Data Validation and Usability Report
Loring PFAS Remedial Investigation
May 2022 Groundwater Sampling
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Groundwater samples were collected at the Former Loring Air Force Base in Limestone, Maine, in May 2022 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. Samples were submitted to SGS North America Laboratory in Orlando, Florida, Katahdin Analytical Services (KAS) in Scarborough, Maine, and Vista Analytical Laboratory (Vista) in El Dorado Hills, California, as summarized below.

SGS analyzed 185 samples for PFAS by Method M537, liquid chromatography tandem mass spectrometry compliant with Table B-15 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.3 (USDoD, 2019a).

KAS analyzed 32 samples for one or more of the following methods:

- Volatile Organic Compounds (VOCs) by SW846 Methods 8011 and 8260C
- Semivolatile Organic Compounds (SVOCs) by SW846 Method 8270D
- Polynuclear Aromatic Hydrocarbons (PAHs) and Select SVOCs by SW846 Methods 8270C Selected Ion Monitoring (SIM) and 8270D SIM
- Pesticides by SW846 Method 8081B
- Polychlorinated Biphenyls (PCBs) by SW846 Method 8082A
- Metals by SW846 Methods 6010C, 6020A, and 7470A
- Perchlorate (subcontracted to Eurofins Test America Laboratory (TAL) in South Burlington, Vermont) by SW846 Method 6850

Duplicates of groundwater samples LORNG_JBW8003B_05232022 and LORNG_JMW0406_05062022 were collected and submitted to Vista Analytical Laboratory in El Dorado Hills, California (Vista) as interlaboratory comparison assessment samples. Vista analyzed two samples for PFAS by Method MS014.0, liquid chromatography tandem mass spectrometry compliant with Table B-15 of the USDoD Quality Systems Manual for Environmental Laboratories (QSM), Version 5.3 (USDoD, 2019a).

Sample event information included in this data validation report is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Summary of Data Validation Actions
- Table 4 – Field Duplicate RPD Summary
- Table 5 – Acronyms and Abbreviations
- Table 6 – Interlaboratory Comparison Assessment Summary

Data quality reviews were completed as described in the Quality Program Plan (QPP) Remedial Investigation PFAS Response (Wood, 2022). Data validation levels are established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019b). PFAS data were validated using Stage 2B procedures and all other chemistry data were validated using Stage 2A procedures. Ten percent of the PFAS and other chemistry data collected during the remedial investigation were validated using Stage 4 procedures. Validation checklists, documentation of sample recalculations, and qualification justification documentation are stored in the Wood project file.

Stage 2A data validation includes review of sample results forms, chain of custody (COC) and supporting records, laboratory receipt checklists, analytical holding time compliance, sample related quality control (QC) data forms (method blanks, laboratory control samples (LCS), matrix spike/matrix spike duplicates (MS/MSD), field and laboratory duplicates, surrogates, internal standards, post digestion spikes, and serial dilutions), and QC sample frequency checks.

Stage 2B data validation includes all reviews performed in a Stage 2A data validation as well as review of initial calibration summaries, continuing calibration verification summaries, instrument performance/tuning summaries, dual column confirmation results, and sample preparation logs.

Stage 4 data validation includes all reviews performed in Stages 2A and 2B as well as review of raw data and chromatograms, target analyte identification confirmation, and recalculation of QC and sample results.

Data review and qualification actions were completed based on DoD Data Validation Guidelines Module 3 for PFAS (USDoD, 2020), general procedures described in USEPA Data Review and Validation Guidelines for PFAS (USEPA, 2018), USEPA National Functional Guidelines for Superfund Data Review (USEPA, 2020a; USEPA, 2020b), and method specifications in the DoD QSM 5.3 and/or the referenced analytical methods when DoD specifications were not available. QC limits presented in the DoD QSM 5.3 and/or the QPP were used during the data evaluation. Data qualifications were completed, if necessary, in accordance with the USEPA guidelines and the professional judgment of the validator using the following qualifiers:

J = Analyte present; concentration is estimated
U = Analyte not detected at the associated detection limits
UJ = Analyte was not detected at the associated detection limits; however, the associated detection limit should be considered an estimate.
R = Sample result is considered unusable for project objectives

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

Validation reason codes were applied to results associated with QC measurements outside project QC goals where validation qualifiers were added to results. Final results are presented in

Table 2. The validation qualification actions and associated validation reason codes applied to sample results are summarized in Table 3. The following data validation reason codes were applied to one or more sample results:

CCL = Continuing calibration standard recovery less than lower control limit
CVHL = Continuing calibration standard recovery greater than upper control limit
IAG = Ion abundance ratio outside calculated limits
LBL = Laboratory blank contamination less than reporting limit
LBM = Laboratory blank contamination greater than reporting limit
LCD = Laboratory control sample (LCS) relative percent difference (RPD) criteria exceeded
LCH = LCS recovery greater than upper control limit
LCL = LCS recovery less than lower control limit
MSD = Matrix spike (MS)/MSD RPD criteria exceeded
MSH = MS recovery greater than upper control limit
MSL = MS recovery less than lower control limit
RIS = Extracted internal standard recovery outside control limits
SDL = Dissolved metals concentration more than twenty percent greater than total metals concentration
SGL = Surrogate recovery less than lower control limit
SVLL = Second source verification standard recovery less than lower control limit
TBG = Trip blank concentration greater than reporting limit

Results reported for LORNG_JBW8003B_05232022SPLIT and LORNG_JMW0406_05062022SPLIT from Vista are included in this report in order to analyze the results of the interlaboratory comparison only and are not considered to be included in the final data set of the Loring RI sampling program and are therefore not presented on Table 2. The interlaboratory comparison assessment summary is included in Table 6.

1.1 DATA USABILITY EVALUATION

The overall data quality and data usability for this data set is interpreted to meet the project objectives identified in the QAPP. Interpretations of data validation qualifications and data usability are provided below:

PFAS
Non-detect results for N-methyl perfluorooctane sulfonamide (N-MeFOSA) in the following samples were qualified as rejected (R) based on extracted internal standard (EIS) percent recoveries less than the DoD PFAS validation guideline limit of 20. Results for N-MeFOSA in these samples are considered unusable for project objectives:

LORNG_AA11MW01_05072022
LORNG_JMW0882-05182022
LORNG_JMW1565-05192022
LORNG_CBW02_05192022
LORNG_JMW0980_05202022
LORNG_LF3MW4_05202022
LORNG_JMW0961_05212022
LORNG-UNK-033_05222022FD

LORNG_JBW7314_05232022

Non-detect results for perfluorotetradecanoic acid (PFTeDA) and perfluorooctane sulfonamide (PFOSA) in sample LORNG_JBW7314_05232022 were qualified as rejected (R) based on extracted internal standard (EIS) percent recoveries less than the DoD PFAS validation guideline limit of 20. Results for PFTeDA and PFOSA in the affected sample are considered unusable for project objectives.

PFAS detections were qualified estimated (J) in a subset of samples based on associated QC results exceeding limits for MS/MSD recovery, EIS recovery, quantitation ion signal to noise ratio, and/or transition ion ratio. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as qualified. The uncertainties that may occur from using estimated detections should be considered during contamination assessment or evaluation of contaminant data against project action limits.

Reporting limits for PFAS were qualified estimated (UJ) in a subset of samples based on associated QC results exceeding limits for EIS recovery. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as qualified. The uncertainties and/or data gaps that may occur from using estimated reporting limits should be considered during contamination assessment or evaluation of contaminant data against project action limits.

Of the 4,625 individual PFAS results reported for the groundwater event, a total of 11 results were qualified as rejected (R) and are interpreted to be unusable for project objectives. This represents a PFAS data completeness of 99.8% for the groundwater data set.

VOCs

A low concentration detection of methylene chloride in sample LORNG_JB7339B_05052022 was qualified non-detect (U) at the reported concentration based on contamination in the associated trip blank. No impact on data usability was identified.

Of the 1,768 individual VOC results (Methods 8260C and 8011) reported for the groundwater event, no results were qualified as rejected. This represents a VOC data completeness of 100% for the groundwater event.

SVOCs

The SVOC LCS/LCSDs associated with the samples listed below had percent recoveries for a subset of analytes below the lower rejection limit of 10. Reporting limits for the affected analytes in the listed samples were qualified rejected (R) as summarized in Table 3. Results for affected analytes in these samples are considered unusable for project objectives:

LORNG_JBW7339B_05052022_K
LORNG_JBW7348_05052022_K
LORNG_JMW0445_05082022_K
LORNG_JMW0683-05202022_K
LORNG_OW16001-05202022_K

In addition, for sample LORNG_JBW7348_05052022_K, surrogate and MS/MSD recoveries were also less than control limits, and for a subset of SVOCs the MS/MSD recoveries were less than the QC rejection limit of 10 percent, and associated results are considered unusable for project objectives.

The result for 1-methylnaphthalene in sample LORNG_JMW0445_05082022_K was qualified estimated (J) based on the relative percent difference between LCS/LCSD recoveries. The result is considered usable as qualified. The uncertainties that may occur from using estimated detections should be considered during contamination assessment or evaluation of contaminant data against project action limits.

Benzyl alcohol (15 ug/L) and bis(2-ethylhexyl)phthalate (4.1 ug/L) were detected below the LOQ in the method blanks (MB) associated with a subset of samples. Sample concentrations were less than the method blank concentrations and results were qualified not-detected (U) at the LOD. Although the LODs for benzyl alcohol and bis(2-ethylhexyl)phthalate are greater than associated project action limits (PALs), MDLs were less than the PALs and results are interpreted to be usable for project objectives.

Reporting limits for SVOCs were qualified estimated (UJ) in a subset of samples based on associated QC results exceeding limits for LCS/LCSD recovery, LCS/LCSD RPD, MS/MSD recovery, MS/MSD RPD, surrogate recovery, instrument calibration check standard recovery, and/or holding time. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as qualified. The uncertainties and/or data gaps that may occur from using estimated reporting limits should be considered during contamination assessment or evaluation of contaminant data against project action limits.

Of the 784 individual SVOC results (Method 8270D) reported for the groundwater event, a total of 31 results were qualified as rejected (R) and are interpreted to be unusable for project objectives. This represents an SVOC data completeness of 96% for the groundwater data set.

PAHs and Select SVOCs by SIM

Reporting limits for PAHs and Select SVOCs by SIM were qualified estimated (UJ) in a subset of samples based on associated QC results exceeding limits for LCS/LCSD recovery, LCS/LCSD RPD, MS/MSD recovery, MS/MSD RPD, and/or holding time. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as qualified. The uncertainties and/or data gaps that may occur from using estimated reporting limits should be considered during contamination assessment or evaluation of contaminant data against project action limits.

PAH detections were qualified estimated (J) in a subset of samples based on associated QC results exceeding limits for LCS/LCSD recovery and/or LCS/LCSD RPD. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as qualified. The uncertainties that may occur from using estimated detections should be considered during contamination assessment or evaluation of contaminant data against project action limits.

Low concentration detections of benzo(b)fluoranthene, pyrene, benzo(g,h,i)perylene, and/or indeno(1,2,3-cd)pyrene were qualified not-detected (U) at the LOD in a subset of samples based on contamination in the associated method blanks. LODs for benzo(b)fluoranthene, pyrene, benzo(g,h,i)perylene, and indeno(1,2,3-cd)pyrene are less than the associated PALs and no impact to data usability was identified.

Of the 260 individual PAH and select SVOCs by SIM results (Methods 8270C SIM and 8270D SIM) reported for the groundwater event, no results were qualified as rejected. This represents a PAH and select SVOCs by SIM data completeness of 100% for the groundwater event.

Pesticides and PCBs

No data qualifications were required. Of the 82 individual pesticides and PCBs results reported for the groundwater event, no results were qualified as rejected. This represents a pesticides and PCBs data completeness of 100% for the groundwater event.

Metals

Low concentration detections of total and dissolved antimony, and total potassium, selenium, thallium, and zinc, in one or more samples were qualified not detected (U) at the LOD or reported sample concentrations based on contamination in the associated laboratory method blanks. LODs for potassium and zinc are less than associated PALs and results for potassium and zinc are considered usable for project objectives. Although the LODs for antimony in a subset of samples and selenium in all samples are greater than associated project action limits (PALs), MDLs are less than the PALs and results for antimony and selenium are interpreted to be usable for project objectives. The LOD and MDL for thallium are greater than the PAL. The potential data gaps that may occur from using non-detect results for thallium should be considered during contamination assessment.

Low concentration detections of total iron, potassium, and thallium in one or more samples were qualified not detected (U) at the LOD or reported sample concentrations based on contamination in the associated instrument calibration blanks. LODs for potassium and zinc are less than associated PALs and results for potassium and zinc are considered usable for project objectives. The LOD and MDL for thallium are greater than the PAL. The potential data gaps that may occur from using non-detect results for thallium should be considered during contamination assessment.

Low concentration detections of dissolved antimony, lead, and mercury in one or more samples were qualified not detected (U) at the LOD or reported sample concentrations based on contamination in the associated field blanks. Although the LODs for lead and mercury are greater than the associated PALs, the MDLs are less than the PALs and results for lead and mercury are interpreted to be usable for project objectives. Detections of dissolved antimony were qualified not detected at reported sample concentrations, which were less than the PAL for antimony. Detections of dissolved barium in samples LORNG_JBW7338B_05092022F and LORNG_JBW7711_05092022F and zinc in sample LORNG_JBW7338B_05092022F were qualified estimated (J) based on contamination in the associated field blanks. Results for dissolved antimony, barium, and zinc are interpreted to be usable as qualified.

Results for total iron and magnesium in sample LORNG_JBW7338B_05092022 were qualified estimated (J) based on MS/MSD percent recoveries that were slightly greater than the QC limits. Results are considered usable as qualified. The uncertainties that may occur from using estimated detections should be considered during contamination assessment or evaluation of contaminant data against project action limits.

Results for total and dissolved zinc in samples LORNG_JMW0445_05082022 and LORNG_JBW7338B_05092022 were qualified estimated (J) based on dissolved concentrations that were more than an order of magnitude greater than the total concentrations. Potential high bias for the reported dissolved zinc results and low bias for the reported total zinc results should be considered when using these data.

Of the 437 individual total and dissolved metals results (Methods 6010C, 6020A, and 7470A) reported for the groundwater event, no results were qualified as rejected. This represents a metals data completeness of 100% for the groundwater event.

Perchlorate

Perchlorate in sample LORNG_JBW7339B_05052022 was analyzed at a dilution (1000X) resulting in an elevated LOD as indicated in Table 2 that was greater than the PAL. With the exception of sample LORNG_JBW7339B_05052022, all reported LODs were less than the PAL. The LODs reported by the laboratory for undiluted samples did not match the LOD specified in the QAPP; however, all LODs for undiluted samples were less than the PAL and no impact to data usability was identified. The potential data gap that may occur from using the non-detect result for perchlorate in sample LORNG_JBW7339B_05052022 should be considered during contamination assessment.

No data qualifications were required for perchlorate. Of the 12 individual perchlorate results reported for the groundwater event, no results were qualified as rejected. This represents a perchlorate data completeness of 100% for the groundwater event.

Laboratory reporting limits (RLs) and/or MDLs for all samples in the groundwater event are less than the Project Action Limits (PALs) identified in the QAPP with the following exception:

- Reporting limits for a subset of VOCs, SVOCs, and metals as reported by the laboratory do not meet the PALs.

Of the overall 7,968 individual results reported for the groundwater event, 42 results were qualified as rejected. This represents an overall data completeness of 99% for the groundwater event.

2.0 DATA VALIDATION QUALIFICATION ACTION SUMMARY

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the DoD QSM 5.3, the QPP, and/or analytical methods. Unless specified below, results are interpreted to be usable as reported by the laboratory.

2.1 PFAS

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance/Tuning
* LCS
  MS/MSD
* Field Duplicates
  Extracted Internal Standard Recovery
* Reporting Limits
* Electronic Data Verification
* Initial Calibration

* Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
  Miscellaneous

* QC criteria were met for this parameter.

2.1.1 MS/MSD

The percent recovery of PFOA in the matrix spike duplicated (MSD) associated with sample LORNG_JBW7326B_05102022 was below the associated DoD acceptance limit (70). PFOA was detected in sample LORNG_JBW7326B_05102022 and the result was qualified as estimated (J).

2.1.2 Extracted Internal Standard Recovery

The extracted internal standard (EIS) percent recoveries associated with a subset of target compounds in multiple samples were less than the lower QC acceptance limit of 50. Results for target compounds reported above the DL are considered estimated (J). Reporting limits associated with non-detected target compounds with EIS recoveries between 20 and 50 are qualified as estimated (UJ). Results for non-detected target compounds with EIS recoveries below 20 were qualified as rejected (R) and are considered unusable for project objectives.

Non-detect results for N-MeFOSA in the following samples were qualified as rejected (R) based on EIS percent recoveries less than 20. Results for N-MeFOSA in these samples are considered unusable for project objectives:

LORNG_AA11MW01_05072022

LORNG_JMW0961_05212022
LORNG-UNK-033_05222022FD
LORNG_JBW7314_05232022

Non-detect results for PFTeDA and PFOSA in sample LORNG_JBW7314_05232022 were qualified as rejected (R) based on EIS percent recoveries less than 20. Results for PFTeDA and PFOSA in the affected sample are considered unusable for project objectives.

Reporting limits for N-MeFOSA in the following samples were qualified as estimated (UJ) based on EIS percent recoveries less than 50.

Reporting limits for PFTeDA in samples LORNG_JPZ0606_05092022, LORNG_JMW1565_05192022. LORNG_MMW0002_05202022, LORNG_JMW0980_05202022, and LORNG_JMW0961_05212022 were qualified as estimated (UJ) based on EIS percent recoveries less than 50.

Reporting limits for FOSA in samples LORNG_JPZ0606_05092022 and LORNG_JMW0882_05182022 were qualified as estimated (UJ) based on EIS percent recoveries less than 50.

The reporting limit for N-MeFOSAA in sample LORNG_MMW0002_05202022 was qualified as estimated (UJ) based on EIS percent recoveries less than 50.

Reporting limits for PFPeA and PFHxA in sample LORNG_LF2MW1_05192022 were qualified estimated (UJ) based on EIS percent recoveries less than 50.

Results for PFPeA and PFHxA in sample LORNG_JMW0602_05192022 were qualified estimated (J) based on EIS percent recoveries less than 50.

2.1.3 Miscellaneous

The transition ion ratio for PFOSA in sample LORNG_JBW7339B_05052022 was outside the acceptable ion ratio range calculated from the associated daily calibration standard. The PFOSA result in the sample LORNG_JBW7339B_05052022 was qualified estimated (J).

The signal to noise ratio for the quantitation ion of PFBS in sample LORNG_OW10005_05062022 was less than the lower QC acceptance limit of 10. The PFBS result for sample LORNG_OW10005_05062022 was qualified estimated (J).

2.2 VOCs

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
  QC Blanks
* Instrument Performance/Tuning
* LCS
* MS/MSD
* Field Duplicates
* Surrogate
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
* Miscellaneous

* QC criteria were met for this parameter.

2.2.1 QC Blanks

Methylene chloride was detected in the trip blank LORNG_TB01_05052022 (7.2 ug/L) associated with sample LORNG_JBW7339B_05052022. The detection of methylene chloride in sample LORNG_JBW7339B_05052022 was reported above the LOQ and the result was qualified as not-detected (U) at the reported result.

2.3 SVOCs

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
  Holding Times
  QC Blanks
* Instrument Performance/Tuning
  LCS
  MS/MSD
* Field Duplicates
  Surrogate
* Reporting Limits
* Electronic Data Verification
  Initial Calibration
  Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
  Miscellaneous

* QC criteria were met for this parameter.

2.3.1 Holding Time

Sample LORNG_JMW0683_05202022 reported all acid surrogates' percent recoveries below the lower rejection QC limit. The sample was re-extracted 10 days outside of holding time and surrogate recoveries were within QC limits. All acid fraction analytes from the initial run have been refused and results from the re-extraction have been reported. All reporting limits from the re-extracted analysis were qualified estimated (UJ) due to exceeding the extraction holding time.

2.3.2 QC Blanks

Benzyl alcohol and bis(2-ethylhexyl)phthalate were detected below the LOQ in the method blanks associated with samples in sample delivery groups WOOD-LORING 2 and SP2222. Detected concentrations of both analytes in associated samples were less than the reported concentrations in the method blanks. Results were qualified not-detected (U) at the LOD.

2.3.3 Laboratory Control Sample

Percent recoveries for a subset of SVOCs in the LCS associated with samples LORNG_JBW7348_05052022, LORNG_JBW7339B_05052022, and LORNG_JMW0445_05082022 were less than the QC rejection limit of 10. The LCS/LCSD RPDs for several SVOCs were outside of the acceptance criteria. The affected SVOCs were not detected in the sample LORNG_JBW7348_05052022 and the reporting limits were qualified as rejected (R).

In the LCSD associated with field samples LORNG_JMW0683_05202022 and LORNG_OW16001_052022, the percent recovery of hexachlorocyclopentadiene was less than the QC rejection limit of 10. Hexachlorocyclopentadiene was not detected in the associated samples and results were qualified rejected (R).

The percent recoveries and relative percent differences for a subset of analytes in numerous laboratory control samples (LCS) and/or laboratory control sample duplicates (LCSD) were outside of project limits. Results and reporting limits for the affected analytes in the associated samples were qualified estimated (J/UJ).

2.3.4 MS/MSD

Percent recoveries for a subset of SVOCs in the MS/MSD associated with sample LORNG_JBW7348_05052022 were less than the lower QC acceptance limit and in some cases less than the QC rejection limit. MS/MSD RPDs for the subset of parameters were also outside of the acceptance criteria. Affected SVOCs were not detected in sample LORNG_JBW7348_05052022 and results were previously qualified as rejected (R) based on low recoveries in the associated LCS/LCSD.

2.3.5 Surrogates

Percent recoveries for two of three acid-extractable surrogates associated with sample LORNG_JBW7348_05052022 (13.1/32.4) were less than the lower control limits, indicating potential low bias. The acid fraction results for sample LORNG_JBW7348_05052022 were qualified as estimated (UJ/J). Results for a subset of acid fraction results were previously qualified rejected based on low LCS/LCSD and MS/MSD recoveries.

2.3.6 Initial/Continuing Calibration

Reporting limits for benzaldehyde, benzidine, and benzoic acid were qualified estimated (UJ) based on instrument calibration check standard and/or second source verification standard recoveries outside project control limits. Results for benzidine and benzoic acid in sample LORNG_JBW7348_05052022_K were previously qualified rejected based on low LCS/LCSD and MS/MSD recoveries.

2.4 PAHs and Select SVOCs by SIM

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
  Holding Times
  QC Blanks
* Instrument Performance/Tuning
  LCS
  MS/MSD

* Field Duplicates
* Surrogate
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
* Miscellaneous

* QC criteria were met for this parameter.

2.4.1 Holding Time

For sample LORNG_JMW0683_052022, the percent recovery of surrogate 2,4-dibromophenol was less than the QC rejection limit of 10. The sample was re-extracted 11 days outside of hold time and surrogate recoveries were within limits. Results for acid-fraction analytes from the re-extracted analysis were selected for final reporting. Based on extraction after expiration of the holding time, reporting limits for all analytes reported from the re-extraction were qualified estimated (UJ).

2.4.2 QC Blanks

In the method blank associated with sample LORNG_JMW0683_05202022, benzo(b)fluoranthene and pyrene were detected at concentrations less than the LOQ. Results for both analytes in sample LORNG_JMW0683_05202022 were qualified not-detected (UJ) at the LOD.

The method blank associated with sample LORNG_AA07MW01_05192022 had concentrations of benzo(g,h,i)perylene and indeno(1,2,3-cd)pyrene less than the LOQ. Results for both analytes in sample LORNG_AA07MW01_05192022 were qualified not-detected (U) at the LOD.

2.4.3 LCS

The SIM LCS/LCSDs associated with the samples listed below had percent recoveries and/or relative percent differences (RPDs) for a subset of analytes outside of project limits. Results and reporting limits for affected analytes in the listed samples were qualified estimated (J/UJ):

LORNG_JBW7339B_05052022_K
LORNG_JBW7348_05052022_K
LORNG_JMW0445_05082022_K
LORNG_JMW0683-05202022_K
LORNG_OW16001-05202022_K
LORNG_MMW3402R_05212022_K
LORNG_BW05007-05232022_K
LORNG_BW05007-05232022FD_K

2.4.4 MS/MSD

Percent recovery of benzo(a)pyrene in the MS/MSD associated with sample LORNG_OW21005_05092022 was less than QC limits. The reporting limit for benzo(a)pyrene in sample LORNG_OW21005_05092022 was qualified estimated (UJ).

Percent recoveries of pentachlorophenol, anthracene, and benzo(a)pyrene in the MS and/or MSD associated with sample LORNG_JBW7348_05052022 were less than the lower QC acceptance limit, and the MS/MSD RPD was outside acceptance criteria for pentachlorophenol. Pentachlorophenol, anthracene, and benzo(a)pyrene were not detected in sample LORNG_JBW7348_05052022 and the reporting limits were qualified as estimated (UJ).

2.5 Pesticides

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance/Tuning
* LCS
* MS/MSD
* Field Duplicates
* Surrogate
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
* Miscellaneous

* QC criteria were met for this parameter.

2.6 PCBs

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance/Tuning
* LCS
* MS/MSD

* Field Duplicates
* Surrogate
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
* Miscellaneous

* QC criteria were met for this parameter.

2.7 Metals

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
  QC Blanks
* Instrument Performance/Tuning
* LCS
  MS/MSD
* Field Duplicates
* Surrogate
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Total/Dissolved Solids
* Raw Data Review and Calculation Checks
  Miscellaneous

* QC criteria were met for this parameter.

2.7.1 QC Blanks

Low concentration detections of total and dissolved antimony, and total potassium, selenium, thallium, and zinc, in one or more samples were qualified not detected (U) at the LOD or reported sample concentrations based on contamination in the associated laboratory method blanks. Qualified results are summarized in Table 3 with reason code LBL or LBM.

Low concentration detections of total iron, potassium, and thallium in one or more samples were qualified not detected (U) at the LOD or reported sample concentrations based on contamination in the associated instrument calibration blanks. Qualified results are summarized in Table 3 with reason code CBL.

Low concentration detections of dissolved antimony, lead, and mercury in one or more samples were qualified not detected (U) at the LOD or reported sample concentrations based on contamination in the associated field blanks. Detections of dissolved barium and zinc in sample LORNG_JBW7338B_05092022F were qualified estimated (J) based on contamination in the associated field blanks. Qualified results are included in Table 3 with reason code FBL or FBG.

2.7.2 MS/MSD

The matrix spike (MS)/matrix spike duplicate (MSD) associated with sample LORNG_JBW7338B_05092022 had percent recoveries for total iron and magnesium that were greater than QC limits. Results for these analytes in the associated sample were qualified estimated (J).

2.7.3 Total/Dissolved Concentrations

The dissolved zinc concentrations exceeded the total zinc concentrations in samples LORNG_JMW0445_05082022 and LORNG_JBW7338B_05092022. Results for total and dissolved zinc were qualified estimated (J) in samples LORNG_JMW0445_05082022 and LORNG_JBW7338B_05092022.

2.8 Perchlorate

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance/Tuning
* LCS
* MS/MSD
* Field Duplicates
* Surrogate
  Reporting Limits
* Electronic Data Verification

* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
* Miscellaneous

* QC criteria were met for this parameter.

2.8.1 Reporting Limits

Perchlorate in sample LORNG_JBW7339B_05052022 was analyzed at a dilution (1000x). Elevated reporting limits are reported as indicated in Table 2.

Notes:

N = Normal Field Sample, FD = Field Duplicate, TB = Trip Blank

UG/L = micrograms per liter

UJ = Analyte not detected and the associated detection limits are estima

U = Analyte not detected at the associated detection limits

J = Analyte present; the reported value may not be accurate or precise

R = Result is rejected

SVOCs = semivolatile organic compounds

VOCs = volatile organic compounds

Notes:

N = Normal Field Sample, FD = Field Duplicate, TB = Trip Blank

UG/L = micrograms per liter

UJ = Analyte not detected and the associated detection limits are estimat

U = Analyte not detected at the associated detection limits

J = Analyte present; the reported value may not be accurate or precise

R = Result is rejected

SVOCs = semivolatile organic compounds

VOCs = volatile organic compounds

Notes:

N = Normal Field Sample, FD = Field Duplicate, TB = Trip Blank

UG/L = micrograms per liter

UJ = Analyte not detected and the associated detection limits are estimat

U = Analyte not detected at the associated detection limits

J = Analyte present; the reported value may not be accurate or precise

R = Result is rejected

SVOCs = semivolatile organic compounds

VOCs = volatile organic compounds

Notes:

1 = Per QPP, RPD Limit 30 unless the difference between analyte concentrations is less than LOQ

U = Analyte not detected at the associated detection limits

UJ = Analyte not detected and considered estimated

J = Concentration is estimated

R = Sample reuslt is considered unusable for project objectives

NC = RPD not calculated; values less than LOQ

NG/L = nanograms per liter

UG/L = micrograms per liter

RPD = relative percent difference

SDG = Sample Delivery Group

Notes:

J = Concentration is estimated
U = Analyte not detected at the associated detection limits
UJ = Analyte not detected and considered estimated
R = Sample reuslt is considered unusable for project objectives
CCL = Continuing calibration standard recovery less than lower control limit
CVHL = Continuing calibration standard recovery greater than upper control limit
IAG = Ion abundance ratio outside calculated limits
LBL = Laboratory blank contamination less than reporting limit
LBM = Laboratory blank contamination greater than reporting limit
LCD = Laboratory control sample (LCS) relative percent difference (RPD) criteria exceeded
LCH = LCS recovery greater than upper control limit
LCL = LCS recovery less than lower control limit
MSD = Matrix spike (MS)/MSD RPD criteria exceeded
MSH = MS recovery greater than upper control limit
MSL = MS recovery less than lower control limit
RIS = Extracted internal standard recovery outside control limits
SDL = Dissolved metals concentration more than twenty percent greater than total metals concentration
SGL = Surrogate recovery less than lower control limit
SVLL = Second source verification standard recovery less than lower control limit
TBG = Trip blank concentration greater than reporting limit
NG/L = nanograms per liter
UG/L = micrograms per liter

Stage 1 Data Validation Report
Loring PFAS Remedial Investigation
May - November 2022 Influent/Effluent and IDW Sampling
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Soil and aqueous samples were collected at the Former Loring Air Force Base in Limestone, Maine, in May - November 2022 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. Samples were submitted to SGS North America Laboratory in Orlando, Florida, Katahdin Analytical Services (KAS) in Scarborough, Maine, and Bureau Veritas Labs (BW Labs) in Mississauga, Ontario, Canada as summarized below.

SGS analyzed eight samples for PFAS by Method M537, liquid chromatography tandem mass spectrometry (LC/MS/MS) compliant with Table B-15 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.3 (USDoD, 2019a).

KAS analyzed 6 samples for one or more of the following methods:

- Volatile Organic Compounds (VOCs) by SW846 Method 8260B or 8260C
- Semivolatile Organic Compounds (SVOCs) by SW846 Method 8270D
- Polychlorinated Biphenyls (PCBs) by SW846 Method 8082A
- Pesticides by SW846 Method 8081B
- Herbicides by SW846 8151A
- Metals by SW846 Methods 6010C and 7470A
- Total Cyanide by Method SW846 9012
- Percent Solids by SM2540G
- Waste Characterization – See Table 1

BV Labs analyzed one sample for PFAS by Method E537, solid phase extract liquid chromatography tandem mass spectrometry (SPE/LC-MS/MS) compliant with Table B-15 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.3 (USDoD, 2019a).

Sample event information included in this Stage 1 data validation report is presented in the following table:

- Table 1 – Summary of Samples and Analytical Methods

Data quality reviews were completed as described in the Quality Program Plan (QPP) Remedial Investigation PFAS Response (Wood, 2022). Data validation levels are established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019b). Samples included in this report were validated using Stage 1 procedures. Documentation of the Stage 1 verification and validation checks is stored in the WSP project file.

Stage 1 data validation consists of verification and validation checks for the compliance of sample receipt conditions, sample characteristics (e.g., percent moisture for soils), and analytical results with associated information. The following checks are performed as applicable to the data set:

- Documentation identifies the laboratory and samples submitted for analyses (COC and electronic data check)
- Requested analytical methods verified
- Sample preparation and analysis dates are present
- Target analyte lists verified
- Laboratory data qualifiers and data qualifier definitions provided
- Requested target analyte result units are reported
- Reporting limits/sample detection limits meet project objectives in QPP
- Results below the reporting limits are identified (J qualified)
- Sampling dates and times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory including preservation, pH and temperature are documented (COC and Sample Receipt Logs)
- Sample conditions upon receipt at the laboratory (e.g., preservation checks) and sample collection meet project requirements in the QPP

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

2.0 STAGE 1 EVALUATION

Stage 1 verification and validation checks confirmed the overall data package compliance for this data set is interpreted to meet the project objectives identified in the QPP. A summary of Stage 1 verification and validation findings for checks that identified data package compliance issues are summarized below.

Stage 1 documentation is present in lab reports and electronic data and no compliance issues were identified.

Data Validation and Usability Report
Loring PFAS Remedial Investigation
October 2021 Groundwater and Surface Water Sampling
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Groundwater and surface water samples were collected at the Former Loring Air Force Base in Limestone, Maine, in October 2021. Per- and polyfluoroalkyl substances (PFAS) samples were submitted to Vista Analytical Laboratory in El Dorado Hills, California (Vista).

Vista analyzed 39 samples for per- and polyfluoroalkyl substances (PFAS) by liquid chromatography tandem mass spectrometry compliant with Table B-15 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.3 (USDoD,2019a).

Results were reported in the following Sample Delivery Groups (SDGs):

- 2110182
- 2110192
- 2110211

Sample event information included in this data validation report is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Summary of Data Validation Actions
- Table 4 – Field Duplicate RPD Summary
- Table 5 – Acronyms and Abbreviations

Data quality reviews were completed as described in the Draft Quality Program Plan (QPP) for Remedial Investigation at Former Loring Air Force Base (Wood, 2021). Data validation levels are established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019b). PFAS data were validated using Stage 2B procedures. Ten percent of the data collected during the remedial investigation were validated using Stage 4 procedures. Validation checklists, documentation of sample recalculations, and qualification justification documentation are stored in the Wood project file.

Stage 2A data validation includes review of sample results forms, chain of custody (COC) and supporting records, laboratory receipt checklists, analytical holding time compliance, sample related quality control (QC) data forms (method blanks, laboratory control samples (LCS), matrix spike/matrix spike duplicates (MS/MSD), field and laboratory duplicates, surrogates, internal standards, post digestion spikes, and serial dilutions), and QC sample frequency checks.

Stage 2B data validation includes all reviews performed in a Stage 2A data validation as well as review of initial calibration summaries, continuing calibration verification summaries, instrument performance/tuning summaries, dual column confirmation results, and sample preparation logs.

Stage 4 data validation includes all reviews performed in Stages 2A and 2B as well as review of raw data and chromatograms, target analyte identification confirmation, and recalculation of QC and sample results.

Data review and qualification actions were completed based on DoD Data Validation Guidelines Module 3 for PFAS (USDoD, 2020), general procedures described in USEPA Data Review and Validation Guidelines for PFAS (USEPA, 2018), and method specifications in the DoD QSM 5.3 and/or the referenced analytical methods when DoD specifications were not available. QC limits presented in the DoD QSM 5.3 and/or the QPP were used during the data evaluation. Data qualifications were completed, if necessary, in accordance with the USEPA guidelines and the professional judgment of the validator using the following qualifiers:

J = Analyte present; concentration is estimated
U = Analyte not detected at the associated detection limits
UJ = Analyte was not detected at the associated detection limits; however, the associated detection limit should be considered an estimate.
R = Sample result is considered unusable for project objectives

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

Validation reason codes were applied to results associated with QC measurements outside project QC goals where validation qualifiers were added to results. Final results are presented in Table 2. The validation qualification actions and associated validation reason codes applied to sample results are summarized in Table 3. The following data validation reason codes were applied to one or more sample results:

CR = Ion transition ratio does not meet criteria
FDD = Field duplicate RPD criteria exceeded
MSL = Matrix spike recovery less than the lower control limit
MSD = Matrix spike RPD criteria exceeded
RIS = Extracted internal standard outside control limit

1.1 DATA USABILITY EVALUATION

The overall data quality and data usability for this data set is interpreted to meet the project objectives identified in the QAPP. Interpretations of data validation qualifications and data usability are provided below:

Non-detect results for N-methyl perfluorooctane sulfonamide (N-MeFOSA) in the following samples were qualified as rejected (R) based on extracted internal standard (EIS) percent

recoveries less than 20. Results for N-MeFOSA in these samples are considered unusable for project objectives:

LORNG-ANWR01-10222021
LORNG-ANWR01-10222021FD
LORNG-ANWR02-10222021
LORNG-BW17004-10222021
LORNG-MMW0124-10212021
LORNG-MMW3402R-10222021
LORNG-OW17001-10222021
LORNG-OW17001-10222021FD
LORNG-USFW01-10222021

Non-detect results for N-methyl perfluorooctanesulfonamidoacetic acid (N-MeFOSAA) in the following samples were qualified as rejected (R) based on EIS percent recoveries less than 20. Results for N-MeFOSAA in these samples are considered unusable for project objectives:

LORNG-MMW0001-10232021
LORNG-MMW0007B-10232021
LORNG-RES03-WH-10252021
LORNG-RES04-WH-10252021

Reporting limits for perfluorooctane sulfonamide (PFOSA) in sample LORNG-OW17001-10222021FD and perfluorotetradecanoic acid (PFTeDA) in samples LORNG-LT13A-SW-10242021 and LORNG-LT18-SW-10242021FD are considered estimated based on EIS recoveries outside of the QC acceptance criteria. No impact on data usability was identified.

Reporting limits for N-MeFOSA and N-MeFOSAA in a subset of samples are considered estimated based on EIS recoveries outside of the QC acceptance criteria. No impact on data usability was identified.

Results for PFOSA in samples LORNG-ANWR02-10222021 and LORNG-MMW3402R-10222021 are considered estimated based on EIS recoveries outside of the QC acceptance criteria. No impact on data usability was identified.

The detection of PFOSA in sample LORNG-LWELLA-10252021 is considered estimated based on matrix spike results. No impact on data usability was identified.

Results for perfluorooctanesulfonic acid (PFOS) in sample LORNG-LT18-SW-10242021 and associated field duplicate LORNG-LT18-SW-10242021FD, and PFOSA in sample LORNG-RES03-WH-10252021 and field duplicate LORNG-RES03-WH-10252021FD, are considered estimated due to differences between field duplicate results. No impact on data usability was identified.

Results for a subset of compounds in a number of samples were qualified estimated based on ion transition ratios that did not meet method criteria. All other peak identification criteria were met and signal to noise ratios were greater than 10:1. Based on professional judgment results are considered estimated and no impact to data usability was identified.

2.0 DATA VALIDATION QUALIFICATION ACTION SUMMARY

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the DoD QSM 5.3, the QPP, and/or analytical methods. Unless specified below, results are interpreted to be usable as reported by the laboratory.

2.1 PFAS

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance/Tuning
* LCS
  MS/MSD
  Field Duplicates
  Extracted Internal Standard Recovery
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
  Miscellaneous

* QC criteria were met for this parameter.

2.1.1 MS/MSD

The percent recovery of PFOSA in the MS associated with sample LORNG-LWELLA-10252021 was below the associated DoD acceptance limit (-16/33). The relative percent difference (RPD) between MS and MSD recoveries for PFOSA was greater than the RPD limit of 30 (595). PFOSA was detected in sample LORNG-LWELLA-10252021 and the result was qualified as estimated (J).

2.1.2 Field Duplicates

The results for PFOS in sample LORNG-LT18-SW-10242021 and its associated field duplicate LORNG-LT18-SW-10242021FD were qualified estimated (J) based on an RPD that exceeds the project limit of 30.

The results for PFOSA in sample LORNG-RES03-WH-10252021 and its associated field duplicate LORNG-RES03-WH-10252021FD were qualified estimated (J) based on an RPD that exceeds the project limit of 30.

2.1.3 Extracted Internal Standard Recovery

The extracted internal standard (EIS) percent recoveries associated with a subset of target compounds in multiple samples were less than the lower QC acceptance limit of 50. Results for target compounds reported above the DL are considered estimated (J). Reporting limits associated with non-detected target compounds with EIS recoveries between 20 and 50 are qualified as estimated (UJ). Results for non-detected target compounds with EIS recoveries below 20 were qualified as rejected (R) and are considered unusable for project objectives.

2.1.4 Miscellaneous

The ion transition ratios were outside of the acceptance criteria for a subset of parameters in a number of samples. The laboratory qualified the affected results with "Q" and stated that all other peak identification criteria were met. Based on professional judgment the Q-qualified results were reported as estimated values (J) in the final data set.

Data Validation and Usability Report
Loring PFAS Remedial Investigation
August 2023 Residential Sampling
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Two residential samples were collected at the Former Loring Air Force Base in Limestone, Maine, in August 2023 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. The samples were submitted to Bureau Veritas in Mississauga, Ontario, for analysis.

BV analyzed two samples for PFAS by United States Environmental Protection Agency (USEPA) Draft Method 1633, liquid chromatography tandem mass spectrometry compliant with Table B-24 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.4 (USDoD, 2021a).

Sample event information included in this data validation report is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Acronyms and Abbreviations

Data quality reviews were completed as described in the Quality Program Plan (QPP) Remedial Investigation PFAS Response (WSP, 2023). Data validation levels are established based on current USEPA guidelines for staged validation of analytical data (USEPA, 2009) and USDoD General Validation Guidelines (USDoD, 2019b). PFAS data were validated using Stage 2B procedures. Ten percent of the PFAS data collected during the remedial investigation were validated using Stage 4 procedures. Validation checklists, documentation of sample recalculations, and qualification justification documentation are stored in the WSP project file.

Stage 2A data validation includes review of sample results forms, chain of custody (COC) and supporting records, laboratory receipt checklists, analytical holding time compliance, sample related quality control (QC) data forms (method blanks, laboratory control samples (LCS), matrix spike/matrix spike duplicates (MS/MSD), field and laboratory duplicates, surrogates, internal standards, post digestion spikes, and serial dilutions), and QC sample frequency checks.

Stage 2B data validation includes all reviews performed in a Stage 2A data validation as well as review of initial calibration summaries, continuing calibration verification summaries, instrument performance/tuning summaries, dual column confirmation results, and sample preparation logs.

Stage 4 data validation includes all reviews performed in Stages 2A and 2B as well as review of raw data and chromatograms, target analyte identification confirmation, and recalculation of QC and sample results.

Data review and qualification actions were completed based on USDoD Data Validation Guidelines Module 6 for PFAS (USDoD, 2022), general procedures described in USEPA Data Review and Validation Guidelines for PFAS (USEPA, 2023), and method specifications in the DoD QSM 5.4 and/or the referenced analytical methods when DoD specifications were not available. QC limits presented in the DoD QSM 5.4 and/or the QPP were used during the data evaluation. Data qualifications were completed, if necessary, in accordance with the USEPA guidelines and the professional judgment of the validator using the following qualifiers:

J = Analyte present; concentration is estimated
U = Analyte not detected at the associated detection limits

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

Validation reason codes are applied to results associated with QC measurements outside project QC goals where validation qualifiers were added to results. Based on the data review, there were no validation qualification actions required and no validation qualifiers or reason codes were applied to sample results. Final results are presented in Table 2.

1.1 DATA USABILITY EVALUATION

The overall data quality and data usability for this data set is interpreted to meet the project objectives identified in the QAPP. Interpretations of data validation qualifications and data usability are provided below:

PFAS

Of the 80 individual PFAS results reported for the groundwater event, a total of zero results were qualified as rejected (R) and were interpreted to be unusable for project objectives. This represents a PFAS data completeness of 100% for the residential data set.

2.0 DATA VALIDATION QUALIFICATION ACTION SUMMARY

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the DoD QSM 5.4, the QPP, and/or analytical methods. Unless specified below, results are interpreted to be usable as reported by the laboratory.

2.1 PFAS

Data were evaluated based on the following parameters:

* Lab Report Narrative

Data Validation and Usability Report
Loring PFAS Remedial Investigation
March 2023 Residential – Straightline Fencing Sampling
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

One residential sample was collected at the Former Loring Air Force Base in Limestone, Maine, in March 2023 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. The sample was submitted to SGS North America Laboratory in Orlando, Florida.

SGS analyzed one sample for PFAS by Method M537, liquid chromatography tandem mass spectrometry compliant with Table B-15 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.3 (USDoD, 2019a).

Sample event information included in this data validation report is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Acronyms and Abbreviations

Data quality reviews were completed as described in the Quality Program Plan (QPP) Remedial Investigation PFAS Response (Wood, 2022). Data validation levels are established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019b). PFAS data were validated using Stage 2B procedures. Ten percent of the PFAS data collected during the remedial investigation were validated using Stage 4 procedures. Validation checklists, documentation of sample recalculations, and qualification justification documentation are stored in the Wood project file.

Stage 2A data validation includes review of sample results forms, chain of custody (COC) and supporting records, laboratory receipt checklists, analytical holding time compliance, sample related quality control (QC) data forms (method blanks, laboratory control samples (LCS), matrix spike/matrix spike duplicates (MS/MSD), field and laboratory duplicates, surrogates, internal standards, post digestion spikes, and serial dilutions), and QC sample frequency checks.

Stage 2B data validation includes all reviews performed in a Stage 2A data validation as well as review of initial calibration summaries, continuing calibration verification summaries, instrument performance/tuning summaries, dual column confirmation results, and sample preparation logs.

Stage 4 data validation includes all reviews performed in Stages 2A and 2B as well as review of raw data and chromatograms, target analyte identification confirmation, and recalculation of QC and sample results.

Data review and qualification actions were completed based on DoD Data Validation Guidelines Module 3 for PFAS (USDoD, 2020), general procedures described in USEPA Data Review and Validation Guidelines for PFAS (USEPA, 2018), and method specifications in the DoD QSM 5.3 and/or the referenced analytical methods when DoD specifications were not available. QC limits presented in the DoD QSM 5.3 and/or the QPP were used during the data evaluation. Data qualifications were completed, if necessary, in accordance with the USEPA guidelines and the professional judgment of the validator using the following qualifiers:

J = Analyte present; concentration is estimated
U = Analyte not detected at the associated detection limits

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

Validation reason codes are applied to results associated with QC measurements outside project QC goals where validation qualifiers were added to results. Based on the data review, there were no validation qualification actions required and no validation qualifiers or reason codes were applied to sample results. Final results are presented in Table 2.

1.1 DATA USABILITY EVALUATION

The overall data quality and data usability for this data set is interpreted to meet the project objectives identified in the QAPP. Interpretations of data validation qualifications and data usability are provided below:

PFAS

Of the 25 individual PFAS results reported for the groundwater event, a total of zero results were qualified as rejected (R) and were interpreted to be unusable for project objectives. This represents a PFAS data completeness of 100% for the residential data set.

2.0 DATA VALIDATION QUALIFICATION ACTION SUMMARY

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the DoD QSM 5.3, the QPP, and/or analytical methods. Unless specified below, results are interpreted to be usable as reported by the laboratory.

2.1 PFAS

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation

* Holding Times
* QC Blanks
* Instrument Performance/Tuning
* LCS
* MS/MSD
* Field/Lab Duplicates
* Extracted Internal Standard Recovery
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
* Miscellaneous

* QC criteria were met for this parameter.

Data Validation and Usability Report
Loring PFAS Remedial Investigation
Spring 2023 Sampling
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Groundwater samples were collected at the Former Loring Air Force Base in Limestone, Maine, from May to July 2023 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. Samples were submitted to Bureau Veritas (BV) located in Mississauga, Ontario, Canada for analysis.

BV analyzed 295 samples for PFAS by Method 1633, liquid chromatography tandem mass spectrometry compliant with Table B-24 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.4 (USDoD, 2021a).

Sample event information included in this data validation report is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Summary of Data Validation Actions
- Table 4 – Field Duplicate RPD Summary
- Table 5 – Acronyms and Abbreviations
- Table 6 – Interlaboratory Assessment Comparison Summary

Data quality reviews were completed as described in the Quality Program Plan (QPP) Remedial Investigation PFAS Response (WSP, 2023). Data validation levels are established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019b). PFAS data were validated using Stage 2B procedures. Ten percent of the PFAS data collected during the remedial investigation were validated using Stage 4 procedures. Validation checklists, documentation of sample recalculations, and qualification justification documentation are stored in the Wood project file.

Stage 2A data validation includes review of sample results forms, chain of custody (COC) and supporting records, laboratory receipt checklists, analytical holding time compliance, sample related quality control (QC) data forms (method blanks, laboratory control samples (LCS), matrix spike/matrix spike duplicates (MS/MSD), field and laboratory duplicates, surrogates, internal standards, post digestion spikes, and serial dilutions), and QC sample frequency checks.

Stage 2B data validation includes all reviews performed in a Stage 2A data validation as well as review of initial calibration summaries, continuing calibration verification summaries,

instrument performance/tuning summaries, dual column confirmation results, and sample preparation logs.

Stage 4 data validation includes all reviews performed in Stages 2A and 2B as well as review of raw data and chromatograms, target analyte identification confirmation, and recalculation of QC and sample results.

Data review and qualification actions were completed based on DoD Data Validation Guidelines Module 6 for PFAS (USDoD, 2022), general procedures described in USEPA Data Review and Validation Guidelines for PFAS (USEPA, 2023), and method specifications in the DoD QSM 5.4 and/or the referenced analytical methods when DoD specifications were not available. QC limits presented in the DoD QSM 5.4 and/or the QPP were used during the data evaluation. Data qualifications were completed, if necessary, in accordance with the USEPA guidelines and the professional judgment of the validator using the following qualifiers:

J = Analyte present; concentration is estimated
J+ = Analyte present; concentration is estimated with potential high bias
J- = Analyte present; concentration is estimated with potential low bias
U = Analyte not detected at the associated detection limits
UJ = Analyte was not detected at the associated detection limits; however, the associated detection limit should be considered an estimate.
R = Sample result is considered unusable for project objectives

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

Validation reason codes were applied to results associated with QC measurements outside project QC goals where validation qualifiers were added to results. Final results are presented in Table 2. The validation qualification actions and associated validation reason codes applied to sample results are summarized in Table 3. The following data validation reason codes were applied to one or more sample results:

CF = Ion abundance ratio not found
CFHD = Split sample RPD criteria exceeded
FBG = Field blank contamination greater than reporting limit
FBL = field blank contamination less than reporting limit
FDD = Field duplicate relative percent difference (RPD) criteria exceeded
HHL = Sampling to extraction holding time exceeded
IAG = Ion abundance ratio outside calculated limits
LBL = laboratory blank contamination less than reporting limit
LBM = laboratory blank contamination greater than method detection limit
RIS = Extracted internal standard recovery outside control limits

Duplicates of groundwater samples LORNG_JBW7339A_06142023, LORNG_JBW8003B_06142023, and LORNG_JMW0882_06152023 were sampled and sent to SGS Laboratories (SGS) in Orlando, Florida, as interlaboratory comparison assessment samples. Results reported for LORNG_JBW7339A_06142023, LORNG_JBW8003B_06142023, and LORNG_JMW0882_06152023 from SGS are included in this report in order to analyze the results of the interlaboratory comparison only and are not considered to be included in the final data set and are therefore not presented on Table 2. The interlaboratory comparison assessment summary is included in Table 6.

1.1 DATA USABILITY EVALUATION

The overall data quality and data usability for this data set is interpreted to meet the project objectives identified in the QAPP. Interpretations of data validation qualifications and data usability are provided below:

Multiple parameters in several samples in SDGs C3H0616, C3H5622, C3H5740, and C3I3214 were extracted past the extraction holding time. Results for associated target compounds are considered estimated and data usability was not impacted.

Results for perfluorooctanesulfonic acid (PFOS) in samples LORNG_BW03002_05162023 and LORNG_MMW0002_05162023 were qualified non-detect due to instrument blank contamination. Data usability was not impacted.

Results for perfluorooctanoic acid (PFOA) in samples LORNG_JBW7752_05182023 and LORNG_LF2MW3_05182023 were qualified non-detect due to instrument blank contamination. Data usability was not impacted.

The result for PFOS in sample LORNG_UNK-034_180_06062023 is considered estimated due to instrument blank contamination. Data usability was not impacted.

The result for PFOS in sample LORNG_BW03001_06072023 was qualified not detected at the reported result due to equipment and instrument blank contamination. Data usability was not impacted.

The result for PFOS in sample LORNG_BW05011D_06072023 is considered estimated with potential high bias due to equipment blank contamination. Data usability was not impacted.

The result for PFOS in sample LORNG_BW10008_06082023 is considered estimated with potential high bias due to equipment blank contamination. Data usability was not impacted.

Results for 1H,1H, 2H, 2H-Perfluorooctane sulfonic acid (6:2FTS) in samples LORNG_JBW7338B_06132023 and LORNG_JBW7335A_06132023 are considered estimated with potential high bias due to equipment blank contamination. Data usability was not impacted.

Results for PFOS in samples LORNG_JBW7107_06132023 and LORNG_MMW0020_150_06132023 are considered non-detected due to instrument blank contamination. Data usability was not impacted.

The result for 6:2FTS in sample LORNG_JBW7327_158_06142023 considered non-detected due to equipment blank contamination. Data usability was not impacted.

Results for perfluorooctane sulfonamide (PFOSA) in samples LORNG_JBW7327_158_06142023, LORNG_OW24001_06142023, LORNG_BW02001_06142023, and LORNG_JBW7711_06142023 were qualified non-detect due to method blank contamination. Data usability was not impacted.

The results for PFOS in sample LORNG_GC_BW002D_06152023 and 6:2FTS in samples LORNG_GC_BW002D_06152023 and LORNG_UNK-033_06152023 were qualified non-detect due to equipment blank contamination. Data usability was not impacted.

Results for 6:2FTS in samples LORNG_JBW7327_265_06192023 and LORNG_JBW7327_265_06192023FD are considered estimated with potential high bias due to equipment blank contamination. Data usability was not impacted.

Perfluorobutanesulfonic acid (PFBS) in sample LORNG_MMW0004_06202023 was qualified non-detect due to equipment blank contamination. Data usability was not impacted.

Results for PFOSA in samples LORNG_JBW7327_158_06142023 and LORNG_JBW7327_158_06142023FD are considered estimated due to a field duplicate RPD exceedance. Data usability was not impacted.

Results for several parameters in sample LORNG_LYS07007D_06142023 and LORNG_LYS07007DDUP_06142023 are considered estimated due to field duplicate RPD exceedances. Data usability was not impacted.

Results for several parameters in sample LORNG_LYS07007S_06142023 and LORNG_LYS07007SDUP_06142023 are considered estimated due to field duplicate RPD exceedances. Data usability was not impacted.

One or more extracted internal standard (EIS) recoveries in a subset of samples recovered outside of the acceptance criteria of 20-150. Results for associated target compounds are considered estimated and data usability was not impacted.

One or more transition ion ratios in multiple samples did not meet the acceptance criteria. Results for associated target compounds are considered estimated and data usability was not impacted.

One or more transition ion ratios in multiple samples were not found. Results for associated target compounds are considered estimated and data usability was not impacted.

Results for PFOS, PFBS, perfluoropentanoic acid (PFPeA), perfluorononanoic acid (PFNA), perfluoropentanesulfonic acid (PFPeS), and PFOSA in sample LORNG_JBW7339A_06142023 are considered estimated due to split sample RPD exceedances. Data usability was not impacted.

Results for PFOSA, PFBS, and PFPeA in sample LORNG_JBW8003B_06142023 are considered estimated due to split sample RPD exceedances. Data usability was not impacted.

2.0 DATA VALIDATION QUALIFICATION ACTION SUMMARY

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the DoD QSM 5.3, the QPP, and/or analytical methods. Unless specified below, results are interpreted to be usable as reported by the laboratory.

2.1 PFAS

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
  Holding Times
  QC Blanks
* Instrument Performance/Tuning
* LCS
* MS/MSD
  Field Duplicates
  Extracted Internal Standard Recovery
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
  Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
  Interlaboratory Assessment Comparison
* Miscellaneous

* QC criteria were met for this parameter.

2.1.1 Holding Times

Multiple parameters in the following samples were extracted past the 28-day holding time for aqueous sample extraction. Associated results in the samples were qualified as estimated (UJ/J):

LORNG_AA07MW-01_06092023	LORNG_LYS05012S_06142023
LORNG_GC_BW0002S_06082023	LORNG_LYS07007D_06142023
LORNG_BW18004_06132023	LORNG_MMW8015_06142023

LORNG_JBW7107_06132023	LORNG_LYS01007D_06142023
LORNG_JBW7327_45_06132023	LORNG_LYS01007S_06142023
LORNG_JBW7335A_06132023	LORNG_LYS07007DDUP_06142023
LORNG_JBW8004B_06132023	LORNG_LYS07007S_06142023
LORNG_MMW0020_150_06132023	LORNG_LYS07007SDUP_06142023
LORNG_MMW0020_60_06132023	LORNG_ND40IDWEFF_06152023
LORNG_MMW0132_06122023	LORNG_ND40IDWINF_06152023
LORNG_OW01004_06122023	LORNG_MMW0004_06202023
LORNG_LYS05012D_06142023	

2.1.2 QC Blanks

PFOS was detected in the instrument blank (0.226 J ng/l) associated with samples LORNG_BW03002_05162023 and LORNG_MMW0002_05162023. The detections of PFOS in samples LORNG_BW03002_05162023 and LORNG_MMW0002_05162023 were reported below the LOD and the result was qualified as not-detected (U) at the LOD.

PFOA was detected in the instrument blank (0.2111 J ng/l) associated with samples LORNG_JBW7752_05182023 and LORNG_LF2MW3_05182023. The detections of PFOA in samples LORNG_JBW7752_05182023 and LORNG_LF2MW3_05182023 were reported below the LOQ and the result was qualified as not-detected (U) at the reported result.

PFOS was detected in the instrument blank (0.5819 J ng/l) associated with sample LORNG_UNK-034_180_06062023. The detection of PFOS in sample LORNG_UNK-034_180_06062023 was reported above the LOQ and the result was qualified as estimated with potential high bias (J+).

PFOS was detected in equipment blank LORNG_EB012_06072023 (0.58 J ng/l) and an instrument blank (0.5819 J ng/l) associated with sample LORNG_BW03001_06072023. The detection of PFOS in sample LORNG_BW03001_06072023 was reported below the LOQ and the result was qualified as not-detected (U) at the reported result.

PFOS was detected in equipment blank LORNG_EB013_06082023 (9.9 ng/l) associated with sample LORNG_BW05011D_06072023. The detection of PFOS in sample LORNG_BW05011D_06072023 was reported above the LOQ and the result was qualified as estimated with potential high bias (J+).

PFOS was detected in equipment blank LORNG_EB014_06082023 (1.3 J ng/l) associated with sample LORNG_BW10008_06082023. The detection of PFOS in sample LORNG_BW10008_06082023 was reported above the LOQ and the result was qualified as estimated with potential high bias (J+).

6:2FTS was detected in equipment blank LORNG_EB019_06132023 (53 ng/l) associated with samples LORNG_JBW7338B_06132023 and LORNG_JBW7335A_06132023. The detections of 6:2FTS in samples LORNG_JBW7338B_06132023 and LORNG_JBW7335A_06132023 were reported above the LOQ and results were qualified as estimated with potential high bias (J+).

PFOS was detected in the instrument blank (0.9829 J ng/l) associated with samples LORNG_JBW7107_06132023 and LORNG_MMW0020_150_06132023. The detections of PFOS in samples LORNG_JBW7107_06132023 and LORNG_MMW0020_150_06132023 were reported below the LOQ and the result was qualified as not-detected (U) at the reported result.

6:2FTS was detected in equipment blank LORNG_EB020_06142023 (0.79 J ng/l) associated with sample LORNG_JBW7327_158_06142023. The detection of 6:2FTS in sample LORNG_JBW7327_158_06142023 was reported below the LOQ and the result was qualified as not-detected (U) at the reported result.

PFOSA was detected in the method blank (0.15 J ng/l) associated with samples LORNG_JBW7327_158_06142023, LORNG_OW24001_06142023, LORNG_BW02001_06142023, and LORNG_JBW7711_06142023. The detections of PFOSA in the associated samples were reported below the LOQ and the result was qualified as not-detected (U) at the reported result.

PFOS (0.52 J ng/l) and 6:2FTS (1.3 J ng/l) were detected in equipment blank LORNG_EB027_06152023 associated with samples LORNG_GC_BW002D_06152023 and LORNG_UNK-033_06152023. The detection of PFOS in sample LORNG_GC_BW002D_06152023 was reported below the LOD and the result was qualified as not-detected (U) at the LOD. Detections of 6:2FTS in samples LORNG_GC_BW002D_06152023 and LORNG_UNK-033_06152023 were reported below the LOQ and the result was qualified as not-detected (U) at the reported result.

6:2FTS was detected in equipment blank LORNG_EB028_06202023 (5.1 J ng/l) associated with sample LORNG_JBW7327_265_06192023 and associated field duplicate LORNG_JBW7327_265_06192023FD. The detections of 6:2FTS in samples LORNG_JBW7327_265_06192023 and LORNG_JBW7327_265_06192023FD were reported above the LOQ and results were qualified as estimated with potential high bias (J+).

PFBS was detected in equipment blank LORNG_EB029_06212023 (0.3 J ng/l) associated with sample LORNG_MMW0004_06202023. The detection of PFBS in sample LORNG_MMW0004_06202023 was reported below the LOQ and the result was qualified as not-detected (U) at the reported result.

2.1.3 Field Duplicates

PFOSA results in sample LORNG_JBW7327_158_06142023 and associated field duplicate LORNG_JBW7327_158_06142023FD were qualified as estimated (J) based on the field duplicate RPD (122) exceeding the project limit.

Results for several parameters in sample LORNG_LYS07007D_06142023 and associated field duplicate LORNG_LYS07007DDUP_06142023 were qualified as estimated (J) based on the field duplicate RPDs (47 - 160) exceeding the project limit.

Results for several parameters in sample LORNG_LYS07007S_06142023 and associated field duplicate LORNG_LYS07007SDUP_06142023 were qualified as estimated (J) based on the field duplicate RPDs (50 - 79) exceeding the project limit.

2.1.4 Extracted Internal Standard Recovery

One or more EIS in the following samples recovered outside of the acceptance criteria of 50-150:

LORNG_BW10007_05092023	LORNG_BW05007_06062023
LORNG_MMW3402R_05092023	LORNG_BW07003_06062023
LORNG_JPZ0606_05102023	LORNG_OW07001_06062023
LORNG_OW10005_05102023	LORNG_OW07003_06062023
LORNG_BW18009_05112023	LORNG_MMW0006_06072023
LORNG_JMW7916_05162023	LORNG_NP_BW001D_06072023
LORNG_JMW6001_05162023	LORNG_SB/OW12001_06072023
LORNG_JMW6001_05162023FD	LORNG_AA07MW-01_06092023
LORNG_OW21005_05172023	LORNG_JBW7327_158_06142023FD
LORNG_OW07002_05172023	LORNG_LYS01007S_06142023
LORNG_AA07MW-02_06052023FD	LORNG_RFW1145_35_07032023
LORNG_AA20MW-01_06062023	

2.1.5 Compound Identification and Quantitation

One or more transition ion ratios was outside of the acceptance criteria for one or more compounds for the following samples and the results were qualified as estimated (J):

LORNG_OW14004_05092023	LORNG_GC_BW001_06082023
LORNG_BW10006_05102023	LORNG_JMW0301C_06082023
LORNG_OW01003_05112023	LORNG_USMW004_06082023FD
LORNG_MMW0015_05172023	LORNG_BW18004_06132023
LORNG_JMW0982_05222023FD	LORNG_BSMW3S_06142023
LORNG_MMW0009_05232023	LORNG_JMW0880_06142023
LORNG_JBW7737A_05242023	LORNG_JBW7336A_06152023
LORNG_OW08002_05242023FD	LORNG_BW13003_06152023FD
LORNG_JBW7335B_05252023	LORNG_JMW0882_06152023FD
LORNG_BW07003_06062023	LORNG_MMW0004_06202023
LORNG_OW07001_06062023	LORNG_RFW1145_35_07032023
LORNG_OW07003_06062023	LORNG_RFW1145_75_07032023

Secondary transition ion responses were not found for one or more compounds for the following samples:

LORNG_JMW-0416B_05092023	LORNG_LF2MW2_05172023
LORNG_JMW0681_05092023	LORNG_OW02002_05172023
LORNG_JMW0682_05092023	LORNG_OW21005_05172023

LORNG_BW10006_05102023	LORNG_JBW7345B_05232023
LORNG_JMW-0602_05102023	LORNG_JBW7737B_05242023
LORNG_JMW-0602_05102023FD	LORNG_JBW7737B_05242023FD
LORNG_JMW0683_05102023	LORNG_MMW0010_05242023
LORNG_NP_OW001_05102023	LORNG_MMW0011_05242023
LORNG_UNK-044_05102023	LORNG_AA11MW-01_05242023
LORNG_JMW0445_05112023	LORNG_BW03001_06072023
LORNG_JPZ7808_05112023	LORNG_AA07MW-01_06092023
LORNG_043-MW03_05162023	LORNG_GC_BW0002S_06082023
LORNG_JMW0991_05162023	LORNG_MMW0020_150_06132023
LORNG_OW23001_05162023	LORNG_BW18004_06132023
LORNG_OW23001_05162023EFF	LORNG_LYS01007S_06142023
LORNG_BW02002_05172023	LORNG_JBW8003B_06142023
LORNG_BW07001_05172023	

Signal to noise ratios met method criteria for analyte identification using the primary transition ion and the results were qualified as estimated (J).

2.1.6 Interlaboratory Assessment Comparison

The RPDs between results for sample LORNG_JBW7339A_06142023 and its split sample exceeded the QC limit of 30 for PFOS (33), PFBS (34), PFPeA (34), PFNA (34), PFPeS (37), and PFOSA (145). The detections of PFOS, PFBS, PFPeA, PFNA, PFPeS, and PFOSA in the associated sample were qualified as estimated (J).

The RPDs between results for sample LORNG_JBW8003B_06142023 and its split sample exceeded the QC limit of 30 for PFOSA (40), PFBS (36), and PFPeA (37). The detections of PFOSA, PFBS, and PFPeA in the associated sample were qualified as estimated (J).

Notes:
N = Normal Field Sample; FD = Field Duplicate
J = Concentration is estimated
J+ = Concentration is estimated, potentially biased high
U = Analyte not detected at the associated detection limits
UJ = Analyte not detected and considered estimated
NG/L = nanograms per liter
PFAS = Per and Polyfluoroalkyl Substance

Notes:
N = Normal Field Sample; FD = Field Duplicate
J = Concentration is estimated
J+ = Concentration is estimated, potentially biased high
U = Analyte not detected at the associated detection limits
UJ = Analyte not detected and considered estimated
NG/L = nanograms per liter
PFAS = Per and Polyfluoroalkyl Substance

Notes:
N = Normal Field Sample; FD = Field Duplicate
J = Concentration is estimated
J+ = Concentration is estimated, potentially biased high
U = Analyte not detected at the associated detection limits
UJ = Analyte not detected and considered estimated
NG/L = nanograms per liter
PFAS = Per and Polyfluoroalkyl Substance

Notes:

J = Concentration is estimated
J+ = Concentration is estimated, potentially biased high
U = Analyte not detected at the associated detection limits
UJ = Analyte not detected and considered estimated
CF = Ion abundance ratio not found
CFHD = Split sample RPD criteria exceeded
FBG = Field blank contamination greater than reporting limit
FBL = field blank contamination less than reporting limit
FDD = Field duplicate relative percent difference (RPD) criteria exceeded
HHL = Sampling to extraction holding time exceeded
IAG = Ion abundance ratio outside calculated limits
LBL = laboratory blank contamination less than reporting limit
LBM = laboratory blank contamination greater than method detection limit
RIS = Extracted internal standard recovery outside control limits
NG/L = nanograms per liter

Table 4 - Field Duplicate RPD Summary

Data Validation and Usability Report
Loring PFAS Remedial Investigation
Spring 2023 Sampling
Former Loring Air Force Base, Limestone, Maine

SDG	Sample ID	Duplicate ID	Method Class	Analyte	Sample Result	Sample Qualifier	Duplicate Result	Duplicate Qualifier	RPD[1]	Flag

Notes:

1 = Per QPP, RPD Limit 30 unless the difference between analyte concentrations is less than LOQ

U = Analyte not detected at the associated detection limits

UJ = Analyte not detected and considered estimated

J = Concentration is estimated

NC = RPD not calculated; values less than LOQ

NG/L = nanograms per liter

UG/L = micrograms per liter

RPD = relative percent difference

SDG = Sample Delivery Group

Prepared by: AKN 11/10/23
Checked by: ALJ 11/13/23

Table 5 - Acronyms and Abbreviations

Data Validation and Usability Report
Loring PFAS Remedial Investigation
Spring 2023 Sampling
Former Loring Air Force Base, Limestone, Maine

Acronym or Abbreviation	Definition
%	Percent
BV	Bureau Veritas
CCV	Continuing Calibration Verification
COC	Chain of Custody
DL	Detection Limit
DoD	Department of Defense
DoE	Department of Energy
ICV	Initial Calibration Verification
ID	Identification
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
LOD	Limit of Detection
LOQ	Limit of Quantification
MDL	Method Detection Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PFAS	Per- and Polyfluoroalkyl Substances
QC	Quality Control
QPP	Quality Program Plan
QSM	Quality Systems Manual for Environmental Laboratories
RI	Remedial Investigation
RL	Reporting Limit
RPD	Relative Percent Difference
SDG	Sample Delivery Group
USDoD	United States Department of Defense
USEPA	United States Environmental Protection Agency
WSP	WSP Environment & Infrastructure

Data Validation and Usability Report
Loring PFAS Remedial Investigation
November 2023 Residential Sampling
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Two residential samples were collected at the Former Loring Air Force Base in Limestone, Maine, in November 2023 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. The samples were submitted to Bureau Veritas (BV) in Mississauga, Ontario, for analysis.

BV analyzed two samples for PFAS by United States Environmental Protection Agency (USEPA) Draft Method 1633, liquid chromatography tandem mass spectrometry compliant with Table B-24 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.4 (USDoD, 2021).

Sample event information included in this data validation report is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Summary of Data Validation Actions
- Table 4 – Acronyms and Abbreviations

Data quality reviews were completed as described in the Quality Program Plan (QPP) Remedial Investigation PFAS Response (WSP, 2023). Data validation levels are established based on current USEPA guidelines for staged validation of analytical data (USEPA, 2009) and USDoD General Validation Guidelines (USDoD, 2019). PFAS data were validated using Stage 2B procedures. Ten percent of the PFAS data collected during the remedial investigation were validated using Stage 4 procedures. Validation checklists, documentation of sample recalculations, and qualification justification documentation are stored in the WSP project file.

Stage 2A data validation includes review of sample results forms, chain of custody (COC) and supporting records, laboratory receipt checklists, analytical holding time compliance, sample related quality control (QC) data forms (method blanks, laboratory control samples (LCS), matrix spike/matrix spike duplicates (MS/MSD), field and laboratory duplicates, surrogates, internal standards, post digestion spikes, and serial dilutions), and QC sample frequency checks.

Stage 2B data validation includes all reviews performed in a Stage 2A data validation as well as review of initial calibration summaries, continuing calibration verification summaries, instrument performance/tuning summaries, dual column confirmation results, and sample preparation logs.

Stage 4 data validation includes all reviews performed in Stages 2A and 2B as well as review of raw data and chromatograms, target analyte identification confirmation, and recalculation of QC and sample results.

Data review and qualification actions were completed based on USDoD Data Validation Guidelines Module 6 for PFAS (USDoD, 2022), general procedures described in USEPA Data Review and Validation Guidelines for PFAS (USEPA, 2023), and method specifications in the DoD QSM 5.4 and/or the referenced analytical methods when DoD specifications were not available. QC limits presented in the DoD QSM 5.4 and/or the QPP were used during the data evaluation. Data qualifications were completed, if necessary, in accordance with the USEPA guidelines and the professional judgment of the validator using the following qualifiers:

J = Analyte present; concentration is estimated
U = Analyte not detected at the associated detection limits

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

Validation reason codes were applied to results associated with QC measurements outside project QC goals where validation qualifiers were added to results. Final results are presented in Table 2. The validation qualification actions and associated validation reason codes applied to sample results are summarized in Table 3. The following data validation reason codes were applied to one or more sample results:

IAG = Ion abundance ratio outside calculated limits

1.1 DATA USABILITY EVALUATION

The overall data quality and data usability for this data set is interpreted to meet the project objectives identified in the QAPP. Interpretations of data validation qualifications and data usability are provided below:

The transition ion ratio for perfluorobutanesulfonic acid (PFBS) in sample LORNG_RES40_11092023 did not meet the acceptance criteria. The result for PFBS is considered estimated and data usability was not impacted.

Of the 80 individual PFAS results reported for the groundwater event, a total of zero results were qualified as rejected (R) and were interpreted to be unusable for project objectives. This represents a PFAS data completeness of 100% for the residential data set.

2.0 DATA VALIDATION QUALIFICATION ACTION SUMMARY

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the DoD QSM 5.4, the QPP, and/or analytical methods. Unless specified below, results are interpreted to be usable as reported by the laboratory.

2.1 PFAS

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance/Tuning
* LCS
* Field/Lab Duplicates
* Extracted Internal Standard Recovery
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
  Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
* Miscellaneous

* QC criteria were met for this parameter.

2.1.1 Compound Identification and Quantitation

The transition ion ratio for PFBS in sample LORNG_RES40_11092023 did not meet the acceptance criteria. The result for PFBS in sample LORNG_RES40_11092023 was qualified as estimated (J).

1 INTRODUCTION

WSP USA Environment & Infrastructure Inc. (WSP) collected 62 aqueous samples, including 6 equipment blanks and 3 field duplicates, between 5 and 18 October 2023 from the former Loring Air Force Base, located in Limestone, Maine. WSP submitted the samples to Bureau Veritas Canada (Bureau Veritas), located in Mississauga, Ontario, Canada, where they were received between 12 and 20 October 2023 and assigned to job numbers C3V6692, C3V6785, C3W2271, C3W2330, and C3W7572. Bureau Veritas analyzed the samples for per- and polyfluoroalkyl substances (PFAS) using United States Environmental Protection Agency (EPA) Draft Method 1633. WSP also sent three interlaboratory split samples to SGS North America, Inc. (SGS), located in Orlando, Florida, where they were received on 20 October 2023 and assigned to job number FC10610.

A list of these samples by field sample identification (ID), sample collection date, and the laboratory sample IDs is presented in Table 1.

2 DATA VALIDATION METHODOLOGY

WSP performed DoD Stage 2B validation on 100 percent (%) of primary field samples analyzed by Bureau Veritas in job numbers C3V6692, C3V6785, C3W2271, C3W2330, and C3W7572. Split sample data reported by SGS in job number FC10610 were not validated and the results were used only to assess interlaboratory precision and data comparability. The Stage 2B validation includes review of quality control (QC) results in the laboratory's analytical report and reported on QC summary forms but does not include review or validation of the raw analytical data. This data validation has been performed in general accordance with:

- WSP, 2023. Draft Quality Program Plan Addendum, Remedial Investigation, Per- and Polyfluoroalkyl Substances Response, Former Loring Air Force Base, Limestone Maine, May.
- Department of Defense (DoD), 2019. DoD General Data Validation Guidelines, September.
- DoD, 2021. DoD Department of Energy Consolidated Quality Systems Manual (QSM) for Environmental Laboratories Version 5.4, October.
- DoD, 2022. Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances Analysis by QSM Table B-24, October.
- EPA, 2023. 4th Draft EPA Method 1633, Analysis of PFAS in Aqueous, Solid, Biosolids, and Tissue Samples by Liquid Chromatography-Tandem Mass Spectrometry (LC-MS/MS), July.

The laboratory's certified analytical report and supporting documentation were reviewed to assess the following:

- Data package and electronic data deliverable completeness;
- Chain of custody (COC) compliance;
- Holding time compliance;
- Sample receipt condition;
- Mass Calibration;
- Initial calibration (ICAL), initial calibration verification (ICV), and continuing calibration verification (CCV) compliance with method specified criteria;
- Presence or absence of laboratory contamination as demonstrated by laboratory blanks;
- Accuracy and bias as demonstrated by recovery of laboratory control sample (LCS) and matrix spike (MS) samples;
- Extracted Internal Standard (EIS) and non-extracted internal standard (NIS) recoveries;

- Analytical precision as relative percent difference (RPD) of analyte concentration between laboratory duplicates, or MSs/MS duplicates (MSDs);
- Sampling and analytical precision as RPD of analyte concentration between field duplicates;
- Assessment of field contamination as demonstrated by field blanks; and
- Insofar as possible, the degree of conformance to method requirements and good laboratory practices.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

3 EXPLANATION OF DATA QUALITY INDICATORS

Summary explanation of the specific data quality indicators reviewed during data validation are presented below.

3.1 LABORATORY CONTROL SAMPLE RECOVERIES

LCSs are aliquots of analyte free matrices that are spiked with the analytes of interest for an analytical method, or a representative subset of those analytes. The spiked matrix is then processed through the same analytical procedures as the samples they accompany.

LCS recovery and precision are an indication of a laboratory's ability to successfully perform an analytical method in an interference free matrix.

3.2 MATRIX SPIKE RECOVERIES

MSs and MSDs are prepared by adding known amounts of the analytes of interest for an analytical method, or a representative subset of those analytes, to an aliquot of sample. The spiked sample is then processed through the same extraction, concentration, cleanup, and analytical procedures as the unspiked samples in an analytical batch.

MS recovery and precision are an indication of a laboratory's ability to successfully recover an analyte in the matrix of a specific sample or closely related sample matrices. It is important not to apply MS results for any specific sample to other samples without understanding how the sample matrices are related.

3.3 BLANK CONCENTRATIONS

Blank samples are aliquots of analyte free matrix that are used as negative controls to verify that the sample collection, storage, preparation, and analysis system does not produce false positive results.

Equipment blanks are prepared by passing analyte free water through or over sample collection equipment and collecting the water in sample containers. Equipment blanks are analyzed for the analytical suite required for the project. Equipment blanks are used to monitor for possible sample contamination during the sample collection process and serve as a check on the effectiveness of field decontamination procedures.

Laboratory blanks are processed by the laboratory using the same procedures as the field samples. Target analytes should not be found in laboratory blanks.

3.4 LABORATORY AND FIELD DUPLICATES

Laboratory and field duplicate analyses verify acceptable method precision by the laboratory at the time of preparation and analysis and/or sampling precision at the time of collection.

4 DEFINITIONS OF QUALIFIERS THAT MAY BE ADDED DURING DATA VALIDATION

J	The reported result was an estimated value.
J+	The reported result was an estimated value with a positive bias.
J-	The reported result was an estimated value with a negative bias.
NJ	The analyte has been tentatively identified as present and the concentration is estimated.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting quality control criteria. The analyte may or may not be present in the sample.
U	The analyte was not detected and was reported as less than the limit of detection (LOD). The LOD has been adjusted for any dilution or concentration of the sample.
UJ	The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

5 QUALIFICATION REASON CODES

The following reason codes were applied to the data during data validation:

CCL	Low CCV recovery. Result may be biased low.
CFD	Confirmation ion was not present in a reported detection of an analyte with a confirmation ion.
EBL	The analyte was detected in the associated equipment blank and the concentration detected in the sample was less than the limit of quantitation (LOQ).
EISL	Low EIS recovery.
HPHL	Hold time between collection and extraction exceeded.
IAG	Transition ion ratio is outside of expected limits.
LBL	The analyte was detected in the associated laboratory blank and the concentration detected in the sample was less than the LOQ.
SNL	Signal to noise ratio did not meet criteria.
TH8	Elevated sample receipt temperature.
TR	The detected analyte concentration is less than the LOQ.

6 CHAIN OF CUSTODY AND SAMPLE RECEIPT CONDITION DOCUMENTATION

The samples were received at the laboratory under proper COC, intact, properly preserved, and at average temperatures less than the method-specified maximum of 6 degrees Celsius (°C), with the following exception:

- Bureau Veritas signed the first page of the COC associated with report number C3V6785, but not the second or third pages. WSP did not qualify any data based on the missing signatures.
- Bureau Veritas did not sign the second page of the COC for report number C3W2330, but there is a note in the signature line to "see page 1". Additionally, the sample receipt temperatures recorded on the COC, ranging between 10.2 and 12.8 °C, were all greater than 6 °C. Per the DoD Data Validation Guidelines, WSP J qualified the detected and UJ qualified the non-detected PFAS results from samples LORNG_BW03002_10112023, LORNG_BW18003_10112023, LORNG_BW18007_10112023, LORNG_GC_BW001_10112023, LORNG_JBW7403_10112023, LORNG_JMW3501_10112023, LORNG_JPZ1382_10112023, LORNG_LF2MW3_10112023, LORNG_MMW0020_60_10112023, LORNG_MMW0020_60_10112023FD, LORNG_MMW0020_150_10112023, LORNG_OW01003_10112023, and LORNG_USMW019_10112023 because of the elevated sample receipt temperatures. (J/UJ, TH8)
- Bureau Veritas did not sign the second page of the COC for report number C3W7572, but there is a note on the signature line to "see page 1". Additionally, the sample receipt temperatures for the samples were generally high, with the average temperature for one of the coolers acceptable at 6.4 °C, but temperatures for the remaining coolers were high with average temperature readings between 7.4 and 8.4 °C. It is not possible to determine which samples were in each cooler and per the DoD Data Validation guidelines, WSP J qualified the detected and UJ qualified the non-detected PFAS results from samples LORNG_BW10006_10182023, LORNG_BW10006_10182023FD, LORNG_BW10007_10182023 , LORNG_BW13002_10182023, LORNG_BW17006_10182023, LORNG_BW18006_10182023, LORNG_JBW7316_10182023, LORNG_JBW7326A_10182023, LORNG_JBW7326B_10182023, LORNG_JBW7345B_10182023, LORNG_JMW-0241A_10182023, LORNG_JMW0445_10182023, LORNG_JMW0961_10182023, LORNG_MMW0007B_10182023, LORNG_OW22003_10182023, LORNG_SB/OW16001_10182023, and LORNG_SB/OW16001_10182023FD because of the elevated sample receipt temperatures. (J/UJ, TH8)

7 SPECIFIC DATA VALIDATION FINDINGS

Results from these samples may be considered usable with the limitations and exceptions described in Sections 7.1 through 9.0.

7.1 PFAS BY EPA DRAFT METHOD 1633

PFAS results generated by Eurofins may be considered usable with the limitations described in Sections 7.1.1 through 7.1.15.

7.1.1 HOLDING TIMES

The samples were extracted for PFAS within the method-specified maximum holding time of 28 days from sample collection when stored at temperatures between 0 and 6 °C. Extracts were analyzed within the method-specified maximum hold time of 90 days from extraction, with the following exception:

- According to the laboratory's notes, sample LORNG_MMW0124_10102023 was originally extracted within the method-specified maximum hold time and then re-extracted 38 days outside the method-specified hold time using a greater extraction volume. Based on professional judgement, WSP J qualified the detected and UJ qualified the non-detected PFAS results from sample LORNG_MMW0124_10102023 because of the grossly exceeded hold time. (J/UJ, HPHL)

7.1.2 MASS CALIBRATION FREQUENCY

According to the laboratory's notes, the analytical instrument underwent mass calibration to the instrument's manufacturer's specifications and using the manufacturer's recommended standard less than a year before the samples reviewed in this report were analyzed.

7.1.3 INITIAL CALIBRATION COMPLIANCE

Relative standard deviations between response factors for each target analyte were less than or equal to the method-specified maximum of 20% and/or relative standard errors were less than the method-specified maximum of 20% for all target analytes and EISs.

7.1.4 INITIAL CALIBRATION VERIFICATION ACCURACY

ICVs were analyzed after each initial calibration. Recoveries were between 70 and 130%.

7.1.5 INSTRUMENT SENSITIVITY CHECK COMPLIANCE

Instrument sensitivity checks (ISCs) were analyzed at the beginning of each analytical run, concentrations were equivalent to the LOQ, signal to noise ratios were greater than or equal to 3:1, and recoveries were within the method-specified 70 to 130% limits.

7.1.6 CONTINUING CALIBRATION VERIFICATION COMPLIANCE

CCVs were analyzed at the beginning of the analytical sequence after the ISC, after every ten or fewer samples, and at the end of the analytical sequence. Recoveries were within the method-specified 70 to 130% limits, with the following exception:

- 3-Perfluoropropyl propanoic acid (3:3 FTCA) recovery was low at 66% in the ISC associated with the analysis of samples LORNG_BW10006_10182023 and LORNG_JBW7316_10182023. Based on professional judgement, WSP UJ qualified the non-detected 3:3 FTCA results from the associated samples because of the low ISC recovery. (UJ, CCL)

7.1.7 BILE SALT INTERFERENCE CHECKS

Bile salt interference checks were analyzed daily and retention times for the bile salts were at least one minute outside the retention times for linear or branched perfluorooctanesulfonic acid (PFOS), with the following exception:

- Bureau Veritas analyzed a bile salt standard with samples LORNG_BW10006_10182023 and LORNG_JBW7316_10182023, but the bile salt peak was not visible, and it was not possible to determine whether bile salts elute more than a minute before linear or branched PFOS. PFOS was detected in the

associated samples and ion ratios were within method specified limits. Per the DoD data validation guidelines, WSP did not qualify any data based on it not being possible to confirm potential bile salt interference.

7.1.8 LABORATORY AND EQUIPMENT BLANK DETECTIONS

Target analytes were not detected in the laboratory and equipment blanks associated with the samples reviewed in this report, with the following exceptions:

- Perfluorooctanesulfonamide (PFOSA) was detected at a concentration of 0.23 nanograms per liter (ng/L) in the laboratory blank associated with the extraction of samples LORNG_BW10006_10182023 and LORNG_JBW7316_10182023. WSP U qualified the PFOSA results from the associated samples because the concentrations detected in the samples were greater than the LOD but less than the LOQ. (U, LBL)
- Perfluorooctanoic acid (PFOA) was detected at a concentration of 0.15 ng/L in the laboratory blank associated with the extraction of samples LORNG_BW10007_10182023, LORNG_BW13002_10182023, LORNG_BW17006_10182023, LORNG_BW18006_10182023, LORNG_JBW7326A_10182023, LORNG_JBW7326B_10182023, LORNG_JBW7345B_10182023, LORNG_JMW-0241A_10182023, LORNG_JMW0445_10182023, LORNG_JMW0961_10182023, LORNG_MMW0007B_10182023, LORNG_OW22003_10182023, LORNG_SB/OW16001_10182023, and LORNG_SB/OW16001_10182023FD. Data limitations are summarized below.
    - WSP U qualified the PFOA result from sample LORNG_BW10007_10182023 at the LOD of 0.25 ng/L because the concentration detected in the sample, at 0.14 ng/L, was less than the LOD. (U, LBL)
    - WSP U qualified the PFOA result from samples LORNG_BW13002_10182023, LORNG_BW17006_10182023, and LORNG_JMW-0241A_10182023 because the concentrations detected in the samples were less than the LOQ. (U, LBL)
    - PFOA concentrations detected in the remaining associated samples were greater than both the LOQ and five times the concentration detected in the blank, and data usability is not adversely affected by the blank detection.
- PFOSA was detected at a concentration of 0.23 ng/L in equipment blank LORNG_EB009_10182023, associated with samples LORNG_BW13002_10182023, LORNG_BW17006_10182023, and LORNG_JMW-0241A_10182023. Data limitations are summarized below.
    - WSP U qualified the PFOSA results from samples LORNG_BW13002_10182023 and LORNG_BW17006_10182023 at the detected concentrations because the concentrations detected in the samples were greater than the LOD but less than the LOQ. (U, EBL)
    - PFOSA was not detected in sample LORNG_JMW-0241A_10182023 and data usability is not adversely affected by the blank detection.
- PFOS was detected at a concentration of 0.23 ng/L in equipment blank LORNG_EB004_10112023, associated with samples LORNG_BW18007_10112023 and LORNG_JBW7403_10112023. The PFOS concentration detected in sample LORNG_BW18007_10112023 was greater than the LOQ and greater than five times the concentration detected in the blank and PFOS was not detected in sample LORNG_JBW7403_10112023. Data usability is not adversely affected by the blank detection.

7.1.9 LABORATORY CONTROL SAMPLE ACCURACY

Low level LCS (LLCS) and LCS were included with each extraction batch, (LLCS) spike concentrations were twice the LOQ, and LCS and LLCS recoveries were within the QAPP-specified 40 to 150% interim limits.

7.1.10 MATRIX SPIKE ACCURACY AND PRECISION

Bureau Veritas performed MS and MSD analyses on samples LORNG_MMW0124_10102023 and LORNG_MMW0326_10102023. MS and MSD recoveries were within the QAPP-specified LCS limits and RPDs between MS and MSD results were less than 30%.

7.1.11 DUPLICATE PRECISION

Bureau Veritas did not perform duplicate analyses on the samples reviewed in this report.

7.1.12 EXTRACTED INTERNAL STANDARD ACCURACY

EIS recoveries were within the QAPP-specified 20 to 150% interim limits, with the following exceptions:

- Recoveries of the EISs D_3-methyl perfluorooctanesulfonamide (MeFOSA) and D_5-ethylperfluorooctanesulfonamide (EtFOSA) were low at 14% and 12%, respectively, in sample LORNG_BW10007_10182023. WSP UJ qualified the non-detected MeFOSA and EtFOSA results from this sample because of the low EIS recoveries. (UJ, EISL)
- Recovery of the EIS D_5-EtFOSA was low at 15% in sample LORNG_MMW0020_60_10112023FD. WSP UJ qualified the non-detected EtFOSA result from this sample because of the low EIS recovery. (UJ, EISL)
- Recoveries of the EISs $^{13}C_2$-perfluorotetradecanoic acid (PFTeDA [13%]), D_3-MeFOSA (9.8%), D_5-EtFOSA (5.0%), and D_9-ethyl perfluorooctanesulfonamidoethanol (EtFOSE [14%]) were low in sample LORNG_USMW019_10112023. Data limitations are summarized below.
  - Based on professional judgement, WSP R qualified and rejected the non-detected EtFOSA result from sample LORNG_USMW019_10112023 because of the extremely low EIS recovery. (R, EISL)
  - WSP UJ qualified the non-detected perfluorotridecanoic acid, PFTeDA, MeFOSA, and EtFOSE results from sample LORNG_USMW019_10112023 because of the low EIS recoveries. (UJ, EISL)

7.1.13 NON-EXTRACTED INTERNAL STANDARD ACCURACY

NIS recoveries were within the method-specified 50 to 200% limits, with the following exception:

- Recovery of the NIS $^{13}C_3$-perfluorobutanoic acid was high at 156% in sample LORNG_BW10006_10182023. The DoD Data Validation Guidelines do not specify any action for high NIS recoveries and WSP did not qualify any data based on the high NIS recovery.

7.1.14 STAGE 4 VALIDATION

WSP did not perform Stage 4 validation on the samples reviewed in this report.

7.1.15 DATA REPORTING AND ANALYTICAL PROCEDURES

WSP J qualified the following results because the ion ratios were outside of expected limits according to bureau Veritas' notes. (J, IAG)

- Perfluoropentanoic acid (PFPeA) in samples LORNG_BW02002_10102023, LORNG_BW03002_10112023, LORNG_BW18007_10112023, LORNG_JBW7316_10182023, LORNG_JMW-0241A_10182023, and LORNG_JMW7916_10102023;
- PFPeA and perfluoroheptanesulfonic acid in sample LORNG_OW22003_10182023,

- Perfluorohexanoic acid in samples LORNG_BW16001_10092023, LORNG_BW18003_10112023, and LORNG_USMW019_10112023;
- PFOA in samples LORNG_JMW0941_10102023, LORNG_USMW004_10062023, and LORNG_USMW015_10052023;
- Perfluoropentanesulfonic acid in sample LORNG_JBW7314_10122023;
- PFOS in sample LORNG_NP_OW001_10102023; and
- PFOSA in samples LORNG_BW10007_10182023, LORNG_BW18006_10182023, LORNG_JBW7326A_10182023, LORNG_JBW7326B_10182023, LORNG_MMW0007B_10182023, and LORNG_SB/OW16001_10182023FD.

According to Bureau Veritas' notes, ion ratios for PFPeA were outside of limits in samples LORNG_BW10006_10182023 and LORNG_JBW7314_10122023 because the confirmation ions were not detected. Based on professional judgement, WSP NJ qualified the detected PFPeA results from these samples as being presumptively identified with estimated concentrations because of the missing confirmation ions. (NJ, CFD)

According to Bureau Veritas' notes, ion ratios for PFOSA were outside of limits in samples LORNG_BW13002_10182023, LORNG_BW17006_10182023, and LORNG_OW22003_10182023 because the confirmation ions were not detected. Data limitations are summarized below.

- Based on professional judgement, WSP NJ qualified the detected PFOSA result as being presumptively identified with an estimated concentration from sample LORNG_OW22003_10182023 because of the missing confirmation ion. (NJ, CFD)
- PFOSA was previously U qualified in samples LORNG_BW13002_10182023 and LORNG_BW17006_10182023 due to a detection in the associated equipment blank and WSP did not additionally qualify the data based on the missing confirmation ion.

According to Bureau Veritas' notes, the signal to noise ratio for the PFPeA detection in sample LORNG_BW02002_10102023 did not meet method-specified minimum criteria. Per the DoD data validation guidelines, WSP J qualified this result because of the low signal to noise ratio. (J, SNL)

Bureau Veritas J qualified analytes with detected concentrations less than the LOQ. WSP agrees that these results are quantitatively uncertain and has maintained Eurofins' J qualifiers. (J, TR)

8 FIELD DUPLICATE PRECISION

WSP collected field duplicates with samples LORNG_BW10006_10182023, LORNG_MMW0020_60_10112023, and LORNG_SB/OW16001_10182023. Precision between primary and field duplicate results was acceptable, with RPDs less than 30% or differences between concentrations less than the average LOQ. Detections in the field duplicate pairs are summarized in Table 4.

9 INTERLABORATORY SPLIT PRECISION

WSP collected interlaboratory splits with samples LORNG_BW10007_10182023, LORNG_JBW7326A_10182023, and LORNG_JBW7345B_10182023. SGS' sensitivity limits were roughly twice Bureau Veritas' sensitivity limits, resulting in more target analyte detections in Bureau Veritas' dataset. Precision between primary and split results was generally acceptable, with RPDs less than 30% or differences between concentrations less than the average LOQ, with the following exception:

- Bureau Veritas detected PFOS at a concentration of 29 ng/L in sample LORNG_JBW7326A_10182023 and SGS detected a concentration of 20.1 ng/L. The difference between the detected concentrations is greater than the average LOQ of 2.6 ng/L and the RPD between the results was high at 36%. Interlaboratory split data are

being used to demonstrate overall comparability and per the project team, no data were qualified based on the imprecision between the split results.

Detections in the interlaboratory split pairs are summarized in Table 5.

10 SUMMARY AND CONCLUSIONS

WSP evaluated a total of 2,160 data records from field samples during this validation. Qualifier definitions are summarized in Section 4.0, reason codes are summarized in Section 5.0, and qualified data are summarized below.

- R: WSP R qualified and rejected 1 record (0.05%) because of an extremely low EIS recovery.
- J: WSP J qualified 354 records (16%) due to a hold time exceedance, elevated sample receipt temperatures, detected concentrations less than the LOQ, transition ion ratios outside of expected limits, and a signal to noise ratio outside of limits.
- NJ: WSP NJ qualified 3 records (0.14%) as being tentatively identified with estimated concentrations because the confirmation ions were not present.
- UJ: WSP UJ qualified 970 records (45%) due to elevated sample receipt temperatures, a hold time exceedance, low CCV recovery, detections in the associated equipment or laboratory blanks, and/or low EIS recoveries.

Data qualified during validation are summarized in Table 3.

WSP	WSP USA Environment & Infrastructure Inc.

1 INTRODUCTION

WSP USA Environment & Infrastructure Inc. (WSP) collected 83 aqueous samples, including 6 equipment blanks and 8 field duplicates, between 10 and 23 October 2023 from the former Loring Air Force Base, located in Limestone, Maine. WSP submitted the samples to Bureau Veritas Canada (Bureau Veritas), located in Mississauga, Ontario, Canada, where they were received between 17 and 26 October 2023 and assigned to job numbers C3W2259, C3W5453, C3W5493, C3W7599, and C3X5365. Bureau Veritas analyzed the samples for per- and polyfluoroalkyl substances (PFAS) using United States Environmental Protection Agency (EPA) Draft Method 1633.

A list of these samples by field sample identification (ID), sample collection date, and the laboratory sample IDs is presented in Table 1.

2 DATA VALIDATION METHODOLOGY

WSP performed DoD Stage 2B validation on 100 percent (%) of primary field samples analyzed by Bureau Veritas in job numbers C3W2259, C3W5453, C3W5493, C3W7599, and C3X5365. The Stage 2B validation includes review of quality control (QC) results in the laboratory's analytical report and reported on QC summary forms but does not include review or validation of the raw analytical data. This data validation has been performed in general accordance with:

- WSP, 2023. Draft Quality Program Plan Addendum, Remedial Investigation, Per- and Polyfluoroalkyl Substances Response, Former Loring Air Force Base, Limestone Maine, May.
- Department of Defense (DoD), 2019. DoD General Data Validation Guidelines, September.
- DoD, 2021. DoD Department of Energy Consolidated Quality Systems Manual (QSM) for Environmental Laboratories Version 5.4, October.
- DoD, 2022. Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances Analysis by QSM Table B-24, October.
- EPA, 2023. 4th Draft EPA Method 1633, Analysis of PFAS in Aqueous, Solid, Biosolids, and Tissue Samples by Liquid Chromatography-Tandem Mass Spectrometry (LC-MS/MS), July.

The laboratory's certified analytical report and supporting documentation were reviewed to assess the following:

- Data package and electronic data deliverable completeness;
- Chain of custody (COC) compliance;
- Holding time compliance;
- Sample receipt condition;
- Mass Calibration;
- Initial calibration (ICAL), initial calibration verification (ICV), and continuing calibration verification (CCV) compliance with method specified criteria;
- Presence or absence of laboratory contamination as demonstrated by laboratory blanks;
- Accuracy and bias as demonstrated by recovery of laboratory control sample (LCS) and matrix spike (MS) samples;
- Extracted Internal Standard (EIS) and non-extracted internal standard (NIS) recoveries;
- Analytical precision as relative percent difference (RPD) of analyte concentration between laboratory duplicates, or MSs/MS duplicates (MSDs);
- Sampling and analytical precision as RPD of analyte concentration between field duplicates;

- Assessment of field contamination as demonstrated by field blanks; and
- Insofar as possible, the degree of conformance to method requirements and good laboratory practices.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

3 EXPLANATION OF DATA QUALITY INDICATORS

Summary explanation of the specific data quality indicators reviewed during data validation are presented below.

3.1 LABORATORY CONTROL SAMPLE RECOVERIES

LCSs are aliquots of analyte free matrices that are spiked with the analytes of interest for an analytical method, or a representative subset of those analytes. The spiked matrix is then processed through the same analytical procedures as the samples they accompany.

LCS recovery and precision are an indication of a laboratory's ability to successfully perform an analytical method in an interference free matrix.

3.2 MATRIX SPIKE RECOVERIES

MSs and MSDs are prepared by adding known amounts of the analytes of interest for an analytical method, or a representative subset of those analytes, to an aliquot of sample. The spiked sample is then processed through the same extraction, concentration, cleanup, and analytical procedures as the unspiked samples in an analytical batch.

MS recovery and precision are an indication of a laboratory's ability to successfully recover an analyte in the matrix of a specific sample or closely related sample matrices. It is important not to apply MS results for any specific sample to other samples without understanding how the sample matrices are related.

3.3 BLANK CONCENTRATIONS

Blank samples are aliquots of analyte free matrix that are used as negative controls to verify that the sample collection, storage, preparation, and analysis system does not produce false positive results.

Equipment blanks are prepared by passing analyte free water through or over sample collection equipment and collecting the water in sample containers. Equipment blanks are analyzed for the analytical suite required for the project. Equipment blanks are used to monitor for possible sample contamination during the sample collection process and serve as a check on the effectiveness of field decontamination procedures.

Laboratory blanks are processed by the laboratory using the same procedures as the field samples. Target analytes should not be found in laboratory blanks.

3.4 LABORATORY AND FIELD DUPLICATES

Laboratory and field duplicate analyses verify acceptable method precision by the laboratory at the time of preparation and analysis and/or sampling precision at the time of collection.

4 DEFINITIONS OF QUALIFIERS THAT MAY BE ADDED DURING DATA VALIDATION

J	The reported result was an estimated value.
J+	The reported result was an estimated value with a positive bias.
J-	The reported result was an estimated value with a negative bias.
NJ	The analyte has been tentatively identified as present and the concentration is estimated.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting quality control criteria. The analyte may or may not be present in the sample.
U	The analyte was not detected and was reported as less than the limit of detection (LOD). The LOD has been adjusted for any dilution or concentration of the sample.
UJ	The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

5 QUALIFICATION REASON CODES

The following reason codes were applied to the data during data validation:

CCL	Low CCV recovery. Result may be biased low.
CFD	Confirmation ion was not present in a reported detection of an analyte with a confirmation ion.
EBL	The analyte was detected in the associated equipment blank, and the concentration detected in the sample was less than the limit of quantitation (LOQ).
EISH	High EIS recovery.
EISL	Low EIS recovery.
FDD	Imprecision between primary and field duplicate results.
HPHL	Hold time between collection and extraction exceeded.
IAG	Transition ion ratio is outside of expected limits.
LBL	The analyte was detected in the associated laboratory blank, and the concentration detected in the sample was less than the LOQ.
ISL	Low NIS recovery
PJ	Potential bile salt interference.
SNL	Signal to noise ratio did not meet criteria.
TH8	Elevated sample receipt temperature.
TR	The detected analyte concentration is less than the LOQ.

6 CHAIN OF CUSTODY AND SAMPLE RECEIPT CONDITION DOCUMENTATION

The samples were received at the laboratory under proper COC, intact, properly preserved, and at average temperatures less than the method-specified maximum of 6 degrees Celsius (°C), with the following exception:

- Bureau Veritas signed the first page of the COC associated with job C3W2259, but not the second or third pages. WSP did not qualify any data based on the missing signatures.
- The field sampling team did not sign the COC associated with job C3X5365 to relinquish sample custody. It is assumed sample custody was maintained because the custody seals were intact when the samps were received at the laboratory. WSP did not qualify any data based on the missing signatures.
- The recorded sample receipt temperatures for job C3W7599 were between 5.9 and 8.8 °C. It was not possible to determine which samples were received in each cooler and per the DoD Data Validation Guidelines, WSP J qualified the detected and UJ qualified the non-detected PFAS results from samples LORNG_JBW7347B_10182023, LORNG_JBW7347B_10182023FD, LORNG_OW21005_10182023, and LORNG_OW21005_10182023FD because of the elevated sample receipt temperatures. (J/UJ, TH8)
- The case narrative for job C3X5365 states that the samples were analyzed past the method-specified maximum holding time. Inspection of the sample collection, extraction, and analysis dates indicate the samples were extracted within the method-specified holding time of 28 days from collection and analyzed within 90 days of extraction. WSP did not qualify any data based on the erroneous holding time information in the case narrative.
- The case narrative for job C3W5493 states that the EIS concentrations are twice what is specified in the laboratory's standard operation procedure. Data quality is not affected because the laboratory adjusted the quantification calculation to take the higher EIS concentrations into account.

7 SPECIFIC DATA VALIDATION FINDINGS

Results from these samples may be considered usable with the limitations and exceptions described in Sections 7.1 through 9.0.

7.1 PFAS BY EPA DRAFT METHOD 1633

PFAS results generated by Bureau Veritas may be considered usable with the limitations described in Sections 7.1.1 through 7.1.14.

7.1.1 HOLDING TIMES

The samples were extracted for PFAS within the method-specified maximum holding time of 28 days from sample collection when stored at temperatures between 0 and 6 °C. Extracts were analyzed within the method-specified maximum hold time of 90 days from extraction, with the following exception:

- According to the case narrative for job C3W7599, samples LORNG_OW21005_10182023 and LORNG_OW21005_10182023FD were originally extracted within the method-specified maximum hold time

and then re-extracted 49 days outside the method-specified hold time. Based on professional judgement, WSP J qualified the detected and UJ qualified the non-detected PFAS results from samples LORNG_OW21005_10182023 and LORNG_OW21005_10182023FD because of the grossly exceeded hold time. (J/UJ, HPHL)

7.1.2 MASS CALIBRATION FREQUENCY

According to the laboratory's notes, the analytical instrument underwent mass calibration to the instrument manufacturer's specifications and using the manufacturer's recommended standard less than a year before the samples reviewed in this report were analyzed.

7.1.3 INITIAL CALIBRATION COMPLIANCE

Relative standard deviations between response factors for each target analyte were less than or equal to the method-specified maximum of 20% and/or relative standard errors were less than the method-specified maximum of 20% for all target analytes and EISs.

7.1.4 INITIAL CALIBRATION VERIFICATION ACCURACY

ICVs were analyzed after each initial calibration. Recoveries were between 70 and 130%.

7.1.5 INSTRUMENT SENSITIVITY CHECK COMPLIANCE

Instrument sensitivity checks (ISCs) were analyzed at the beginning of each analytical sequence, concentrations were equivalent to the LOQ, and signal to noise ratios were greater than or equal to 3:1. The target compound recoveries were within the method-specified 70 to 130% limits, except as noted below.

- 3-Perfluoropropyl propanoic acid (3:3 FTCA) recovery is low at 66% in the ISC associated with the analysis of samples LORNG_JBW7347B_10182023FD and LORNG_OW21005_10182023FD. Based on professional judgement, WSP UJ qualified the non-detected 3:3 FTCA results from the associated samples because of the low ISC recovery. (UJ, CCL)
- 3:3 FTCA recovery is low at 64% in the ISC associated with the analysis of samples in job C3X5365. Based on professional judgement, WSP UJ qualified the non-detected 3:3 FTCA results from samples LORNG_043-MW03_10232023, LORNG_MMW3402R_10232023, LORNG_USMW025_10192023FD, LORNG_USMW025_10192023, LORNG_JPZ0606_10202023, LORNG_JMW-0806_10192023, LORNG_AA18MW-02_10192023, LORNG_OW10005_10202023, LORNG_BW20002_10192023, LORNG_OW20007_10192023, LORNG_BW17005_10202023, LORNG_OW17002_10192023, LORNG_BB_OW001_10232023, LORNG_BW01006_10202023, LORNG_BW18009_10192023, LORNG_OW20003_10202023, LORNG_BW13001_10192023, LORNG_EBGB_BW002_10192023, and LORNG_BW18010_10192023 because of the low ISC recovery. (UJ, CCL)

7.1.6 CONTINUING CALIBRATION VERIFICATION COMPLIANCE

CCVs were analyzed at the beginning of the analytical sequence after the ISC, after every ten or fewer samples, and at the end of the analytical sequence. Recovery of target compound is within the method-specified 70 to 130% limits.

7.1.7 BILE SALT INTERFERENCE CHECKS

Bile salt interference checks were analyzed daily and retention times for the bile salts were at least one minute outside the retention times for linear or branched perfluorooctanesulfonic acid (PFOS), with the following exception:

- The bile salt peak was not visible on instrument LCMS05 (reports C3W7599 and C3X5365) making it impossible to determine whether bile salt interference peaks elute more than one minute before linear or branched PFOS peaks. Data limitations are summarized below.
    - Per the DoD data validation guidelines, WSP J qualified the detected PFOS result from sample LORNG_AA18-MW02_10192023 because the ion ratio is outside criteria and WSP was not able to determine from the laboratory data report if there is potential for interference from bile salts. (J, PJ)
    - PFOS detection in the remaining associated sample met ion ratio criteria and data usability is not adversely affected by not being able to assess potential interference from bile salts.

7.1.8 LABORATORY AND EQUIPMENT BLANK DETECTIONS

Target analytes were not detected in the laboratory and equipment blanks associated with the samples reviewed in this report, with the following exception:

- Perfluorooctanesulfonamide (PFOSA) was detected at a concentration of 0.23 nanograms per liter (ng/L) in the laboratory blank associated with the extraction of samples LORNG_OW21005_10182023, LORNG_JBW7347B_10182023, and LORNG_JBW7347B_10182023FD (report C3W7599). WSP U qualified the PFOSA results from the associated samples because the concentrations detected in the samples were greater than the LOD but less than the LOQ. (U, LBL)
- PFOSA was detected at a concentration of 0.13 ng/L in the laboratory blank associated with the extraction of samples LORNG_JPZ0606_10202023, LORNG_OW10005_10202023, and LORNG_OW20003_10202023. Data limitations are summarized below.
    - WSP U qualified the PFOSA results from samples LORNG_JPZ0606_10202023 and LORNG_OW10005_10202023 because the concentrations detected in the samples were greater than the LOD but less than the LOQ. (U, LBL)
    - PFOSA was not detected in the remaining associated sample and data usability is not adversely affected by the blank detection.
- PFOSA (2.1 ng/L), ethyl-perfluorooctanesulfonamidoethanol (EtFOSE [1.7 ng/L]), perfluoroheptanoic acid (PFHpA [0.33 ng/L]), perfluorohexanoic acid (PFHxA [0.19 ng/L]), and PFOS (0.66 ng/L) were detected in equipment blank LORNG_EB008_10172023, associated with sample LORNG_LF2MW1_10172023. Data limitations are summarized below.
    - WSP U qualified the PFOSA and PFHpA results from sample LORNG_LF2MW1_10172023 because the concentrations detected in the sample are greater than the LOD but less than the LOQ. (U, EBL)
    - The remaining analytes either were not detected in the associated sample or the detected concentrations were greater than both the LOQ and five times the concentrations detected in the blank. Data usability is not adversely affected by the blank detections.

7.1.9 LABORATORY CONTROL SAMPLE ACCURACY AND PRECISION

Low level LCS (LLCS) and an LCS/LCSD pair were included with each extraction batch. LLCS spike concentrations were twice the LOQ. LCS and LLCS recoveries were within the QAPP-specified 40 to 150% interim limits and RPDs between LCS and LCS duplicate results were less than 30%.

7.1.10 MATRIX SPIKE ACCURACY AND PRECISION

Bureau Veritas performed MS and MSD analyses on sample LORNG_JPZ808_10122023. MS and MSD recoveries were within the QAPP-specified LCS limits and RPDs between MS and MSD results were less than 30%.

7.1.11 EXTRACTED INTERNAL STANDARD ACCURACY

EIS recoveries were within the QAPP-specified 20 to 150% interim limits, with the following exceptions:

- Recoveries of the EISs $^{13}C_2$-perfluorotetradecanoic acid (PFTeDA [3.4%]), D_3-methyl perfluorooctanesulfonamide (MeFOSA [1.1%]), D_5-ethyl perfluorooctanesulfonamide (EtFOSA [0.39%]), D_7-methyl perfluorooctanesulfonamidoethanol (MeFOSE [12%]), and D_9-EtFOSE (7.1%) were low in sample LORNG_JBW7203A_10172023. Data limitations are summarized below.
  - Based on professional judgement, WSP R qualified and rejected the perfluorotridecanoic acid (PFTrDA), PFTeDA, MeFOSA, EtFOSA, and EtFOSE results from sample LORNG_JBW7203A_10172023 because of extremely low EIS recoveries. (R, EISL)
  - WSP UJ qualified the non-detected MeFOSE result from sample LORNG_JBW7203A_10172023 because of the low EIS recovery. (UJ, EISL)
- Recoveries of the EISs $^{13}C_2$-perfluorododecanoic acid (PFDoA [11%]), $^{13}C_2$-PFTeDA (1.7%), D_3-MeFOSA (0.85%), D_5-EtFOSA (0.18%), D_7-MeFOSE (1.2%), and D_9-EtFOSE (0.54%) were low in sample LORNG_JMW1762_10172023. Data limitations are summarized below.
  - Based on professional judgement, WSP R qualified and rejected the PFTrDA, PFTeDA, MeFOSA, EtFOSA, MeFOSE, and EtFOSE results from sample LORNG_JMW1762_10172023 because of the extremely low EIS recoveries. (R, EISL)
  - WSP UJ qualified the non-detected PFDoA result from sample LORNG_JMW1762_10172023 because of the low EIS recovery. (UJ, EISL)
- Recovery of the EIS D_5-ethyl perfluorooctanesulfonamide (EtFOSA) was low at 18% in sample LORNG_OW10007_10172023. WSOP UJ qualified the non-detected EtFOSE result because of the low EIS recovery. (UJ, EISL)
- Recoveries of the EISs $^{13}C_2$-PFTeDA (2.9%), D_3-MeFOSA (0.37%), D_5-EtFOSA (0.12%), D7-MeFOSE (14%), and D_9-EtFOSE (8.9%) were low in sample LORNG_BW16002_10172023. Data limitations are summarized below.
  - Based on professional judgement, WSP R qualified and rejected the PFTrDA, PFTeDA, MeFOSA, EtFOSA, and EtFOSE results from sample LORNG_BW16002 because if the extremely low EIS recoveries. (X, EISL)
  - WSP UJ qualified the non-detected MeFOSE result from sample LORNG_BW16002_10172023 because of the low EIS recovery. (UJ, ISL)
- Recoveries of the EISs $^{13}C_2$-4:2 fluorotelomersulfonic acid (FTS) and $^{13}C_5$-perfluoropentanoic acid (PFPeA) were high at 208% and 232%, respectively, in sample LORNG_BW18009_10192023. Data limitations are summarized below.
  - WSP J- qualified the detected PFPeA result from sample LORNG_BW18009_10192023 because of the high EIS recovery. (J-, EISH)
  - 4:2 FTS, perfluoro-3-methylpropianoic acid (PFMPA), perfluoro-4-methoxyburtanoic acid (PFMBA), and 3:3 FTCA were not detected in sample LORNG_BW18009_10192023 and data usability is not adversely affected by the high EIS recoveries.
- Recoveries of the EISs $^{13}C_2$-4:2 FTS and $^{13}C_5$-PFPeA were high at 159% and 157%, respectively, in sample LORNG_USMW025_10192023. Data limitations are summarized below.
  - WSP J- qualified the detected PFPeA result from sample LORNG_USMW025_10192023 because of the high EIS recovery. (J-, EISH)
  - 4:2 FTS, PFMPA, PFMBA, and 3:3 FTCA were not detected in sample LORNG_USMW025_10192023 and data usability is not adversely affected by the high EIS recoveries.

- Recoveries of the EISs D_3-MeFOSA and D_5-EtFOSA were low at 8.0% and 7.8%, respectively, in sample LORNG_AA18MW-02_10192023. Based on professional judgement, WSP R qualified and rejected the MeFOSA and EtFOSA results from this sample because of the extremely low EIS recoveries. (R, EISL)
- Recoveries of the EISs D_3-MeFOSA and D_5-EtFOSA were low at 19% and 17%, respectively, in sample LORNG_BW01006_10202023. WSP UJ qualified the MeFOSA and EtFOSA results from this sample because of the low EIS recoveries. (UJ, EISL)
- Recoveries of the EISs D_3-MeFOSA and D_5-EtFOSA were low at 9.5% and 7.2%, respectively, in sample LORNG_BW17005_10202023. Based on professional judgement, WSP R qualified and rejected the MeFOSA and EtFOSA results from this sample because of the extremely low EIS recoveries. (R, EISL)
- Recoveries of the EIS $^{13}C_2$-4:2 FTS were high in samples LORNG_JPZ0606_10202023 and LORNG_OW10005_10202023 at 171% and 197%, respectively. 4:2 FTS was not detected in these samples and data usability is not adversely affected by the high EIS recoveries.

7.1.12 NON-EXTRACTED INTERNAL STANDARD ACCURACY

NIS recoveries were within the method-specified 50 to 200% limits, with the following exceptions:

- Several samples have NIS recovery above the 200% limit. The DoD Data Validation Guidelines do not specify any action for high NIS recoveries and WSP did not qualify any data based on high NIS recovery.
- Recovery of the NIS $^{13}C_4$-PFOS was low at 47% in sample LORNG_JMW1762_10172023. Data limitations are summarized below.
    - WSP J qualified the detected perfluoroheptanesulfonic acid (PFHpS) and PFOS results from sample LORNG_JMW1762_10172023 because of the low NIS recovery. (J, ISL)
    - WSP UJ qualified the non-detected perfluorononanesulfonic acid, perfluorodecanesulfonic acid, perfluorododecanesulfonic acid, PFOSA, methyl perfluorooctanesulfonamidoacetic acid, and ethyl perfluorooctanesulfonamidoacetic acid results from sample LORNG_JMW1762_10172023because of the low NIS recovery. (UJ, ISL)
    - The EtFOSA, EtFOSE, MeFOSA, and MeFOSE results were previously rejected due to low EIS recoveries and the data were not additionally qualified due to the low NIS recovery.

7.1.13 STAGE 4 VALIDATION

WSP did not perform Stage 4 validation on the samples reviewed in this report.

7.1.14 DATA REPORTING AND ANALYTICAL PROCEDURES

WSP J qualified the following results because the ion ratios were outside of expected limits according to Bureau Veritas' notes. (J, IAG)

- PFPeA in samples LORNG_BW05010_10122023, LORNG_BW20002_10192023, LORNG_EBGB_BW002_10192023, LORNG_JBW7347B_10182023, LORNG_JPZ_0686_10132023, LORNG_JPZ7808_10122023, LORNG_OW16003_10122023, and LORNG_OW20007_10192023;
- PFPeA and PFOS in sample LORNG_JBW7107-10122023,
- PFPeA and PFOSA in samples LORNG_BW18009_10192023, LORNG_JPZ0606_10202023, LORNG_MMW3402R_10232023, and LORNG_USMW025_10192023FD;
- PFHxA and perfluorononanoic acid in samples LORNG_BW13001_10192023 and LORNG_USMW024_10122023;
- Perfluorooctanoic acid in samples LORNG_BW22001_10122023 and LORNG_MMW0015_10122023;
- Perfluorobutanesulfonic acid in sample LORNG_BW05006_10122023;

- PFHpS in samples LORNG_JBW7714_10132023, LORNG_JMW1762_10172023, and LORNG_OW20004_10132023FD;
- PFOS in sample LORNG_AA18MW-02_10192023; and
- PFOSA in samples LORNG_BW01006_10202023, LORNG_BW18010_10192023, LORNG_LF2MW1_10172023, LORNG_OW10005_10202023, LORNG_OW20002_10172023, and LORNG_USMW025_10192023.

According to Bureau Veritas' notes, the signal to noise ratios for the PFPeA detections in samples LORNG_BW18010_10192023, LORNG_BW20002_10192023, LORNG_EBGB_BW002_10192023, and LORNG_RFW-38_10122023 did not meet method-specified minimum criteria. Per the DoD data validation guidelines, WSP J qualified these results because of the low signal to noise ratio. (J, SNL)

According to Bureau Veritas' notes, the PFPeA results from samples LORNG_JBW7347B_10182023FD and LORNG_USMW025_10192023 and the PFOSA result from sample LORNG_043-MW03_10232023 did not meet identification criteria because the confirmation ions were not detected. Based on professional judgement, WSP NJ qualified these results as being tentatively identified with estimated concentrations because the confirmation ions were not detected. (NJ, CFD)

Bureau Veritas J qualified analytes with detected concentrations less than the LOQ. WSP agrees that these results are quantitatively uncertain and has maintained Eurofins' J qualifiers. (J, TR)

8 FIELD DUPLICATE PRECISION

WSP collected field duplicates with samples LORNG_OW20004_10132023, LORNG_MMW0007A_10122023, LORNG_JMW6001_10172023, LORNG_JMW-0602_10172023, LORNG_LF3MW3_10162023, LORNG_JBW7347B_10182023, LORNG_OW21005_10182023, and LORNG_USMW025_10192023. Except as noted below, precision between primary and field duplicate results was acceptable, with RPDs less than 30% or differences between concentrations less than the average LOQ. Detections in the field duplicate pairs are summarized in Table 4.

- The RPD between PFOSA results from sample LORNG_JMW-0602_10172023 and its field duplicate LORNG_JMW-0602_10172023 was high at 65%. WSP J qualified the PFOSA results from this field duplicate pair because of potential sampling and/or analytical imprecision. (J, FDD)
- The differences between detected and non-detected PFOSA and MeFOSE results from sample LORNG_OW21005_10182023 and its field duplicate LORNG_OW21005_10182023 are greater than the average LOQs. WSP J qualified the detected and UJ qualified the non-detected PFOSA and MeFOSE results from this field duplicate pair due to potential sampling and/or analytical imprecision. (J/UJ, FDD)

9 SUMMARY AND CONCLUSIONS

WSP evaluated a total of 2,160 data records from field samples during this validation. Qualifier definitions are summarized in Section 4.0, reason codes are summarized in Section 5.0, and qualified data are summarized below.

- R: WSP R qualified and rejected 20 records (0.93%) because of extremely low EIS recoveries.
- J: WSP J qualified 440 records (20%) due to hold time exceedances, elevated sample receipt temperatures, low ICS recovery, low NIS recovery, potential bile salt interference, detected concentrations less than the LOQ, transition ion ratios outside of expected limits, signal to noise ratios outside of limits, and/or imprecision between primary and field duplicate results.
- J-: WSP J- qualified 1 record (0.05%) because of high EIS recovery.
- NJ: WSP NJ qualified 3 records (0.14%) as being qualitatively and quantitatively uncertain because the secondary transition ions were not detected.
- U: WSP U qualified 1 record (0.05%) because of a detection in the associated equipment blank.

- UJ: WSP UJ qualified 146 records (6.7%) due to elevated sample receipt temperatures, missed hold times, low ISC recoveries, detections in the associated equipment or laboratory blanks with other quality control exceedances, low NIS or EIS recoveries, and/or imprecision between primary and field duplicate results.

Data qualified during validation are summarized in Table 3.

Former Loring Air Force Base, Maine
SDGs C3W2259-C3X5365

SDG	Method	Fraction	Lab Sample ID	Field Sample ID	Parameter Name	Lab Result	Lab Qualifier	Validated Result	Validation Qualifier	Val Reason Code	Result Units

NJ = Analyte has been tentatively identified and concentration is estimated

NG/L = nanograms per liter

CCL = Low continuing calibration verification standard recovery

CFD = Confirmation ion not present

EBL = Analyte detected in equipment blank; concentration in sample is less than LOQ

EISH = High extracted internal standard recovery

EISL = Low extracted internal standard recovery

FDD = Imprecision between primary sample and field duplicate results

HPHL = Hold time between collection and extraction exceeded

IAG = Transition ion ratio outside limits

ISL = Low non-extracted internal standard recovery

LBL = Analyte detected in laboratory blank; concentration in sample is less than LOQ

PJ = Potential bile salt interference

SNL = Signal to noise ratio outside criteria

TH8 = Elevated sample receipt temperature

TR = Analyte concentration is less than LOQ

1 INTRODUCTION

WSP USA Environment & Infrastructure Inc. (WSP) collected 144 aqueous samples, including 16 equipment blanks and 13 field duplicates, between 19 October and 10 November 2023 from the former Loring Air Force Base, located in Limestone, Maine. WSP submitted the samples to Bureau Veritas Canada (Bureau Veritas), located in Mississauga, Ontario, Canada, where they were received between 26 October and 11 November 2023 and assigned to job numbers C3X5422, C3X7078, C3Y0329, C3Y0355, C3Y1766, C3Y3189, C3Y3233, C3Y5028, C3Y5043, C3Y8381, C3Y8410, C3Z4686, and C3Z4689. Bureau Veritas analyzed the samples for per- and polyfluoroalkyl substances (PFAS) using United States Environmental Protection Agency (EPA) Draft Method 1633.

A list of these samples by field sample identification (ID), sample collection date, and the laboratory sample IDs is presented in Table 1.

2 DATA VALIDATION METHODOLOGY

WSP performed DoD Stage 2B validation on 100 percent (%) of primary field samples reviewed in this report. The Stage 2B validation includes review of quality control (QC) results in the laboratory's analytical report and reported on QC summary forms but does not include review or validation of the raw analytical data. This data validation has been performed in general accordance with:

- WSP, 2023. Draft Quality Program Plan Addendum, Remedial Investigation, Per- and Polyfluoroalkyl Substances Response, Former Loring Air Force Base, Limestone Maine, May.
- Department of Defense (DoD), 2019. DoD General Data Validation Guidelines, September.
- DoD, 2021. DoD Department of Energy Consolidated Quality Systems Manual (QSM) for Environmental Laboratories Version 5.4, October.
- DoD, 2022. Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances Analysis by QSM Table B-24, October.
- EPA, 2023. 4th Draft EPA Method 1633, Analysis of PFAS in Aqueous, Solid, Biosolids, and Tissue Samples by Liquid Chromatography-Tandem Mass Spectrometry (LC-MS/MS), July.

The laboratory's certified analytical report and supporting documentation were reviewed to assess the following:

- Data package and electronic data deliverable completeness;
- Chain of custody (COC) compliance;
- Holding time compliance;
- Sample receipt condition;
- Mass Calibration;
- Initial calibration (ICAL), initial calibration verification (ICV), and continuing calibration verification (CCV) compliance with method specified criteria;
- Presence or absence of laboratory contamination as demonstrated by laboratory blanks;
- Accuracy and bias as demonstrated by recovery of laboratory control sample (LCS) and matrix spike (MS) samples;
- Extracted Internal Standard (EIS) and non-extracted internal standard (NIS) recoveries;
- Analytical precision as relative percent difference (RPD) of analyte concentration between laboratory duplicates, or MSs/MS duplicates (MSDs);
- Sampling and analytical precision as RPD of analyte concentration between field duplicates;

- Assessment of field contamination as demonstrated by field blanks; and
- Insofar as possible, the degree of conformance to method requirements and good laboratory practices.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

3 EXPLANATION OF DATA QUALITY INDICATORS

Summary explanation of the specific data quality indicators reviewed during data validation are presented below.

3.1 LABORATORY CONTROL SAMPLE RECOVERIES

LCSs are aliquots of analyte free matrices that are spiked with the analytes of interest for an analytical method, or a representative subset of those analytes. The spiked matrix is then processed through the same analytical procedures as the samples they accompany.

LCS recovery and precision are an indication of a laboratory's ability to successfully perform an analytical method in an interference free matrix.

3.2 MATRIX SPIKE RECOVERIES

MSs and MSDs are prepared by adding known amounts of the analytes of interest for an analytical method, or a representative subset of those analytes, to an aliquot of sample. The spiked sample is then processed through the same extraction, concentration, cleanup, and analytical procedures as the unspiked samples in an analytical batch.

MS recovery and precision are an indication of a laboratory's ability to successfully recover an analyte in the matrix of a specific sample or closely related sample matrices. It is important not to apply MS results for any specific sample to other samples without understanding how the sample matrices are related.

3.3 BLANK CONCENTRATIONS

Blank samples are aliquots of analyte free matrix that are used as negative controls to verify that the sample collection, storage, preparation, and analysis system does not produce false positive results.

Equipment blanks are prepared by passing analyte free water through or over sample collection equipment and collecting the water in sample containers. Equipment blanks are analyzed for the analytical suite required for the project. Equipment blanks are used to monitor for possible sample contamination during the sample collection process and serve as a check on the effectiveness of field decontamination procedures.

Laboratory blanks are processed by the laboratory using the same procedures as the field samples. Target analytes should not be found in laboratory blanks.

3.4 LABORATORY AND FIELD DUPLICATES

Laboratory and field duplicate analyses verify acceptable method precision by the laboratory at the time of preparation and analysis and/or sampling precision at the time of collection.

4 DEFINITIONS OF QUALIFIERS THAT MAY BE ADDED DURING DATA VALIDATION

J	The reported result was an estimated value.
J+	The reported result was an estimated value with a positive bias.
J-	The reported result was an estimated value with a negative bias.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting quality control criteria. The analyte may or may not be present in the sample.
U	The analyte was not detected and was reported as less than the limit of detection (LOD). The LOD has been adjusted for any dilution or concentration of the sample.
UJ	The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

5 QUALIFICATION REASON CODES

The following reason codes were applied to the data during data validation:

EBG	The analyte was detected in the associated equipment blank and the concentration detected in the sample was greater than the limit of quantitation (LOQ).
EBL	The analyte was detected in the associated equipment blank and the concentration detected in the sample was less than the LOQ.
EISH	High EIS recovery.
EISL	Low EIS recovery.
IAG	Transition ion ratio is outside of expected limits.
LBL	The analyte was detected in the associated laboratory blank and the concentration detected in the sample was less than the LOQ.
MSH	High MS recovery.
MSL	Low MS recovery.
SNL	Signal to noise ratio did not meet criteria.
TR	The detected analyte concentration is less than the LOQ.

6 CHAIN OF CUSTODY AND SAMPLE RECEIPT CONDITION DOCUMENTATION

The samples were received at the laboratory under proper COC, intact, properly preserved, and at average temperatures less than the method-specified maximum of 6 degrees Celsius, with the following exception:

- Bureau Veritas did not sign the second page of the COCs for report numbers C3X7078, C3Y3233, and C3Y5043 but there is a note in the signature line to "see page 1". WSP did not qualify any data based on the missing signatures.
- Bureau Veritas signed the first page of the COC associated with report number C3Z4686, but not the second page. WSP did not qualify any data based on the missing signatures.

7 SPECIFIC DATA VALIDATION FINDINGS

Results from these samples may be considered usable with the limitations and exceptions described in Sections 7.1 through 8.0.

7.1 PFAS BY EPA DRAFT METHOD 1633

PFAS results generated by Eurofins may be considered usable with the limitations described in Sections 7.1.1 through 7.1.14.

7.1.1 HOLDING TIMES

The samples were extracted for PFAS within the method-specified maximum holding time of 28 days from sample collection when stored at temperatures between 0 and 6 °C. Extracts were analyzed within the method-specified maximum hold time of 90 days from extraction.

7.1.2 MASS CALIBRATION FREQUENCY

According to the laboratory's notes, the analytical instrument underwent mass calibration to the instrument's manufacturer's specifications and using the manufacturer's recommended standard less than a year before the samples reviewed in this report were analyzed.

7.1.3 INITIAL CALIBRATION COMPLIANCE

Relative standard deviations between response factors for each target analyte were less than or equal to the method-specified maximum of 20% and/or relative standard errors were less than the method-specified maximum of 20% for all target analytes and EISs.

7.1.4 INITIAL CALIBRATION VERIFICATION ACCURACY

ICVs were analyzed after each initial calibration. Recoveries were between 70 and 130%.

7.1.5 INSTRUMENT SENSITIVITY CHECK COMPLIANCE

Instrument sensitivity checks (ISCs) were analyzed at the beginning of each analytical run, concentrations were equivalent to the LOQ, signal to noise ratios were greater than or equal to 3:1, and recoveries were within the method-specified 70 to 130% limits.

7.1.6 CONTINUING CALIBRATION VERIFICATION COMPLIANCE

CCVs were analyzed at the beginning of the analytical sequence after the ISC, after every ten or fewer samples, and at the end of the analytical sequence. Recoveries were within the method-specified 70 to 130% limits.

7.1.7 BILE SALT INTERFERENCE CHECKS

Bile salt interference checks were analyzed daily and retention times for the bile salts were at least one minute outside the retention times for linear or branched perfluorooctanesulfonic acid (PFOS).

7.1.8 LABORATORY AND EQUIPMENT BLANK DETECTIONS

Target analytes were not detected in the laboratory and equipment blanks associated with the samples reviewed in this report, with the following exceptions:

- Perfluorooctanesulfonamide (PFOSA) was detected at a concentration of 0.13 nanograms per liter (ng/L) in the laboratory blank associated with samples LORNG_JBW7710_10202023 and LORNG_JMW1981_10202023. Data limitations are summarized below.
  - WSP U qualified the PFOSA result from sample LORNG_JBW7710_10202023 because the detected concentration was greater than the LOD but less than the LOQ. (U, LBL)
  - PFOSA was not detected in the remaining associated sample and data usability is not adversely affected by the blank detection.
- PFOSA was detected at a concentration of 0.18 ng/L in the laboratory blank associated with samples LORNG_BW13003_10242023, LORNG_BW13003_10242023FD, LORNG_JBW7305_107_10252023, LORNG_JBW7305_33_10252023, LORNG_JMW3102_10242023, and LORNG_JMW3601_10252023. WSP U qualified the PFOSA result from the associated samples because the detected concentrations were greater than the LOD but less than the LOQ. (U, LBL)
- PFOS was detected at a concentration of 0.81 ng/L in equipment blank LORNG_EB013_10242023, associated with samples LORNG_BW13003_10242023, LORNG_BW13003_10242023FD, and LORNG_MMW0004_10242023. Data limitations are summarized below.
  - WSP J+ qualified the PFOS result from sample LORNG_MMW0004_10242023 because the detected concentration was greater than the LOQ and less than five times the concentration detected in the blank. (J+, EBG)
  - PFOS was detected in the remaining associated samples at concentrations greater than five times the concentration detected in the blank and data usability is not adversely affected by the blank detection.
- Perfluorobutanoic acid (PFBA) was detected at a concentration of 0.91 ng/L in equipment blank LORNG_EB018_10262023, associated with sample LORNG_OW17003_10262023. WSP U qualified the PFBA result from the associated sample at the because the detected concentration was greater than the LOD but less than the LOQ. (U, EBL)
- Perfluorooctanoic acid (PFOA) was detected at a concentration of 0.14 ng/L in equipment blank LORNG_EB024_10312023, associated with samples LORNG_BW18008_10312023, LORNG_JBW7339A_10312023, and LORNG_JBW7339B_10312023. PFOA was detected in the associated samples at concentrations greater than five times the concentration detected in the blank and data usability is not adversely affected by the blank detection.

- Ethyl perfluorooctanesulfonamidoethanol (EtFOSE) and methyl perfluorooctanesulfonamidoethanol (MeFOSE) were detected at concentrations of 2.8 ng/L and 2.5 ng/L, respectively, in equipment blank LORNG_EB031_11072023, associated with samples LORNG_UNK-033_11072023. Data limitations are summarized below.
    - WSP U qualified the EtFOSE result from sample LORNG_UNK-033_11072023 at the LOD of 4.7 ng/L because the detected concentration was less than the LOD. (U, EBL)
    - MeFOSE was not detected in the associated sample and data usability is not adversely affected by the blank detection.
- MeFOSE and EtFOSE were detected at concentrations of 2.9 ng/L and 3.7 ng/L, respectively, in the laboratory blank associated with the analysis of samples LORNG_JBW7753A_10272023, LORNG_MMW0011_10272023, LORNG_AA18MW-01_10272023, LORNG_BW07001_10272023, LORNG_BW07002_10272023, LORNG_OW12002_10272023, and LORNG_RFW1147_10272023. EtFOSE and MeFOSE were not detected in the associated samples and data usability is not adversely affected by the blank detections.
- MeFOSE and EtFOSE were detected at concentrations of 2.2 ng/L and 2.9 ng/L, respectively, in the laboratory blank associated with the analysis of samples LORNG_JBW7336A_11012023, LORNG_OW08001_11012023, LORNG_JBW7304_11012023, LORNG_BW05009_11012023, LORNG_BW01005_11012023, LORNG_BW01007_11012023, LORNG_BW07003_11012023, LORNG_BW12005_11012023, LORNG_BW18004_11012023, LORNG_OW02001_11012023, LORNG_OW07002_11012023, and LORNG_JBW8003B_11012023. EtFOSE and MeFOSE were not detected in the associated samples and data usability is not adversely affected by the blank detections.
- PFBA was detected at a concentration of 0.85 ng/L in equipment blank LORNG_EB017_10262023, associated with sample LORNG_FMW3413_10262023. PFBA was detected in the associated sample at a concentration greater than five times the concentration detected in the blank and data usability is not adversely affected by the blank detection.
- MeFOSE was detected at a concentration of 26 ng/L in equipment blank LORNG_EB026_11012023, associated with samples LORNG_ASMW101_11012023, LORNG_BW18004_11012023, and LORNG_JMW1665_11012023. MeFOSE was not detected in the associated samples and data usability is not adversely affected by the blank detection.
- PFOS was detected at a concentration of 2.5 ng/L in equipment blank LORNG_EB027_11022023, associated with samples LORNG_BW06006_11022023, LORNG_JBW7215B_11022023, and LORNG_UNK-TC01_11022023. PFOS was detected in the associated samples at concentrations greater than five times the concentration detected in the blank and data usability is not adversely affected by the blank detection.
- PFOS was detected at a concentration of 1.5 ng/L in equipment blank LORNG_EB035_11092023, associated with sample LORNG_JBW7327_265_11092023. PFOS was detected in the associated sample at a concentration greater than five times the concentration detected in the blank and data usability is not adversely affected by the blank detection.

7.1.9 LABORATORY CONTROL SAMPLE ACCURACY

Low level LCS (LLCS) and LCS were included with each extraction batch, LLCS spike concentrations were twice the LOQ, and LCS and LLCS recoveries were within the QAPP-specified 40 to 150% interim limits.

7.1.10 MATRIX SPIKE ACCURACY AND PRECISION

Bureau Veritas performed MS and MSD analyses on samples LORNG_BSMW3S_11012023, LORNG_BW07001_10272023, LORNG_JPZ1780_10252023, LORNG_JBW8003B_11012023, LORNG_JBW7215B_11022023, and LORNG_MMW0004_10242023. MS and MSD recoveries were within the QAPP-specified LCS limits and RPDs between MS and MSD results were less than 30%, with the following exceptions:

- Perfluorotridecanoic acid (PFTrDA) and perfluorododecanesulfonic acid (PFDoDS) recoveries were outside limits at 411% and 16%, respectively, in the MSD performed on sample LORNG_OW23001_10232023. Additionally, RPDs were high between MS and MSD results for PFTrDA (115%), perfluorodecanesulfonic acid (PFDS [57%]), PFDoDS (136%), and 3-perfluoroheptylpropanoic acid (62%). Data limitations are summarized below.
  - WSP UJ qualified the non-detect PFDoDS result from sample LORNG_OW23001_10232023 due to potential low analytical bias. (UJ, MSL)
  - PFDS, PFDoDS, and 3-perfluoroheptylpropanoic acid were not detected in the unspiked native sample and data usability is not adversely affected by potential analytical imprecision.
  - PFTrDA was not detected in the unspiked native sample and data usability is not adversely affected by potential high analytical bias or analytical imprecision.
- PFDS (221%, 212%), PFDoDS (220%, 215%), perfluoroheptanesulfonic acid (PFHpS [235%, 234%]), perfluorohexanesulfonic acid (PFHxS [172%, 168%]), perfluorononanesulfonic acid (PFNS [213%, 209%]), and perfluoropentanesulfonic acid (PFPeS [212%, 216%]) recoveries were high in the MS and MSD performed on sample LORNG_JBW8003B_11012023. Data limitations are summarized below.
  - WSP J+ qualified the PFHpS, PFHxS, PFPeS, PFNS results from the associated sample due to potential high analytical bias. (J+, MSH)
  - PFDS and PFDoDS were not detected in the unspiked native sample and data usability is not adversely affected by potential high analytical bias.
- PFHpS recovery was high at 159% in the MSD performed on sample LORNG_BSMW3S_11012023. WSP J+ qualified the detected PFHpS result from the associated sample due to potential high analytical bias. (J+, MSH)

7.1.11 DUPLICATE PRECISION

Bureau Veritas performed duplicate analyses on sample LORNG_JMW8011_11022023. RPDs were less than 30%, indicating acceptable analytical precision.

7.1.12 EXTRACTED INTERNAL STANDARD ACCURACY

EIS recoveries were within the QAPP-specified 20 to 150% interim limits, with the following exceptions:

- Recoveries of the EISs d_3-methyl perfluorooctanesulfonamide (MeFOSA) and d_5-ethyl perfluorooctanesulfonamide (EtFOSA) were extremely low at 3.6% and 5.3%, respectively, in sample LORNG_RFW1147_10272023. Based on professional judgement, WSP R qualified and rejected the non-detect MeFOSA and EtFOSA results from the associated sample due to extremely low EIS recoveries. (R, EISL)
- Recovery of the EIS d_3-MeFOSA was low at 19% in sample LORNG_JPZ7704_10192023. WSP UJ qualified the non-detect MeFOSA result from the associated sample due to low EIS recovery. (UJ, EISL)
- Recoveries of the EISs $^{13}C_2$-4:2 fluorotelomer sulfonic acid (FTS) and $^{13}C_5$-perfluoropentanoic acid (PFPeA) were high at 167% and 214%, respectively, in sample LORNG_JMW3601_10252023. Data limitations are summarized below.
  - WSP J- qualified the detected PFPeA result from the associated sample due to high EIS recovery. (J-, EISH)
  - 4:2 FTS was not detected in the associated sample and data usability is not adversely affected by high EIS recovery.
- Recovery of the EIS $^{13}C_3$-perfluorobutanesulfonic acid (PFBS) was high at 158% in sample LORNG_BW05009_11012023. WSP J- qualified the detected PFBS result from the associated sample due to high EIS recovery. (J-, EISH)

- Recovery of the EIS $^{13}C_3$-PFBS was high at 155% in sample LORNG_JBW8003B_11012023. WSP J- qualified the detected PFBS result from the associated sample due to high EIS recovery. (J-, EISH)
- Recoveries of the EISs $^{13}C_4$-PFBA (19%), $^{13}C_3$-PFBS (19%), $^{13}C_3$-PFHxS (18%), and $^{13}C_8$-PFOS (12%) were low in sample LORNG_JMW0301C_11022023. WSP J+ qualified the detected and UJ qualified the non-detect PFBA, PFBS, PFDS, PFHxS, PFHpS, PFNS, PFOS, PFDoDS, and PFPeS results from the associated sample due to low EIS recoveries. (J+/UJ, EISL)
- Recovery of the EIS $^{13}C_2$-4:2 FTS was high at 163% in sample LORNG_LYS05012D_11072023. WSP J- qualified the detected 4:2 FTS result from the associated sample due to high EIS recovery. (J-, EISH)
- Recovery of the EIS $^{13}C_2$-4:2 FTS was high at 159% in sample LORNG_BW13003_10242023FD. 4:2 FTS was not detected in the associated sample and data usability is not adversely affected by high EIS recovery.
- Recovery of the EIS $^{13}C_2$-4:2 FTS was high at 165% in sample LORNG_JMW1565_10262023. 4:2 FTS was not detected in the associated sample and data usability is not adversely affected by high EIS recovery.
- Recovery of the EIS $^{13}C_2$-4:2 FTS was high at 154% in sample LORNG_OW08002_10272023. 4:2 FTS was not detected in the associated sample and data usability is not adversely affected by high EIS recovery.
- Recovery of the EIS $^{13}C_2$-4:2 FTS was high at 174% in sample LORNG_BSMW3S_11012023. 4:2 FTS was not detected in the associated sample and data usability is not adversely affected by high EIS recovery.
- Recovery of the EIS $^{13}C_2$-4:2 FTS was high at 300% in sample LORNG_LYS01007S_11072023. 4:2 FTS was not detected in the associated sample and data usability is not adversely affected by high EIS recovery.

7.1.13 NON-EXTRACTED INTERNAL STANDARD ACCURACY

NIS recoveries were within the method-specified 50 to 200% limits, with the following exceptions:

- Recoveries of the NISs $^{13}C_3$-PFBA (263%), $^{13}C_2$-perfluorodecanoic acid (PFDA [245%]), $^{13}C_2$-perfluorohexanoic acid (PFHxA [252%]), $^{13}C_4$-PFOS (226%), $^{13}C_4$-PFOA (245%), $^{13}C_5$-perfluorononanoic acid (PFNA [251%]), and $^{18}O_2$-PFHxS (222%) were high in sample LORNG_JBW7738B_10262023. There are no qualification criteria in the DoD data validation guidelines for high NIS recoveries and WSP did not qualify any data based on the high NIS recoveries.
- Recoveries of the NISs $^{13}C_3$-PFBA (238%), $^{13}C_2$-PFDA (234%), $^{13}C_2$-PFHxA (245%), $^{13}C_4$-PFOS (208%), $^{13}C_4$-PFOA (236%), $^{13}C_5$-PFNA (244%), and $^{18}O_2$-PFHxS (215%) were high in sample LORNG_RFW1147_10272023. There are no qualification criteria in the DoD data validation guidelines for high NIS recoveries and WSP did not qualify any data based on the high NIS recoveries.
- Recoveries of the NIS $^{13}C_3$-PFBA were high in samples LORNG_BW05009_11012023 (236%), LORNG_JBW7304_11012023 (264%), LORNG_JMW3601_10252023 (343%), LORNG_OW02001_11012023 (218%), LORNG_OW07002_11012023 (440%), and LORNG_OW08001_11012023 (283%). There are no qualification criteria in the DoD data validation guidelines for high NIS recoveries and WSP did not qualify any data based on the high NIS recoveries.

7.1.14 STAGE 4 VALIDATION

WSP did not perform Stage 4 validation on the samples reviewed in this report.

7.1.15 DATA REPORTING AND ANALYTICAL PROCEDURES

WSP J qualified the following results because the ion ratios were outside of expected limits according to Bureau Veritas' notes. (J, IAG)

- 8:2 FTS in sample LORNG_JMW0683_10312023;
- PFBS in sample LORNG_JBW7742A_11102023;

- PFDA in samples LORNG_BW06006_11022023 and LORNG_LYS07007S_11072023;
- PFHpS in samples LORNG_FMW3413_10262023 and LORNG_JBW7335A_10312023;
- PFHxA in sample LORNG_BW18004_11012023;
- PFOS in sample LORNG_OW02001_11012023;
- PFOSA in samples LORNG_BW12006_10312023, LORNG_JBW7305_107_1025202, LORNG_JBW7339A_10312023, LORNG_JBW7710_10202023, LORNG_JBW7737B_10312023, LORNG_JPZ0348_10252023, LORNG_JMW1565_10262023, LORNG_LF3MW4_10312023, LORNG_LYS05012D_11072023, and LORNG_OW07002_11012023;
- PFPeA in samples LORNG_BW05009_11012023, LORNG_BW12005_11012023, LORNG_JBW7327_158_11082023, LORNG_JBW7336A_11012023, LORNG_JMW3601_10252023, and LORNG_MMW0004_10242023; and
- PFHxA and PFPeA in sample LORNG_UNK-034_280_1102202.

According to Bureau Veritas' notes, the signal to noise ratio for the PFOSA detections in samples LORNG_BW07001_10272023, LORNG_BW07002_10272023, and LORNG_OW07001_11022023 did not meet method-specified minimum criteria. Per the DoD data validation guidelines, WSP J qualified the PFOSA results from the associated samples because of the low signal to noise ratio. (J, SNL)

Bureau Veritas J qualified analytes with detected concentrations less than the LOQ. WSP agrees that these results are quantitatively uncertain and has maintained Eurofins' J qualifiers. (J, TR)

8 FIELD DUPLICATE PRECISION

WSP collected field duplicates with the following samples:

- LORNG_BW13003_10242023 (LORNG_BW13003_10242023FD),
- LORNG_MMW0010_10262023 (LORNG_MMW0010_10262023FD),
- LORNG_BW06007_10262023 (LORNG_BW06007_10262023FD),
- LORNG_OW08002_10272023 (LORNG_OW08002_10272023FD),
- LORNG_OW09001_10262023 (LORNG_OW09001_10262023FD),
- LORNG_AA20MW-02_10312023 (LORNG_AA20MW-02_10312023FD),
- LORNG_JBW7737B_10312023 (LORNG_JBW7737B_10312023FD),
- LORNG_JBW7737A_10312023 (LORNG_JBW7737A_10312023FD),
- LORNG_OW05002_10312023 (LORNG_OW05002_10312023FD),
- LORNG_AA07MW-02_11012023 (LORNG_AA07MW-02_11012023FD),
- LORNG_JBW7327_45_11022023 (LORNG_JBW7327_45_11022023FD),
- LORNG_BW01008_11022023 (LORNG_BW01008_11022023FD), and
- LORNG_OW05003_11022023 (LORNG_OW05003_11022023FD)

Precision between primary and field duplicate results was acceptable, with RPDs less than or equal to 30% or differences between concentrations less than the average LOQ. Detections in the field duplicate pairs are summarized in Table 4.

9 SUMMARY AND CONCLUSIONS

WSP evaluated a total of 5,120 data records from field samples during this validation. Qualifier definitions are summarized in Section 4.0, reason codes are summarized in Section 5.0, and qualified data are summarized below.

- R: WSP R qualified and rejected 2 records (0.04%) due to low EIS recoveries.
- J+: WSP J+ qualified 12 records (0.23%) as being estimated concentrations with a positive bias due to high MS recoveries, low EIS recoveries, and/or detections in the associated equipment blank.
- J-: WSP J- qualified 4 records (0.08%) as estimated concentrations with a negative bias due to high EIS recoveries.
- U: WSP U qualified 7 records (0.14%) as non-detections due to detections in the associated equipment or laboratory blanks.
- J/UJ: WSP J or UJ qualified 365 records (7.1%) due to low EIS or MS recoveries, signal to noise ratios outside of limits, detected concentrations less than the LOQ, and/or transition ion ratios outside of expected limits.

Data qualified during validation are summarized in Table 3.

Notes:

U = Analyte not detected at the associated detection limits

J = Analyte is estimated

J- = Analyte is estimated; potential low bias

J+ = Analyte is estimated; potential high bias

R = Date are unusable

UJ = Analyte not detected; reporting limits estimated

NG/L = nanograms per liter

EBG = Analyte detected in equipment blank; concentration in sample is greater than LOQ

EBL = Analyte detected in equipment blank; concentration in sample is less than LOQ

EISH = High extracted internal standard recovery

EISL = Low extracted internal standard recovery

IAG = Transition ion ratio outside limits

LBL = Analyte detected in laboratory blank; concentration in sample is less than LOQ

MSH = MS/MSD recovery greater than the upper control limit

MSL = MS/MSD recovery less than the lower control limit

SNL = Signal to noise ratio outside criteria

TR = Analyte concentration is less than LOQ

1 INTRODUCTION

WSP USA Environment & Infrastructure Inc. (WSP) collected 36 aqueous samples, including 7 equipment blanks and 5 field duplicates, between 24 and 30 October 2023 from the former Loring Air Force Base, located in Limestone, Maine. WSP submitted the samples to Bureau Veritas Canada (Bureau Veritas), located in Mississauga, Ontario, Canada, where they were received on 27 October and 1 November 2023 and assigned to job numbers C3X7141 and C3Y1725. Bureau Veritas analyzed the samples for per- and polyfluoroalkyl substances (PFAS) using United States Environmental Protection Agency (EPA) Draft Method 1633.

A list of these samples by field sample identification (ID), sample collection date, and the laboratory sample IDs is presented in Table 1.

2 DATA VALIDATION METHODOLOGY

WSP performed DoD Stage 4 validation on 100 percent (%) of the field samples in job numbers C3X7141 and C3Y1725. The Stage 4 validation includes review of quality control (QC) results in the laboratory's analytical report and review of the raw analytical data. This data validation has been performed in general accordance with:

- WSP, 2023. Draft Quality Program Plan Addendum, Remedial Investigation, Per- and Polyfluoroalkyl Substances Response, Former Loring Air Force Base, Limestone Maine, May.
- Department of Defense (DoD), 2019. DoD General Data Validation Guidelines, September.
- DoD, 2021. DoD Department of Energy Consolidated Quality Systems Manual (QSM) for Environmental Laboratories Version 5.4, October.
- DoD, 2022. Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances Analysis by QSM Table B-24, October.
- EPA, 2023. 4th Draft EPA Method 1633, Analysis of PFAS in Aqueous, Solid, Biosolids, and Tissue Samples by Liquid Chromatography-Tandem Mass Spectrometry (LC-MS/MS), July.

The laboratory's certified analytical report and supporting documentation were reviewed to assess the following:

- Data package and electronic data deliverable completeness;
- Chain of custody (COC) compliance;
- Holding time compliance;
- Sample receipt condition;
- Mass Calibration;
- Initial calibration (ICAL), initial calibration verification (ICV), and continuing calibration verification (CCV) compliance with method specified criteria;
- Presence or absence of laboratory contamination as demonstrated by laboratory blanks;
- Accuracy and bias as demonstrated by recovery of laboratory control sample (LCS) and matrix spike (MS) samples;
- Extracted Internal Standard (EIS) and non-extracted internal standard (NIS) recoveries;
- Analytical precision as relative percent difference (RPD) of analyte concentration between laboratory duplicates, or MSs/MS duplicates (MSDs);
- Sampling and analytical precision as RPD of analyte concentration between field duplicates;
- Assessment of field contamination as demonstrated by field blanks;

- Confirmation of analyte identification and quantification using the raw analytical data; and
- Insofar as possible, the degree of conformance to method requirements and good laboratory practices.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

3 EXPLANATION OF DATA QUALITY INDICATORS

Summary explanation of the specific data quality indicators reviewed during data validation are presented below.

3.1 LABORATORY CONTROL SAMPLE RECOVERIES

LCSs are aliquots of analyte free matrices that are spiked with the analytes of interest for an analytical method, or a representative subset of those analytes. The spiked matrix is then processed through the same analytical procedures as the samples they accompany.

LCS recovery and precision are an indication of a laboratory's ability to successfully perform an analytical method in an interference free matrix.

3.2 MATRIX SPIKE RECOVERIES

MSs and MSDs are prepared by adding known amounts of the analytes of interest for an analytical method, or a representative subset of those analytes, to an aliquot of sample. The spiked sample is then processed through the same extraction, concentration, cleanup, and analytical procedures as the unspiked samples in an analytical batch.

MS recovery and precision are an indication of a laboratory's ability to successfully recover an analyte in the matrix of a specific sample or closely related sample matrices. It is important not to apply MS results for any specific sample to other samples without understanding how the sample matrices are related.

3.3 BLANK CONCENTRATIONS

Blank samples are aliquots of analyte free matrix that are used as negative controls to verify that the sample collection, storage, preparation, and analysis system does not produce false positive results.

Equipment blanks are prepared by passing analyte free water through or over sample collection equipment and collecting the water in sample containers. Equipment blanks are analyzed for the analytical suite required for the project. Equipment blanks are used to monitor for possible sample contamination during the sample collection process and serve as a check on the effectiveness of field decontamination procedures.

Laboratory blanks are processed by the laboratory using the same procedures as the field samples. Target analytes should not be found in laboratory blanks.

3.4 LABORATORY AND FIELD DUPLICATES

Laboratory and field duplicate analyses verify acceptable method precision by the laboratory at the time of preparation and analysis and/or sampling precision at the time of collection.

4 DEFINITIONS OF QUALIFIERS THAT MAY BE ADDED DURING DATA VALIDATION

J The reported result was an estimated value.

J+ The reported result was an estimated value with a positive bias.

J- The reported result was an estimated value with a negative bias.

R The data are unusable. The sample results are rejected due to serious deficiencies in meeting quality control criteria. The analyte may or may not be present in the sample.

U The analyte was not detected and was reported as less than the limit of detection (LOD). The LOD has been adjusted for any dilution or concentration of the sample.

UJ The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

5 QUALIFICATION REASON CODES

The following reason codes were applied to the data during data validation:

EISL Low EIS recovery.

IAG Transition ion ratio is outside of expected limits.

LBL The analyte was detected in the associated laboratory blank, and the concentration detected in the sample was less than the LOQ.

TH8 Elevated sample receipt temperature.

TR The detected analyte concentration is less than the LOQ.

6 CHAIN OF CUSTODY AND SAMPLE RECEIPT CONDITION DOCUMENTATION

The samples were received at the laboratory under proper COC, intact, properly preserved, and at average temperatures less than the method-specified maximum of 6 degrees Celsius (°C), with the following exception:

- Bureau Veritas only signed page 1 of the COCs for report numbers C3X7141 and C3Y1725. The remaining pages had notes that said, “See page 1”. No data were qualified based on the missing signatures.
- The recorded receipt temperatures for the samples in report number C3X7141 were high, ranging between 7.2 and 7.8 °C. Per the DoD Data Validation Guidelines, WSP J qualified the detected and UJ qualified the non-detected PFAS results from samples LORNG_CBW02_10252023, LORNG_JBW7341B_10252023, LORNG_JBW7734_10252023, LORNG_JBW7734_10252023FD, LORNG_JMW-0406_10252023, LORNG_JMW0991_10242023, LORNG_LF2MW2_10242023, LORNG_MMW0018B_10242023,

LORNG_OW02002_10242023, LORNG_OW05004_10242023, LORNG_OW14004_10252023, LORNG_OW20006_10252023, LORNG_OW24001_10252023, LORNG_RFW1144_10252023, LORNG_UNK-042_10242023, LORNG_USGS2_40_10252023, and LORNG_USGS2_125_10252023 because of the elevated sample receipt temperatures. (J/UJ, TH8)

7 SPECIFIC DATA VALIDATION FINDINGS

Results from these samples may be considered usable with the limitations and exceptions described in Sections 7.1 through 8.0.

7.1 PFAS BY EPA DRAFT METHOD 1633

PFAS results generated by Eurofins may be considered usable with the limitations described in Sections 7.1.1 through 7.1.15.

7.1.1 HOLDING TIMES

The samples were extracted for PFAS within the method-specified maximum holding time of 28 days from sample collection when stored at temperatures between 0 and 6 °C. Extracts were analyzed within the method-specified maximum hold time of 90 days from extraction.

7.1.2 MASS CALIBRATION FREQUENCY

According to the laboratory's notes, the analytical instrument underwent mass calibration to the instrument's manufacturer's specifications and using the manufacturer's recommended standard less than a year before the samples reviewed in this report were analyzed.

7.1.3 INITIAL CALIBRATION COMPLIANCE

Relative standard deviations between response factors for each target analyte were less than or equal to the method-specified maximum of 20% and/or relative standard errors were less than the method-specified maximum of 20% for all target analytes and EISs.

Bureau Veritas quantified perfluorotridecanoic acid using the EIS $^{13}C_2$-perfluorotetradecanoic acid (PFTeDA) instead of the average of the EISs $^{13}C_2$-perfluorododecanoic acid and $^{13}C_2$-PFTeDA, as specified by EPA Method 1633. WSP did not qualify any data based on the method deviation.

7.1.4 INITIAL CALIBRATION VERIFICATION ACCURACY

ICVs were analyzed after each initial calibration. Recoveries were between 70 and 130%.

7.1.5 INSTRUMENT SENSITIVITY CHECK COMPLIANCE

Instrument sensitivity checks (ISCs) were analyzed at the beginning of each analytical run, concentrations were equivalent to the LOQ, signal to noise ratios were greater than or equal to 3:1, and recoveries were within the method-specified 70 to 130% limits.

7.1.6 CONTINUING CALIBRATION VERIFICATION COMPLIANCE

CCVs were analyzed at the beginning of the analytical sequence after the ISC, after every ten or fewer samples, and at the end of the analytical sequence. Recoveries were within the method-specified 70 to 130% limits.

7.1.7 BILE SALT INTERFERNCE CHECKS

Bile salt interference checks were analyzed daily and retention times for the bile salts were at least one minute outside the retention times for linear or branched perfluorooctanesulfonic acid (PFOS).

7.1.8 LABORATORY AND EQUIPMENT BLANK DETECTIONS

Target analytes were not detected in the laboratory and equipment blanks associated with the samples reviewed in this report, with the following exceptions:

- Perfluorooctanesulfonamide (PFOSA [0.14 nanograms per liter {ng/L}]), methyl perfluorooctanesulfonamidoethanol (MeFOSE [2.4 ng/L]), ethyl perfluorooctanesulfonamidoethanol (EtFOSE [2.7 ng/L]), and 3-perfluoroheptylpropanoic acid (7:3 FTCA [17 ng/L]) were detected in the laboratory blank associated with the extraction of samples LORNG_BW01009_10302023, LORNG_BW10008_10302023, LORNG_JMW0880_10302023, LORNG_JMW0882_10302023, LORNG_JMW0882_10302023FD, LORNG_JMW0980_10302023, LORNG_JMW0982_10302023, LORNG_JMW0982_10302023FD, and LORNG_JMW1684_10302023. Data limitations are summarized below.
    - WSP U qualified the PFOSA, EtFOSE, and 7:3 FTCA results from sample LORNG_JMW0880_10302023 at the LODs of 0.26 ng/L, 5.2 ng/L, and 32 ng/L, respectively, because the concentrations detected in the sample were less than the LODs. (U, LBL)
    - WSP U qualified the PFOSA result from samples LORNG_JMW0882_10302023 and LORNG_JMW0882_10302023FD and the MeFOSE result from sample LORNG_JMW0880_10302023 because the concentrations detected in the samples were less than the LOQ. (U, LBL)
    - PFOSA, MeFOSE, EtFOSE, and 7:3 FTCA either were not detected in the remaining associated samples or the detected concentrations were greater than or equal to both the LOQ and five times the concentrations detected in the blank. Data usability is not adversely affected by the blank detections.
- PFOS was detected at a concentration of 0.81 ng/L in equipment blank LORNG_EB013_10242023, associated with samples LORNG_BW13003_10242023, LORNG_BW13003_10242023FD, and LORNG_MMW0004_10242023. The associated samples were not reviewed during this validation and the blank detection is addressed in the validation report containing the associated field samples.
- PFOS was detected at a concentration of 0.57 ng/L in equipment blank LORNG_EB021_10202023, associated with samples LORNG_JMW0980_10302023, LORNG_JMW0982_10302023, LORNG_JMW0982_10302023FD, LORNG_JMW1684_10302023, and LORNG_JMW1684_10302023FD. PFOS concentration detected in the associated samples were greater than both the LOQ and five times the concentration detected in the blank. Data usability is not adversely affected by the blank detection.

7.1.9 LABORATORY CONTROL SAMPLE ACCURACY

Low level LCS (LLCS) and LCS were included with each extraction batch, (LLCS) spike concentrations were twice the LOQ, and LCS and LLCS recoveries were within the QAPP-specified 40 to 150% interim limits.

7.1.10 MATRIX SPIKE ACCURACY AND PRECISION

Bureau Veritas performed MS and MSD analyses on samples LORNG_CBW02_10252023, LORNG_JMW0880_10302023, LORNG_JMW0991_10242023, and LORNG_OW05004_10242023. MS and MSD recoveries were within the QAPP-specified LCS limits and RPDs between MS and MSD results were less than 30%.

7.1.11 DUPLICATE PRECISION

Bureau Veritas did not perform duplicate analyses on the samples reviewed in this report.

7.1.12 EXTRACTED INTERNAL STANDARD ACCURACY

EIS recoveries were within the QAPP-specified 20 to 150% interim limits, with the following exceptions:

- Recoveries of the EISs $^{13}C_2$-4:2 fluorotelomersulfonic acid (FTS [162%]), D_3-methyl perfluorooctanesulfonamide (MeFOSA [11%]), and D_5-ethyl perfluorooctanesulfonamide (EtFOSA [6.8%]) were outside of limits in sample LORNG_CBW02_10252023. Data limitations are summarized below.
  - Based on professional judgement, WSP R qualified and rejected the non-detected EtFOSA result from this sample because of the extremely low EIS recovery. (R, EISL)
  - WSP UJ qualified the non-detected MeFOSA result from this sample because of the low EIS recovery. (UJ, EISL)
  - 4:2 FTS was not detected in this sample and data usability is not adversely affected by the high EIS recovery.
- Recoveries of the EIS $^{13}C_2$-4:2 FTS were high in samples LORNG_JMW0882_10302023 (172%), LORNG_JMW0882_10302023FD (155%), and LORNG_OW14004_10252023 (152%,). 4:2 FTS was not detected in these samples and data usability is not adversely affected by the high EIS recoveries.

7.1.13 NON-EXTRACTED INTERNAL STANDARD ACCURACY

NIS recoveries were within the method-specified 50 to 200% limits.

7.1.14 STAGE 4 VALIDATION

WSP performed Stage 4 validation on all field samples reviewed in this report. Data quality was acceptable, with appropriate manual integrations, correct target analyte identification, and correct quantification.

7.1.15 DATA REPORTING AND ANALYTICAL PROCEDURES

During Stage 4 validation, WSP compared ion ratios for detections in field samples against both the ion ratios from the midpoint calibration standard, for analytes with detected concentrations greater than the LOQ, and the opening midpoint CCV, for analytes with detected concentrations less than the LOQ. Ion ratios were within the method-specified 50 to 150% limits with the following exceptions, where results were J qualified because the ion ratios were outside of limits (J, IAG), unless otherwise specified:

- Perfluoropentanoic acid (PFPeA) in samples LORNG_CBW02_10252023 and LORNG_JMW0882_10302023,
- Perfluoroheptanesulfonic acid (PFHpS) in sample LORNG_OW14004_10252023,
- PFHpS and PFOSA in sample LORNG_RFW1144_10252023,
- PFOSA in samples LORNG_BW01009_10302023, LORNG_JBW7341B_10252023, LORNG_JMW0980_10302023, LORNG_JMW0982_10302023, LORNG_JMW0982_10302023FD, and LORNG_USGS2_40_10252023, and
- The PFOSA result from sample LORNG_JMW0882_10302023 was previously U qualified at the detected concentration and WSP UJ qualified the result because the ion ratio was outside of expected limits.

According to Bureau Veritas' notes, the ion ratio for PFPeA was outside of expected limits in sample LORNG_BW10008_10302023. The ion ratio of PFPeA was within limits and WSP did not qualify this result.

According to Bureau Veritas' notes, the ion ratio for PFOS was outside of expected limits in sample LORNG_OW14004_10252023. The ion ratio of PFOS was within limits and WSP did not qualify this result.

According to Bureau Veritas' notes, the signal to noise ratio for the PFPeA detection in sample LORNG_JMW0982_10302023 did not meet method-specified minimum criteria. Signal to noise ratios for both the primary and confirmation met method specified minimum criteria and WSP did not qualify this result.

Bureau Veritas J qualified analytes with detected concentrations less than the LOQ. WSP agrees that these results are quantitatively uncertain and has maintained Eurofins' J qualifiers. (J, TR)

8 FIELD DUPLICATE PRECISION

WSP collected field duplicates with samples LORNG_JBW7348_10302023, LORNG_JBW7734_10252023, LORNG_JMW0882_10302023, LORNG_JMW0982_10302023, and LORNG_JMW1684_10302023. Precision between primary and field duplicate results was acceptable, with RPDs less than 30% or differences between concentrations less than the average LOQ. Detections in the field duplicate pairs are summarized in Table 4.

9 SUMMARY AND CONCLUSIONS

WSP evaluated a total of 1,160 data records from field samples during this validation. Qualifier definitions are summarized in Section 4.0, reason codes are summarized in Section 5.0, and qualified data are summarized below.

- R: WSP R qualified and rejected 1 record (0.09%) due to extremely low EIS recovery.
- J or UJ: WSP J or UJ qualified 745 records (64%) due to elevated sample receipt temperatures, low EIS recovery, detections in the associated laboratory blanks, transition ion ratios outside of expected limits, and/or detected concentrations less than the LOQ.

Data qualified during validation are summarized in Table 3.

SDGs C3X7141 and C3Y1725

SDG	Method	Fraction	Lab Sample ID	Field Sample ID	Parameter Name	Lab Result	Lab Qualifier	Validated Result	Validation Qualifier	Val Reason Code	Result Units

U = Analyte not detected at the associated detection limits

J = Analyte is estimated

J- = Analyte is estimated; potential low bias

J+ = Analyte is estimated; potential high bias

R = Date are unusable

UJ = Analyte not detected; reporting limits estimated

NG/L = nanograms per liter

EISL = Low extracted internal standard recovery

IAG = Transition ion ratio outside limits

LBL = Analyte detected in laboratory blank; concentration in sample is less than LOQ

TH8 = Elevated sample receipt temperature

TR = Analyte concentration is less than LOQ

				3-Perfluoroheptyl propanoic acid (7:3FTCA) (NG/L)	31	U	30	U	NC	

Notes:

1 = Per QPP, RPD Limit 30 unless the difference between analyte concentrations is less than LOQ

U = Analyte not detected at the associated detection limits

J = Concentration is estimated

NC = RPD not calculated; values less than LOQ

RPD = relative percent difference

SDG = Sample Delivery Group

NG/L = nanograms per liter

DATA VALIDATION SUMMARY REPORT - PFAS

COMPANY:	WSP USA Environment and Infrastructure
PROJECT NAME:	Loring AFB
SITE NAME:	Loring AFB RI-TO 1048
CONTRACTED LAB:	Bureau Veritas Laboratories, Mississauga, Ontario, Canada
PROJECT NUMBER:	775361701
QA/QC LEVEL:	EPA Stage 4 Validation Manual (S4VM)
ANALYTICAL METHOD:	EPA Draft Method 1633
VALIDATION GUIDELINES:	Quality Assurance Project Plan (QAPP) TO 1048 Quality Program Plan September 2023, USEPA Staged Validation Checklist – Stage 2B and Stage 4, Data Validation Guidelines Module 6, November 2022, Professional judgment
SAMPLE MATRIX:	Water and Soil
TYPES OF ANALYSES:	Per fluorinated Alkyl Substances (PFAS) by Liquid Chromatography/Tandem Mass Spectroscopy (LC-MS/MS)
DATA VALIDATION DATE:	January 31,2024
DATA REVIEWER(S):	Cathi Lesher
SECONDARY REVIEWER(S):	Timothy Morris, Kevin Harmon
SDG NUMBER:	C3W5473
SAMPLING DATE(S):	October 16, 2023

Forty PFAS analytes to be Validated

Analyte	Acronym	Extracted Internal Standard
Perfluorobutanoic acid	PFBA	13C4-PFBA
Perfluoropentanoic acid	PFPeA	13C5-PFPeA
Perfluorohexanoic acid	PFHxA	13C5-PFHxA
Perfluoroheptanoic acid	PFHpA	13C4-PFHpA
Perfluorooctanoic acid	PFOA	13C8-PFOA
Perfluorononanoic acid	PFNA	13C9-PFNA
Perfluorodecanoic acid	PFDA	13C6-PFDA
Perfluoroundecanoic acid	PFUnA	13C7-PFUnA
Perfluorododecanoic acid	PFDoA	13C2-PFDoA
Perfluorotridecanoic acid	PFTrDA	13C2-PFTeDA
Perfluorotetradecanoic acid	PFTeDA	13C2-PFTeDA
Perfluorobutanesulfonic acid	PFBS	13C3-PFBS
Perfluoropentanesulfonic acid	PFPeS	13C3-PFHxS
Perfluorohexanesulfonic acid	PFHxS	13C3-PFHxS
Perfluoroheptanesulfonic acid	PFHpS	13C8-PFOS
Perfluorooctanesulfonic acid	PFOS	13C8-PFOS
Perfluorononanesulfonic acid	PFNS	13C8-PFOS
Perfluorodecanesulfonic acid	PFDS	13C8-PFOS
Perfluorododecanesulfonic acid	PFDoS	13C8-PFOS
1H,1H,2H,2H-Perfluorohexane sulfonic acid	4:2 FTS	13C2-4:2FTS
1H,1H,2H,2H-Perfluorooctane sulfonic acid	6:2 FTS	13C2-6:2FTS
1H,1H,2H,2H-Perfluorodecane sulfonic	8:2 FTS	13C2-8:2FTS
Perfluorooctanesulfonamide	PFOSA	13C8-PFOSA
N-ethyl perfluorooctanesulfonamide	EtFOSA	D5-EtFOSA
N-methyl perfluorooctanesulfonamide	MeFOSA	D3-MeFOSA
N-ethyl perfluorooctanesulfonamidoacetic acid	EtFOSAA	D5-EtFOSAA
N-methyl perfluorooctanesulfonamidoacetic acid	MeFOSAA	D3-MeFOSAA
N-ethyl perfluorooctanesulfonamidoethanol	EtFOSE	D9-EtFOSE
N-methyl perfluorooctanesulfonamidoethanol	MeFOSE	D7-MeFOSE
Hexafluoropropylene oxide dimer acid	HFPO-DA	13C3HFPO-DA
4,8-Dioxa-3-H-perfluorononanoic acid	ADONA	13C3HFPO-DA
Perfluoro-3-methoxypropanoic acid	PFMPA	13C5-PFPeA
Perfluoro-4-methoxybutanoic acid	PFMBA	13C5-PFPeA
Nonafluoro-3,6-dioxaheptanoic acid	NFDHA	13C5-PFHxA
9-Chlorohexadecafluoro-3-oxanonane-1-sulfonic acid	9Cl-PF3ONS	13C3HFPO-DA
11-Chloroeicosafluoro-3-oxaundecane-1-sulfonic acid	11Cl-PF3OUdS	13C3HFPO-DA
Perfluoro(2-ethoxyethane)sulfonic acid	PFEESA	13C5-PFHxA
3-Perfluoropropyl propanoic acid	3:3FTCA	13C5-PFPeA
2H,2H,3H,3H-Perfluorooctanoic acid	5:3FTCA	13C5-PFHxA
3-Perfluoroheptyl propanoic acid	7:3FTCA	13C5-PFHxA

QAPP Validation Qualifiers

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DATA VALIDATION SUMMARY

Bureau Veritas Laboratories – SDG: C3W5473

PFAS (Per- and polyfluoroalkyl substances)

SUMMARY

I.) General:

The samples were extracted and analyzed by LC/MS/MS for a selected list of PFAS using the PFAS Extracted Internal Standard (EIS) quantification, EPA DRAFT METHOD 1633. The results for PFHxS, PFOA, PFOS, PFNA, PFOSA, MeFOSA, EtFOSA, MeFOSAA, EtFOSAA, MeFOSE and EtFOSE include both linear and branched isomers (standards are quantitative or qualitative). Results for all other analytes include the linear isomers only.

II.) Overall Assessment of Data:

The overall assessment of data was acceptable. Data qualifiers are summarized in Attachment A, Table 3 "Summary of Data Validation Actions".

MAJOR ISSUES

The following sample reported Extracted Internal Standard (EIS) recoveries less than the expanded lower control limit of 10%. All associated sample results are non-detects and the results are unusable and have ben qualified "R".

LAB ID	CLIENT ID	EIS	ANALYTE(S)	QUAL
XIK623	LORNG SB16018-00-01-10162023	D7MeFOSE	MeFOSE	R
		D9EtFOSE	EtFOSE	R

MINOR ISSUES

I.) Laboratory Data Package:

The required documentation was present and complete. The laboratory presented a complete and accurate case narrative in the data package. The data package contains results for all samples and method types listed on the COC.

II.) Sample Receipt, Preservation, and Holding Times:

The samples were received intact with proper COC documentation and signatures. The samples were received within the project QAPP temperature requirements of ≤ 10°C. All holding time criteria were met. No data were qualified.

III.) Mass Calibration:

INSTRUMENT: LCMS07
Mass calibration was completed on October 13, 2023, to original equipment manufacturer's specifications for analytical batches 9038477, 9038641 and 9041626.

IV.) LC-MS Tune:

Autotunes were performed on instrument LCMS07 with acceptable results. All masses were acceptable. All instrument tunes met the project QAPP criteria.

V.) Initial Calibration (ICAL) and Initial Calibration Verification (ICV):

All Initial Calibration and Initial Calibration Verification criteria were met. The ICALs and ICVs met all project QAPP requirements. No data qualification was necessary.

VI.) Instrument Sensitivity Check (ISC):

Analyte concentrations were at LOQ. The ISC samples met all project QAPP requirements. No data qualification was necessary.

VII.) Continuing Calibration (CCV):

All Continuing Calibration Verification criteria met project QAPP criteria. No data qualification was necessary.

VIII.) Blanks:

Instrument Blanks:

The instrument blanks met all project QAPP criteria. Instrument blank IB9038641 reported ADONA at 0.0120 ng/g. All associated sample results were non-detect for this analyte. No qualification was necessary.

Method Blanks:

A method blank was prepared and analyzed for each preparation batch. There were no detections in the method blanks. No data qualification was needed.

Field and Equipment Blanks present in this SDG were used in evaluating blank contamination for the associated samples in this case based on sampling date.

Field Blanks:

There were no field blanks associated with this SDG. No data qualification was necessary.

Equipment Blanks (Rinse Blanks):

The rinse blank associated with this SDG, XIK633 LORNG-EB101-10162023, was free from

contamination. No data were qualified based on Rinse Blank contamination.

IX.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analysis was performed on the following SDG samples:

Laboratory ID	Client Sample ID	QA/QC Batch
XIK625	LORNG SB06018-00-01-10162023	9038477
XIK626	LORNG SB06018-04-06-10162023	9038641

The Percent Recoveries (%Rs) and Relative Percent Differences (RPDs) met project QAPP criteria.

X.) Laboratory Control Samples / Laboratory Control Sample Duplicate (LCS / LCSD):

A spiked blank (LCS) was prepared and analyzed for the water preparation batch. All LCS recoveries met project QAPP criteria. No data qualification was necessary.

XI.) Field Duplicates (FD):

The following FD samples were identified in the SDG. Relative Percent Differences (RPDs) for the detected analyte results were calculated to evaluate the field sampling and laboratory precision for the sample matrix.

Parent Sample ID (Lab ID)	Duplicate Sample ID (Lab ID)
LORNG SB06018-04-06-10162023(XIK626)	LORNG SB06018-04-06-10162023FD (XIK627)
LORNG SB06022-00-01-10162023(XIK630)	LORNG SB06022-00-01-10162023FD (XIK631)

The following table lists the FD pair RPDs requiring qualification actions. The parent and duplicate sample are qualified.

Parent Sample ID (Lab ID)	ANALYTE	RPD	QC LIMIT	QUAL
LORNG SB06018-04-06-10162023(XIK626)	PFOS	31%	</=30%	J
LORNG SB06022-00-01-10162023(XIK630)	PFOS	127%	</=30%	J

XII.) Extracted Internal Standard Analytes (EIS):

All EIS in the samples in this SDG reported recoveries within the of 20%-150% criteria, with the following exceptions:

LAB ID	CLIENT ID	EIS	ANALYTE(S)	QUAL
XIK627	LORNG SB06018-04-06-10162023	D3MeFOSA D5EtFOSA	MEFOSA EtFOSA	UJ UJ
XIK628	LORNG SB06018-09-11-10162023	D3MeFOSA D5EtFOSA	MEFOSA EtFOSA	UJ UJ

Several samples reported recoveries for EIS greater than the upper control limit, the associated results were all non-detect. No qualification was needed.

XIII.) Ion Transitions:

Ion transition criteria were met. No qualification was necessary.

XIV.) Ion Ratio:

All ion ratio criteria were met, with the following exceptions:

LAB ID	CLIENT ID	ANALYTE(S)	QUAL
XIK618	LORNG SB06020-04-06-10162023	PFPeA PFHpS	J
XIK623	LORNG SB16018-00-01-10162023	PFPeA PFHxA	J
XIK617	LORNG SB06020-04-06-10162023	PFPeA PFDA PFHpS PFOSA	J
XIK624	LORNG SB16018-02-04-10162023	PFPeA PFOSA	J
XIK630	LORNG SB06022-00-01-10162023	PFBS	J

XV.) Reporting limits (RLs):

All LOQs (Limit of Quantitation) were acceptable. Due to high concentrations or matrix interference, dilutions were required for PFOS in some samples at 10X, dilution which resulted in elevated detection limits.

XVI.) Bile Salt Standard Retention Time Check:

The bile salt standard met the method retention time requirements.

XVII.) Reanalysis:
There were no reanalysis of any samples in the SDG.

Attachment B

Completed DV Checklist with Notes

WSP USA Environment & Infrastructure
USEPA STAGED VALIDATION CHECKLIST – STAGE 2B
PFAS – DoD QSM 5.4 Table B-24

Project Task:
Method: 1633 **Lab and SDG:** Bureau Veritas C3W5473
Date: 3/18/24 **Reviewer:** Cathi Lesher

☐ **USEPA Stage 2B**

NOTE: *Per QSM 5.4 Table B-24: In addition to the requirements specified in Table B-24, ALL OF THE REQUIREMENTS CONTAINED IN EPA DRAFT METHOD 1633 (CURRENT VERSION) MUST BE MET.*

1. ☒ **Case Narrative and Data Package Completeness**
   - COC review
   - Requested compound list reported
   - Detection Limits meet QAPP and PALs and correct analysis level was reported (low/standard level)
   - Results between MDL and LOQ qualified estimated (J), NDs reported to LOD
   - Confirm transition ions in Method 1633 4th Draft Table 9 (or "*Analyte Ions Monitored, Extracted Internal Standard, and Non-extracted Internal Standard Used for Quantification*" table in current draft Method 1633) were used for all analytes

2. ☒ **Holding Time and Sample Preservation/Collection**
   - Sample conditions upon receipt at laboratory
   - Holding times met (See Section 8.5 Holding Times in Method 1633 for more information and exceptions re NFDHA):
   - ----Aqueous samples 28 days to extraction if stored by lab at 0-6 degrees C and protected from light/90 days to extraction if stored at ≤20 degrees C and protected from light/90 days to analysis of extract if stored in the dark at ≤0 degrees C
   - ----Soil/Solid samples 90 days to extraction if stored by lab at 0-6 degrees C or ≤20 degrees C and protected from light/90 days to analysis of extract if stored in the dark at ≤0 degrees C
   - ----Tissue samples 90 days to extraction if stored at ≤20 degrees C and protected from light/90 days to analysis of extract if stored in the dark at ≤0 degrees C
   - ----Biosolids samples 90 days to extraction if stored at 0-6 degrees C or ≤20 degrees C and protected from light/90 days to analysis of extract if stored in the dark at ≤0 degrees C
   - Collection, preparation, and analysis date verification

3. ☒ **QC Blanks**
   - Completeness and evaluation
   - Method blanks (preparation) ≤ ½ LOQ (or > 1/10th the amount measured in any sample or 1/10th the regulatory limit, whichever is greater)
   - Instrument blanks ≤ ½ LOQ (or > 1/10th the amount measured in any sample or 1/10th the regulatory limit, whichever is greater)
   - Field QC blanks –See discussion in Module 6 Section 3.3.1
   - For all blank qualification actions follow Module 6 Table III (below) and discussions in Module 6 Section 3.3.1 and 4.7, and use ≤2x blank concentration for qualifying result U if sample result is > LOD and ≤ LOQ—

Sample Result	Validated Result	Validation Qualifier
Non-detect or detect ≤LOD	Report at LOD	U
>LOQ but ≤5x blank	Report at sample result	J+
>LOQ and >5x blank	Report at sample result	None

4. X **Instrument Tuning and Instrument Sensitivity Check (ISC)**
   - Mass Calibration performed annually or as recommended by the instrument manufacturer, whichever is more frequent, per Method 1633 Section 10.1
   - Mass Calibration Verification ± 0.2 amu per Method 1633 (not specified in Table B-24)
   - Valid Mass Calibration Verification before ICAL and sample analysis
   - ISC concentrations at LOQ and recoveries ±30%
   - Valid ISC prior to sample analysis

5. X **Initial Calibration**
   - Sequence Log and Preparation Log Review
   - Quantitative/Qualitative Standard Review - Confirm analytes with branched isomers in the initial calibration standards are identified in the lab report and that areas of branched isomers area included in the calibration response areas for those analytes (See Method 1633 Sections 10.1.1 and 15.1.3).
   - Confirm lowest standard concentration is ≤ the LOQ.
   - %RSD RFs ≤ 20; linear $r^2 \geq 0.99$ (DoD QSM 5.4 B-24). If %RSD >30 use judgment to J or R.
   - Calibration standards recovered 70-130% of true value
   - ICV ±30%
   - Instrument Blank Review

6. X **Continuing Calibration**
   - Verify the CCV was analyzed every 10 samples in sequence.
   - %D ±30%
   - Use judgment to J or R for %D > 50
   - Instrument Blank Review

7. X **Laboratory Control Samples** (DoD QSM 5.4 Table B-24 40-150% or lab limits if approved for project use)
   - Completeness and evaluation
   - Percent Recoveries within criteria
   - RPD ≤30 if LCSD reported
   - Ion ratios within limit for all analytes

8. X **Matrix Duplicate (Lab Duplicate) and Field Duplicate Precision**
   - Completeness and evaluation
   - Lab Duplicate RPD ≤ 30
   - Field Duplicate use QAPP Limits or determine project limits

9. X **Matrix Spike Results** (DoD QSM 5.4 Table B-24 40-150% or lab limits if approved for project use)
   - Completeness and evaluation
   - Recovery within criteria and RPD ≤ 30

10. X **Ion Abundance Ratio (IAR)** See Below
    - As defined in Method 1633 4th Draft Section 14.3.5: AreaQ1/AreaQ2 where Q1 and Q2 are primary and secondary transition masses for detected compounds. Acceptance criteria are based on comparison with ion ratios established by the ICAL midpoint standard or daily CCV. If secondary transition masses are identified in Method 1633 4th Draft Table 9 (or "*Analyte Ions Monitored, Extracted Internal Standard, and Non-extracted Internal Standard*

Used for Quantification" table in current draft Method 1633), IAR must be within ±50% of IAR established for the ICAL midpoint standard or daily CCV per Section 15.1.3. Check ion ratios reported for LCS and samples.

11. X Extracted Internal Standard (EIS) See Below

- Lab Recovery Limits B-24 (%R 20-150 vs ICAL midpoint or CCV)
- J for %R <20 and >200 (Module 6)
- R ND results if <10 and use judgment for detections
- RTs for samples and batch QC 0.40 minutes of CCV or initial calibration (if no CCV run)
- Analytes RT within +/- 0.1 minutes of their associated EIS

12. X Non-Extracted Internal Standard (NIS) Recovery (%R >30 vs ICAL midpoint or CCV)

- DoD Module 6 criteria: J/UJ results if <30 or use professional judgment for R (Note: Method 1633 Section 14.9 specifies NIS recoveries within 50-200% vs CCV)
- RTs for samples 0.40 minutes of CCV or initial calibration (if no CCV run)

13. X Bile Salt Standard Retention Time (RT) Check

Did the laboratory analyze a bile salt standard? (required by Method 1633/QSM 5.4 B-24 for all sample matrices) YES NO (circle one)

Is the RT of the bile salt standard >1 minute from the RT window for PFOS (including linear and branched isomers)? YES NO (circle one)

NOTE: Three bile acids (TDCA, TCDCA, and TUDCA) have the same (<1 amu) primary transition masses as PFOS: m/z 498.9 ->79.9 for PFOS, and m/z 499.2 ->79.9 for the bile acids. As a result, the presence of these bile acids in samples can cause high bias to PFOS concentrations if co-eluting with PFOS. The bile salt standard must demonstrate chromatographic separation so there is no co-elution with any PFOS isomer.

Review Notes:

1.) 2 EIS in sample XI623 outside expanded lower control limit require R qualification.

2.) Several EIS recoveries high in multiple samples, all non-detect. No qualification.

3.) Several EIS recoveries in multiple samples low resulting in J/UJ qualification.

4.) Ion Ratios: multiple out in multiple samples, detects were qualified "J".

WSP USA Environment & Infrastructure
USEPA STAGED VALIDATION CHECKLIST – STAGE 4
PFAS – DoD QSM 5.4 Table B-24

STAGE 3/STAGE 4 REVIEW RECORD

Project Task: Loring Air Force Base
Method: 1633 **Lab and SDG:** Bureau Veritas C3W5473
Date: 3/18/24 **Reviewer:** Cathi Lesher

This checklist is completed in conjunction with a Stage 2B checklist, Data Validation Guidelines Module 6, and criteria from DoD QSM 5.4 B-24.

☒ Standard Preparation and Traceability Review
Obtain standard preparation documentation and original vendor certificates and confirm concentrations for initial calibration working standard, ICV, and LCS for 10% of target analytes. Determine if compounds had vendor standards for salt forms for any compounds. If standard with salts were used, confirm concentrations were adjusted for acid fraction concentration.

☒ Initial Calibration (including ICV and ISC)
Raw Data and Calculation 10% of target analytes – RF or RRF
Raw Data and Calculation 10% of target analytes – RSD and %D

☒ Continuing Calibration
Raw Data and Calculation 10% of target analytes – RF or RRF
Raw Data and Calculation 10% of target analytes – %D

☒ Method Blanks
Raw Data and Calculation for one detected target analyte
Review Ion Chromatograms
EIS Recovery for 10% EIS
NIS Response for 10% NIS
Detection Limits verified for one target analyte

☒ Laboratory Control Sample (LCS) and Low Level LCS Results
Review Ion Chromatograms
Raw Data and Calculation for primary compound(s) of concern and 10% of target analytes
Summary Form Verification - % R and RPD

☒ Matrix Spike Results (if applicable)
Review Ion Chromatograms
Raw Data and Calculation for primary compound(s) of concern and 10% of target analytes
Summary Form Verification - % R (and RPD if MS/MSD)

☒ Matrix Duplicate / Associated Field Sample
Review Ion Chromatograms
Raw Data and Calculation for primary compound of concern and 10% of target analytes
Summary Form Verification – RPD using concentration (not %R)

☒ Field Sample PFAS Identification
- Verify ion transitions (precursor/product ion pairs as specified in Method 1633 4th Draft Table 9)
- Ion ratios – use lab criteria, must not exceed 50-150%
- S/N Ratio for positive identification/detection of Target Analytes and EIS-- Quantitation ions and confirmation ions S/N ≥ 3; or if no confirmation ion is expected (Method 1633

4th Draft Table 9), quantitation ion must have S/N ≥10, as described in Method 1633 4th Draft Section 15.1.1: *For target analytes or EISs to be identified, peak responses of the quantitation and confirmation ions must be at least three times the background noise level (S/N 3:1). The quantitation ion must have a S/N ≥ 10:1 if there is no confirmation ion* [specified in Table 9]. *If the S/N ratio is not met due to high background noise, the laboratory must correct the issue (e.g., perform instrument troubleshooting and any necessary maintenance, such as cleaning the ion source, replacing the LC column, or if needed, repeat the cleanup steps to remove background due to the sample matrix). If the S/N ratio is not met but the background is low, then the analyte is to be considered a non-detect.* Note: If lab result is <LOQ and expected confirmation ion is not detected, qualify U at LOD or sample concentration, as appropriate. If lab result is >LOQ and expected confirmation ion is not detected, review raw data and use professional judgment.

- Quantitation ion and confirmation ion maximize simultaneously (±2 sec.)

☒ Field Sample Results
Review Ion Chromatograms
Raw Data and Calculation for all detected analytes including concentration and ion ratios
Extracted Internal Standard for 10% of EIS
Non-extracted Internal Standard for 10% of NIS
Detection limits verified for one analyte per sample
RT ICAL midpoint or initial CCV, ± 0.4 min.

☒ Detection Limits

Notes: Field duplicate RPDs out requiring J qualification.

WSP USA Environment & Infrastructure, Inc
USEPA STAGED VALIDATION CHECKLIST – STAGE 2A
SW-846 Methods – Inorganics

Project: _____Method: _____
Project #: _____ Laboratory and SDG: _____
Date: _____ Reviewer: _____

☐ **USEPA Stage 2A**

1. ☐ **Case Narrative and Data Package Completeness**
   - COC review vs. lab report and Table 1
   - Requested analytical methods performed
   - Target analytes and Reporting Limits
   - Results between MDL and RL qualified estimated (J)

2. ☐ **Holding Time and Sample Preservation/Collection**
   - Sample conditions upon receipt at laboratory
   - Holding times met
   - Collection, preparation, and analysis date verification

3. ☐ **QC Blanks**
   - Completeness and evaluation
   - Method blanks
   - Field QC blanks

4. ☐ **Laboratory Control Samples (Use QAPP/project or lab limits)**
   - Completeness and evaluation
   - Percent Recoveries within limits.
   - RPD if LCSD reported.

5. ☐ **Field Duplicate Precision**
   - Completeness and evaluation
   - Use QAPP Limits or determine project limits

6. ☐ **Lab Duplicate Precision (Use QAPP/project or lab limits)**
   - Completeness and evaluation

7. ☐ **Matrix Spike Results (Use QAPP/project or lab limits)**
   - Completeness and evaluation
   - Percent Recoveries within limits.
   - RPD if MSD reported.

8. ☐ **Serial Dilution (Use %D < 20 aqueous <25 soil for concentration >50X MDL)**

9. ☐ **Post Digestion Spike (Use QAPP/project or lab limits)**

DATA VALIDATION SUMMARY REPORT - PFAS

COMPANY:	WSP USA Environment and Infrastructure
PROJECT NAME:	Loring AFB
SITE NAME:	Loring AFB RI-TO 1048
CONTRACTED LAB:	Bureau Veritas Laboratories, Mississauga, Ontario, Canada
PROJECT NUMBER:	775361701
QA/QC LEVEL:	EPA Stage 2B Validation Manual (S4VM)
ANALYTICAL METHOD:	EPA Draft Method 1633
VALIDATION GUIDELINES:	Quality Assurance Project Plan (QAPP) TO 1048 Quality Program Plan September 2023, USEPA Staged Validation Checklist – Stage 2B, Data Validation Guidelines Module 6, November 2022, Professional judgment
SAMPLE MATRIX:	Soil
TYPES OF ANALYSES:	Per fluorinated Alkyl Substances (PFAS) by Liquid Chromatography/Tandem Mass Spectroscopy (LC-MS/MS)
DATA VALIDATION DATE:	March 9, 2024
DATA REVIEWER(S):	Robert Thielke
SECONDARY REVIEWER(S):	Timothy Morris, Kevin Harmon
SDG NUMBER:	C3W7649
SAMPLING DATE(S):	October 22, 2023
SAMPLES:	See Table 1

Forty PFAS analytes to be Validated

Analyte	Acronym	Extracted Internal Standard
Perfluorobutanoic acid	PFBA	13C4-PFBA
Perfluoropentanoic acid	PFPeA	13C5-PFPeA
Perfluorohexanoic acid	PFHxA	13C5-PFHxA
Perfluoroheptanoic acid	PFHpA	13C4-PFHpA
Perfluorooctanoic acid	PFOA	13C8-PFOA
Perfluorononanoic acid	PFNA	13C9-PFNA
Perfluorodecanoic acid	PFDA	13C6-PFDA
Perfluoroundecanoic acid	PFUnA	13C7-PFUnA
Perfluorododecanoic acid	PFDoA	13C2-PFDoA
Perfluorotridecanoic acid	PFTrDA	13C2-PFTeDA
Perfluorotetradecanoic acid	PFTeDA	13C2-PFTeDA
Perfluorobutanesulfonic acid	PFBS	13C3-PFBS
Perfluoropentanesulfonic acid	PFPeS	13C3-PFHxS
Perfluorohexanesulfonic acid	PFHxS	13C3-PFHxS
Perfluoroheptanesulfonic acid	PFHpS	13C8-PFOS
Perfluorooctanesulfonic acid	PFOS	13C8-PFOS
Perfluorononanesulfonic acid	PFNS	13C8-PFOS
Perfluorodecanesulfonic acid	PFDS	13C8-PFOS
Perfluorododecanesulfonic acid	PFDoS	13C8-PFOS
1H,1H,2H,2H-Perfluorohexane sulfonic acid	4:2 FTS	13C2-4:2FTS
1H,1H,2H,2H-Perfluorooctane sulfonic acid	6:2 FTS	13C2-6:2FTS
1H,1H,2H,2H-Perfluorodecane sulfonic	8:2 FTS	13C2-8:2FTS
Perfluorooctanesulfonamide	PFOSA	13C8-PFOSA
N-ethyl perfluorooctanesulfonamide	EtFOSA	D5-EtFOSA
N-methyl perfluorooctanesulfonamide	MeFOSA	D3-MeFOSA
N-ethyl perfluorooctanesulfonamidoacetic acid	EtFOSAA	D5-EtFOSAA
N-methyl perfluorooctanesulfonamidoacetic acid	MeFOSAA	D3-MeFOSAA
N-ethyl perfluorooctanesulfonamidoethanol	EtFOSE	D9-EtFOSE
N-methyl perfluorooctanesulfonamidoethanol	MeFOSE	D7-MeFOSE
Hexafluoropropylene oxide dimer acid	HFPO-DA	13C3HFPO-DA
4,8-Dioxa-3-H-perfluorononanoic acid	ADONA	13C3HFPO-DA
Perfluoro-3-methoxypropanoic acid	PFMPA	13C5-PFPeA
Perfluoro-4-methoxybutanoic acid	PFMBA	13C5-PFPeA
Nonafluoro-3,6-dioxaheptanoic acid	NFDHA	13C5-PFHxA
9-Chlorohexadecafluoro-3-oxanonane-1-sulfonic acid	9Cl-PF3ONS	13C3HFPO-DA
11-Chloroeicosafluoro-3-oxaundecane-1-sulfonic acid	11Cl-PF3OUdS	13C3HFPO-DA
Perfluoro(2-ethoxyethane)sulfonic acid	PFEESA	13C5-PFHxA
3-Perfluoropropyl propanoic acid	3:3FTCA	13C5-PFPeA
2H,2H,3H,3H-Perfluorooctanoic acid	5:3FTCA	13C5-PFHxA
3-Perfluoroheptyl propanoic acid	7:3FTCA	13C5-PFHxA

QAPP Validation Qualifiers

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DATA VALIDATION SUMMARY

Bureau Veritas Laboratories – SDG: C3W7649

PFAS (Per- and polyfluoroalkyl substances)

SUMMARY

I.) General:

The samples were extracted and analyzed by LC/MS/MS for a selected list of PFAS using EPA Draft Method 1633. The results for PFHxS, PFOA, PFOS, PFNA, PFOSA, MeFOSA, EtFOSA, MeFOSAA, EtFOSAA, MeFOSE and EtFOSE include both linear and branched isomers. Results for all other analytes include the linear isomers only.

II.) Overall Assessment of Data:

The overall assessment of data was acceptable. Data qualifiers are summarized in Attachment A, Table 3 "Summary of Data Validation Actions".

MAJOR ISSUES

There were no major problems for this fraction of the SDG.

MINOR ISSUES

I.) Laboratory Data Package:

The required documentation was present and complete. The laboratory presented a complete and accurate case narrative in the data package. The data package contains results for all samples and method types listed on the COC.

II.) Sample Receipt, Preservation, and Holding Times:

The samples were received intact with proper COC documentation and signatures. The Chain of Custody records did not indicate if samples were received within the project QAPP temperature requirements of ≤ 10°C. All holding time criteria were met. No data were qualified.

III.) Mass Calibration:

INSTRUMENT: LCMS 7

Mass calibration was completed on October 13, 2023, to original equipment manufacturer's specifications.

IV.) LC-MS Tune:

Autotunes were performed on instrument LCMS 7 with acceptable results. All masses were acceptable. All instrument tunes met the project QAPP criteria.

V.) Initial Calibration (ICAL) and Initial Calibration Verification (ICV):

All Initial Calibration and Initial Calibration Verification criteria were met. No data qualification was necessary.

VI.) Instrument Sensitivity Check (ISC):

Analyte concentrations were at LOQ. The ISC samples met all project QAPP requirements. No data qualification was necessary.

VII.) Continuing Calibration (CCV):

All Continuing Calibration Verification criteria met project QAPP criteria with the following exceptions:

- ADONA, 9Cl-PF3ONS, 11Cl-PF3OUdS, 3:3-FTCA, 5:3-FTCA, and 7:3-FTCA exceeded the %D CCV criteria. The ADONA, 9Cl-PF3ONS, 11Cl-PF3OUdS, 3:3-FTCA, 5:3-FTCA, and 7:3-FTCA results in both samples were qualified as estimated (J/UJ).

VIII.) Blanks:

Instrument Blanks:

The instrument blanks met all project QAPP criteria. No data qualification was necessary.

Method Blanks:

A method blank was prepared and analyzed for each preparation batch. All results were non-detected.

Field Blanks:

Sample LORNG_EB103_10182023 was associated with this SDG.

Equipment Blanks (Rinse Blanks):

The rinse blank sample LORNG_EB103_10182023 was associated with this SDG. The following result was detected in the rinse blank sample:

Client Sample ID	**Analyte**	**Blank Value (ng/l)**
LORNG_EB103_10182023	PFOSA	0.23 J

The PFOSA result in both samples were qualified as estimated (J+).

IX.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

The MS / MSD analysis was performed on a sample not associated with the samples in the SDG.

X.) Laboratory Control Samples / Laboratory Control Sample Duplicate (LCS / LCSD):

A spiked blank (LCS) was prepared and analyzed for the soil preparation batch. All LCS recoveries were within acceptance criteria.

XI.) Field Duplicates (FD):

The following FD samples were identified in the SDG. Relative Percent Differences (RPDs) for the detected analyte results were calculated to evaluate the field sampling and laboratory precision for the sample matrix.

Parent Sample ID (Lab ID)	**Duplicate Sample ID (Lab ID)**
LORNG_SB21006_00-02_10182023 (XIW356)	LORNG_SB21006_00-02_10182023FD (XIW357)

For the FD pair listed above, the following table lists RPDs and qualification actions.

SAMPLE/DUPLICATE	**ANALYTE**	**RPD**	**QC LIMIT**	**QUALIFICATION**
LORNG_SB21006_00-02_10182023 / LORNG_SB21006_00-02_10182023FD	PFHxS PFOS	44% 37%	For Soils </= 30%	J

XII.) Extracted Internal Standard Analytes (EIS):

All EIS in the samples in this SDG reported recoveries within criteria.

XIII.) Ion Transitions:

Ion transition criteria were met. No qualification was necessary.

XIV.) Ion Ratio:

All ion ratio criteria were met. No data qualification was necessary.

XV.) Reporting limits (RLs):

All LOQs (Limit of Quantitation) were acceptable.

XVI.) Bile Salt Standard Retention Time Check:

The bile salt standard met the method retention time requirements.

XVII.) Reanalysis

Reanalysis was not required for any samples.

Attachment B

Completed DV Checklist with Notes

WSP USA Environment & Infrastructure
USEPA STAGED VALIDATION CHECKLIST – STAGE 2B
PFAS – DoD QSM 5.4 Table B-24

Project Task:
Method: 1633 **Lab and SDG: C3W7649**
Date: 3/9/24 **Reviewer: R.Thielke**

☐ **USEPA Stage 2B**

NOTE: *Per QSM 5.4 Table B-24: In addition to the requirements specified in Table B-24, ALL OF THE REQUIREMENTS CONTAINED IN EPA DRAFT METHOD 1633 (CURRENT VERSION) MUST BE MET.*

X **1.** ☐ **Case Narrative and Data Package Completeness**
- COC review
- Requested compound list reported
- Detection Limits meet QAPP and PALs and correct analysis level was reported (low/standard level)
- Results between MDL and LOQ qualified estimated (J), NDs reported to LOD
- Confirm transition ions in Method 1633 4th Draft Table 9 (or "*Analyte Ions Monitored, Extracted Internal Standard, and Non-extracted Internal Standard Used for Quantification*" table in current draft Method 1633) were used for all analytes

X **2.** ☐ **Holding Time and Sample Preservation/Collection**
- Sample conditions upon receipt at laboratory
- Holding times met (See Section 8.5 Holding Times in Method 1633 for more information and exceptions re NFDHA):
- ----Aqueous samples 28 days to extraction if stored by lab at 0-6 degrees C and protected from light/90 days to extraction if stored at ≤20 degrees C and protected from light/90 days to analysis of extract if stored in the dark at ≤0 degrees C
- ----Soil/Solid samples 90 days to extraction if stored by lab at 0-6 degrees C or ≤20 degrees C and protected from light/90 days to analysis of extract if stored in the dark at ≤0 degrees C
- ----Tissue samples 90 days to extraction if stored at ≤20 degrees C and protected from light/90 days to analysis of extract if stored in the dark at ≤0 degrees C
- ----Biosolids samples 90 days to extraction if stored at 0-6 degrees C or ≤20 degrees C and protected from light/90 days to analysis of extract if stored in the dark at ≤0 degrees C
- Collection, preparation, and analysis date verification

X **3.** ☐ **QC Blanks**
- Completeness and evaluation
- Method blanks (preparation) ≤ ½ LOQ (or > 1/10th the amount measured in any sample or 1/10th the regulatory limit, whichever is greater)
- Instrument blanks ≤ ½ LOQ (or > 1/10th the amount measured in any sample or 1/10th the regulatory limit, whichever is greater)
- Field QC blanks –See discussion in Module 6 Section 3.3.1
- For all blank qualification actions follow Module 6 Table III (below) and discussions in Module 6 Section 3.3.1 and 4.7, and use ≤2x blank concentration for qualifying result U if sample result is > LOD and ≤ LOQ—

Sample Result	Validated Result	Validation Qualifier
Non-detect or detect ≤LOD	Report at LOD	U
>LOQ but ≤5x blank	Report at sample result	J+
>LOQ and >5x blank	Report at sample result	None

See Report for Field Blank Outliers

X **4.** **Instrument Tuning and Instrument Sensitivity Check (ISC)**

- Mass Calibration performed annually or as recommended by the instrument manufacturer, whichever is more frequent, per Method 1633 Section 10.1
- Mass Calibration Verification ± 0.2 amu per Method 1633 (not specified in Table B-24)
- Valid Mass Calibration Verification before ICAL and sample analysis
- ISC concentrations at LOQ and recoveries ±30%
- Valid ISC prior to sample analysis

X **5.** **Initial Calibration**

- Sequence Log and Preparation Log Review
- Quantitative/Qualitative Standard Review - Confirm analytes with branched isomers in the initial calibration standards are identified in the lab report and that areas of branched isomers area included in the calibration response areas for those analytes (See Method 1633 Sections 10.1.1 and 15.1.3).
- Confirm lowest standard concentration is ≤ the LOQ.
- %RSD RFs ≤ 20; linear $r^2 \geq 0.99$ (DoD QSM 5.4 B-24). If %RSD >30 use judgment to J or R.
- Calibration standards recovered 70-130% of true value
- ICV ±30%
- Instrument Blank Review

X **6.** **Continuing Calibration**

- Verify the CCV was analyzed every 10 samples in sequence.
- %D ±30%
- Use judgment to J or R for %D > 50
- Instrument Blank Review

See Report for Outliers

X **7.** **Laboratory Control Samples** (DoD QSM 5.4 Table B-24 40-150% or lab limits if approved for project use)

- Completeness and evaluation
- Percent Recoveries within criteria
- RPD ≤30 if LCSD reported
- Ion ratios within limit for all analytes

X **8.** **Matrix Duplicate (Lab Duplicate) and Field Duplicate Precision**

- Completeness and evaluation
- Lab Duplicate RPD ≤ 30
- Field Duplicate use QAPP Limits or determine project limits

See Report for Outliers

X **9.** **Matrix Spike Results** (DoD QSM 5.4 Table B-24 40-150% or lab limits if approved for project use)

- Completeness and evaluation
- Recovery within criteria and RPD ≤ 30

X **10.** **Ion Abundance Ratio (IAR)**

- As defined in Method 1633 4th Draft Section 14.3.5: AreaQ1/AreaQ2 where Q1 and Q2 are primary and secondary transition masses for detected compounds. Acceptance criteria are based on comparison with ion ratios established by the ICAL midpoint standard or daily CCV. If secondary transition masses are identified in Method 1633 4th Draft Table 9 (or "*Analyte Ions Monitored, Extracted Internal Standard, and Non-extracted Internal Standard*

Used for Quantification" table in current draft Method 1633), IAR must be within ±50% of IAR established for the ICAL midpoint standard or daily CCV per Section 15.1.3. Check ion ratios reported for LCS and samples.

X **11. Extracted Internal Standard (EIS)**

- Lab Recovery Limits B-24 (%R 20-150 vs ICAL midpoint or CCV)
- J for %R <20 and >200 (Module 6)
- R ND results if <10 and use judgment for detections
- RTs for samples and batch QC 0.40 minutes of CCV or initial calibration (if no CCV run)
- Analytes RT within +/- 0.1 minutes of their associated EIS

X **12. Non-Extracted Internal Standard (NIS) Recovery (%R >30 vs ICAL midpoint or CCV)**

- DoD Module 6 criteria: J/UJ results if <30 or use professional judgment for R (Note: Method 1633 Section 14.9 specifies NIS recoveries within 50-200% vs CCV)
- RTs for samples 0.40 minutes of CCV or initial calibration (if no CCV run)

X **13. Bile Salt Standard Retention Time (RT) Check**

Did the laboratory analyze a bile salt standard? (required by Method 1633/QSM 5.4 B-24 for all sample matrices) YES NO (circle one)

Is the RT of the bile salt standard >1 minute from the RT window for PFOS (including linear and branched isomers)? YES NO (circle one)

NOTE: Three bile acids (TDCA, TCDCA, and TUDCA) have the same (<1 amu) primary transition masses as PFOS: m/z 498.9 ->79.9 for PFOS, and m/z 499.2 ->79.9 for the bile acids. As a result, the presence of these bile acids in samples can cause high bias to PFOS concentrations if co-eluting with PFOS. The bile salt standard must demonstrate chromatographic separation so there is no co-elution with any PFOS isomer.

DATA VALIDATION SUMMARY REPORT - PFAS

COMPANY:	WSP USA Environment and Infrastructure
PROJECT NAME:	Loring AFB
SITE NAME:	Loring AFB RI-TO 1048
CONTRACTED LAB:	Bureau Veritas Laboratories, Mississauga, Ontario, Canada
PROJECT NUMBER:	775361701
QA/QC LEVEL:	EPA Stage 4 Validation Manual (S4VM)
ANALYTICAL METHOD:	EPA Draft Method 1633
VALIDATION GUIDELINES:	Quality Assurance Project Plan (QAPP) TO 1048 Quality Program Plan September 2023, USEPA Staged Validation Checklist – Stage 2B and Stage 4, Data Validation Guidelines Module 6, November 2022, Professional judgment
SAMPLE MATRIX:	Soil
TYPES OF ANALYSES:	Per fluorinated Alkyl Substances (PFAS) by Liquid Chromatography/Tandem Mass Spectroscopy (LC-MS/MS)
DATA VALIDATION DATE:	February 22, 2024
DATA REVIEWER(S):	Robert Thielke
SECONDARY REVIEWER(S):	Timothy Morris, Kevin Harmon
SDG NUMBER:	C3W7688
SAMPLING DATE(S):	October 16-17, 2023
SAMPLES:	See Table 1

Analyte	Acronym	Extracted Internal Standard
Perfluorobutanoic acid	PFBA	13C4-PFBA
Perfluoropentanoic acid	PFPeA	13C5-PFPeA
Perfluorohexanoic acid	PFHxA	13C2-PFHxA
Perfluoroheptanoic acid	PFHpA	13C4-PFHpA
Perfluorooctanoic acid	PFOA	13C4-PFOA
Perfluorononanoic acid	PFNA	13C5-PFNA
Perfluorodecanoic acid	PFDA	13C2-PFDA
Perfluoroundecanoic acid	PFUnA	13C2-PFUnA
Perfluorododecanoic acid	PFDoA	13C2-PFDoA
Perfluorotridecanoic acid	PFTrDA	13C2-PFTeDA
Perfluorotetradecanoic acid	PFTeA	13C2-PFTeDA
Perfluorobutanesulfonic acid	PFBS	13C3-PFBS
Perfluoropentanesulfonic acid	PFPeS	13C5-PFPeA
Perfluorohexanesulfonic acid	PFHxS	18O2-PFHxS
Perfluoroheptanesulfonic acid	PFHpS	13C4-PFHpA
Perfluorooctanesulfonic acid	PFOS	13C4-PFOS
Ethylperfluorooctanesulfonamidoacetic acid	EtFOSAA	D5-EtFOSAA
Methylperfluorooctanesulfonamidoacetic acid	MeFOSAA	D3-MeFOSAA
4:2 Fluorotelomersulfonic acid	4:2 FTS	13C2-4:2FTS
6:2 Fluorotelomersulfonic acid	6:2 FTS	13C2-6:2FTS
8:2 Fluorotelomersulfonic acid	8:2 FTS	13C2-8:2FTS
Hexafluoropropylene oxide dimer acid	HFPO-DA	13C3-HFPO-DA
4,8-dioxa-3H-perfluorononanoic acid	ADONA	13C4-PFHpA
11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid	11Cl-PF3OUdS	13C2-PFDoA
9-chlorohexadecafluoro-3-oxanone-1-sulfonic acid	9Cl-PF3ONS	13C8-PFOS
Perfluoro-3-methoxypropanoic acid	PFMPA	13C2PFHxA
Perfluoro-4-methoxybutanoic acid	PFMBA	13C3-PFPeA
Nonafluoro-3,6-dioxaheptanoic acid	NFDHA	13C3-PFBS
Perfluoro(2-ethoxyethane)sulfonic acid	PFEESA	13C3-PFHxA

QAPP Validation Qualifiers

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DATA VALIDATION SUMMARY

Bureau Veritas Laboratories – SDG: C3W7688

PFAS (Per- and polyfluoroalkyl substances)

SUMMARY

I.) General:

The samples were extracted and analyzed by LC/MS/MS for a selected list of PFAS using EPA Draft Method 1633. The results for PFHxS, PFOA, PFOS, PFNA, PFOSA, MeFOSA, EtFOSA, MeFOSAA, EtFOSAA, MeFOSE and EtFOSE include both linear and branched isomers. Results for all other analytes include the linear isomers only.

II.) Overall Assessment of Data:

The overall assessment of data was acceptable. Data qualifiers are summarized in Attachment A, Table 3 "Summary of Data Validation Actions".

MAJOR ISSUES

There were no major problems for this fraction of the SDG.

MINOR ISSUES

I.) Laboratory Data Package:

The required documentation was present and complete. The laboratory presented a complete and accurate case narrative in the data package. The data package contains results for all samples and method types listed on the COC.

II.) Sample Receipt, Preservation, and Holding Times:

The samples were received intact with proper COC documentation and signatures. The Chain of Custody records did not indicate if samples were received within the project QAPP temperature requirements of ≤ 10°C. All holding time criteria were met. No data were qualified.

III.) Mass Calibration:

INSTRUMENT: LCMS 7

Mass calibration was completed on October 13, 2023, to original equipment manufacturer's specifications for analytical batches 7985688.

IV.) LC-MS Tune:

Autotunes were performed on instrument LCMS 7 with acceptable results. All masses were acceptable. All instrument tunes met the project QAPP criteria.

V.) Initial Calibration (ICAL) and Initial Calibration Verification (ICV):

All Initial Calibration and Initial Calibration Verification criteria were met. The ICALs and ICVs met all project QAPP requirements. No data qualification was necessary.

VI.) Instrument Sensitivity Check (ISC):

Analyte concentrations were at LOQ. The ISC samples met all project QAPP requirements. No data qualification was necessary.

VII.) Continuing Calibration (CCV):

All Continuing Calibration Verification criteria associated with the reported sample results met project QAPP criteria.

VIII.) Blanks:

Instrument Blanks:

The instrument blanks met all project QAPP criteria. No data qualification was necessary.

Method Blanks:

A method blank was prepared and analyzed for each preparation batch. There were no detections in the method blanks. No data qualification was needed.

There were no Field and Equipment Blanks present in this SDG. LORNG_EB102_10172023 was associated with the samples in this SDG. However, the Equipment Blank was not included with this SDG.

Field Blanks:

There were no field blanks associated with this SDG. No data qualification was necessary.

Equipment Blanks (Rinse Blanks):

LORNG_EB102_10172023 was associated with the samples in this SDG but was reported in SDG C3W5473. All results were non-detected and no action was taken.

IX.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analysis was performed on the following SDG samples:

Client Sample ID	Laboratory ID	QA/QC Batch
LORNG_SB18046_00-01_10172023	XIW537	9042122
LORNG_SB18045_00-01_10172023	XIW534	9041407

The Percent Recoveries (%Rs) and Relative Percent Differences (RPDs) met project QAPP criteria .

X.) Laboratory Control Samples / Laboratory Control Sample Duplicate (LCS / LCSD):

A spiked blank (LCS) was prepared and analyzed for the soil preparation batches. All LCS recoveries met project QAPP criteria. No data qualification was necessary.

XI.) Field Duplicates (FD):

The following FD samples were identified in the SDG. Relative Percent Differences (RPDs) for the detected analyte results were calculated to evaluate the field sampling and laboratory precision for the sample matrix. RPD results for Field Duplicates were presented in Table 4.

Parent Sample ID (Lab ID)	Duplicate Sample ID (Lab ID)
LORNG_SB18048_00-01_10172023 (XIW553)	LORNG_SB18048_00-01_10172023FD (XIW554)
LORNG_SB18041_06-08_10172023 (XIW545)	LORNG_SB18041_06-08_10172023FD (XIW546)

For FD pairs listed above, the following table lists RPDs and qualification actions.

SAMPLE/DUPLICATE	ANALYTE	RPD	QC LIMIT	QUALIFICATION
LORNG_SB18048_00-01_10172023 / LORNG_SB18048_00-01_10172023FD	PFOA PFNA	75% 73%	For results <LOQ +/- LOQ	J
	PFHxS PFOS	33% 44%	For Soils </= 30%	J

The PFOA, PFNA, PFHxS, and PFOS results in samples LORNG_SB18048_00-01_10172023 and LORNG_SB18048_00-01_10172023FD are qualified as estimated (J).

XII.) Extracted Internal Standard Analytes (EIS):

All EIS in the samples in this SDG reported recoveries within criteria. No data were qualified.

XIII.) Ion Transitions:

Ion transition criteria were met. No qualification was necessary.

XIV.) Ion Ratio:

All ion ratio criteria were met. No data qualification was necessary.

XV.) Reporting limits (RLs):

All LOQs (Limit of Quantitation) were acceptable. Due to high concentrations, dilutions were required for PFOS in samples LORNG_SB18043_00-01_10172 and LORNG_SB18044_00-01_10172.

XVI.) Bile Salt Standard Retention Time Check:

The bile salt standard met the method retention time requirements.

XVII.) Reanalysis

Sample LORNG_SB18033_07-09_10172 was re-extracted and re-analyzed due to unacceptable native internal standard recoveries.

Attachment B

Completed DV Checklist with Notes

WSP USA Environment & Infrastructure
USEPA STAGED VALIDATION CHECKLIST – STAGE 2B
PFAS – DoD QSM 5.4 Table B-24

Project Task: Loring AFB
Method: 1633 **Lab and SDG: Bureau Veritas C3W7688**
Date: 2/23/24 **Reviewer: R. Thielke**

☐ **USEPA Stage 2B**

NOTE: *Per QSM 5.4 Table B-24: In addition to the requirements specified in Table B-24, ALL OF THE REQUIREMENTS CONTAINED IN EPA DRAFT METHOD 1633 (CURRENT VERSION) MUST BE MET.*

1. **X Case Narrative and Data Package Completeness**
   - COC review
   - Requested compound list reported
   - Detection Limits meet QAPP and PALs and correct analysis level was reported (low/standard level)
   - Results between MDL and LOQ qualified estimated (J), NDs reported to LOD
   - Confirm transition ions in Method 1633 4th Draft Table 9 (or "*Analyte Ions Monitored, Extracted Internal Standard, and Non-extracted Internal Standard Used for Quantification*" table in current draft Method 1633) were used for all analytes

2. **X Holding Time and Sample Preservation/Collection**
   - Sample conditions upon receipt at laboratory
   - Holding times met (See Section 8.5 Holding Times in Method 1633 for more information and exceptions re NFDHA):
   - ----Aqueous samples 28 days to extraction if stored by lab at 0-6 degrees C and protected from light/90 days to extraction if stored at ≤20 degrees C and protected from light/90 days to analysis of extract if stored in the dark at ≤0 degrees C
   - ----Soil/Solid samples 90 days to extraction if stored by lab at 0-6 degrees C or ≤20 degrees C and protected from light/90 days to analysis of extract if stored in the dark at ≤0 degrees C
   - ----Tissue samples 90 days to extraction if stored at ≤20 degrees C and protected from light/90 days to analysis of extract if stored in the dark at ≤0 degrees C
   - ----Biosolids samples 90 days to extraction if stored at 0-6 degrees C or ≤20 degrees C and protected from light/90 days to analysis of extract if stored in the dark at ≤0 degrees C
   - Collection, preparation, and analysis date verification

3. **X QC Blanks**
   - Completeness and evaluation
   - Method blanks (preparation) ≤ ½ LOQ (or > 1/10th the amount measured in any sample or 1/10th the regulatory limit, whichever is greater)
   - Instrument blanks ≤ ½ LOQ (or > 1/10th the amount measured in any sample or 1/10th the regulatory limit, whichever is greater)
   - Field QC blanks –See discussion in Module 6 Section 3.3.1
   - For all blank qualification actions follow Module 6 Table III (below) and discussions in Module 6 Section 3.3.1 and 4.7, and use ≤2x blank concentration for qualifying result U if sample result is > LOD and ≤ LOQ—

Sample Result	Validated Result	Validation Qualifier
Non-detect or detect ≤LOD	Report at LOD	U
>LOQ but ≤5x blank	Report at sample result	J+
>LOQ and >5x blank	Report at sample result	None

4. X **Instrument Tuning and Instrument Sensitivity Check (ISC)**
   - Mass Calibration performed annually or as recommended by the instrument manufacturer, whichever is more frequent, per Method 1633 Section 10.1
   - Mass Calibration Verification ± 0.2 amu per Method 1633 (not specified in Table B-24)
   - Valid Mass Calibration Verification before ICAL and sample analysis
   - ISC concentrations at LOQ and recoveries ±30%
   - Valid ISC prior to sample analysis

5. X **Initial Calibration**
   - Sequence Log and Preparation Log Review
   - Quantitative/Qualitative Standard Review - Confirm analytes with branched isomers in the initial calibration standards are identified in the lab report and that areas of branched isomers area included in the calibration response areas for those analytes (See Method 1633 Sections 10.1.1 and 15.1.3).
   - Confirm lowest standard concentration is ≤ the LOQ.
   - %RSD RFs ≤ 20; linear $r^2 \geq 0.99$ (DoD QSM 5.4 B-24). If %RSD >30 use judgment to J or R.
   - Calibration standards recovered 70-130% of true value
   - ICV ±30%
   - Instrument Blank Review

6. X **Continuing Calibration**
   - Verify the CCV was analyzed every 10 samples in sequence.
   - %D ±30%
   - Use judgment to J or R for %D > 50
   - Instrument Blank Review

   CCV results were outside criteria. No action taken because no associated samples

7. X **Laboratory Control Samples** (DoD QSM 5.4 Table B-24 40-150% or lab limits if approved for project use)
   - Completeness and evaluation
   - Percent Recoveries within criteria
   - RPD ≤30 if LCSD reported
   - Ion ratios within limit for all analytes

8. X **Matrix Duplicate (Lab Duplicate) and Field Duplicate Precision**
   - Completeness and evaluation
   - Lab Duplicate RPD ≤ 30
   - Field Duplicate use QAPP Limits or determine project limits

   FD out for some analytes See Report

9. X **Matrix Spike Results** (DoD QSM 5.4 Table B-24 40-150% or lab limits if approved for project use)
   - Completeness and evaluation
   - Recovery within criteria and RPD ≤ 30

10. X **Ion Abundance Ratio (IAR)**
    - As defined in Method 1633 4th Draft Section 14.3.5: AreaQ1/AreaQ2 where Q1 and Q2 are primary and secondary transition masses for detected compounds. Acceptance criteria are based on comparison with ion ratios established by the ICAL midpoint standard or daily CCV. If secondary transition masses are identified in Method 1633 4th Draft Table 9 (or "*Analyte Ions Monitored, Extracted Internal Standard, and Non-extracted Internal Standard*

Used for Quantification" table in current draft Method 1633), IAR must be within ±50% of IAR established for the ICAL midpoint standard or daily CCV per Section 15.1.3. Check ion ratios reported for LCS and samples.

11. X Extracted Internal Standard (EIS)

- Lab Recovery Limits B-24 (%R 20-150 vs ICAL midpoint or CCV)
- J for %R <20 and >200 (Module 6)
- R ND results if <10 and use judgment for detections
- RTs for samples and batch QC 0.40 minutes of CCV or initial calibration (if no CCV run)
- Analytes RT within +/- 0.1 minutes of their associated EIS

12. X Non-Extracted Internal Standard (NIS) Recovery (%R >30 vs ICAL midpoint or CCV)

- DoD Module 6 criteria: J/UJ results if <30 or use professional judgment for R (Note: Method 1633 Section 14.9 specifies NIS recoveries within 50-200% vs CCV)
- RTs for samples 0.40 minutes of CCV or initial calibration (if no CCV run)

13. X Bile Salt Standard Retention Time (RT) Check

Did the laboratory analyze a bile salt standard? (required by Method 1633/QSM 5.4 B-24 for all sample matrices) **YES** (circle one) **YES**

Is the RT of the bile salt standard >1 minute from the RT window for PFOS (including linear and branched isomers)? YES NO (circle one)

NOTE: Three bile acids (TDCA, TCDCA, and TUDCA) have the same (<1 amu) primary transition masses as PFOS: m/z 498.9 ->79.9 for PFOS, and m/z 499.2 ->79.9 for the bile acids. As a result, the presence of these bile acids in samples can cause high bias to PFOS concentrations if co-eluting with PFOS. The bile salt standard must demonstrate chromatographic separation so there is no co-elution with any PFOS isomer.

WSP USA Environment & Infrastructure
USEPA STAGED VALIDATION CHECKLIST – STAGE 4
PFAS – DoD QSM 5.4 Table B-24

STAGE 3/STAGE 4 REVIEW RECORD

Project Task: Loring AFB
Method: 1633 **Lab and SDG: Bureau Veritas C3W7688**
Date: 2/23/24 **Reviewer: R. Thielke**

This checklist is completed in conjunction with a Stage 2B checklist, Data Validation Guidelines Module 6, and criteria from DoD QSM 5.4 B-24.

☐ **X** Standard Preparation and Traceability Review
Obtain standard preparation documentation and original vendor certificates and confirm concentrations for initial calibration working standard, ICV, and LCS for 10% of target analytes. Determine if compounds had vendor standards for salt forms for any compounds. If standard with salts were used, confirm concentrations were adjusted for acid fraction concentration.

☐ **X** **I**nitial Calibration (including ICV and ISC)
Raw Data and Calculation 10% of target analytes – RF or RRF
Raw Data and Calculation 10% of target analytes – RSD and %D

☐ **X** Continuing Calibration
Raw Data and Calculation 10% of target analytes – RF or RRF
Raw Data and Calculation 10% of target analytes – %D

☐ **N/A** Method Blanks **(All Non Detected)**
Raw Data and Calculation for one detected target analyte
Review Ion Chromatograms
EIS Recovery for 10% EIS
NIS Response for 10% NIS
Detection Limits verified for one target analyte

☐ **X** Laboratory Control Sample (LCS) and Low Level LCS Results
Review Ion Chromatograms
Raw Data and Calculation for primary compound(s) of concern and 10% of target analytes
Summary Form Verification - % R and RPD

☐ **X** Matrix Spike Results (if applicable)
Review Ion Chromatograms
Raw Data and Calculation for primary compound(s) of concern and 10% of target analytes
Summary Form Verification - % R (and RPD if MS/MSD)

☐ **X** Matrix Duplicate / Associated Field Sample
Review Ion Chromatograms
Raw Data and Calculation for primary compound of concern and 10% of target analytes Summary Form Verification – RPD using concentration (not %R)

☐ **X** Field Sample PFAS Identification

- Verify ion transitions (precursor/product ion pairs as specified in Method 1633 4th Draft Table 9)
- Ion ratios – use lab criteria, must not exceed 50-150%
- S/N Ratio for positive identification/detection of Target Analytes and EIS-- Quantitation ions and confirmation ions S/N ≥ 3; or if no confirmation ion is expected (Method 1633

4th Draft Table 9), quantitation ion must have S/N ≥10, as described in Method 1633 4th Draft Section 15.1.1: *For target analytes or EISs to be identified, peak responses of the quantitation and confirmation ions must be at least three times the background noise level (S/N 3:1). The quantitation ion must have a S/N ≥ 10:1 if there is no confirmation ion* [specified in Table 9]. *If the S/N ratio is not met due to high background noise, the laboratory must correct the issue (e.g., perform instrument troubleshooting and any necessary maintenance, such as cleaning the ion source, replacing the LC column, or if needed, repeat the cleanup steps to remove background due to the sample matrix). If the S/N ratio is not met but the background is low, then the analyte is to be considered a non-detect.* Note: If lab result is <LOQ and expected confirmation ion is not detected, qualify U at LOD or sample concentration, as appropriate. If lab result is >LOQ and expected confirmation ion is not detected, review raw data and use professional judgment.

- Quantitation ion and confirmation ion maximize simultaneously (±2 sec.)

☐ **X** Field Sample Results
Review Ion Chromatograms
Raw Data and Calculation for all detected analytes including concentration and ion ratios
Extracted Internal Standard for 10% of EIS
Non-extracted Internal Standard for 10% of NIS
Detection limits verified for one analyte per sample
RT ICAL midpoint or initial CCV, ± 0.4 min.

☐ **X** Detection Limits

DATA VALIDATION SUMMARY REPORT - PFAS

COMPANY:	WSP USA Environment and Infrastructure
PROJECT NAME:	Loring AFB
SITE NAME:	Loring AFB RI-TO 1048
CONTRACTED LAB:	Bureau Veritas Laboratories, Mississauga, Ontario, Canada
PROJECT NUMBER:	775361701
QA/QC LEVEL:	EPA Stage 2B Validation Manual (S4VM)
ANALYTICAL METHOD:	EPA Draft Method 1633
VALIDATION GUIDELINES:	Quality Assurance Project Plan (QAPP) TO 1048 Quality Program Plan September 2023, USEPA Staged Validation Checklist – Stage 2B, Data Validation Guidelines Module 6, November 2022, Professional judgment
SAMPLE MATRIX:	Soil
TYPES OF ANALYSES:	Per fluorinated Alkyl Substances (PFAS) by Liquid Chromatography/Tandem Mass Spectroscopy (LC-MS/MS)
DATA VALIDATION DATE:	March 8, 2024
DATA REVIEWER(S):	Robert Thielke
SECONDARY REVIEWER(S):	Timothy Morris, Kevin Harmon
SDG NUMBER:	C3X5479
SAMPLING DATE(S):	October 20, 2023
SAMPLES:	See Table 1

Forty PFAS analytes to be Validated

Analyte	Acronym	Extracted Internal Standard
Perfluorobutanoic acid	PFBA	13C4-PFBA
Perfluoropentanoic acid	PFPeA	13C5-PFPeA
Perfluorohexanoic acid	PFHxA	13C5-PFHxA
Perfluoroheptanoic acid	PFHpA	13C4-PFHpA

N-ethyl perfluorooctanesulfonamide	EtFOSA	D5-EtFOSA
N-methyl perfluorooctanesulfonamide	MeFOSA	D3-MeFOSA
N-ethyl perfluorooctanesulfonamidoacetic acid	EtFOSAA	D5-EtFOSAA
N-methyl perfluorooctanesulfonamidoacetic acid	MeFOSAA	D3-MeFOSAA
N-ethyl perfluorooctanesulfonamidoethanol	EtFOSE	D9-EtFOSE
N-methyl perfluorooctanesulfonamidoethanol	MeFOSE	D7-MeFOSE
Hexafluoropropylene oxide dimer acid	HFPO-DA	13C3HFPO-DA
4,8-Dioxa-3-H-perfluorononanoic acid	ADONA	13C3HFPO-DA
Perfluoro-3-methoxypropanoic acid	PFMPA	13C5-PFPeA
Perfluoro-4-methoxybutanoic acid	PFMBA	13C5-PFPeA
Nonafluoro-3,6-dioxaheptanoic acid	NFDHA	13C5-PFHxA
9-Chlorohexadecafluoro-3-oxanonane-1-sulfonic acid	9Cl-PF3ONS	13C3HFPO-DA
11-Chloroeicosafluoro-3-oxaundecane-1-sulfonic acid	11Cl-PF3OUdS	13C3HFPO-DA
Perfluoro(2-ethoxyethane)sulfonic acid	PFEESA	13C5-PFHxA
3-Perfluoropropyl propanoic acid	3:3FTCA	13C5-PFPeA
2H,2H,3H,3H-Perfluorooctanoic acid	5:3FTCA	13C5-PFHxA
3-Perfluoroheptyl propanoic acid	7:3FTCA	13C5-PFHxA

QAPP Validation Qualifiers

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DATA VALIDATION SUMMARY

Bureau Veritas Laboratories – SDG: C3X5479

PFAS (Per- and polyfluoroalkyl substances)

SUMMARY

I.) General:

The samples were extracted and analyzed by LC/MS/MS for a selected list of PFAS using EPA Draft Method 1633. The results for PFHxS, PFOA, PFOS, PFNA, PFOSA, MeFOSA, EtFOSA, MeFOSAA, EtFOSAA, MeFOSE and EtFOSE include both linear and branched isomers. Results for all other analytes include the linear isomers only.

II.) Overall Assessment of Data:

The overall assessment of data was acceptable. Data qualifiers are summarized in Attachment A, Table 3 "Summary of Data Validation Actions".

MAJOR ISSUES

There were no major problems for this fraction of the SDG.

MINOR ISSUES

I.) Laboratory Data Package:

The required documentation was present and complete. The laboratory presented a complete and accurate case narrative in the data package. The data package contains results for all samples and method types listed on the COC.

II.) Sample Receipt, Preservation, and Holding Times:

The samples were received intact with proper COC documentation and signatures. The Chain of Custody records did not indicate if samples were received within the project QAPP temperature requirements of ≤ 10°C. All holding time criteria were met. No data were qualified.

III.) Mass Calibration:

INSTRUMENT: LCMS 7

Mass calibration was completed on October 13, 2023, to original equipment manufacturer's specifications.

IV.) LC-MS Tune:

Autotunes were performed on instrument LCMS 7 with acceptable results. All masses were acceptable. All instrument tunes met the project QAPP criteria.

V.) Initial Calibration (ICAL) and Initial Calibration Verification (ICV):

All Initial Calibration and Initial Calibration Verification criteria were met with the exception of NFDHA which had a RSD over 20 percent in the ICAL. The NFDHA results in all samples were qualified as estimated (J/UJ) .

The ICVs met all project QAPP requirements. No data qualification was necessary.

VI.) Instrument Sensitivity Check (ISC):

Analyte concentrations were at LOQ. The ISC samples met all project QAPP requirements. No data qualification was necessary.

VII.) Continuing Calibration (CCV):

All Continuing Calibration Verification criteria met project QAPP criteria. with the following exceptions:

VIII.) Blanks:

Instrument Blanks:

The instrument blanks met all project QAPP criteria. No data qualification was necessary.

Method Blanks:

A method blank was prepared and analyzed for each preparation batch. The following results were detected in the method blank samples:

Method Blank ID	**Analyte**	**Blank Value (ng/l)**
9061764 2023/12/04	PFOSA	0.0041
	MeFOSA	0.00033
	EtFOSA	0.00024
	MeFOSE	0.0021
	EtFOSE	0.0011 J

The following sample results were qualified due to method blank results:

- PFOSA in sample LORNG_SB05033_00-01_10202023 was qualified as undetected (U).

Field Blanks:

Sample LORNG_EB105_10202023 was associated with this SDG.

Equipment Blanks (Rinse Blanks):

The rinse blank sample LORNG_EB105_10202023 was associated with this SDG. All associated results were non-detected.

IX.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analysis was performed on the following SDG sample:

Client Sample ID	Laboratory ID	QA/QC Batch
LORNG_SB05032_00-02_10202023	XKO184	9059219

The Percent Recoveries (%Rs) and Relative Percent Differences (RPDs) met project QAPP.

X.) Laboratory Control Samples / Laboratory Control Sample Duplicate (LCS / LCSD):

A spiked blank (LCS) was prepared and analyzed for the soil preparation batch. The following LCS recoveries did not meet project QAPP criteria:

- PFOSA, MeFOSA, EtFOSA, and MeFOSE in the LCS batch 9059219 were recovered above the upper control limit for the respective analytes. No action was taken because all associated results were either qualified as undetected or were reported as undetected.

XI.) Field Duplicates (FD):

The following FD samples were identified in the SDG. Relative Percent Differences (RPDs) for the detected analyte results were calculated to evaluate the field sampling and laboratory precision for the sample matrix.

Parent Sample ID (Lab ID)	Duplicate Sample ID (Lab ID)
LORNG_SB05031_01-02_10202023 (XKO186)	LORNG_SB05031_01-02_10202023FD (XKO187)

For the FD pair listed above, all RPDs were met.

XII.) Extracted Internal Standard Analytes (EIS):

All EIS in the samples in this SDG reported recoveries within criteria with the following exceptions:

- D3-MeFOSA and D5-EtFOSA recoveries were less than the lower control limit in samples LORNG_SB05032_00-02_10202023, LORNG_SB05031_01-02_10202023 . MeFOSA and EtFOSA in samples LORNG_SB05032_00-02_10202023, LORNG_SB05031_01-02_10202023 were qualified as estimated (J-/UJ)

XIII.) Ion Transitions:

Ion transition criteria were met. No qualification was necessary.

XIV.) Ion Ratio:

All ion ratio criteria were met. No data qualification was necessary.

XV.) Reporting limits (RLs):

All LOQs (Limit of Quantitation) were acceptable.

XVI.) Bile Salt Standard Retention Time Check:

The bile salt standard met the method retention time requirements.

XVII.) Reanalysis

Reanalysis was not required for any samples.

Attachment B

Completed DV Checklist with Notes

WSP USA Environment & Infrastructure
USEPA STAGED VALIDATION CHECKLIST – STAGE 2B
PFAS – DoD QSM 5.4 Table B-24

Project Task:
Method: 1633 **Lab and SDG: _____**
Date: _____ **Reviewer: _____**

☐ **USEPA Stage 2B**

NOTE: *Per QSM 5.4 Table B-24: In addition to the requirements specified in Table B-24, ALL OF THE REQUIREMENTS CONTAINED IN EPA DRAFT METHOD 1633 (CURRENT VERSION) MUST BE MET.*

X **1.** ☐ **Case Narrative and Data Package Completeness**

- COC review
- Requested compound list reported
- Detection Limits meet QAPP and PALs and correct analysis level was reported (low/standard level)
- Results between MDL and LOQ qualified estimated (J), NDs reported to LOD
- Confirm transition ions in Method 1633 4th Draft Table 9 (or "*Analyte Ions Monitored, Extracted Internal Standard, and Non-extracted Internal Standard Used for Quantification*" table in current draft Method 1633) were used for all analytes

X **2.** ☐ **Holding Time and Sample Preservation/Collection**

- Sample conditions upon receipt at laboratory
- Holding times met (See Section 8.5 Holding Times in Method 1633 for more information and exceptions re NFDHA):
- ----Aqueous samples 28 days to extraction if stored by lab at 0-6 degrees C and protected from light/90 days to extraction if stored at ≤20 degrees C and protected from light/90 days to analysis of extract if stored in the dark at ≤0 degrees C
- ----Soil/Solid samples 90 days to extraction if stored by lab at 0-6 degrees C or ≤20 degrees C and protected from light/90 days to analysis of extract if stored in the dark at ≤0 degrees C
- ----Tissue samples 90 days to extraction if stored at ≤20 degrees C and protected from light/90 days to analysis of extract if stored in the dark at ≤0 degrees C
- ----Biosolids samples 90 days to extraction if stored at 0-6 degrees C or ≤20 degrees C and protected from light/90 days to analysis of extract if stored in the dark at ≤0 degrees C
- Collection, preparation, and analysis date verification

X **3.** ☐ **QC Blanks**

- Completeness and evaluation
- Method blanks (preparation) ≤ ½ LOQ (or > 1/10th the amount measured in any sample or 1/10th the regulatory limit, whichever is greater)
- Instrument blanks ≤ ½ LOQ (or > 1/10th the amount measured in any sample or 1/10th the regulatory limit, whichever is greater)
- Field QC blanks –See discussion in Module 6 Section 3.3.1
- For all blank qualification actions follow Module 6 Table III (below) and discussions in Module 6 Section 3.3.1 and 4.7, and use ≤2x blank concentration for qualifying result U if sample result is > LOD and ≤ LOQ—

See Report for Method Blank Outliers.

Sample Result	Validated Result	Validation Qualifier
Non-detect or detect ≤LOD	Report at LOD	U
>LOQ but ≤5x blank	Report at sample result	J+
>LOQ and >5x blank	Report at sample result	None

X **4.** **Instrument Tuning and Instrument Sensitivity Check (ISC)**

- Mass Calibration performed annually or as recommended by the instrument manufacturer, whichever is more frequent, per Method 1633 Section 10.1
- Mass Calibration Verification ± 0.2 amu per Method 1633 (not specified in Table B-24)
- Valid Mass Calibration Verification before ICAL and sample analysis
- ISC concentrations at LOQ and recoveries ±30%
- Valid ISC prior to sample analysis

X **5.** **Initial Calibration**

- Sequence Log and Preparation Log Review
- Quantitative/Qualitative Standard Review - Confirm analytes with branched isomers in the initial calibration standards are identified in the lab report and that areas of branched isomers area included in the calibration response areas for those analytes (See Method 1633 Sections 10.1.1 and 15.1.3). See Report for Outliers
- Confirm lowest standard concentration is ≤ the LOQ.
- %RSD RFs ≤ 20; linear $r^2 \geq 0.99$ (DoD QSM 5.4 B-24). If %RSD >30 use judgment to J or R.
- Calibration standards recovered 70-130% of true value
- ICV ±30%
- Instrument Blank Review

X **6.** **Continuing Calibration**

- Verify the CCV was analyzed every 10 samples in sequence.
- %D ±30%
- Use judgment to J or R for %D > 50
- Instrument Blank Review

X **7.** **Laboratory Control Samples** (DoD QSM 5.4 Table B-24 40-150% or lab limits if approved for project use) See Report for Outliers

- Completeness and evaluation
- Percent Recoveries within criteria
- RPD ≤30 if LCSD reported
- Ion ratios within limit for all analytes

X **8.** **Matrix Duplicate (Lab Duplicate) and Field Duplicate Precision**

- Completeness and evaluation
- Lab Duplicate RPD ≤ 30
- Field Duplicate use QAPP Limits or determine project limits

X **9.** **Matrix Spike Results** (DoD QSM 5.4 Table B-24 40-150% or lab limits if approved for project use)

- Completeness and evaluation
- Recovery within criteria and RPD ≤ 30

X **10.** **Ion Abundance Ratio (IAR)**

- As defined in Method 1633 4th Draft Section 14.3.5: AreaQ1/AreaQ2 where Q1 and Q2 are primary and secondary transition masses for detected compounds. Acceptance criteria are based on comparison with ion ratios established by the ICAL midpoint standard or daily CCV. If secondary transition masses are identified in Method 1633 4th Draft Table 9 (or "*Analyte Ions Monitored, Extracted Internal Standard, and Non-extracted Internal Standard*

Used for Quantification" table in current draft Method 1633), IAR must be within ±50% of IAR established for the ICAL midpoint standard or daily CCV per Section 15.1.3. Check ion ratios reported for LCS and samples.

X **11. □ Extracted Internal Standard (EIS)** See Report for Outliers

- Lab Recovery Limits B-24 (%R 20-150 vs ICAL midpoint or CCV)
- J for %R <20 and >200 (Module 6)
- R ND results if <10 and use judgment for detections
- RTs for samples and batch QC 0.40 minutes of CCV or initial calibration (if no CCV run)
- Analytes RT within +/- 0.1 minutes of their associated EIS

X **12. □ Non-Extracted Internal Standard (NIS) Recovery (%R >30 vs ICAL midpoint or CCV)**

- DoD Module 6 criteria: J/UJ results if <30 or use professional judgment for R (Note: Method 1633 Section 14.9 specifies NIS recoveries within 50-200% vs CCV)
- RTs for samples 0.40 minutes of CCV or initial calibration (if no CCV run)

X **13. □ Bile Salt Standard Retention Time (RT) Check**

Did the laboratory analyze a bile salt standard? (required by Method 1633/QSM 5.4 B-24 for all sample matrices) YES NO (circle one) YES

Is the RT of the bile salt standard >1 minute from the RT window for PFOS (including linear and branched isomers)? YES NO (circle one) YES

NOTE: Three bile acids (TDCA, TCDCA, and TUDCA) have the same (<1 amu) primary transition masses as PFOS: m/z 498.9 ->79.9 for PFOS, and m/z 499.2 ->79.9 for the bile acids. As a result, the presence of these bile acids in samples can cause high bias to PFOS concentrations if co-eluting with PFOS. The bile salt standard must demonstrate chromatographic separation so there is no co-elution with any PFOS isomer.

DATA VALIDATION SUMMARY REPORT - PFAS

COMPANY:	WSP USA Environment and Infrastructure
PROJECT NAME:	Loring AFB
SITE NAME:	Loring AFB RI-TO 1048
CONTRACTED LAB:	Bureau Veritas Laboratories, Mississauga, Ontario, Canada
PROJECT NUMBER:	775361701
QA/QC LEVEL:	EPA Stage 2B Validation Manual
ANALYTICAL METHOD:	EPA Draft Method 1633
VALIDATION GUIDELINES:	Quality Assurance Project Plan (QAPP) TO 1048 Quality Program Plan September 2023, USEPA Staged Validation Checklist – Stage 2B, Data Validation Guidelines Module 6, November 2022, Professional judgment
SAMPLE MATRIX:	Soil
TYPES OF ANALYSES:	Per fluorinated Alkyl Substances (PFAS) by Liquid Chromatography/Tandem Mass Spectroscopy (LC-MS/MS)
DATA VALIDATION DATE:	February 28, 2024
DATA REVIEWER(S):	Robert Thielke
SECONDARY REVIEWER(S):	Timothy Morris, Kevin Harmon
SDG NUMBER:	C3X5518
SAMPLING DATE(S):	October 18-22, 2023
SAMPLES:	See Table 1

Analyte	Acronym	Extracted Internal Standard
Perfluorobutanoic acid	PFBA	13C4-PFBA
Perfluoropentanoic acid	PFPeA	13C5-PFPeA
Perfluorohexanoic acid	PFHxA	13C2-PFHxA
Perfluoroheptanoic acid	PFHpA	13C4-PFHpA
Perfluorooctanoic acid	PFOA	13C4-PFOA
Perfluorononanoic acid	PFNA	13C5-PFNA
Perfluorodecanoic acid	PFDA	13C2-PFDA
Perfluoroundecanoic acid	PFUnA	13C2-PFUnA
Perfluorododecanoic acid	PFDoA	13C2-PFDoA
Perfluorotridecanoic acid	PFTrDA	13C2-PFTeDA
Perfluorotetradecanoic acid	PFTeA	13C2-PFTeDA
Perfluorobutanesulfonic acid	PFBS	13C3-PFBS
Perfluoropentanesulfonic acid	PFPeS	13C5-PFPeA
Perfluorohexanesulfonic acid	PFHxS	18O2-PFHxS
Perfluoroheptanesulfonic acid	PFHpS	13C4-PFHpA
Perfluorooctanesulfonic acid	PFOS	13C4-PFOS
Ethylperfluorooctanesulfonamidoacetic acid	EtFOSAA	D5-EtFOSAA
Methylperfluorooctanesulfonamidoacetic acid	MeFOSAA	D3-MeFOSAA
4:2 Fluorotelomersulfonic acid	4:2 FTS	13C2-4:2FTS
6:2 Fluorotelomersulfonic acid	6:2 FTS	13C2-6:2FTS
8:2 Fluorotelomersulfonic acid	8:2 FTS	13C2-8:2FTS
Hexafluoropropylene oxide dimer acid	HFPO-DA	13C3-HFPO-DA
4,8-dioxa-3H-perfluorononanoic acid	ADONA	13C4-PFHpA
11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid	11Cl-PF3OUdS	13C2-PFDoA
9-chlorohexadecafluoro-3-oxanone-1-sulfonic acid	9Cl-PF3ONS	13C8-PFOS
Perfluoro-3-methoxypropanoic acid	PFMPA	13C2PFHxA
Perfluoro-4-methoxybutanoic acid	PFMBA	13C3-PFPeA
Nonafluoro-3,6-dioxaheptanoic acid	NFDHA	13C3-PFBS
Perfluoro(2-ethoxyethane)sulfonic acid	PFEESA	13C3-PFHxA

QAPP Validation Qualifiers

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DATA VALIDATION SUMMARY

Bureau Veritas Laboratories – SDG: C3X5518

PFAS (Per- and polyfluoroalkyl substances)

SUMMARY

I.) General:

The samples were extracted and analyzed by LC/MS/MS for a selected list of PFAS using EPA Draft Method 1633. The results for PFHxS, PFOA, PFOS, PFNA, PFOSA, MeFOSA, EtFOSA, MeFOSAA, EtFOSAA, MeFOSE and EtFOSE include both linear and branched isomers. Results for all other analytes include the linear isomers only.

II.) Overall Assessment of Data:

The overall assessment of data was acceptable. Data qualifiers are summarized in Attachment A, Table 3 "Summary of Data Validation Actions".

MAJOR ISSUES

There were no major problems for this fraction of the SDG.

MINOR ISSUES

I.) Laboratory Data Package:

The required documentation was present and complete. The laboratory presented a complete and accurate case narrative in the data package. The data package contains results for all samples and method types listed on the COC.

II.) Sample Receipt, Preservation, and Holding Times:

The samples were received intact with proper COC documentation and signatures. The Chain of Custody records did not indicate if samples were received within the project QAPP temperature requirements of ≤ 10°C. All holding time criteria were met. No data were qualified.

III.) Mass Calibration:

INSTRUMENT: LCMS 7

Mass calibration was completed on October 13, 2023, to original equipment manufacturer's specifications for analytical batches 7985688.

IV.) LC-MS Tune:

Autotunes were performed on instrument LCMS 7 with acceptable results. All masses were acceptable. All instrument tunes met the project QAPP criteria.

V.) Initial Calibration (ICAL) and Initial Calibration Verification (ICV):

All Initial Calibration and Initial Calibration Verification criteria were met. The ICALs and ICVs met all project QAPP requirements. No data qualification was necessary.

VI.) Instrument Sensitivity Check (ISC):

Analyte concentrations were at LOQ. The ISC samples met all project QAPP requirements. No data qualification was necessary.

VII.) Continuing Calibration (CCV):

All Continuing Calibration Verification criteria met project QAPP criteria with the following exceptions:

- MeFOSAA in the 12/3/2023 CCV was outside the 30%D criteria. MeFOSAA results in samples LORNG_SB05038_00-02_10202023, LORNG_SB01039_00-02_10182023, LORNG_SB01041_00-02_10182023, LORNG_SB01042_00-01_10182023, LORNG_SB01034_08-10_10182023, LORNG_SB01034_08-10_10182023FD, LORNG_SB01035_00-01_10182023, and LORNG_SB01035_06-08_10182023 were qualified as estimated (J/UJ)
- 8:2-FTS in the 12/4/2023 CCV was outside the 30%D criteria. 8:2-FTS in samples LORNG_SB01030_00-01_10182023, LORNG_SB01030_07-09_10182023, LORNG_SB01031_00-01_10182023, LORNG_SB01031_08-10_10182023, LORNG_SB01032_00-01_10182023, LORNG_SB01032_05-07_10182023, LORNG_SB01033_00-01_10182023, LORNG_SB01034_00-01_10182023, LORNG_SB01035_12-14_10182023, LORNG_SB01036_00-01_10192023, LORNG_SB01036_07-09_10192023, LORNG_SB01036_07-09_10192023FD, LORNG_SB01036_13-15_10192023, LORNG_SB01037_00-01_10192023, LORNG_SB01037_08-10_10192023, and LORNG_SB01040_05-07_10192023 were qualified as estimated (J/UJ).

VIII.) Blanks:

Instrument Blanks:

The instrument blanks met all project QAPP criteria. No data qualification was necessary.

Method Blanks:

A method blank was prepared and analyzed for each preparation batch. The following results were detected in the method blank samples:

Method Blank ID	**Analyte**	**Blank Value (mg/kg)**
9055344 2023/12/09	PFOSA	0.13 J (ng/l)
9061764 2023/12/04	PFOSA	0.0057

Method Blank ID	Analyte	Blank Value (mg/kg)
	MeFOSA	0.00037
	EtFOSA	0.00025
	MeFOSE	0.0032
	EtFOSE	0.0016 J
9067161 2023/12/03	PFOSA	0.0031
	MeFOSA	0.00031
	EtFOSA	0.00022
	MeFOSE	0.0031
	EtFOSE	0.0033
9072441 2023/12/04	PFOSA	0.0029
	MeFOSA	0.00083
	EtFOSA	0.00017 J
	MeFOSE	0.013
	EtFOSE	0.00087 J
9075979 2023/12/04	PFOSA	0.0021
	MeFOSA	0.0049
	EtFOSA	0.00017 J
	MeFOSE	0.15
	EtFOSE	0.00076 J

The following sample results were qualified due to method blank results:

- PFOSA in samples LORNG_EB106_10182023, LORNG_EB107_10182023, LORNG_SB01034_00-01_10182023, LORNG_SB01038_00-02_10182023, LORNG_SB01041_00-02_10182023, LORNG_SB01035_00-01_10182023, LORNG_SB01036_00-01_10192023, and LORNG_SB01037_08-10_10192023 were qualified as undetected (U).
- PFOSA in samples LORNG_SB01032_00-01_10182023, LORNG_SB01037_00-01_10192023, and LORNG_SB01040_00-01_10192023 were qualified as estimated (J+).
- EtFOSE in samples LORNG_SB01038_00-02_10182023, LORNG_SB01042_00-01_10182023, LORNG_SB01034_08-10_10182023, LORNG_SB01034_08-10_10182023FD, LORNG_SB01035_00-01_10182023, and LORNG_SB01035_06-08_10182023 were qualified as estimated (J+).
- EtFOSE in sample LORNG_SB01039_00-02_10182023 was qualified as undetected (U).

Field Blanks:

Samples LORNG_EB103_10182023, LORNG_EB104_10192023, LORNG_EB105_10202023, LORNG_EB106_10212023, and LORNG_EB107_10222023 were associated with this SDG.

Equipment Blanks (Rinse Blanks):

The rinse blank samples LORNG_EB103_10182023, LORNG_EB104_10192023, LORNG_EB105_10202023, LORNG_EB106_10212023, and LORNG_EB107_10222023 were associated with this SDG. The following results were detected in the rinse blank samples:

Client Sample ID	Analyte	Blank Value (ng/l)
LORNG_EB103_10182023	PFOSA	0.23 J
LORNG_EB106_10182023	PFOSA	0.13 J
	PFTEDA	0.23 J
	MeFOSE	2.3 J
	EtFOSE	3.0 J
LORNG_EB107_10182023	PFOSA	0.24 J

The following sample results were qualified due to rinse blank results:

- PFOSA in samples LORNG_SB01030_00-01_10182023, LORNG_SB01038_00-02_10182023, LORNG_SB01041_00-02_10182023, LORNG_SB01035_00-01_10182023 were qualified as undetected (U).
- PFOSA in samples LORNG_SB01032_00-01_10182023, LORNG_SB01034_00-01_10182023, LORNG_SB22012_00-01_10212023, LORNG_SB22012_01-02_10212023 were qualified as estimated (J+).
- EtFOSE in sample LORNG_SB07029_00-01_10212023 was qualified as undetected (J+).

IX.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analysis was performed on the following SDG samples:

Client Sample ID	Laboratory ID	QA/QC Batch
LORNG_SB01034_00-01_10182023	XKO349	9061764
LORNG_SB01041_00-02_10182023	XKO352	9067161
LORNG_SB01031_08-10_10182023	XKO345	9098397
LORNG_SB01035_12-14_10182023	XKO421	9072441
LORNG_SB12020_00-01_10192023	XKO435	9075979
LORNG_SB12023_00-02_10192023	XKO520	9078741
LORNG_SB18034_06-08-10212023FD	XKO598	9081462
LORNG_SB18037_00-01-10212023	XKO600	9091842
LORNG_SB18050_00-01_10192023	XKO522	9084358
LORNG_SB20016_00-01_10202023	XKO547	9094781

The Percent Recoveries (%Rs) and Relative Percent Differences (RPDs) met project QAPP criteria with the following exceptions:

- The MeFOSA RPD was outside acceptance criteria of 30% RPD in the LORNG_SB01041_00-02_10182023 MS/MSD analysis. J/UJ the MeFOSA result for sample LORNG_SB01041_00-02_10182023.
- The PFTRDA recovery was above the upper control limit in the LORNG_SB20016_00-01_10202023 MS/MSD analysis. J+/None the LORNG_SB20016_00-01_10202023 result for PFTRDA.
- The Perfluorododecanesulfonic acid recovery was below the lower control limit in the LORNG_SB20016_00-01_10202023 MS/MSD analysis. J-/UJ the LORNG_SB20016_00-01_10202023 result for Perfluorododecanesulfonic acid.

.

X.) Laboratory Control Samples / Laboratory Control Sample Duplicate (LCS / LCSD):

A spiked blank (LCS) was prepared and analyzed for the water and soil preparation batches. The following LCS recoveries did not meet project QAPP criteria:

- PFOSA, MeFOSA, EtFOSA, and MeFOSE in the LCS batch 9061764 and 9072441 were recovered above the upper control limit for the respective analytes. PFOSA, MeFOSA, EtFOSA, and MeFOSE results in samples LORNG_SB01030_00-01_10182023, LORNG_SB01030_07-09_10182023, LORNG_SB01031_00-01_10182023, LORNG_SB01031_08-10_10182023, LORNG_SB01032_00-01_10182023, LORNG_SB01032_05-07_10182023, LORNG_SB01033_00-01_10182023, LORNG_SB01034_00-01_10182023, LORNG_SB01035_12-14_10182023, LORNG_SB01036_00-01_10192023, LORNG_SB01036_07-09_10192023, LORNG_SB01036_07-09_10192023FD, LORNG_SB01036_13-15_10192023, LORNG_SB01037_00-01_10192023, LORNG_SB01037_08-10_10192023, and LORNG_SB01040_05-07_10192023 were qualified as estimated (J+/None).
- PFOSA, MeFOSA, EtFOSE, and MeFOSE in the LCS batch 9067161 were recovered above the upper control limit for the respective analytes. PFOSA, MeFOSA, EtFOSE, and MeFOSE in samples LORNG_SB01038_00-02_10202023, LORNG_SB01039_00-02_10182023, LORNG_SB01041_00-02_10182023, LORNG_SB01042_00-01_10182023, LORNG_SB01034_08-10_10182023, LORNG_SB01034_08-10_10182023FD, LORNG_SB01035_00-01_10182023, and LORNG_SB01035_06-08_10182023 were qualified as estimated (J+/None)
- PFOSA, MeFOSA, and MeFOSE in LCS batch 9075979 and were recovered above the upper control limit for the respective analytes. PFOSA, MeFOSA, and MeFOSE in samples LORNG_SB01040_05-07_10192023, LORNG_SB01040_11-13_10192023, LORNG_SB12020_00-01_10192023 , LORNG_SB12021_00-01_10192023, LORNG_SB12021_04-06_10192023, LORNG_SB05034_00-01_10202023, LORNG_SB12020_04-06_10192023, LORNG_SB12020_04-06_10192023FD, LORNG_SB12022_00-02_10192023, LORNG_SB12023_00-02_10192023, and LORNG_SB12024_00-02_10192023 were qualified as estimated (J+/None)

XI.) Field Duplicates (FD):

The following FD samples were identified in the SDG. Relative Percent Differences (RPDs) for the detected analyte results were calculated to evaluate the field sampling and laboratory precision for the sample matrix.

Parent Sample ID (Lab ID)	**Duplicate Sample ID (Lab ID)**
LORNG_SB01034_08-10_10182023 (XKO417)	LORNG_SB01034_08-10_10182023FD (XKO418)
LORNG_SB01036_07-09_10192023 (XKO423)	LORNG_SB01036_07-09_10192023FD (XKO428)
LORNG_SB07027_06-08_10202023 (XKO541)	LORNG_SB07027_06-08_10202023FD (XKO542)
LORNG_SB12020_04-06_10192023 (XKO517)	LORNG_SB12020_04-06_10192023FD (XKO518)
LORNG_SB18034_06-08-10212023 (XKO597)	LORNG_SB18034_06-08-10212023FD (XKO598)
LORNG_SB18038_00-01-10212023 (XKO601)	LORNG_SB18038_00-01-10212023FD (XKO602)

For FD pairs listed above, the following table lists RPDs and qualification actions.

SAMPLE/DUPLICATE	ANALYTE	RPD	QC LIMIT	QUALIFICATION
LORNG_SB12020_04-06_10192023 / LORNG_SB12020_04-06_10192023FD	PFHxS PFOS	36% 53%	For Soils </= 30%	J
LORNG_SB07027_06-08_10202023/ LORNG_SB07027_06-08_10202023FD	PFHpA PFOA PFNA PFHxS PFHpS PFOSA	38% 41% 60% 49% 55% 132%	For Soils </= 30%	J
LORNG_SB01034_08-10_10182023/ LORNG_SB01034_08-10_10182023FD	PFHxS PFOS	36% 37%	For Soils </= 30%	J

XII.) Extracted Internal Standard Analytes (EIS):

All EIS in the samples in this SDG reported recoveries within criteria. No data were qualified.

XIII.) Ion Transitions:

Ion transition criteria were met. No qualification was necessary.

XIV.) Ion Ratio:

All ion ratio criteria were met. No data qualification was necessary.

XV.) Reporting limits (RLs):

All LOQs (Limit of Quantitation) were acceptable. Due to high concentrations, dilutions were required for selected analytes in the following samples:

- LORNG_SB01037_00-01_10192 for PFOS
- LORNG_SB01040_00-01_10192 for PFOS
- LORNG_SB05038_00-02_10202 for PFOS
- LORNG_SB07027_00-01_10202 for PFOS
- LORNG_SB07027_06-08_10202 for PFOS and PFHxS
- LORNG_SB07027_06-08_10202 for PFOS and PFHxS
- LORNG_SB20015_00-01_10202 for PFOS

XVI.) Bile Salt Standard Retention Time Check:

The bile salt standard met the method retention time requirements.

XVII.) Reanalysis

All samples on QC batch 9061764 (2023/12/04) were re-extracted and re-analyzed on QC batch 9098397 (2023/12/14) due to blank contamination of EtFOSA, MeFOSA, MeFOSE, and PFOSA.

The following samples on QC batch 9061764 (2023/12/04) were re-extracted and re-analyzed in QC batch 9098397 (2023/12/14) due to unacceptable EIS recoveries:

- LORNG_SB01030_00-01_10182
- LORNG_SB01031_00-01_10182
- LORNG_SB01033_00-01_10182
- LORNG_SB01034_00-01_10182.

Completed DV Checklist with Notes

WSP USA Environment & Infrastructure
USEPA STAGED VALIDATION CHECKLIST – STAGE 2B
PFAS – DoD QSM 5.4 Table B-24

Project Task:
Method: 1633 **Lab and SDG: C3X5518**
Date: 2/29.24 **Reviewer: R. Thielke**

☐ **USEPA Stage 2B**

NOTE: *Per QSM 5.4 Table B-24: In addition to the requirements specified in Table B-24, ALL OF THE REQUIREMENTS CONTAINED IN EPA DRAFT METHOD 1633 (CURRENT VERSION) MUST BE MET.*

X **1. Case Narrative and Data Package Completeness**
- COC review
- Requested compound list reported
- Detection Limits meet QAPP and PALs and correct analysis level was reported (low/standard level)
- Results between MDL and LOQ qualified estimated (J), NDs reported to LOD
- Confirm transition ions in Method 1633 4th Draft Table 9 (or "*Analyte Ions Monitored, Extracted Internal Standard, and Non-extracted Internal Standard Used for Quantification*" table in current draft Method 1633) were used for all analytes

X **2. Holding Time and Sample Preservation/Collection**
- Sample conditions upon receipt at laboratory
- Holding times met (See Section 8.5 Holding Times in Method 1633 for more information and exceptions re NFDHA):
- ----Aqueous samples 28 days to extraction if stored by lab at 0-6 degrees C and protected from light/90 days to extraction if stored at ≤20 degrees C and protected from light/90 days to analysis of extract if stored in the dark at ≤0 degrees C
- ----Soil/Solid samples 90 days to extraction if stored by lab at 0-6 degrees C or ≤20 degrees C and protected from light/90 days to analysis of extract if stored in the dark at ≤0 degrees C
- ----Tissue samples 90 days to extraction if stored at ≤20 degrees C and protected from light/90 days to analysis of extract if stored in the dark at ≤0 degrees C
- ----Biosolids samples 90 days to extraction if stored at 0-6 degrees C or ≤20 degrees C and protected from light/90 days to analysis of extract if stored in the dark at ≤0 degrees C
- Collection, preparation, and analysis date verification

X **3. ☐ QC Blanks**
- Completeness and evaluation
- Method blanks (preparation) ≤ ½ LOQ (or > 1/10th the amount measured in any sample or 1/10th the regulatory limit, whichever is greater)
- Instrument blanks ≤ ½ LOQ (or > 1/10th the amount measured in any sample or 1/10th the regulatory limit, whichever is greater)
- Field QC blanks –See discussion in Module 6 Section 3.3.1
- For all blank qualification actions follow Module 6 Table III (below) and discussions in Module 6 Section 3.3.1 and 4.7, and use ≤2x blank concentration for qualifying result U if sample result is > LOD and ≤ LOQ—

Sample Result	Validated Result	Validation Qualifier
Non-detect or detect ≤LOD	Report at LOD	U
>LOQ but ≤5x blank	Report at sample result	J+
>LOQ and >5x blank	Report at sample result	None

Method blanks and equipment rinse blanks had detected results. See Report.

X **4.** **Instrument Tuning and Instrument Sensitivity Check (ISC)**

- Mass Calibration performed annually or as recommended by the instrument manufacturer, whichever is more frequent, per Method 1633 Section 10.1
- Mass Calibration Verification ± 0.2 amu per Method 1633 (not specified in Table B-24)
- Valid Mass Calibration Verification before ICAL and sample analysis
- ISC concentrations at LOQ and recoveries ±30%
- Valid ISC prior to sample analysis

X **5.** **Initial Calibration**

- Sequence Log and Preparation Log Review
- Quantitative/Qualitative Standard Review - Confirm analytes with branched isomers in the initial calibration standards are identified in the lab report and that areas of branched isomers area included in the calibration response areas for those analytes (See Method 1633 Sections 10.1.1 and 15.1.3).
- Confirm lowest standard concentration is ≤ the LOQ.
- %RSD RFs ≤ 20; linear $r^2 \geq 0.99$ (DoD QSM 5.4 B-24). If %RSD >30 use judgment to J or R.
- Calibration standards recovered 70-130% of true value
- ICV ±30%
- Instrument Blank Review

X **6.** **Continuing Calibration**

- Verify the CCV was analyzed every 10 samples in sequence.
- %D ±30%
- Use judgment to J or R for %D > 50
- Instrument Blank Review

CCV Results outside criteria. See Report

X **7.** **Laboratory Control Samples** (DoD QSM 5.4 Table B-24 40-150% or lab limits if approved for project use)

- Completeness and evaluation
- Percent Recoveries within criteria
- RPD ≤30 if LCSD reported
- Ion ratios within limit for all analytes

LCS outside criteria. See Report

X **8.** **Matrix Duplicate (Lab Duplicate) and Field Duplicate Precision**

- Completeness and evaluation
- Lab Duplicate RPD ≤ 30
- Field Duplicate use QAPP Limits or determine project limits

X **9.** **Matrix Spike Results** (DoD QSM 5.4 Table B-24 40-150% or lab limits if approved for project use)

- Completeness and evaluation
- Recovery within criteria and RPD ≤ 30

MS recoveries outside criteria. See Report

X **10.** **Ion Abundance Ratio (IAR)**

- As defined in Method 1633 4th Draft Section 14.3.5: AreaQ1/AreaQ2 where Q1 and Q2 are primary and secondary transition masses for detected compounds. Acceptance criteria are based on comparison with ion ratios established by the ICAL midpoint standard or daily CCV. If secondary transition masses are identified in Method 1633 4th Draft Table 9 (or "*Analyte Ions Monitored, Extracted Internal Standard, and Non-extracted Internal Standard*

Used for Quantification" table in current draft Method 1633), IAR must be within ±50% of IAR established for the ICAL midpoint standard or daily CCV per Section 15.1.3. Check ion ratios reported for LCS and samples.

X **11. □ Extracted Internal Standard (EIS)**

- Lab Recovery Limits B-24 (%R 20-150 vs ICAL midpoint or CCV)
- J for %R <20 and >200 (Module 6)
- R ND results if <10 and use judgment for detections
- RTs for samples and batch QC 0.40 minutes of CCV or initial calibration (if no CCV run)
- Analytes RT within +/- 0.1 minutes of their associated EIS

X **12. X Non-Extracted Internal Standard (NIS) Recovery (%R >30 vs ICAL midpoint or CCV)**

- DoD Module 6 criteria: J/UJ results if <30 or use professional judgment for R (Note: Method 1633 Section 14.9 specifies NIS recoveries within 50-200% vs CCV)
- RTs for samples 0.40 minutes of CCV or initial calibration (if no CCV run)

See report for CCV values that exceeded 30%

X **13. □ Bile Salt Standard Retention Time (RT) Check**

Did the laboratory analyze a bile salt standard? (required by Method 1633/QSM 5.4 B-24 for all sample matrices) YES NO (circle one)

Is the RT of the bile salt standard >1 minute from the RT window for PFOS (including linear and branched isomers)? YES NO (circle one)

NOTE: Three bile acids (TDCA, TCDCA, and TUDCA) have the same (<1 amu) primary transition masses as PFOS: m/z 498.9 ->79.9 for PFOS, and m/z 499.2 ->79.9 for the bile acids. As a result, the presence of these bile acids in samples can cause high bias to PFOS concentrations if co-eluting with PFOS. The bile salt standard must demonstrate chromatographic separation so there is no co-elution with any PFOS isomer.

Data Validation and Usability Report
Loring PFAS Remedial Investigation
Fall 2023 Stormwater Sampling
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Stormwater samples were collected at the Former Loring Air Force Base in Limestone, Maine, from September to October 2023 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. Samples were submitted to Bureau Veritas (BV) located in Mississauga, Ontario, Canada for analysis.

BV analyzed 48 samples for PFAS by Method 1633, liquid chromatography tandem mass spectrometry compliant with Table B-24 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.4 (USDoD, 2021a).

Sample event information included in this data validation report is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Summary of Data Validation Actions
- Table 4 – Field Duplicate RPD Summary
- Table 5 – Acronyms and Abbreviations
- Table 6 – Interlaboratory Assessment Comparison Summary

Data quality reviews were completed as described in the Quality Program Plan (QPP) Remedial Investigation PFAS Response (WSP, 2023). Data validation levels are established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019b). PFAS data were validated using Stage 2B procedures. Ten percent of the PFAS data collected during the remedial investigation were validated using Stage 4 procedures. Validation checklists, documentation of sample recalculations, and qualification justification documentation are stored in the Wood project file.

Stage 2A data validation includes review of sample results forms, chain of custody (COC) and supporting records, laboratory receipt checklists, analytical holding time compliance, sample related quality control (QC) data forms (method blanks, laboratory control samples (LCS), matrix spike/matrix spike duplicates (MS/MSD), field and laboratory duplicates, surrogates, internal standards, post digestion spikes, and serial dilutions), and QC sample frequency checks.

Stage 2B data validation includes all reviews performed in a Stage 2A data validation as well as review of initial calibration summaries, continuing calibration verification summaries,

instrument performance/tuning summaries, dual column confirmation results, and sample preparation logs.

Stage 4 data validation includes all reviews performed in Stages 2A and 2B as well as review of raw data and chromatograms, target analyte identification confirmation, and recalculation of QC and sample results.

Data review and qualification actions were completed based on DoD Data Validation Guidelines Module 6 for PFAS (USDoD, 2022), general procedures described in USEPA Data Review and Validation Guidelines for PFAS (USEPA, 2023), and method specifications in the DoD QSM 5.4 and/or the referenced analytical methods when DoD specifications were not available. QC limits presented in the DoD QSM 5.4 and/or the QPP were used during the data evaluation. Data qualifications were completed, if necessary, in accordance with the USEPA guidelines and the professional judgment of the validator using the following qualifiers:

J = Analyte present; concentration is estimated
J+ = Analyte present; concentration is estimated with potential high bias
J- = Analyte present; concentration is estimated with potential low bias
U = Analyte not detected at the associated detection limits
UJ = Analyte was not detected at the associated detection limits; however, the associated detection limit should be considered an estimate.
R = Sample result is considered unusable for project objectives

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

Validation reason codes were applied to results associated with QC measurements outside project QC goals where validation qualifiers were added to results. Final results are presented in Table 2. The validation qualification actions and associated validation reason codes applied to sample results are summarized in Table 3. The following data validation reason codes were applied to one or more sample results:

HHL = Sampling to extraction holding time exceeded
IAG = Ion abundance ratio outside calculated limits
RIS = Extracted internal standard recovery outside control limits

A duplicate of stormwater sample LORNG_C2_ST_10042023 was sampled and sent to SGS Laboratories (SGS) in Orlando, Florida as an interlaboratory comparison assessment sample. Results reported for LORNG_C2_ST_10042023 from SGS are included in this report in order to analyze the results of the interlaboratory comparison only and are not considered to be included in the final data set and are therefore not presented on Table 2. The interlaboratory comparison assessment summary is included in Table 6.

1.1 DATA USABILITY EVALUATION

The overall data quality and data usability for this data set is interpreted to meet the project objectives identified in the QAPP. Interpretations of data validation qualifications and data usability are provided below:

Multiple parameters in several samples in SDGs C3U7087 and C3V6721 were extracted past the extraction holding time. Results for associated target compounds are considered estimated and data usability was not impacted.

One or more extracted internal standard (EIS) recoveries in a subset of samples recovered outside of the acceptance criteria of 20-200. Results for associated target compounds are considered estimated and data usability was not impacted.

One or more EIS recoveries in a subset of samples recovered outside of the rejection limit of 10. Reporting limits for associated target compounds are considered rejected and results are considered unusable for project objectives.

One or more transition ion ratios in multiple samples did not meet the acceptance criteria. Results for associated target compounds are considered estimated and data usability was not impacted.

2.0 DATA VALIDATION QUALIFICATION ACTION SUMMARY

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the DoD QSM 5.3, the QPP, and/or analytical methods. Unless specified below, results are interpreted to be usable as reported by the laboratory.

2.1 PFAS

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
  Holding Times
* QC Blanks
* Instrument Performance/Tuning
* LCS
* MS/MSD
* Field Duplicates
  Extracted Internal Standard Recovery
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration

Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
* Interlaboratory Assessment Comparison
* Miscellaneous

* QC criteria were met for this parameter.

2.1.1 Holding Times

Multiple parameters in the following samples were extracted past the 28-day holding time for aqueous sample extraction. Associated results in the samples were qualified as estimated (UJ/J):

LORNG_ST16005_09282023	LORNG_ST08002_10102023
LORNG_ST13016_09282023	LORNG_ST11002_10102023
LORNG_ST05002_10102023	LORNG_ST11004_10102023
LORNG_ST05002_10102023FD	LORNG_ST18010_10052023
LORNG_ST07004_10102023	

2.1.2 Extracted Internal Standard Recovery

One or more EIS in the following samples recovered outside of the acceptance criteria of 20-200:

LORNG_C2_ST_10042023	LORNG_ST13014_10042023
LORNG_C3_ST_10052023	

One or more EIS in the following samples recovered below the rejection limit of 10:

LORNG_C1_ST_10042023	LORNG_ST13006_10042023
LORNG_C2_ST_10042023FD	LORNG_ST13017_10042023

2.1.3 Compound Identification and Quantitation

One or more transition ion ratios was outside of the acceptance criteria for one or more compounds for the following samples and the results were qualified as estimated (J):

LORNG_ST16002_09282023	LORNG_ST05002_10102023FD
LORNG_ST16005_09282023	LORNG_ST07006_10052023

Data Validation Report
Loring PFAS Remedial Investigation
Additional Sample - Fall 2024 Groundwater Sampling Program
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

One groundwater sample was collected at the Former Loring Air Force Base in Limestone, Maine, in December 2024 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. The location was sampled after the main sampling event due to delayed access. The sample was submitted to SGS North America (SGS) located in Orlando, Florida, for analysis.

SGS analyzed one sample and one equipment blank for PFAS by Method 1633, liquid chromatography tandem mass spectrometry compliant with Table B-24 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.4 (USDoD, 2021).

Sample event information included in this data validation report is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Summary of Data Validation Actions
- Table 4 – Acronyms and Abbreviations

Data quality reviews were completed as described in the Draft Quality Program Plan (QPP) Remedial Investigation PFAS Response (WSP, 2024) and the final Method 1633 (USEPA, 2024). Data validation levels are established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019). PFAS data were validated using Stage 2B procedures. Validation checklists, documentation of sample recalculations, and qualification justification documentation are stored in the WSP project file.

Stage 2B data validation includes review of sample results forms, chain of custody (COC) and supporting records, laboratory receipt checklists, analytical holding time compliance, sample related quality control (QC) data forms (method blanks, laboratory control samples [LCS], matrix spike/matrix spike duplicates [MS/MSD], field and laboratory duplicates, extracted internal standards [EIS] and non-extracted internal standards [NIS], QC sample frequency checks, initial calibration summaries, continuing calibration verification summaries, instrument mass calibration /tuning summaries, and sample preparation logs.

Data review and qualification actions were completed based on DoD Data Validation Guidelines Module 6 for PFAS (USDoD, 2022), general procedures described in National USEPA Data Review and Validation Guidelines (USEPA, 2020), and method specifications in the DoD QSM 5.4 and/or

the final Method 1633. QC limits presented in the DoD QSM 5.4, Method 1633, and/or the QPP were used during the data evaluation. Data qualifications were completed, if necessary, in accordance with the USEPA guidelines and the professional judgment of the validator using the following qualifiers:

J = Analyte present; concentration is estimated
J+ = Analyte present; concentration is estimated with potential high bias
J- = Analyte present; concentration is estimated with potential low bias
U = Analyte not detected at the associated detection limits
UJ = Analyte was not detected at the associated detection limits; however, the associated detection limit should be considered an estimate.
R = Sample result is considered unusable for project objectives

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

Validation reason codes were applied to results associated with QC measurements outside project QC goals where validation qualifiers were added to results. Final results are presented in Table 2. The validation qualification actions and associated validation reason codes applied to sample results are summarized in Table 3. The following data validation reason codes were applied to one or more sample results:

LCL = Laboratory control sample recovery less than lower control limit

2.0 DATA VALIDATION QUALIFICATION ACTION SUMMARY

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the DoD QSM 5.4, the QPP, and/or analytical method. Unless specified below, results are interpreted to be usable as reported by the laboratory.

2.1 PFAS

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance/Tuning
  LCS
* MS/MSD (not applicable)
* Field Duplicates (not applicable)

* Extracted Internal Standard Recovery
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Miscellaneous

* QC criteria were met for this parameter.

2.1.1 LCS

The reporting limit for N-ethyl perfluorooctanesulfonamidoacetic acid (NEtFOSAA) in sample LORNG_GB_BW002_12272024 was qualified estimated (UJ) with reason code LCL based on low recovery in the associated LCS. Percent recovery of NEtFOSAA in the LCS was 66 with control limits 70-145.

Data Validation Report
Loring PFAS Remedial Investigation
December 2024 Residential Sampling Program
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Residential water samples were collected at the Former Loring Air Force Base in Limestone, Maine, in December 2024 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. Samples were submitted to SGS North America (SGS) located in Orlando, Florida, for analysis.

SGS analyzed 21 samples for PFAS by Method 1633, liquid chromatography tandem mass spectrometry compliant with Table B-24 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.4 (USDoD, 2021).

Sample event information included in this data validation report is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Summary of Data Validation Actions
- Table 4 – Summary of Field Duplicate Results
- Table 5 – Acronyms and Abbreviations

Data quality reviews were completed as described in the Draft Quality Program Plan (QPP) Remedial Investigation PFAS Response (WSP, 2024) and the final Method 1633 (USEPA, 2024). Data validation levels are established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019). PFAS data were validated using Stage 4 procedures. Validation checklists, documentation of sample recalculations, and qualification justification documentation are stored in the WSP project file.

Stage 4 data validation includes review of sample results forms, chain of custody (COC) and supporting records, laboratory receipt checklists, analytical holding time compliance, sample related quality control (QC) data forms (method blanks, laboratory control samples [LCS], matrix spike/matrix spike duplicates [MS/MSD], field and laboratory duplicates, extracted internal standards [EIS] and non-extracted internal standards [NIS], QC sample frequency checks, initial calibration summaries, continuing calibration verification summaries, instrument mass calibration /tuning summaries, and sample preparation logs, as well as review of raw data and chromatograms, target analyte identification confirmation, and recalculation of QC and sample results.

Data review and qualification actions were completed based on DoD Data Validation Guidelines Module 6 for PFAS (USDoD, 2022), general procedures described in National USEPA Data Review and Validation Guidelines (USEPA, 2020), and method specifications in the DoD QSM 5.4 and/or the final Method 1633. QC limits presented in the DoD QSM 5.4, Method 1633, and/or the QPP were used during the data evaluation. Data qualifications were completed, if necessary, in accordance with the USEPA guidelines and the professional judgment of the validator using the following qualifiers:

J = Analyte present; concentration is estimated
J+ = Analyte present; concentration is estimated with potential high bias
J- = Analyte present; concentration is estimated with potential low bias
U = Analyte not detected at the associated detection limits
UJ = Analyte was not detected at the associated detection limits; however, the associated detection limit should be considered an estimate.
R = Sample result is considered unusable for project objectives

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

Validation reason codes were applied to results associated with QC measurements outside project QC goals where validation qualifiers were added to results. Final results are presented in Table 2. The validation qualification actions and associated validation reason codes applied to sample results are summarized in Table 3. The following data validation reason codes were applied to one or more sample results:

HPHL = Sampling to extraction holding time exceeded

2.0 DATA VALIDATION QUALIFICATION ACTION SUMMARY

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the DoD QSM 5.4, the QPP, and/or analytical method. Unless specified below, results are interpreted to be usable as reported by the laboratory.

2.1 PFAS

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
  Holding Times
* QC Blanks
* Instrument Performance/Tuning

* LCS
* MS/MSD
* Field Duplicates
* Extracted Internal Standard Recovery
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
* Miscellaneous

* QC criteria were met for this parameter.

2.1.1 Holding Times

Sample LORNG_RES09_12042024 was initially extracted within the extraction holding time of 28 days. Recoveries of extracted internal standards (EIS) in the initial extraction were outside control limits and ranged from 1 to 5 percent. The sample was re-extracted one day after expiration of the holding time and EIS recoveries for all compounds were within control limits and ranged from 96 to 145 percent. Results from the re-extraction of sample LORNG_RES09_12042024 were selected for final reporting and all results for this sample were qualified estimated (J/UJ) with reason code HPHL.

Former Loring Air Force Base, Limestone, Maine

Acronym or Abbreviation	Definition
%	Percent
CCV	Continuing Calibration Verification
COC	Chain of Custody
DL	Detection Limit
DoD	Department of Defense
DoE	Department of Energy
EIS	Extracted Internal Standard
ICV	Initial Calibration Verification
ID	Identification
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
LOD	Limit of Detection
LOQ	Limit of Quantification
MDL	Method Detection Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
NIS	Non-extracted Internal Standard
PFAS	Per- and Polyfluoroalkyl Substances
QC	Quality Control
QPP	Quality Program Plan
QSM	Quality Systems Manual for Environmental Laboratories
RL	Reporting Limit
RPD	Relative Percent Difference
SDG	Sample Delivery Group
SGS	SGS North America Laboratory
USDoD	United States Department of Defense
USEPA	United States Environmental Protection Agency
WSP	WSP USA Environment & Infrastructure, Inc.

Stage I - DATA VERIFICATION CHECKLIST

Project Name: Loring AFB – Fall 2024 LEAF sampling program **Project Number:** US-EI-775361701
Reviewing Company: WSP USA Environment & Infrastructure Inc **Project Manager:** Scott Calkin
Data Evaluator: Tige Cunningham **Data Evaluation Date:**3/17/2025
Laboratory: SGS (PFAS), Eurofins (LEAF analysis)

Lab Job #: FC20059, FC20061, FC20143, FC20145, FC20336, FC20337, 180-181004-1, 180-181034-1

Matrix: ☒ Aqueous ☒ Soil ☐ Sediment ☐ Waste ☐ Air ☐ Other:

A Stage 1 review was completed on the aqueous PFAS LEAF fraction data for soil samples collected in October and November 2024 at the Loring AFB Site. Soil samples were shipped from Loring AFB to Eurofins in Pittsburgh, PA. Eurofins performed the LEAF extraction on the soil samples and shipped the aqueous fractions to SGS Noth America Labs in Orlando, FL for PFAS analysis by USEPA Method 1633. The Stage 1 review was performed of the aqueous PFAS data and general chemistry parameters on the soil samples (ORP, pH, and specific conductance) following the US DoD Draft General Data Validation Guidelines (November 2019 Rev1) as presented in the TO 1048 Quality Program Plan Rev 1, April 2024. Stage 1 review is described below.

Stage 1: A verification and validation conducted only on completeness and compliance of sample specific information and field QC: field sample IDs and target analytes verified against the chain of custody for completeness; sample conditions upon arrival at laboratory noted; sample preservation was appropriate and verified by the laboratory; holding times were met; concentrations and units for limits of detection and quantitation were appropriate; trip blanks, field blanks, equipment blanks, and field duplicates met project requirements for frequency and field quality control.

Analytical Methods: See Table 1.

Sample Information: See Table 1.

Data Qualification: No qualifications required. Table 2 has final results. Table 3 presents qualified results.

Work Plan or QAPP reference: TO 1048 Quality Program Plan Rev 1, April 2024

Data Validation Guidance: DoD QSM 5.4 Quality Control Limits and Laboratory Quality Control Limits

Chain of Custody (COC) and Sample Receipt	YES	NO	NA	COMMENT
a) COC complete and correct? (Project location, contacts, sample IDs, sample dates, field QC samples, analyses identified, et c.)	☒	☐		
b) COC documents release of custody (signed and dated)?	☒	☐		
c) Field QC types provided (note types)?	☐	☐	☒	No Field QC samples collected. OK
d) Did the cooler contents match the COC?	☒	☐		
e) Were samples received in good condition?	☒	☐		
f) Were cooler temperatures within control limits?	☒	☐		

Data Package Information	YES	NO	NA	COMMENT
a) Laboratory name and location documented?	☒	☐		
b) All samples on COC reported in data package?	☒	☐		
c) Requested analytical methods used?	☒	☐		
d) Requested analyte list reported?	☒	☐		

Data Package Information	YES	NO	NA	COMMENT
e) Requested units reported?	☒	☐	☐	
f) Did the laboratory define the qualifiers used?	☒	☐		
g) Data package contains all information necessary to complete the data quality review?	☒	☐		PFOS was missing for sample LORNG_SB01055_0-2_100124 T5 in SDG FC20143. SGS was contacted and data package was re-issued to report the missing PFOS result. Andrew Nelson entered the result into ERPIMS, no revised EDD was submitted from SGS.

Analytical Assessment	YES	NO	NA	COMMENT
a) Solid samples reported on a dry-weight basis?	☐	☐	☒	
b) Were solid samples percent moisture criteria acceptable?	☒	☐	☐	
c) Were sample dilutions noted?	☒	☐		
d) Were detected concentrations less than the QL qualified by the laboratory?	☒	☐		
e) All detected sample results within the calibrated range?	☒	☐		
f) Did the laboratory satisfy the requested sensitivity requirements?	☒	☐		

Laboratory Case Narrative	YES	NO	NA	COMMENT
a) Do the laboratory narrative or laboratory qualifiers indicate deficiencies?	☒	☐	☐	See Notes

Sample Preservation and Holding Time	YES	NO	NA	COMMENT
a) Were samples properly preserved?	☒	☐		
b) Were holding times met for sample preparation and/or extraction?	☐	☒	☐	See Notes
c) Were holding times met for sample analysis?	☒	☐		

Blanks	YES	NO	NA	COMMENTS
a) Are any analytes detected in the associated preparation/method blank(s)?	☒	☐	☒	Not effecting results.
b) Are any analytes detected in the associated trip blank(s)?	☐	☐	☒	
c) Are any analytes detected in the associated field or equipment/rinsate blank(s)?	☐	☐	☒	

Duplicates	YES	NO	NA	COMMENTS
a) Were field duplicates reported?	☐	☒	☐	No FDs
b) Was field duplicate RPD or absolute difference criteria acceptable?	☐	☐	☒	Not Evaluated

Overall Evaluation	YES	NO	NA	COMMENTS
a) Any other technical problems that lead to data rejection identified by laboratory?	☐	☒		
b) Were data acceptable and usable, except where noted?	☒	☐		

Comments/Notes:

1) Case Narrative review:

Hold Times (28 days to extraction/analysis):

- SDG: FC20059: Sample LORNG_SB07036_0-2_093024 T1. Re-extracted 5 days out of out of hold time due to low EIS in original run. The following analytes re-ported from the extraction out of hold: Perfluorotetradecanoic acid, MeFOSE, EtFOSE. Results were ND for these compounds and qualified UJ.

  Reason Code: HPHL = HOLDINGTIME: SAMPLING TO EXTRACTION HOLDING TIME EXCEEDED

  See attached Table 3

- SDG: FC20143: The following sub-set of samples were re-extracted out of hold time due to recoveries of extracted internal standards out of control criteria in the initial extraction. A subset of compounds were reported from the original run within hold time and a subset were report from the re-extracted samples out of hold. Compounds reported from the extraction out of hold time were qualified estimated (J/UJ): **LORNG_SB01055_0-2_100124 T5 and LORNG_SB01055_0-2_100124 T7**

  Reason Code: HPHL = HOLDINGTIME: SAMPLING TO EXTRACTION HOLDING TIME EXCEEDED

  See attached Table 3

Blanks

- **SDG FC20145 = Instrument Blank had EtFOSA 0.0013 ug/l and 0.0010 ug/l. No data qualified.**
- **SDG FC20336 = Instrument Blank had EtFOSA 0.0013 ug/l and 0.0010 ug/l. No data qualified.**
- **SDG FC20337 = Instrument Blank had Perfluorooctanesulfonic acid 0.00086 ug/l. No data qualified.**

Data Validation and Usability Report
Loring PFAS Remedial Investigation
February 2024 Residential Sampling
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

One residential sample was collected at the Former Loring Air Force Base in Limestone, Maine, in February 2024 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. The samples were submitted to Bureau Veritas in Mississauga, Ontario, for analysis.

BV analyzed one sample for PFAS by United States Environmental Protection Agency (USEPA) Draft Method 1633, liquid chromatography tandem mass spectrometry compliant with Table B-24 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.4 (USDoD, 2021).

Sample event information included in this data validation report is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Acronyms and Abbreviations

Data quality reviews were completed as described in the Quality Program Plan (QPP) Remedial Investigation PFAS Response (WSP, 2023). Data validation levels are established based on current USEPA guidelines for staged validation of analytical data (USEPA, 2009) and USDoD General Validation Guidelines (USDoD, 2019). PFAS data were validated using Stage 2B procedures. Ten percent of the PFAS data collected during the remedial investigation were validated using Stage 4 procedures. Validation checklists, documentation of sample recalculations, and qualification justification documentation are stored in the WSP project file.

Stage 2A data validation includes review of sample results forms, chain of custody (COC) and supporting records, laboratory receipt checklists, analytical holding time compliance, sample related quality control (QC) data forms (method blanks, laboratory control samples (LCS), matrix spike/matrix spike duplicates (MS/MSD), field and laboratory duplicates, surrogates, internal standards, post digestion spikes, and serial dilutions), and QC sample frequency checks.

Stage 2B data validation includes all reviews performed in a Stage 2A data validation as well as review of initial calibration summaries, continuing calibration verification summaries, instrument performance/tuning summaries, dual column confirmation results, and sample preparation logs.

Stage 4 data validation includes all reviews performed in Stages 2A and 2B as well as review of raw data and chromatograms, target analyte identification confirmation, and recalculation of QC and sample results.

Data review and qualification actions were completed based on USDoD Data Validation Guidelines Module 6 for PFAS (USDoD, 2022), general procedures described in USEPA Data Review and Validation Guidelines for PFAS (USEPA, 2023), and method specifications in the DoD QSM 5.4 and/or the referenced analytical methods when DoD specifications were not available. QC limits presented in the DoD QSM 5.4 and/or the QPP were used during the data evaluation. Data qualifications were completed, if necessary, in accordance with the USEPA guidelines and the professional judgment of the validator using the following qualifiers:

J = Analyte present; concentration is estimated
U = Analyte not detected at the associated detection limits

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

Validation reason codes are applied to results associated with QC measurements outside project QC goals where validation qualifiers were added to results. Based on the data review, there were no validation qualification actions required and no validation qualifiers or reason codes were applied to sample results. Final results are presented in Table 2.

1.1 DATA USABILITY EVALUATION

The overall data quality and data usability for this data set is interpreted to meet the project objectives identified in the QAPP. Interpretations of data validation qualifications and data usability are provided below:

No data validation qualifications were applied during data validation and data are interpreted to be usable as reported by the laboratory.

Of the 40 individual PFAS results reported for this residential sampling event, a total of zero results were qualified as rejected (R) and were interpreted to be unusable for project objectives. This represents a PFAS data completeness of 100% for the February 2024 residential data set.

2.0 DATA VALIDATION QUALIFICATION ACTION SUMMARY

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the DoD QSM 5.4, the QPP, and/or analytical methods. Unless specified below, results are interpreted to be usable as reported by the laboratory.

2.1 PFAS

Data were evaluated based on the following parameters:

* Lab Report Narrative

* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance/Tuning
* LCS/LCSD
* Extracted Internal Standard Recovery
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
* Miscellaneous

* QC criteria were met for this parameter.

No data quality issues were identified, and results are interpreted to be usable as reported by the laboratory.

Table 1 provides a summary of the major and minor data quality issues identified in this data set. All data are acceptable except those results which have been qualified with “R”, rejected. Data validation qualifiers along with associated descriptions are provided in Table 2. All data qualification related to this group of samples is detailed on the attached sheets.

All data users should note two facts. First, an “R” flag means that the associated value is unusable due to significant quality control (QC) problems, the data is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on any data tables even as a last resort. Second, no analyte concentration, even if it passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

DATA ASSESSMENT

1. NARRATIVE AND COMPLETENESS REVIEW

The case narrative was reviewed, and the data package was checked for completeness. No discrepancies were noted.

2. SAMPLE DELIVERY AND CONDITION

The samples arrived at the laboratory in acceptable condition. Proper custody was documented.

3. HOLDING TIME

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Proper sample handling and preservation also play a role in the chemical stability of analytes in the sample matrix. If samples are not collected and stored using proper containers and/or preservatives, data may not be valid.

No problems were found for this criterion.

4. CALIBRATION

Satisfactory instrument calibration is established to ensure that the instrument can produce acceptable quantitative data. An initial calibration demonstrates that the instrument can give acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance. Additionally, a continuing calibration is analyzed at the end of each 12-hour analytical sequence, denoted as a "closing" calibration verification and ascertains acceptable performance at the conclusion of the analytical sequence.

A) Initial Calibration

Percent relative standard deviation (%RSD) is calculated from the initial calibration and is used to indicate stability of a specific compound over the calibration range.

An RSD value outside the initial calibration limit indicates the potential for quantitation errors. For this reason, all positive and non-detected results are qualified as estimated. Severe performance failures (RSD >30%) requires rejection of all results. The following QC criteria have been applied for this project: The %RSD of initial calibration must be <20%.

No problems were found for this criterion.

B) Continuing Calibration

The Percent Recovery (%R) for all target analytes in the continuing calibration must be within 70-130%. All initial calibration verification (ICV) and continuing calibration verification (CCV) %Rs were with acceptance limits with the following exceptions.

No problems were found for this criterion.

C) Instrument Sensitivity Check

Prior to analysis an instrument sensitivity check (ISC) must be performed. The ISC must be at the limit of quantitation (LOQ). All analyte concentrations must be within ±30%. Note: the laboratory reports refer to the ISC as Low-Concentration Calibration Verification (LCV). The validator has determined that the low level CCV in the laboratory's report is equivalent to the method required ISC.

No problems were found for this criterion.

5. BLANK CONTAMINATION

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. When an equipment blank, or lab blank has an analyte detection, then all associated field samples are qualified per validation guidance as appropriate.

A) Method blank contamination:

No problems were found for this criterion.

B) Instrument blank contamination:

No problems were found for this criterion.

C) Field/Equipment blank contamination:

Sample LORNG_EB013_10042024 was submitted as an equipment blank in association with samples LORNG_BW20002_10082024, LORNG_OW20002_10042024, and LORNG_JMW1762_10042024. No problems were found for this criterion.

Sample LORNG_EB014_10072024 was submitted as an equipment blank in association with samples LORNG_JBW7335A_10072024, LORNG_JBW7335B_10072024, and LORNG_JBW7345B_10072024. No problems were found for this criterion.

Sample LORNG_EB015_10072024 was submitted as an equipment blank in association with samples LORNG_FMW3413_10072024, LORNG_JBW7912_46_10072024, and LORNG_JBW7912_150_10072024. No problems were found for this criterion.

Sample LORNG_EB015_10072024 was submitted as an equipment blank. No problems were found for this criterion.

Sample LORNG_EB017_10082024 was submitted as an equipment blank in association with samples LORNG_JBW7403_10082024 and LORNG_JMW0682_10082024. No problems were found for this criterion.

6. EXTRACTED INTERNAL STANDARDS

All samples are spiked with labeled standard compounds prior to sample preparation and analyses to evaluate overall laboratory performance and efficiency of the analytical technique. The reported project samples had observed standard recoveries within the established limits in all cases with the following exceptions.

No problems were found for this criterion.

7. NON-EXTRACTED INTERNAL STANDARDS

Non-extracted internal standard peak areas are used to quantify extracted internal standard recoveries. The reported project samples had non-extracted internal standard area counts within the established limits in all cases with the following exceptions.

No problems were found for this criterion.

8. COMPOUND IDENTIFICATION

The project target analyte compounds are identified on the LC/MS/MS by using the analytes retention time (RT). The retention time of each target analyte should be within ± 0.4 minutes of the predicted retention. Target analyte detections should display a signal-to-noise of ≥ 3:1, have proper peak integration, and display all ions at the correct retention times.

Target analyte detections should have passing ion ratios (50 - 150% of theoretical). Ion ratio failures could be caused by matrix interference and/or be the result of the presence of isomers in the sample at different ratios than the ratio of isomers present in the calibration standards.

Ion ratios were verified as part of the Level 2B data validation. No anomalies were identified with the following exceptions.

The transition mass ratios were outside the established ratio limits for isotope dilution standards listed in the table below during the analyses of the listed samples indicating some degree of uncertainty in the qualitative identification of the analyte. The impacted results have been qualified "J" on this basis.

Sample	*Isotope Dilution Standard*
LORNG_JBW7912_46_10072024	*PFOSA*
LORNG_JMW1960_10082024	*PFOSA*
LORNG_JBW7345B_10072024	*PFOSA*
LORNG_JBW7314_10082024	*PFPeA*
LORNG_OW20006_10082024	*PFOSA*
LORNG_OW05004_10072024	*PFOSA*
LORNG_UNK-044_10082024	*PFOSA*
LORNG_JBW7335A_10072024	*PFOSA*
LORNG_JBW7737A_10082024	*PFOSA*
LORNG_AA18MW-02_10082024	*PFOSA*

Additional target compound identification criterion was not verified as part of the Level 2B data validation.

9. COMPOUND QUANTIFICATION

Target compound quantitation was not verified as part of the Level 2B data validation.

Manual integrations were not reviewed at the Stage 2B level.

10. MATRIX SPIKE/MATRIX SPIKE DUPLICATE RECOVERY / MATRIX DUPLICATE

Matrix spike/matrix spike duplicate (MS/MSD) data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD data may be used in conjunction with other quality control criteria for additional qualification of data.

Sample LORNG_OW08001_10072024 was submitted for MS/MSD evaluation in association with this sample delivery group (SDG). Upon evaluation all accuracy and precision indicators were acceptable.

Sample LORNG_JPZ7808_10082024 was submitted for MS/MSD evaluation in association with this SDG. Upon evaluation all accuracy and precision indicators were acceptable.

Sample LORNG_OW05004_10072024 was submitted for MS/MSD evaluation in association with this SDG. Upon evaluation all accuracy and precision indicators were acceptable.

11. FIELD DUPLICATES

Field duplicates may be taken and analyzed as an indication of overall precision. These analyses measure both field and laboratory precision. A control limit of ≤ 30% for the Relative Percent Difference (RPD), shall be used when original and duplicate sample values are greater than or equal to the sample specific LOQ. For field duplicate analyses that do not meet the technical criteria, the action was applied to only the parent sample and its duplicate.

Samples LORNG_JBW7737A_10082024 and LORNG_JBW7737A_10082024FD were submitted as a field duplicate pair in association with this SDG. Adequate field precision was demonstrated.

12. LABORATORY CONTROL SAMPLES

The Laboratory Control Sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. The LCS results are used to verify that the laboratory can perform the analysis in a clean matrix.

No problems were found for this criterion.

13. DILUTIONS, RE-EXTRACTIONS & REANALYSIS

Samples may be re-analyzed for dilution, re-extraction and for other QC reasons. In such cases, the best result values are used.

Samples were re-extracted and/or reanalyzed as necessary to confirm results or bring analytes in to the instruments linear calibration range.

14. SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

Overall, the laboratory data generated met the project goals and quality control criteria, with the exceptions identified in this report and as summarized in Table 1.

15. OTHER

Please note sample LORNG_JBW7326A_10082024 was submitted for split sample analyses. The split sample results are located in SDG FC19573. Adequate precision was demonstrated.

Table 1
Review Elements Summary

	Were acceptance criteria met?		
	Yes	No	
Per-fluorinated Compounds		Major	Minor
Holding Time/Sample Handling	x		
Method Blanks	x		
Instrument Blanks	x		
Field Blanks	x		
Calibration Percent Relative Standard Deviation and Percent Difference	x

Major= Major data quality issue identified resulting in rejection of data.
Minor= Minor data quality issue identified resulting in the qualification of data. Data qualification should be used to inform the data users of data limitations.
NA = Not applicable

Table 2
Data Validation Qualifiers

Data Qualifier	Definition
U	The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided.

32 aqueous

SAMPLE RECEIPT AND CASE NARRATIVE REVIEW

- ✓ Traffic reports, chain-of-custody forms or SDG narrative do not indicate any problems with sample receipt, condition of the samples, analytical problems or special circumstances affecting the quality of the data.
- ✓ AFFF samples are to be shipped in HDPE containers with an unlined cap
- ✓ Shipment temp 0-6°C: recommended to freeze tissue samples upon receipt
- ✓ If temp upon receipt is greater than 6°C J/UJ all

Received on 10/10 at <6 C

HOLDING TIMES

- ✓ Recommended storage temp is ≤ -20°C
- ✓ Per method 1633: aqueous samples may be held in the lab for up to 90 days when stored at recommended temp and protected from light; when stored at 0-6 °C and protected from light samples can be held for up to 28 days (see method for additional details)
- ✓ Per method 1633: solid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C (see method for additional details)
- ✓ Per method 1633: biosolid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C; however, freezing is recommended (see method for additional details)
- ✓ Samples extracts should be stored at 0-4°C protected from light and analyzed within 90 days

- ✓ If hold time is exceeded qualify J/UJ
- ✓ If hold time is grossly exceeded (2X hold time) J/X

244 Table II. Sample Storage and Holding Time Requirements

Matrix Type	Stored at 0 - 6°C, protected from light		Stored at ≤ -20°C, protected from light	
	Holding Time	Caveat	Holding Time	Caveat
Aqueous	28 days	Precursor degradation occurs after 7 days	90 days	None
Solid and Tissue	90 days	Should be prepared as soon as possible if NFDHA is a target analyte	90 days	Should be prepared as soon as possible if NFDHA is a target analyte
Biosolid	90 days	Not recommended due to the production of gases due to microbiological activity	90 days	None

Samples collected 10/04/2024; 10/07/2024 – 10/08/2024
Extracted 10/18; 10/20; 10/23; 10/25; 10/28
Analyzed 10/20; 10/22; 10/25; 10/26; 10/30 ok

Extracted Internal STANDARDS (EIS)

- ✓ Added to all QC and field samples
- ✓ Recoveries are within the limits as defined in QAPP; QSM 6.0 specified using lab derived limits with lower limits no less than 20%
- ✓ Detected for analytes qualified using an EIS percent recovery >200% should be qualified J-. Nod-detects should not be qualified.
- ✓ If EIS recovery is <10%; associated detected and non-detects should be qualified X
- ✓ EIS retention times should be within 0.4 minutes of standard; use professional judgment to qualify

EDS rules as Module 6 does not define all situations:

- **For EIS %R >200% J- positive results, no action on non-detects (per module 6)**
- **For EIS %Rs >lab limit J- positive results, no action on non-detects**
- **For EIS %Rs between lab limit; no action (per module 6)**
- **For EIS %Rs lower lab limit but >10%; J+ positive results, UJ non-detects**
- **For EIS %Rs <10% X positive and non-detected (per module 6)**

Per Loring QAPP:

Extracted Internal Standards	Preliminary in-house acceptance criteria of 20-150% to be used until in-house limits are generated and approved for project use. Lower limit of in-house acceptance criteria cannot be <20%

All reported ok

Non-Extracted Internal STANDARDS (NIS)

- ✓ Used to quantify EIS
- ✓ If low are counts are reported (<30%) detected and non-detected should be qualified X

ok

Laboratory Control Sample (LCS) and Low-Level Laboratory Control Sample (LLLCS)

- ✓ LCMS Lab Control Recovery (Form III), Form I, prep log, run log
- ✓ LCS prepared, extracted, analyzed, and reported once for every 20 field samples of a similar matrix, per SDG.
- ✓ Laboratory Control Samples were analyzed for all the target analytes that the samples are analyzed for.
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150% if lab limits have not been generated.
- ✓ If LCS or LLLCS %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If LCS or LLLCS %R is < lower limit; qualify detected J- and non-detected X

Use lab limits to evaluate per Loring QAPP

Batch 9712677	ok
Batch 9719756	ok
Batch 9725392	ok
Batch 9728787	ok

MS/MSD and Matrix Duplicate

- ✓ LCMS Matrix Spike Recovery (Form III)
- ✓ The Matrix Spike Samples were spiked and analyzed for all the target analytes that the samples are analyzed for (Same analytes as LCS).
- ✓ Per module 6: MS and MSD are applicable where the spike concentration is a least 3 times greater than the native analyte concentration **(3X rule)**
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150%.
- ✓ If MS or MSD %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If MS or MSD %R is < lower limit but >10%; qualify detected J- and non-detected UJ
- ✓ If MS or MSD %R is < 10%; qualify detected J- and non-detected X
- ✓ If MS/MSD RPD is out; qualify detected J and non-detected UJ
- ✓ For matrix duplicate; for concentrations of analytes that are equal to or greater than the LOQ, the RPD must be ≤30%; if out qualified detected J; no action on non-detects

Use lab limits to evaluate per Loring QAPP; RPD 30%

BLANKS

- ✓ LCMS Method Blank Summary (Form IV), method blank Form I, prep log, run log
- ✓ Frequency of Analysis: method blank has been analyzed for every 20 (or less) samples of similar matrix or concentration or each extraction batch.
- ✓ Continuing Calibration Blanks (Form I) and run log
- ✓ Frequency of Analysis: immediately following the highest standard analyzed and daily prior to sample analysis.
- ✓ Field/rinse blanks are non-detected for all analytes

Per Loring QAPP:

- Sample results with associated blank contamination will be qualified as follows:

Method Type	Blank Result	Sample Result	Action
PFAS, Organics, and Wet Chemistry	< LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ	≤ 2x blank: Qualify non-detect (U) at reported result. ≥ 2x-5x blank: J+
	≥ LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ and < blank result	Qualify non-detect (U) at reported result
		≥ LOQ and ≥ blank result	≤ 2x blank: Qualify non-detect (U) at reported result. 2x-5x blank: J+
Metals	≤ LOQ	≤ LOD and < 5x blank result	Qualify non-detect (U) at LOD.
		LOD < Sample Result ≤ LOQ and < 5x blank result	Qualify non-detect (U) at reported result.
		> LOQ	< 5x blank result; qualify estimated (J+)
	> LOQ	≤ LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result ≤ LOQ	Qualify non-detect (U) at reported result
		> LOQ but < 5x blank result	Qualify estimated (J+)
		≥ 5x blank result	No qualification

MASS CALIBRATION

- ✓ Verified to be ±0.2 amu of true value

Bile Salt Interference Check and Qualitative Identification Standard

- ✓ Provided and requirements met
- ✓ 1.0 minute between RTs of bile salt and PFOS
- ✓ Qualitative Identification Standard to confirm RTs

All acceptable

ICAL

- ✓ Initial Calibration Data Curve Evaluation (Form VI) and run log
- ✓ Lowest standard should be at or below LOQ
- ✓ %RSD <20% or relative standard error (RSE) <20%
- ✓ If %RSD > 20% but <30% J/UJ
- ✓ If %RSD >30% J/R

See below

INSTRUMENT PERFORMANCE CHECK PER DRAFT METHOD 1633

- ✓ Concentration equal to LOQ
- ✓ Analyzed after ICAL and daily before samples
- ✓ If not analyzed all associated data should be qualified X

- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

CCAL

- ✓ Continuing Calibration Data (Form VII) and run log
- ✓ Continuing calibration standard analyzed on each working day, prior to sample analyses.
- ✓ Calibration verification/continuing calibration standard been analyzed after every 10 samples and at the end of each analytical sequence
- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

EXECUTIVE NARRATIVE

Sample Delivery Group: C4V9659
Laboratory: Bureau Veritas Canada
Site: Loring AFB
Sampling dates: 10/01/2024 – 10/02/2024
Number of Samples: 23
Test Method: USEPA Method 1633
Analysis: per- and polyfluoroalkyl substances (PFAS)

Quality Assurance Project Plan: Draft TO 1048 Quality Program Plan, September 2023 (QAPP).

Validation Guidelines: United States Department of Defense (DOD) Environmental Data Quality Workgroup (EDQW), General Validation Guidelines, November 2019; United States Department of Defense Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances analysis by QSM Table B-24, Environmental Data Quality Workgroup, October 18, 2022

Table 1 provides a summary of the major and minor data quality issues identified in this data set. All data are acceptable except those results which have been qualified with “R”, rejected. Data validation qualifiers along with associated descriptions are provided in Table 2. All data qualification related to this group of samples is detailed on the attached sheets.

All data users should note two facts. First, an “R” flag means that the associated value is unusable due to significant quality control (QC) problems, the data is invalid and provides no information as to whether the compound is present or not. “R” values should not appear on any data tables even as a last resort. Second, no analyte concentration, even if it passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

DATA ASSESSMENT

1. NARRATIVE AND COMPLETENESS REVIEW

The case narrative was reviewed, and the data package was checked for completeness. No discrepancies were noted.

2. SAMPLE DELIVERY AND CONDITION

The sample arrived at the laboratory in acceptable condition. Proper custody was documented.

3. HOLDING TIME

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Proper sample handling and preservation also play a role in the chemical stability of analytes in the sample matrix. If samples are not collected and stored using proper containers and/or preservatives, data may not be valid.

No problems were found for this criterion.

4. CALIBRATION

Satisfactory instrument calibration is established to ensure that the instrument can produce acceptable quantitative data. An initial calibration demonstrates that the instrument can give acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance. Additionally, a continuing calibration is analyzed at the end of each 12-hour analytical sequence, denoted as a "closing" calibration verification and ascertains acceptable performance at the conclusion of the analytical sequence.

A) Initial Calibration

Percent relative standard deviation (%RSD) is calculated from the initial calibration and is used to indicate stability of a specific compound over the calibration range.

An RSD value outside the initial calibration limit indicates the potential for quantitation errors. For this reason, all positive and non-detected results are qualified as estimated. Severe performance failures (RSD >30%) requires rejection of all results. The following QC criteria have been applied for this project: The %RSD of initial calibration must be <20%.

No problems were found for this criterion.

B) Continuing Calibration

The Percent Recovery (%R) for all target analytes in the continuing calibration must be within 70-130%. All initial calibration verification (ICV) and continuing calibration verification (CCV) %Rs were with acceptance limits with the following exceptions.

No problems were found for this criterion.

C) Instrument Sensitivity Check

Prior to analysis an instrument sensitivity check (ISC) must be performed. The ISC must be at the limit of quantitation (LOQ). All analyte concentrations must be within ±30%. Note: the laboratory reports refer to the ISC as Low-Concentration Calibration Verification (LCV). The validator has determined that the low level CCV in the laboratory's report is equivalent to the method required ISC.

No problems were found for this criterion.

5. BLANK CONTAMINATION

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. When an equipment blank, or lab blank has an analyte detection, then all associated field samples are qualified per validation guidance as appropriate.

A) Method blank contamination:

No problems were found for this criterion with the following exceptions. PFHxSA was positively identified in the method blanks associated with the reported samples listed in the table below. Positive results reported for the impacted analyte in the associated samples have been evaluated and qualified as appropriate per validation guidance.

LORNG_SB01043_0-1_10012024	*LORNG_SB12025_0-2_10012024*
LORNG_SB01048_0-1_10012024	*LORNG_SB12025_13-15_10012024*
LORNG_SB01053_0-1_10012024	*LORNG_SB01051_0-1_10022024*
LORNG_SB01055_0-2_10012024	*LORNG_SB01049_11-13_10022024*
LORNG_SB01055_7-9_10012024	*LORNG_SB01052_3-5_10022024*
LORNG_SB05041_5-7_10012024	*LORNG_SB01052_7-9_10022024*

B) Instrument blank contamination:

No problems were found for this criterion.

C) Field/Equipment blank contamination:

Sample LORNG_EB105_10012024, located in sample delivery group (SDG) FC19378, was submitted as an equipment blank in association with the samples collected on 10/01/2024. No problems were found for this criterion.

Sample LORNG_EB106_10022024, located in SDG FC19378, was submitted as an equipment blank in association with the samples collected on 10/02/2024. No problems were found for this criterion with the following exceptions. FOSA and PFOS were positively identified. Positive results reported for the impacted analytes in the associated samples have been evaluated and qualified as appropriate per validation guidance.

WSP reviewed qualifiers added to soil results by EDS due to low level EB contamination. Region 1 guidance was used and professional judgment was made by WSP to not qualify the detections in the soil samples as not detected (U) from the low level detections reported in the Equipment Blanks. The soil detections for PFOSA were less than the LOQ and were reported by the laboratory as estimated (J). The (J) qualifier was retained during validation and a reason code added of EBL to alert the end user that the soil result is associated with an equipment blank that had low level detections.

6. EXTRACTED INTERNAL STANDARDS

All samples are spiked with labeled standard compounds prior to sample preparation and analyses to evaluate overall laboratory performance and efficiency of the analytical technique. The reported project samples had observed standard recoveries within the established limits in all cases with the following exceptions.

No problems were found for this criterion with the following exception. The observed recovery for isotope dilution standard D9-EtFOSE was less than the lowest acceptance limit during the analysis of sample LORNG_SB01043_0-1_10012024. The result reported for the associated target analyte has been qualified "UJ" on this basis.

7. NON-EXTRACTED INTERNAL STANDARDS

Non-extracted internal standard peak areas are used to quantify extracted internal standard recoveries. The reported project samples had non-extracted internal standard area counts within the established limits in all cases with the following exceptions.

No problems were found for this criterion.

8. COMPOUND IDENTIFICATION

The project target analyte compounds are identified on the LC/MS/MS by using the analytes retention time (RT). The retention time of each target analyte should be within ± 0.4 minutes of the predicted retention. Target analyte detections should display a signal-to-noise of ≥ 3:1, have proper peak integration, and display all ions at the correct retention times.

Target analyte detections should have passing ion ratios (50 - 150% of theoretical). Ion ratio failures could be caused by matrix interference and/or be the result of the presence of isomers in the sample at different ratios than the ratio of isomers present in the calibration standards.

Ion ratios were verified as part of the Level 2B data validation. No anomalies were identified with the following exceptions.

The transition mass ratios were outside the established ratio limits for isotope dilution standards listed in the table below during the analyses of the listed samples indicating some degree of uncertainty in the qualitative identification of the analyte. The results reported for the impacted analytes have been qualified "J" on this basis.

Sample	*Isotope Dilution Standard*
LORNG_SB01049_0-1_10022024	*PFPeA*
LORNG_SB01049_6-8_10022024	*PFPeA*
LORNG_SB01043_0-1_10012024	*PFOA, PFUnA*
LORNG_SB01047_0-1_10012024FD	*PFUnA*
LORNG_SB01047_0-1_10012024	*PFUnA*
LORNG_SB01050_0-1_10012024	*PFUnA*
LORNG_SB01053_0-1_10012024	*PFDoA, PFDS, PFNS*
LORNG_SB05041_0-2_10012024	*PFPeA*

Additional target compound identification criterion was not verified as part of the Level 2B data validation.

9. COMPOUND QUANTIFICATION

Target compound quantitation was not verified as part of the Level 2B data validation.

Manual integrations were not reviewed at the Stage 2B level.

10. MATRIX SPIKE/MATRIX SPIKE DUPLICATE RECOVERY / MATRIX DUPLICATE

Matrix spike/matrix spike duplicate (MS/MSD) data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD data may be used in conjunction with other quality control criteria for additional qualification of data.

Sample LORNG_SB01050_0-1_10012024 was submitted for MS/MSD evaluation in association with this sample delivery group (SDG). Upon evaluation all accuracy and precision indicators were acceptable or did not result in a need to qualify sample results.

Sample LORNG_SB01047_0-1_10012024 was submitted for MS/MSD evaluation in association with this SDG. Upon evaluation all accuracy and precision indicators were acceptable.

Sample LORNG_SB01048_0-1_10012024 was submitted for MS/MSD evaluation in association with this sample delivery group (SDG). Upon evaluation all accuracy and precision indicators were acceptable or did not result in a need to qualify sample results.

Sample LORNG_SB01053_0-1_10012024 was submitted for MS/MSD evaluation in association with this SDG. Upon evaluation all accuracy and precision indicators were acceptable.

11. FIELD DUPLICATES

Field duplicates may be taken and analyzed as an indication of overall precision. These analyses measure both field and laboratory precision. A control limit of ≤ 30% for the Relative Percent Difference (RPD), shall be used when original and duplicate sample values are greater than or equal to the sample specific LOQ. For field duplicate analyses that do not meet the technical criteria, the action was applied to only the parent sample and its duplicate.

Samples LORNG_SB01047_0-1_10012024 and LORNG_SB01047_0-1_10012024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated.

Samples LORNG_SB01052_3-5_10022024 and LORNG_SB01052_3-5_10022024FD were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated.

12. LABORATORY CONTROL SAMPLES

The Laboratory Control Sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. The LCS results are used to verify that the laboratory can perform the analysis in a clean matrix.

No problems requiring qualification of sample results were found for this criterion.

13. DILUTIONS, RE-EXTRACTIONS & REANALYSIS

Samples may be re-analyzed for dilution, re-extraction and for other QC reasons. In such cases, the best result values are used.

Samples were re-extracted and/or reanalyzed as necessary to confirm results or bring analytes in to the instruments linear calibration range.

14. SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

Overall, the laboratory data generated met the project goals and quality control criteria, with the exceptions identified in this report and as summarized in Table 1.

15. OTHER

Please note sample LORNG_SB01049_0-1_10022024 was submitted for split sample analyses. The split sample results are located in SDG C4V7278. Adequate precision was demonstrated.

Please note sample LORNG_SB01051_0-1_10022024 was submitted for split sample analyses. The split sample results are located in SDG C4V7278. Adequate precision was demonstrated.

Table 1
Review Elements Summary

	Were acceptance criteria met?		
	Yes	No	
Per-fluorinated Compounds		Major	Minor
Holding Time/Sample Handling	x		
Method Blanks			x
Instrument Blanks	x		
Field Blanks			x
Calibration Percent Relative Standard Deviation and Percent Difference	x		
Instrument Sensitivity Check	x		
Extracted Internal Standards			x
Non-Extracted Internal Standards	x		
Compound Identification			x
Matrix Spike/Matrix Spike Duplicate/Matrix Duplicate	x		
Laboratory Control Sample	x		
Other Quality Control Data out of Specification	x		
Field Duplicate	x		

Major= Major data quality issue identified resulting in rejection of data.
Minor= Minor data quality issue identified resulting in the qualification of data. Data qualification should be used to inform the data users of data limitations.
NA = Not applicable

Table 2
Data Validation Qualifiers

Data Qualifier	Definition
U	The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided.

Data Validation Worksheet

DATA VALIDATION PFAS

Module 6; PFAS by QSM Table B-24; October 18, 2022

Validator: GAP

Reviewer: DM

Date Validated: 01/27/2025

Reviewed: 2/6/2025

Project: Loring AFB

SDG: C4V9659

LAB: Bureau Veritas Canada

Samples Collected: 10/01/2024 – 10/02/2024

23 solid

SAMPLE RECEIPT AND CASE NARRATIVE REVIEW

- ✓ Traffic reports, chain-of-custody forms or SDG narrative do not indicate any problems with sample receipt, condition of the samples, analytical problems or special circumstances affecting the quality of the data.
- ✓ AFFF samples are to be shipped in HDPE containers with an unlined cap
- ✓ Shipment temp 0-6°C: recommended to freeze tissue samples upon receipt
- ✓ If temp upon receipt is greater than 6°C J/UJ all

Received on 10/10 at <6 C

HOLDING TIMES

- ✓ Recommended storage temp is ≤ -20°C
- ✓ Per method 1633: aqueous samples may be held in the lab for up to 90 days when stored at recommended temp and protected from light; when stored at 0-6 °C and protected from light samples can be held for up to 28 days (see method for additional details)
- ✓ Per method 1633: solid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C (see method for additional details)
- ✓ Per method 1633: biosolid samples may be held in the lab for up to 90 days when stored at recommended temp or 0-6 °C; however, freezing is recommended (see method for additional details)
- ✓ Samples extracts should be stored at 0-4°C protected from light and analyzed within 90 days

- ✓ If hold time is exceeded qualify J/UJ
- ✓ If hold time is grossly exceeded (2X hold time) J/X

244 Table II. Sample Storage and Holding Time Requirements

Matrix Type	Stored at 0 - 6°C, protected from light		Stored at ≤ -20°C, protected from light	
	Holding Time	Caveat	Holding Time	Caveat
Aqueous	28 days	Precursor degradation occurs after 7 days	90 days	None
Solid and Tissue	90 days	Should be prepared as soon as possible if NFDHA is a target analyte	90 days	Should be prepared as soon as possible if NFDHA is a target analyte
Biosolid	90 days	Not recommended due to the production of gases due to microbiological activity	90 days	None

Samples collected 10/01/2024 – 10/02/2024
Extracted 10/22/2024; 10/23/2024; and 10/28/2024
Analyzed 10/25/2024; 10/27/2024; and 10/31/2024

All ok

Extracted Internal STANDARDS (EIS)

- ✓ Added to all QC and field samples
- ✓ Recoveries are within the limits as defined in QAPP; QSM 6.0 specified using lab derived limits with lower limits no less than 20%
- ✓ Detected for analytes qualified using an EIS percent recovery >200% should be qualified J-. Nod-detects should not be qualified.
- ✓ If EIS recovery is <10%; associated detected and non-detects should be qualified X
- ✓ EIS retention times should be within 0.4 minutes of standard; use professional judgment to qualify

EDS rules as Module 6 does not define all situations:

- **For EIS %R >200% J- positive results, no action on non-detects (per module 6)**
- **For EIS %Rs >lab limit J- positive results, no action on non-detects**
- **For EIS %Rs between lab limit; no action (per module 6)**
- **For EIS %Rs lower lab limit but >10%; J+ positive results, UJ non-detects**
- **For EIS %Rs <10% X positive and non-detected (per module 6)**

Per Loring QAPP:

Extracted Internal Standards	Preliminary in-house acceptance criteria of 20-150% to be used until in-house limits are generated and approved for project use. Lower limit of in-house acceptance criteria cannot be <20%

All ok except

AFNJ80		
13C2 4:2 FTS ↑	4:2 FTS	ND; no action
13C2 6:2 FTS ↑	6:2 FTS	ND; no action
13C2 8:2 FTS ↑	8:2 FTS	ND; no action
AFNJ85		
13C2 4:2 FTS ↑	4:2 FTS	ND; no action
13C2 6:2 FTS ↑	6:2 FTS	ND; no action

AFNJ95	LORNG_SB01043_0-1_10012024	
D9-EtFOSE ↓	EtFOSE	flag UJ

Non-Extracted Internal STANDARDS (NIS)

- ✓ Used to quantify EIS
- ✓ If low are counts are reported (<30%) detected and non-detected should be qualified X

ok

Laboratory Control Sample (LCS) and Low-Level Laboratory Control Sample (LLLCS)

- ✓ LCMS Lab Control Recovery (Form III), Form I, prep log, run log
- ✓ LCS prepared, extracted, analyzed, and reported once for every 20 field samples of a similar matrix, per SDG.
- ✓ Laboratory Control Samples were analyzed for all the target analytes that the samples are analyzed for.
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150% if lab limits have not been generated.

- ✓ If LCS or LLLCS %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If LCS or LLLCS %R is < lower limit; qualify detected J- and non-detected X

Use lab limits to evaluate per Loring QAPP

Batch 6716762	ok
Batch 9719547	ok
Batch 9728816	ok
Batch 9734642	ok

MS/MSD and Matrix Duplicate

- ✓ LCMS Matrix Spike Recovery (Form III)
- ✓ The Matrix Spike Samples were spiked and analyzed for all the target analytes that the samples are analyzed for (Same analytes as LCS).
- ✓ Per module 6: MS and MSD are applicable where the spike concentration is a least 3 times greater than the native analyte concentration **(3X rule)**
- ✓ Use limits as defined in QAPP; otherwise lab limits or QSM criteria of 40-150%.
- ✓ If MS or MSD %R is > upper limit; qualify detects J+; no action on non-detected
- ✓ If MS or MSD %R is < lower limit but >10%; qualify detected J- and non-detected UJ
- ✓ If MS or MSD %R is < 10%; qualify detected J- and non-detected X
- ✓ If MS/MSD RPD is out; qualify detected J and non-detected UJ
- ✓ For matrix duplicate; for concentrations of analytes that are equal to or greater than the LOQ, the RPD must be ≤30%; if out qualified detected J; no action on non-detects

Use lab limits to evaluate per Loring QAPP; RPD 30%

BLANKS

- ✓ LCMS Method Blank Summary (Form IV), method blank Form I, prep log, run log
- ✓ Frequency of Analysis: method blank has been analyzed for every 20 (or less) samples of similar matrix or concentration or each extraction batch.
- ✓ Continuing Calibration Blanks (Form I) and run log
- ✓ Frequency of Analysis: immediately following the highest standard analyzed and daily prior to sample analysis.
- ✓ Field/rinse blanks are non-detected for all analytes

Per Loring QAPP:

- Sample results with associated blank contamination will be qualified as follows:

Method Type	Blank Result	Sample Result	Action
PFAS, Organics, and Wet Chemistry	< LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ	≤ 2x blank: Qualify non-detect (U) at reported result. ≥ 2x-5x blank: J+
	≥ LOQ	< LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result < LOQ	Qualify non-detect (U) at reported result
		≥ LOQ and < blank result	Qualify non-detect (U) at reported result
		≥ LOQ and ≥ blank result	≤ 2x blank: Qualify non-detect (U) at reported result. 2x-5x blank: J+
Metals	≤ LOQ	≤ LOD and < 5x blank result	Qualify non-detect (U) at LOD.
		LOD < Sample Result ≤ LOQ and < 5x blank result	Qualify non-detect (U) at reported result.
		> LOQ	< 5x blank result; qualify estimated (J+)
	> LOQ	≤ LOD	Qualify non-detect (U) at LOD
		LOD < Sample Result ≤ LOQ	Qualify non-detect (U) at reported result
		> LOQ but < 5x blank result	Qualify estimated (J+)
		≥ 5x blank result	No qualification

MASS CALIBRATION

- ✓ Verified to be ±0.2 amu of true value

Bile Salt Interference Check and Qualitative Identification Standard

- ✓ Provided and requirements met
- ✓ 1.0 minute between RTs of bile salt and PFOS
- ✓ Qualitative Identification Standard to confirm RTs

All acceptable

ICAL

- ✓ Initial Calibration Data Curve Evaluation (Form VI) and run log
- ✓ Lowest standard should be at or below LOQ
- ✓ %RSD <20% or relative standard error (RSE) <20%
- ✓ If %RSD > 20% but <30% J/UJ
- ✓ If %RSD >30% J/R

See below

INSTRUMENT PERFORMANCE CHECK PER DRAFT METHOD 1633

- ✓ Concentration equal to LOQ
- ✓ Analyzed after ICAL and daily before samples
- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X

CCAL

- ✓ Continuing Calibration Data (Form VII) and run log
- ✓ Continuing calibration standard analyzed on each working day, prior to sample analyses.

- ✓ Calibration verification/continuing calibration standard been analyzed after every 10 samples and at the end of each analytical sequence
- ✓ If not analyzed all associated data should be qualified X
- ✓ The %R for ICV and CCV 30%; if out >130% qualify positive J+ and nondetected UJ; if out <70% qualify positives J- and nondetects UJ
- ✓ Per module if gross exceedances of recoveries <50% or >150%; qualify all associate data X
