001_05082024, and LORNG_BW02002_05082024. PFOSA was not detected in the associated samples and data usability is not adversely affected by the blank detection.

– EtFOSA was detected at a concentration of 0.0011 micrograms per liter (ug/L) in the instrument blank associated with the analysis of samples LORNG_BB_BW002_05072024, LORNG_JMW0992_05072024, LORNG_MMW0018B_05072024, LORNG_MMW0018B_05072024FD, LORNG_NP_BW001D_05072024, LORNG_NP_BW001S_05072024, LORNG_BW02002_05082024, LORNG_BW03001_05072024, LORNG_BW05010_05072024, LORNG_BW22001_05072024, LORNG_JBW7314_05072024, LORNG_OW16003_05072024, LORNG_JMW0941_05082024, LORNG_MMW0002_05082024, LORNG_BW02001_05082024, and LORNG_GC_BW002S_05082024; and equipment blanks LORNG_EB003_05072024, LORNG_EB005_05092024, and LORNG_EB006_05092024. EtFOSA was not detected in the associated samples, WSP does not qualify data form equipment blanks, and data usability is not adversely affected by the blank detection.

– EtFOSA was detected at a concentration of 0.0011 ug/L in the instrument blank associated with the analysis of sample LORNG_JMW0992_05072024 and equipment blank LORNG_EB003_05072024. EtFOSA was not detected in the associated sample, WSP does not qualify data from equipment blanks, and data usability is not adversely affected by the blank detection.

– EtFOSA was detected at concentrations of 0.0012 ug/L and 0.0013 ug/L in the instrument blanks associated with the analysis of sample LORNG_GC_BW002S_05082024. EtFOSA was not detected in the associated sample and data usability is not adversely affected by the blank detections.

7.1.9 LABORATORY CONTROL SAMPLE ACCURACY

Low level LCS (LLCS) and LCS were included with each extraction batch, (LLCS) spike concentrations were twice the LOQ, and LCS and LLCS recoveries were within the quality assurance project plan (QAPP)-specified 40 to 150% interim limits, with the following exception:

– Perfluorononanesulfonic acid (PFNS) recovery was high at 161% in the LLCS associated with the analysis of samples LORNG_GC_BW001_05062024, LORNG_JBW7327_265_05062024, LORNG_JMW-0241A_05062024, LORNG_JBW7327_158_05032024, LORNG_MMW0006_05062024, LORNG_UNK-23001_05072024, and LORNG_USMW024_05032024; equipment blanks LORNG_EB001_05062024 and LORNG_EB002_05062024; and field blank LORNG_FB02_05032024. PFNS was not detected in the associated samples, WSP does not qualify data from equipment or field blanks, and data usability is not adversely affected by potential high analytical bias.

7.1.10 MATRIX SPIKE ACCURACY AND PRECISION

SGS performed MS and MSD analyses on samples LORNG_JMW0992_05072024, LORNG_MMW0326_05062024, LORNG_JPZ7808_05062024, and LORNG_MMW0006_05062024. MS and MSD recoveries were within the QAPP-specified 40 to 150% limits and RPDs between MS and MSD results were less than the QAPP-specified maximum of 30%, with the following exception:

- The RPD between ethyl perfluorooctanesulfonamidoacetic acid (EtFOSAA) results was high at 38% in the MS and MSD performed on sample LORNG_MMW0006_05062024. EtFOSAA was not detected in the unspiked native sample and data usability is not adversely affected by potential analytical imprecision.

7.1.11 DUPLICATE PRECISION

SGS performed a duplicate analysis on sample LORNG_MMW0018B_05072024. RPDs between primary and laboratory duplicate results were less than the QAPP-specified maximum of 30%.

7.1.12 EXTRACTED INTERNAL STANDARD ACCURACY

EIS recoveries were within the QAPP-specified 20 to 150% interim limits, with the following exceptions:

- Recoveries of the EISs $^{13}C_2$-4:2 fluorotelomer sulfonic acid (FTS) and $^{13}C_2$-6:2 FTS were high at 243% and 151%, respectively, in the initial analysis of sample LORNG_NP_BW001D_05072024. Data limitations are summarized below.
  - WSP J qualified the detected 6:2 FTS result from the associated sample due to high EIS recovery. (J, EISH)
  - 4:2 FTS was not reported from the associated analysis and data usability is not adversely affected by high EIS recoveries.
- Recoveries of the EISs $^{13}C_2$-6:2 FTS (156%), $^{13}C_2$-8:2 FTS (162%), and $^{13}C_4$-perfluorobutanoic acid (PFBA [9%]) were outside limits in the initial analysis of sample LORNG_BW16002_05032024. 6:2 FTS and 8:2 FTS were not detected in the associated sample and PFBA was not reported from the associated analysis. Data usability is not adversely affected by low or high EIS recoveries.
- Recovery of the EIS $^{13}C_2$-4:2 FTS was high at 155% in sample LORNG_JPZ1382_05062024. 4:2 FTS was not detected in the associated sample and data usability is not adversely affected by high EIS recovery.
- Recovery of the EIS $^{13}C_2$-4:2 FTS was high at 162% in sample LORNG_JBW7752_05072024. 4:2 FTS was not detected in the associated sample and data usability is not adversely affected by high EIS recovery.
- Recovery of the EIS $^{13}C_2$-4:2 FTS was high at 157% in sample LORNG_JMW-0241A_05062024. 4:2 FTS was not detected in the associated sample and data usability is not adversely affected by high EIS recovery.
- Recovery of the EIS $^{13}C_2$-4:2 FTS was high at 155% in sample LORNG_JBW7327_158_05032024. 4:2 FTS was not detected in the associated sample and data usability is not adversely affected by high EIS recovery.
- Recovery of the EIS $^{13}C_2$-4:2 FTS was high at 160% in sample LORNG_MMW0006_05062024. 4:2 FTS was not detected in the associated sample and data usability is not adversely affected by high EIS recovery.
- Recovery of the EIS $^{13}C_2$-4:2 FTS was high at 179% in sample LORNG_UNK-23001_05072024. 4:2 FTS was not detected in the associated sample and data usability is not adversely affected by high EIS recovery.
- Recovery of the EIS $^{13}C_2$-4:2 FTS was high at 160% in sample LORNG_USMW024_05032024. 4:2 FTS was not detected in the associated sample and data usability is not adversely affected by high EIS recovery.

7.1.13 NON-EXTRACTED INTERNAL STANDARD ACCURACY

NIS recoveries were within the method-specified 50 to 200% limits.

7.1.14 STAGE 4 VALIDATION

WSP performed Stage 4 validation on samples LORNG_BW16002_05032024, LORNG_JPZ1382_05062024, LORNG_MMW0326_05062024, LORNG_OW01003_05072024, LORNG_USMW015_05032024, LORNG_BW18006_05062024, LORNG_JBW7752_05072024, LORNG_JPZ7808_05062024, LORNG_OW02001_05062024, LORNG_BW16001_05062024, LORNG_GC_BW001_05062024, LORNG_JBW7327_265_05062024,

LORNG_JMW-0241A_05062024, LORNG_JBW7327_158_05032024, LORNG_MMW0006_05062024, LORNG_UNK-23001_05072024, LORNG_USMW024_05032024, LORNG_BB_BW002_05072024, LORNG_JMW0992_05072024, LORNG_MMW0018B_05072024, LORNG_NP_BW001D_05072024, LORNG_NP_BW001S_05072024, LORNG_BW02002_05082024, LORNG_BW03001_05072024, and LORNG_BW05010_05072024. Reported results matched the raw analytical data and target analytes were correctly identified.

7.1.15 DATA REPORTING AND ANALYTICAL PROCEDURES

SGS J qualified analytes with detected concentrations less than the LOQ. WSP agrees that these results are quantitatively uncertain and has maintained SGS's J qualifiers. (J, TR)

8 FIELD DUPLICATE PRECISION

WSP collected field duplicates with samples LORNG_BW16001_05062024 (LORNG_BW16001_05062024FD), LORNG_MMW0018B_05072024 (LORNG_MMW0018B_05072024FD), and LORNG_MMW0007A_05082024 (LORNG_MMW0007A_05082024FD). Precision between primary and field duplicate results was acceptable, with RPDs less than 30% or differences between concentrations less than the average LOQ. Detections in the field duplicate pairs are summarized in Table 2.

9 SUMMARY AND CONCLUSIONS

WSP evaluated a total of 1,560 data records from field samples during this validation. Qualifier definitions are summarized in Section 4.0, reason codes are summarized in Section 5.0, and qualified data are summarized below.

- U: WSP U qualified 5 records (0.32%) as non-detects due to detections in an associated equipment blank.
- J/UJ: WSP J qualified 114 records (7.3%) due to high or low ICV recoveries, high EIS recovery, or detected concentrations less than the LOQ.

Data qualified during validation are summarized in Table 3.

Notes:

NC = not calculable, RPD = relative perent difference

NG/L = nanograms per liter

J = Analyte is estimated

U = Analyte not detected at the associated detection limits

UJ = Analyte not detected; reporting limits estimated

EBL = Analyte detected in equipment blank; concentration in samples is less than LOQ

IVD = Initial calibration verification outside of limits

TR = Analyte concentration is less than LOQ

Data Validation Report
Loring PFAS Remedial Investigation
May 2025 Residential Sampling Program
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Residential water samples were collected at the Former Loring Air Force Base in Limestone, Maine, in May 2025 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. Samples were submitted to SGS North America (SGS) located in Orlando, Florida, for analysis.

SGS analyzed seven samples and one field duplicate for PFAS by Method 1633, liquid chromatography tandem mass spectrometry compliant with Table B-24 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.4 (USDoD, 2021).

Sample event information included in this data validation report is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Summary of Data Validation Actions
- Table 4 – Summary of Field Duplicate Results
- Table 5 – Acronyms and Abbreviations

Data quality reviews were completed as described in the Final Quality Program Plan (QPP) Remedial Investigation PFAS Response (WSP, 2025) and the final Method 1633 (USEPA, 2024). Data validation levels are established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019). PFAS data were validated using Stage 4 procedures. Validation checklists, documentation of sample recalculations, and qualification justification documentation are stored in the WSP project file.

Stage 4 data validation includes review of sample results forms, chain of custody (COC) and supporting records, laboratory receipt checklists, analytical holding time compliance, sample related quality control (QC) data forms (method blanks, laboratory control samples [LCS], matrix spike/matrix spike duplicates [MS/MSD], field and laboratory duplicates, extracted internal standards [EIS] and non-extracted internal standards [NIS], QC sample frequency checks, initial calibration summaries, continuing calibration verification summaries, instrument mass calibration /tuning summaries, and sample preparation logs, as well as review of raw data and chromatograms, target analyte identification confirmation, and recalculation of QC and sample results.

Data review and qualification actions were completed based on DoD Data Validation Guidelines Module 6 for PFAS (USDoD, 2022), general procedures described in National USEPA Data Review and Validation Guidelines (USEPA, 2020), and method specifications in the DoD QSM 5.4 and/or the final Method 1633. QC limits presented in the DoD QSM 5.4, Method 1633, and/or the QPP were used during the data evaluation. Data qualifications were completed, if necessary, in accordance with the USEPA guidelines and the professional judgment of the validator using the following qualifiers:

J = Analyte present; concentration is estimated
J+ = Analyte present; concentration is estimated with potential high bias
U = Analyte not detected at the associated detection limits

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

Validation reason codes were applied to results associated with QC measurements outside project QC goals where validation qualifiers were added to results. Final results are presented in Table 2. The validation qualification actions, and associated validation reason codes applied to sample results are summarized in Table 3. The following data validation reason codes were applied to one or more sample results:

LCH = Laboratory control sample recovery exceeds quality control limits

2.0 DATA VALIDATION QUALIFICATION ACTION SUMMARY

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the DoD QSM 5.4, the QPP, and/or analytical method. Unless specified below, results are interpreted to be usable as reported by the laboratory.

2.1 PFAS

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance/Tuning
  LCS
* MS/MSD
* Field Duplicates
* Extracted Internal Standard Recovery
* Reporting Limits

* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
* Miscellaneous

* QC criteria were met for this parameter.

2.1.1 Laboratory Control Sample (LCS)

The percent recovery of Perfluorooctanesulfonic acid (PFOS) was 162% and was above the upper control limit of 150 in the LCS associated with a subset of samples. Results for PFOS were qualified as estimated (J+) with potential high bias and assigned a reason code of LCH in Table 3.

Data Validation Report
Loring PFAS Remedial Investigation
Fall 2024 Soil Boring Sampling Program
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Soil samples were collected at the Former Loring Air Force Base in Limestone, Maine, in September and October 2024 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. Samples were submitted to Katahdin Analytical Services (Katahdin) located in Scarborough, Maine for analysis of Total Organic Carbon (TOC) and Grain Size analysis and reported in Sample Delivery Group (SDG) SR5475.

Sample event information included in this data validation report is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Summary of Data Validation Actions
- Table 5 – Acronyms and Abbreviations

Data quality reviews were completed as described in the Draft Quality Program Plan (QPP) Remedial Investigation PFAS Response (WSP, 2024). Data validation levels are established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019). The TOC data were validated using Stage 2A procedures. A Stage 1 review was completed on the grain size data. Validation checklists and qualification justification documentation are stored in the WSP project file.

The Stage 1 review included a review of sample results forms, chain of custody and supporting records, and laboratory receipt checklist.

The Stage 2A data validation included a review of sample results forms, chain of custody (COC) and supporting records, laboratory receipt checklists, analytical holding time compliance, sample related quality control (QC) data forms (method blanks, laboratory control samples [LCS], matrix spike/matrix spike duplicates [MS/MSD], field and laboratory duplicates, and QC sample frequency checks.

Data review and qualification actions were completed based on DoD General Validation Guidelines (USDoD, 2019) and general procedures described in USEAP National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2020). QC limits presented in the QPP were used during the data evaluation. Data qualifications were completed, if necessary, in accordance with the USEPA guidelines and the professional judgment of the validator using the following qualifiers:

J = Analyte present; concentration is estimated
J+ = Analyte present; concentration is estimated with potential high bias
U = Analyte not detected at the associated detection limits

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

Validation reason codes were applied to results associated with QC measurements outside project QC goals where validation qualifiers were added to results. Final results are presented in Table 2. The validation qualification actions and associated validation reason codes applied to sample results are summarized in Table 3. The following data validation reason codes were applied to one or more sample results:

MSH = Matrix spike recovery greater than the upper control limit
MBG = Material (Method) blank contamination exceeds the reporting limit

2.0 DATA VALIDATION QUALIFICATION ACTION SUMMARY

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the QPP, and/or analytical method. Unless specified below, results are interpreted to be usable as reported by the laboratory.

2.1 TOC

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
  QC Blanks
* LCS
  MS/MSD
* Lab Duplicates
* Field Duplicates
* Reporting Limits
* Electronic Data Verification

* QC criteria were met for this parameter.

2.1.1 QC Blanks

TOC was detected in the laboratory method blank at 480 ug/g for batch WG360633. The majority of associated samples had TOC concentrations greater than 5X the level reported in the blank. The following samples had TOC concentrations within the 2x – 5X range and were qualified as estimated J+:

sample ID	Lab ID	Conc ug/g	Validation qual	reason code
LORNG_SB01055_13-15_10012024_K	SR5475-2	1300	J+	MBG
LORNG_SB05041_10-12_10012024_K	SR5475-4	1900	J+	MBG
LORNG_SB07036_13-15_09302024_K	SR5475-6	1700	J+	MBG

2.1.2 MS/MSD

A matrix spike and matrix spike duplicate analysis was performed on LORNG_SB12025_0-2_10012024_K and compared to recover limits of 75-125%. The percent recovery in the MS (149%) and MSD (144%) was above the upper control limit and TOC was qualified as estimated (J+) in sample LORNG_SB12025_0-2_10012024_K and LORNG_SB12025_0-2_10012024FD_K.
