Data Validation and Usability Report
Loring PFAS Remedial Investigation
August and October 2022 Tissue Sampling
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Tissue samples were collected at the Former Loring Air Force Base in Limestone, Maine, in August and October 2022 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. Samples were submitted to Vista Analytical Laboratory (Vista) in El Dorado Hills, California, as summarized below.

Vista analyzed 28 samples for PFAS by Method M537, liquid chromatography tandem mass spectrometry (LC/MS/MS) compliant with Table B-15 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.3 (USDoD, 2019a).

Sample event information included in this data validation report is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Summary of Data Validation Actions
- Table 4 – Acronyms and Abbreviations

Data quality reviews were completed as described in the Quality Program Plan (QPP) Remedial Investigation PFAS Response (Wood, 2022). Data validation levels are established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019b). PFAS data were validated using Stage 2B procedures. Ten percent of the PFAS samples collected during the remedial investigation were validated using Stage 4 procedures. Validation checklists, documentation of sample recalculations, and qualification justification documentation are stored in the WSP project file.

Stage 2A data validation includes review of sample results forms, chain of custody (COC) and supporting records, laboratory receipt checklists, analytical holding time compliance, sample related quality control (QC) data forms (method blanks, laboratory control samples (LCS), matrix spike/matrix spike duplicates (MS/MSD), field and laboratory duplicates, surrogates, internal standards, post digestion spikes, and serial dilutions), and QC sample frequency checks.

Stage 2B data validation includes all reviews performed in a Stage 2A data validation as well as review of initial calibration summaries, continuing calibration verification summaries, instrument performance/tuning summaries, dual column confirmation results, and sample preparation logs.

Stage 4 data validation includes all reviews performed in Stages 2A and 2B as well as review of raw data and chromatograms, target analyte identification confirmation, and calculation verifications of QC and sample results.

Data review and qualification actions were completed based on DoD Data Validation Guidelines Module 3 for PFAS (USDoD, 2020), general procedures described in USEPA Data Review and Validation Guidelines for PFAS (USEPA, 2018), and method specifications in the DoD QSM 5.3 and/or the referenced analytical methods when DoD specifications were not available. QC limits presented in the DoD QSM 5.3 and the QPP were used during the data evaluation. Data qualifications were completed, if necessary, in accordance with the USEPA guidelines and the professional judgment of the validator using the following qualifiers:

J = Analyte present; concentration is estimated
U = Analyte not detected at the associated detection limits
UJ = Analyte was not detected at the associated detection limits; however, the associated detection limit should be considered an estimate.
R = Sample result is considered unusable for project objectives

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

Validation reason codes were applied to results associated with QC measurements outside project QC goals where validation qualifiers were added to results. Final results are presented in Table 2. The validation qualification actions and associated validation reason codes applied to sample results are summarized in Table 3. The following data validation reason codes were applied to one or more sample results:

IAG = Ion ratio exceeds acceptance limits
MSD = Matrix spike (MS)/MSD RPD criteria exceeded
MSH = MS recovery greater than upper control limit
MSL = MS recovery less than lower control limit
RIS = Extracted internal standard recovery outside control limits

1.1 DATA USABILITY EVALUATION

The overall data quality and data usability for this data set is interpreted to meet the project objectives identified in the QAPP. A summary of data validation qualifications and interpretations on data usability are provided in this section. More detailed discussions are provided in Section 2.0.

PFAS compound detections were qualified estimated (J) and reporting limits (UJ) in a subset of samples based on associated QC results outside limits for MS/MSD recovery, MS/MSD precision, extracted internal standard (EIS) recovery, and/or ion abundance ratio. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as estimated values. The uncertainties that may occur from using estimated detections should be

considered during contamination assessment or evaluation of contaminant data against project action limits.

Recoveries within QSM and QPP project limits were reported for PFAS compounds in most MS/MSD analyses indicating accuracy goals were achieved in the tissue media with the following exceptions:

- The results for perfluorononanesulfonic acid (PFNS), perfluorodecane sulfonate (PFDS), and perfluorotridecanoic acid (PFTrDA) in sample LORNG_LMR_002_FT_FF_08032022 are qualified estimated due to low recoveries in the associated MS/MSD.
- The result for perfluorooctanesulfonic acid (PFOS) in sample LORNG_LT14_FT_SB_08052022 is qualified estimated due to a high recovery and RPD exceedance in the associated MS/MSD.
- The results for PFNS, PFDS, and PFTrDA in sample LORNG_LT14_FT_SB_08052022 are qualified estimated due to low recoveries and RPD exceedance in the associated MS/MSD.
- The results for N-methyl perfluorooctane sulfonamide (N-MeFOSA), PFDS, and PFTrDA in sample LORNG_NP_001_FT_BT_10052022 are qualified estimated due to low recoveries and RPD exceedance in the associated MS/MSD.

PFAS compound detections were qualified estimated (J) and reporting limits (UJ) in a subset of samples based on EIS recovery. In accordance with QSM and QPP objectives EIS recovery limits are 50-150 percent. Target compound results associated with recoveries less than 50 percent are qualified estimated. Non-detect results associated with recoveries less than 20 percent are qualified rejected. Affected samples and associated qualified results are summarized in Table 3 with code RIS. Results qualified estimated (J/UJ) are considered usable as estimated values. Results qualified rejected (R) are considered unusable for project objectives.

The following ion ratios did not meet the acceptance criteria and the results are considered estimated:

- Perfluorododecanoic acid (PFDoA) in sample LORNG_LT05_FT_BB_08052022;
- Perfluoroundecanoic acid (PFUnA) in samples LORNG_LT14_FT_SB_08052022 and LORNG_LT05A_FT_BB_08062022; and
- PFDoA, perfluorononanoic acid (PFNA), and perfluorodecanoic acid (PFDA) in sample LORNG_WBGB_004_FT_BT_08032022

Of the 700 individual PFAS results reported for the tissue event, 50 results were qualified as rejected. This represents an overall data completeness of 92.9% for the tissue event.

2.0 DATA VALIDATION QUALIFICATION ACTION SUMMARY

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the DoD QSM 5.3, the QPP, and/or analytical methods. Unless specified below, results are interpreted to be usable as reported by the laboratory.

2.1 PFAS

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance/Tuning
* LCS
  MS/MSD
* Field Duplicates
  Extracted Internal Standard Recovery
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
  Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
* Miscellaneous

* QC criteria were met for this parameter.

2.1.1 MS/MSD

The MS/MSD percent recoveries associated with PFNS (67), PFDS (40/37), and PFTrDA (64/58) in sample LORNG_LMR_002_FT_FF_08032022 were less than the lower control limits. The reporting limits for PFNS, PFDS, and PFTrDA in sample LORNG_LMR_002_FT_FF_08032022 were qualified as estimated (UJ).

The MS/MSD percent recovery associated with PFOS in sample LORNG_LT14_FT_SB_08052022 was greater than the upper control limits (175). The MS/MSD relative percent difference (RPD) exceeded the QC acceptance limit (33). The result for PFOS in sample LORNG_LT14_FT_SB_08052022 was qualified as estimated (J).

The MS/MSD percent recoveries associated with PFNS (64/34), PFDS (52), and PFTrDA (55/64) in sample LORNG_LT14_FT_SB_08052022 were less than the lower control limits. The MS/MSD RPD for PFNS exceeded the QC acceptance limit (34). The reporting limits for PFNS, PFDS, and PFTrDA in sample LORNG_LT14_FT_SB_08052022 were qualified as estimated (UJ).

The MS/MSD percent recoveries associated with N-MeFOSA (59), PFDS (43/37), and PFTrDA (59/55) in sample LORNG_NP_001_FT_BT_10052022 were less than the lower control limits. The MS/MSD RPD for N-MeFOSA exceeded the QC acceptance limit (61). The reporting limits for N-MeFOSA, PFDS, and PFTrDA in sample LORNG_NP_001_FT_BT_10052022 were qualified as estimated (UJ).

2.1.2 Extracted Internal Standard Recovery

The extracted internal standard (EIS) percent recoveries associated with N-MeFOSA (20 – 27) and PFDoA and PFTrDA (32 - 38) in samples LORNG_LT02_FT_BT_08032022, LORNG_LT13A_FT_BT_08032022, and LORNG_LT18_FT_BT_08032022 were less than the lower QC acceptance limit of 50. EIS recoveries associated with PFTeDA (8.2 – 9.4) were less than the rejection limit of 20 percent in the associated samples. N-MeFOSA, PFDoA, and PFTrDA were not detected in samples LORNG_LT02_FT_BT_08032022, LORNG_LT13A_FT_BT_08032022, and LORNG_LT18_FT_BT_08032022 and reporting limits were qualified as estimated (UJ). Non-detect results for PFTeDA in samples LORNG_LT02_FT_BT_08032022, LORNG_LT13A_FT_BT_08032022, and LORNG_LT18_FT_BT_08032022 were qualified as rejected (R).

Non-detect results for N-MeFOSA in the following samples were qualified as rejected (R) based on extracted internal standard (EIS) percent recoveries less than the DoD PFAS validation guideline limit of 20. EIS percent recoveries ranged from 5.0 to 19 in affected samples. Results for N-MeFOSA in the following samples are considered unusable for project objectives:

LORNG_GB_003_FT_BT_08032022
LORNG_LMR_002_FT_FF_08032022
LORNG_LT1006_FT_BT_08022022
LORNG_LT1006A_FT_BT_08032022
LORNG_LT13_FT_BT_08022022
LORNG_LT14A_FT_BT_08032022
LORNG_LMR_001_FT_FF_08042022
LORNG_LT02_FT_FF_08042022
LORNG_LT05_FT_BB_08052022
LORNG_LT05A_FT_BB_08062022
LORNG_LT15_FT_BT_08042022
LORNG_LT16_FT_BT_08042022
LORNG_LT17_FT_BT_08042022
LORNG_LT17_FT_CC_08042022
LORNG_LT18_FT_SB_08052022
LORNG_LT19_FT_BT_08042022
LORNG_WBGB_004_FT_BT_08032022

Non-detect results for PFTeDA in the following samples were qualified as rejected (R) based on extracted internal standard (EIS) percent recoveries less than the DoD PFAS validation guideline limit of 20. EIS percent recoveries ranged from 3.0 to 11 in affected samples. Results for PFTeDA in the following samples are considered unusable for project objectives:

LORNG_GB_003_FT_BT_08032022
LORNG_LMR_001_FT_BT_08032022
LORNG_LMR_002_FT_FF_08032022
LORNG_LT1001_FT_BT_08022022

LORNG_LT1006_FT_BT_08022022
LORNG_LT1006A_FT_BT_08032022
LORNG_LT13_FT_BT_08022022
LORNG_LT14A_FT_BT_08032022

LORNG_LMR_001_FT_FF_08042022
LORNG_LT02_FT_FF_08042022
LORNG_LT05_FT_BB_08052022
LORNG_LT05A_FT_BB_08062022
LORNG_LT14_FT_BT_08042022
LORNG_LT14_FT_SB_08052022
LORNG_LT15_FT_BT_08042022
LORNG_LT16_FT_BT_08042022
LORNG_LT17_FT_BT_08042022
LORNG_LT17_FT_CC_08042022
LORNG_LT18_FT_SB_08052022
LORNG_LT19_FT_BT_08042022
LORNG_WBGB_004_FT_BT_08032022
LORNG_NP_001_FT_BT_10052022

Non-detect results for PFTrDA in the following samples were qualified as rejected (R) based on extracted internal standard (EIS) percent recoveries less than the DoD PFAS validation guideline limit of 20. EIS percent recoveries were 19 in affected samples. Results for PFTrDA in the following samples are considered unusable for project objectives, and non-detect results for PFDoA in samples LORNG_LT15_FT_BT_08042022 and LORNG_LT16_FT_BT_08042022 are considered unusable for project objectives:

LORNG_LT15_FT_BT_08042022
LORNG_LT16_FT_BT_08042022
LORNG_WBGB_004_FT_BT_08032022

The EIS percent recoveries associated with PFDoA and PFTrDA (27) and N-MeFOSA (44) in sample LORNG_LT05_FT_BT_ON_10042022 were less than the lower QC acceptance limit of 50. The EIS recovery associated with PFTeDA was less than the rejection limit of 20 (9). The reporting limits for N-MeFOSA, PFDoA, and PFTrDA in sample LORNG_LT05_FT_BT_ON_10042022 were qualified as estimated (UJ). The non-detect result for PFTeDA in sample LORNG_LT05_FT_BT_ON_10042022 was qualified as rejected (R).

The EIS recovery associated with PFDoA and PFTrDA (47) in sample LORNG_LT05_FT_BT_OFF_10042022 was less than the lower QC acceptance limit of 50. The recovery of PFTeDA was less than the rejection limit of 20 (14). The reporting limits for PFDoA and PFTrDA in sample LORNG_LT05_FT_BT_OFF_10042022 were qualified as estimated (UJ). The non-detect result for PFTeDA in sample LORNG_LT05_FT_BT_OFF_10042022 was qualified as rejected (R).

Positive and non-detect results for the following PFAS compounds were qualified estimated (J/UJ) in a subset of samples based on extracted internal standard percent recoveries less than the lower QC acceptance limit of 50 (21 – 49). Qualified results are considered usable as estimated values and are summarized in Table 3:

8:2 Fluorotelomer sulfonate (8:2 FTS)
N-Ethyl perfluorooctanesulfonamidoacetic acid (N-EtFOSAA)
N-MeFOSA
N-Methyl perfluorooctanesulfonamidoacetic acid (N-MeFOSAA)

PFDS
PFDA
PFDoA
Perfluoroheptanesulfonic acid (PFHpS)
PFNS
PFNA
Perfluorooctane sulfonamide (PFOSA)
PFOS
PFTrDA
PFUnA

2.1.3 Compound Identification and Quantitation

The ion transition ratio was outside of the acceptance criteria for PFDoA in sample LORNG_LT05_FT_BB_08052022. Based on professional judgment the laboratory Q-qualified results were reported as estimated values (J) in the final data set.

The ion transition ratios were outside of the acceptance criteria for PFUnA in samples LORNG_LT14_FT_SB_08052022 and LORNG_LT05A_FT_BB_08062022. Based on professional judgment the laboratory Q-qualified results were reported as estimated values (J) in the final data set.

The ion transition ratios were outside of the acceptance criteria for PFDoA, PFNA, and PFDA in sample LORNG_WBGB_004_FT_BT_08032022. Based on professional judgment the laboratory Q-qualified results were reported as estimated values (J) in the final data set.

Data Validation and Usability Report
Loring PFAS Remedial Investigation
August - October 2022 Groundwater Sampling
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Groundwater samples were collected at the Former Loring Air Force Base in Limestone, Maine, in August - October 2022 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. Samples were submitted to SGS North America Laboratory in Orlando, Florida, Katahdin Analytical Services (KAS) in Scarborough, Maine, and Vista Analytical Laboratory (Vista) in El Dorado Hills, California, as summarized below.

SGS analyzed 307 samples for PFAS by Method M537, liquid chromatography tandem mass spectrometry compliant with Table B-15 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.3 (USDoD, 2019a).

KAS analyzed 47 samples for one or more of the following methods:

- Volatile Organic Compounds (VOCs) by SW846 Methods 8011 and 8260C
- Semivolatile Organic Compounds (SVOCs) by SW846 Method 8270D
- Polynuclear Aromatic Hydrocarbons (PAHs) and Select SVOCs by SW846 Methods 8270C Selected Ion Monitoring (SIM) and 8270D SIM
- Pesticides by SW846 Method 8081B
- Polychlorinated Biphenyls (PCBs) by SW846 Method 8082A
- Metals by SW846 Methods 6010C, 6020A, and 7470A
- Perchlorate (subcontracted to Eurofins Test America Laboratory (TAL) in South Burlington, Vermont) by SW846 Method 6850

Duplicates of groundwater samples LORNG_OW12002_09012022, LORNG_BW12005_09282022, LORNG_BW16002_10012022, and LORNG_OW17002_10022022 were collected and submitted to Vista Analytical Laboratory in El Dorado Hills, California (Vista) as interlaboratory comparison assessment samples. Vista analyzed four samples for PFAS by Method MS014.0, liquid chromatography tandem mass spectrometry compliant with Table B-15 of the USDoD Quality Systems Manual for Environmental Laboratories (QSM), Version 5.3 (USDoD, 2019a).

Sample event information included in this data validation report is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Summary of Data Validation Actions
- Table 4 – Field Duplicate RPD Summary
- Table 5 – Acronyms and Abbreviations
- Table 6 – Interlaboratory Comparison Assessment Summary

Data quality reviews were completed as described in the Quality Program Plan (QPP) Remedial Investigation PFAS Response (Wood, 2022). Data validation levels are established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019b). PFAS data were validated using Stage 2B procedures and all other chemistry data were validated using Stage 2A procedures. Ten percent of the PFAS and other chemistry data collected during the remedial investigation were validated using Stage 4 procedures. Validation checklists, documentation of sample recalculations, and qualification justification documentation are stored in the Wood project file.

Stage 2A data validation includes review of sample results forms, chain of custody (COC) and supporting records, laboratory receipt checklists, analytical holding time compliance, sample related quality control (QC) data forms (method blanks, laboratory control samples (LCS), matrix spike/matrix spike duplicates (MS/MSD), field and laboratory duplicates, surrogates, internal standards, post digestion spikes, and serial dilutions), and QC sample frequency checks.

Stage 2B data validation includes all reviews performed in a Stage 2A data validation as well as review of initial calibration summaries, continuing calibration verification summaries, instrument performance/tuning summaries, dual column confirmation results, and sample preparation logs.

Stage 4 data validation includes all reviews performed in Stages 2A and 2B as well as review of raw data and chromatograms, target analyte identification confirmation, and recalculation of QC and sample results.

Data review and qualification actions were completed based on DoD Data Validation Guidelines Module 3 for PFAS (USDoD, 2020), general procedures described in USEPA Data Review and Validation Guidelines for PFAS (USEPA, 2018), USEPA National Functional Guidelines for Superfund Data Review (USEPA, 2020a; USEPA, 2020b), and method specifications in the DoD QSM 5.3 and/or the referenced analytical methods when DoD specifications were not available. QC limits presented in the DoD QSM 5.3 and/or the QPP were used during the data evaluation. Data qualifications were completed, if necessary, in accordance with the USEPA guidelines and the professional judgment of the validator using the following qualifiers:

J = Analyte present; concentration is estimated
U = Analyte not detected at the associated detection limits
UJ = Analyte was not detected at the associated detection limits; however, the associated detection limit should be considered an estimate.
R = Sample result is considered unusable for project objectives

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

Validation reason codes were applied to results associated with QC measurements outside project QC goals where validation qualifiers were added to results. Final results are presented in Table 2. The validation qualification actions and associated validation reason codes applied to sample results are summarized in Table 3. The following data validation reason codes were applied to one or more sample results:

CBL = Continuing calibration blank concentration less than the reporting limit
CCL = Continuing calibration standard recovery less than lower control limit
CFHD = Field sample/split sample RPD outside project limit
EBG = Equipment blank concentration greater than the reporting limit
FDD = Field duplicate RPD criteria exceeded
HHL = Holding time exceeded
IAG = Ion abundance ratio outside calculated limits
ICD = Initial calibration relative standard deviation limit exceeded
ISL = Internal standard response less than the lower control limit
LBL = Laboratory blank contamination less than reporting limit
LBM = Laboratory blank contamination greater than reporting limit
LCD = Laboratory control sample (LCS) relative percent difference (RPD) criteria exceeded
LDD = Lab duplicate RPD criteria exceeded
LCL = LCS recovery less than lower control limit
MSD = Matrix spike (MS)/MSD RPD criteria exceeded
MSH = MS recovery greater than upper control limit
MSL = MS recovery less than lower control limit
RIS = Extracted internal standard recovery outside control limits
SGL = Surrogate recovery less than lower control limit
SGH = Surrogate recovery greater than the upper control limit
SVLL = Second source verification standard recovery less than lower control limit
TBL = Trip blank concentration less than the reporting limit

Interlaboratory split samples LORNG-OW12002-09012022SPLIT, LORNG_BW12005_09282022SPLIT, LORNG_BW16002_10012022SPLIT, and LORNG_OW17002_10022022SPLIT were submitted to Vista as an additional quality assurance step. Data validation was not planned for Vista data unless gross deviations were observed. No gross deviations were observed. Results are presented in this report to complete the interlaboratory comparison only and are not included in the final data set of the Loring RI sampling program and not presented on Table 2. The interlaboratory comparison assessment summary is included in Table 6. An evaluation of split sample results is presented in Section 2.1.9.

1.1 DATA USABILITY EVALUATION

The overall data quality and data usability for this data set is interpreted to meet the project objectives identified in the QAPP. Interpretations of data validation qualifications and data usability are provided below:

PFAS

Non-detect results for N-methyl perfluorooctane sulfonamide (N-MeFOSA) in the following samples were qualified as rejected (R) based on extracted internal standard (EIS) percent

recoveries less than the DoD PFAS validation guideline limit of 20. Results for N-MeFOSA in these samples are considered unusable for project objectives:

The non-detect result for perfluorooctane sulfonamide (PFOSA) in sample LORNG_NP-BW001D_10272022 was qualified as rejected (R) based on EIS percent recovery less than the DoD PFAS validation guideline limit of 20. The result for PFOSA in sample LORNG_NP-BW001D_10272022 is considered unusable for project objectives.

PFAS detections were qualified estimated (J) in a subset of samples based on associated QC results exceeding limits for MS/MSD recovery, EIS recovery, field or laboratory duplicate RPD, and/or transition ion ratio. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as qualified. The uncertainties that may occur from using estimated detections should be considered during contamination assessment or evaluation of contaminant data against project action limits.

Reporting limits for PFAS were qualified estimated (UJ) in a subset of samples based on associated QC results exceeding limits for EIS recovery, LCS/LCSD recovery, MS/MSD recovery and RPD, holding time exceedance, and/or continuing calibration verification (CCV) standard percent difference. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as qualified. The uncertainties and/or data gaps that may occur from using estimated reporting limits should be considered during contamination assessment or evaluation of contaminant data against project action limits.

Low concentration detections of 6:2 fluorotelomer sulfonate (6:2 FTS) in a subset of samples were qualified as non-detect (U) at the LOD or reported sample result due to concentrations of

6:2 FTS in the associated equipment blank greater than the LOD. Data gaps that may occur from using elevated reporting limits should be considered during contamination assessment. There is no project action limit for 6:2 FTS.

Of the 7,775 individual PFAS results reported for the groundwater event, a total of 60 results were qualified as rejected (R) and are interpreted to be unusable for project objectives. This represents a PFAS data completeness of 99.2% for the groundwater data set.

VOCs

Non-detect results for 1,2-dibromo-3-chloropropane (DBCP) and 1,2-dibromoethane (EDB) by Method 8011 were qualified rejected (R) in sample LORNG_JBW7338B_09272022_K due to a lab error in sample surrogate spiking resulting in surrogate percent recoveries of zero (0). Results for the affected analytes in this sample are considered unusable for project objectives.

Low concentration detections of methylene chloride in samples LORNG_JMW0445_08312022_K and LORNG_OW12001_09012022_K were qualified non-detect (U) at the LOD based on contamination in the associated trip blank. No impact on data usability was identified.

Low concentration detections of chloromethane in samples LORNG_BW12006_10012022_K and LORNG_OW21005_09142022_K were qualified non-detect (U) at the LOD based on contamination in the associated trip blank. No impact on data usability was identified.

Reporting limits for VOCs were qualified estimated (UJ) in a subset of samples based on associated QC results exceeding limits for holding time, LCS/LCSD recovery, second source verification recovery and/or continuing calibration percent difference. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as qualified. The uncertainties and/or data gaps that may occur from using estimated reporting limits should be considered during contamination assessment or evaluation of contaminant data against project action limits.

VOC detections were qualified estimated (J) in a subset of samples based on associated QC results exceeding limits for surrogate recovery, MS/MSD recovery, and/or MS/MSD precision. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as qualified. The uncertainties that may occur from using estimated detections should be considered during contamination assessment or evaluation of contaminant data against project action limits.

Of the 1,998 individual VOC results (Methods 8260C and 8011) reported for the groundwater event, two results were qualified as rejected. This represents a VOC data completeness of 99.9% for the groundwater event.

SVOCs

The non-detect results for 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, 4-nitrophenol, and benzoic acid in sample LORNG_BW05007_09072022_K were qualified rejected (R) based on matrix spike/matrix spike duplicate percent recoveries less than 10. Results for the affected analytes in this sample are considered unusable for project objectives.

The non-detect results for 2-chlorophenol and benzoic acid in samples LORNG_OW24001_09182022_K and LORNG_OW16001_09182022_K were rejected (R) based on an LCSD percent recovery less than 10. Results for the affected analytes in this sample are considered unusable for project objectives.

Non-detect results for a subset of SVOC analytes in samples LORNG_JMW7348_09282022_K, LORNG_JMW7338B_09272022_K, LORNG_JBW7339B_10012022_K, LORNG_OW07003_10022022_K, and LORNG_OW08002_09302022_K were rejected (R) due to LCS and/or LCSD percent recoveries less than 10. Results for the affected analytes in this sample are considered unusable for project objectives.

The non-detect result for benzidine in sample LORNG_OW24001_10262022_K was qualified rejected (R) due to LCS and/or LCSD percent recoveries less than 10 and an LCS/LCSD RPD greater than DoD limits. Results for the affected analytes in this sample are considered unusable for project objectives.

Non-detect results for 2,3,4,6-tetrachlorophenol, 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, 4-nitrophenol, benzidine, benzoic acid, and pyridine in samples LORNG_AA07MW01_09202022_K and LORNG_JMW0683_09192022_K were rejected (R) due to LCS and/or LCSD percent recoveries less than 10 and LCS/LCSD RPDs greater than DoD limits. Results for the affected analytes in these samples are considered unusable for project objectives.

Low level concentrations of bis(2-ethylhexyl) phthalate in samples LORNG_JPZ0349_09142022_K and LORNG_OW21005_09142022_K were qualified non-detect (U) at the LOD based on contamination in the associated method blank. No impact on data usability was identified.

Reporting limits for SVOCs were qualified estimated (UJ) in a subset of samples based on associated QC results exceeding limits for LCS/LCSD recovery, LCS/LCSD RPD, MS/MSD recovery, MS/MSD RPD, surrogate recovery, instrument calibration check standard recovery, instrument internal standard recovery, and/or holding time. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as qualified. The uncertainties and/or data gaps that may occur from using estimated reporting limits should be considered during contamination assessment or evaluation of contaminant data against project action limits.

SVOC detections were qualified estimated (J) in a subset of samples based on associated QC results exceeding limits for LCS/LCSD RPD, surrogate recovery, and/or holding time. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as qualified. The uncertainties that may occur from using estimated detections should be considered during contamination assessment or evaluation of contaminant data against project action limits.

Of the 896 individual SVOC results (Method 8270D) reported for the groundwater event, a total of 41 results were qualified as rejected (R) and are interpreted to be unusable for project objectives. This represents an SVOC data completeness of 95.4% for the groundwater data set.

PAHs and Select SVOCs by SIM

Non-detect results for pentachlorophenol in samples LORNG_AA07MW01_09202022_K and LORNG_JMW0683_09192022_K were qualified as rejected (R) based on LCS/LCSD percent recoveries less than the lower rejection limit. Results for pentachlorophenol in these samples are considered unusable for project objectives.

Reporting limits for PAHs and Select SVOCs by SIM were qualified estimated (UJ) in a subset of samples based on associated QC results exceeding limits for LCS/LCSD recovery, LCS/LCSD RPD, holding time, surrogate recovery, and/or instrument calibration check standard recovery. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as qualified. The uncertainties and/or data gaps that may occur from using estimated reporting limits should be considered during contamination assessment or evaluation of contaminant data against project action limits.

Of the 298 individual PAH and select SVOCs by SIM results (Methods 8270C SIM and 8270D SIM) reported for the groundwater event, 2 results were qualified as rejected. This represents a PAH and select SVOCs by SIM data completeness of 99.3% for the groundwater event.

Pesticides and PCBs

Reporting limits for pesticides were qualified estimated (UJ) in sample LORNG_BW05007_09072022_K based on sample extraction performed after expiration of the holding time. Qualified results are summarized in Table 3. Results are considered usable as qualified. The uncertainties and/or data gaps that may occur from using estimated reporting limits should be considered during contamination assessment or evaluation of contaminant data against project action limits.

Samples LORNG_OW16001_09182022_K and LORNG_OW24001_09182022_K were analyzed for PCBs by the lab but were not requested on the associated COC. Results were ND for all aroclors, and results were included in report tables.

Of the 91 individual pesticides and PCBs results reported for the groundwater event, no results were qualified as rejected. This represents a pesticides and PCBs data completeness of 100% for the groundwater event.

Metals

Low concentration detections of total antimony, chromium, thallium, mercury, vanadium, and zinc in one or more samples were qualified not detected (U) at the LOD or reported sample concentrations based on contamination in the associated laboratory method blanks. LODs for antimony, chromium, vanadium, and zinc are less than associated PALs, and results for antimony, chromium, vanadium, and zinc are considered usable for project objectives. Although the LODs for mercury in a subset of samples and selenium in all samples are greater than associated project action limits (PALs), MDLs are less than the PALs and results for mercury and selenium are interpreted to be usable for project objectives. The LOD and MDL for thallium are greater than the PAL. The potential data gaps that may occur from using non-detect results for thallium should be considered during contamination assessment.

Low concentration detections of total iron and/or chromium in one or more samples were qualified not detected (U) at the LOD or reported sample concentrations based on contamination in the associated instrument calibration blanks. LODs for iron and chromium are less than associated PALs, and results for iron and chromium are considered usable for project objectives.

Of the 395 individual total and dissolved metals results (Methods 6010C, 6020A, and 7470A) reported for the groundwater event, no results were qualified as rejected. This represents a metals data completeness of 100% for the groundwater event.

Perchlorate

No data qualifications were required for perchlorate. Of the 12 individual perchlorate results reported for the groundwater event, no results were qualified as rejected. This represents a perchlorate data completeness of 100% for the groundwater event.

Laboratory reporting limits (RLs) and/or MDLs for all samples in the groundwater event are less than the Project Action Limits (PALs) identified in the QAPP with the following exception:

- Reporting limits for a subset of VOCs, SVOCs, and metals as reported by the laboratory do not meet the PALs.

Of the overall 11,390 individual results reported for the groundwater event, 105 results were qualified as rejected. This represents an overall data completeness of 99.1% for the groundwater event.

2.0 DATA VALIDATION QUALIFICATION ACTION SUMMARY

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the DoD QSM 5.3, the QPP, and/or analytical methods. Unless specified below, results are interpreted to be usable as reported by the laboratory.

2.1 PFAS

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
  Holding Times
  QC Blanks
* Instrument Performance/Tuning
  LCS
  MS/MSD
  Field/Lab Duplicates
  Extracted Internal Standard Recovery
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
  Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
  Miscellaneous

* QC criteria were met for this parameter.

2.1.1 Holding Times

Reporting limits for a subset of target compounds in sample LORNG_JBW7314_09072022 were qualified as estimated (UJ). Reported results for these compounds were obtained from a sample extraction performed six days after expiration of the 28-day extraction holding time.

2.1.2 QC Blanks

Low concentration detections of 6:2 FTS in samples LORNG_OW24001_09182022, LORNG_JBW7335A_09192022, and LORNG_JMW0681_09192022 were qualified as non-detect (U) at the LOD or reported sample result due to concentrations of 6:2 FTS in the associated equipment blank greater than the LOD.

2.1.3 LCS

Reporting limits for N-ethyl perfluorooctanesulfonamidoacetic acid (N-EtFOSAA) in the following samples were qualified as estimated (UJ) based on an LCS percent recovery less than DoD Limits:

LORNG_JMW0416B_08302022
LORNG_JMW0806_08302022
LORNG_JMW0961_08292022
LORNG_JMW0992_08302022
LORNG_JPZ7808_08302022
LORNG_MMW0018B_08302022
LORNG_MMW0422_08302022
LORNG_MMW0423_08302022

LORNG_OW22001_08292022
LORNG_RFW-38_08302022

2.1.4 MS/MSD

The 6:2 FTS results in samples LORNG_BW06007_09012022 and LORNG_JBW7341B_09272022 were qualified as estimated (J) based on MS percent recovery less than DoD limits.

The reporting limits for perfluorodecane sulfonate (PFDS) and perfluorotridecanoic acid (PFTrDA) in sample LORNG_MMW0007B_09082022 were qualified as estimated (UJ) based on MSD percent recoveries less than DoD limits and MS/MSD relative percent differences greater than DoD limits.

The result for perfluoropentanesulfonic acid (PFPeS) in sample LORNG_BW07003_09272022 was qualified as estimated (J) based on an MS percent recovery less than DoD limits.

The result for perfluorohexanesulfonic acid (PFHxS) in sample and LORNG_JBW7341B_09272022 was qualified as estimated (J) based on an MSD percent recovery greater than DoD limits.

The reporting limit for PFTrDA in sample LORNG_JBW7614_09282022 was qualified as estimated (UJ) based on an MSD percent recovery less than DoD limits and an MS/MSD relative percent difference greater than DoD limits.

2.1.5 Field/Lab Duplicates

The results for perfluorooctanesulfonic acid (PFOS) in field sample LORNG_BSMW3S_09182022 and its associated field duplicate, LORNG_BSMW3S_09182022FD, were qualified as estimated (J) based on a field duplicate relative percent difference that exceeds DoD limits.

The results for 6:2 FTS in field samples LORNG_JMW6001_09282022 and LORNG_AA07MW02_09202022 and the associated field duplicates, LORNG_JMW6001_09282022FD and LORNG_AA07MW02_09202022FD, were qualified as estimated (J) based on field duplicate relative percent differences that exceed DoD limits.

The result for perfluorononanesulfonic acid (PFNS) in sample LORNG_OW07001_10042022 was qualified as estimated (J) based on a lab duplicate relative percent difference that exceeds DoD limits.

2.1.6 Extracted Internal Standard Recovery

The EIS percent recoveries associated with a subset of target compounds in multiple samples were less than the lower QC acceptance limit of 50. Results for target compounds reported above the DL are considered estimated (J). Reporting limits associated with non-detected target compounds with EIS recoveries between 20 and 50 are qualified as estimated (UJ). Results for non-detected target compounds with EIS recoveries below 20 were qualified as rejected (R) and are considered unusable for project objectives.

The non-detect result for PFOSA in sample LORNG_NP-BW001D_10272022 was qualified as rejected (R) based on an EIS percent recovery less than 50. The result for PFOSA in the affected sample is considered unusable for project objectives.

Non-detect results for N-MeFOSA in the following samples were qualified as rejected (R) based on EIS percent recoveries less than 20. Results for N-MeFOSA in these samples are considered unusable for project objectives:

LORNG_BW17006_10262022
LORNG_GC_BW002S_10252022

The result for perfluoroheptanesulfonic acid (PFHpS) in sample LORNG_OW07003_08232022 was qualified as estimated (J) based on an EIS percent recovery less than 50.

Reporting limits for perfluoroheptanoic acid (PFHpA) in the following samples were qualified as estimated (UJ) based on EIS percent recoveries less than 50:

LORNG_JPZ7808_08302022
LORNG_BW05011S_10262022
LORNG_GC_BW002D_10252022
LORNG_GC_BW002S_10252022
LORNG_NP-BW001D_10272022
LORNG_NP-BW001S_10272022

Reporting limits for PFHxS in samples LORNG_GC_BW002D_10252022, LORNG_GC_BW002S_10252022, and LORNG_NP-BW001D_10272022 were qualified as estimated (UJ) based on EIS percent recoveries less than 50.

Positive detections of PFHxS in samples LORNG_BW05011S_10262022 and LORNG_NP-BW001S_10272022 were qualified as estimated (J) based on EIS percent recoveries less than 50.

Reporting limits for perfluorohexanoic acid (PFHxA) in the following samples were qualified as estimated (UJ) based on EIS percent recoveries less than 50:

LORNG_JPZ7808_08302022
LORNG_BW05011S_10262022
LORNG_GC_BW002D_10252022
LORNG_GC_BW002S_10252022
LORNG_NP-BW001D_10272022
LORNG_NP-BW001S_10272022

The positive detection of PFHxA in sample LORNG_WBGB_BW001_10012022FD was qualified as estimated (J) based on an EIS percent recovery less than 50.

Reporting limits for PFNS in samples LORNG_OW07003_08232022, LORNG_BW18009_10012022, and LORNG_BW06006_10252022 were qualified as estimated (UJ) based on EIS percent recoveries less than 50.

Reporting limits for perfluorononanoic acid (PFNA) in samples LORNG_JPZ7808_08302022 and LORNG_GC_BW002S_10252022 were qualified as estimated (UJ) based on EIS percent recoveries less than 50.

The reporting limit for PFOS in sample LORNG_BW18009_10012022 was qualified as estimated (UJ) based on an EIS percent recovery less than 50.

Reporting limits for perfluorooctanoic acid (PFOA) in the following samples were qualified as estimated (UJ) based on EIS percent recoveries less than 50:

LORNG_JPZ7808_08302022
LORNG_BW05011S_10262022
LORNG_GC_BW002D_10252022
LORNG_GC_BW002S_10252022
LORNG_NP-BW001D_10272022
LORNG_NP-BW001S_10272022

The reporting limit for PFPeS in sample LORNG_MMW0002_08222022 was qualified as estimated (UJ) based on an EIS percent recovery less than 50.

Reporting limits for perfluoropentanoic acid (PFPeA) in samples LORNG_JPZ7808_08302022 and LORNG_OW17003_09202022 were qualified as estimated (UJ) based on EIS percent recoveries less than 50.

Positive detections of PFPeA in the following samples were qualified as estimated (J) based on EIS percent recoveries less than 50:

LORNG_MMW0422_08302022
LORNG_WBGB_BW001_10012022FD
LORNG_BW05011S_10262022

LORNG_BW06006_10252022

2.1.7 Continuing Calibration

Reporting limits for N-EtFOSAA in samples LORNG_JMW0416B_08302022 and LORNG_RFW1144_09172022 were qualified as estimated (UJ) due to one or more associated continuing calibration verification standards (CCVs) reporting a percent difference outside of DoD limits.

2.1.8 Miscellaneous

The transition ion ratio for PFOSA in sample LORNG_JMW0982_08232022 was outside the acceptable ion ratio range calculated from the associated daily calibration standard. The PFOSA result in the sample LORNG_JBW0982_08232022 was qualified estimated (J).

2.1.9 Interlaboratory Split Samples

Interlaboratory split samples were collected in association with the following groundwater samples:

LORNG_OW12002_09012022
LORNG_BW12005_09282022
LORNG_BW16002_10012022
LORNG_OW17002_10022022

A summary of split sample results is presented on Table 6. Comparison criteria are established in QPP Appendix E. The majority of PFAS target compounds were not detected in each of the samples. PFAS compounds that were detected showed general agreement between results reported by SGS and Vista. Ninety-six percent of compound results met comparability goals specified in the QPP. Four compound results had RPDs greater than the QPP goal of 30, with RPDs ranging from 36 to 71. Results for the split samples analyzed at Vista Laboratory are interpreted to confirm the accuracy of samples reported in the SGS data sets and no data qualifiers were applied as a result of the split sample evaluation.

2.2 VOCs

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
  Holding Times
  QC Blanks
* Instrument Performance/Tuning
  LCS
  MS/MSD
* Field Duplicates
  Surrogate
* Reporting Limits

* Electronic Data Verification
* Initial Calibration
  Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
* Miscellaneous

* QC criteria were met for this parameter.

2.2.1 Holding Times

Reporting limits for 1,2-dibromo-3-chloropropane and 1,2-dibromoethane in the following samples were qualified as estimated (UJ) due to analysis time exceeding DoD limits:

LORNG_BW05007_09072022_K
LORNG_JBW7711_09012022_K
LORNG_JBW7711_09012022FD_K
LORNG_JMW0445_08312022_K
LORNG_OW12001_09012022_K
LORNG_BW06005_09142022_K
LORNG_JPZ0349_09142022_K
LORNG_OW21005_09142022_K

2.2.2 QC Blanks

Methylene chloride was detected in the trip blank LORNG_TB12_08312022 (1.4 ug/L) associated with samples LORNG_JMW0445_08312022_K and LORNG_OW12001_09012022_K. The detections of methylene chloride in both samples were less than the LOD and results were qualified as not-detected (U) at the LOD.

Chloromethane was detected in the trip blank LORNG_TB13_09152022 (1.5 ug/L) associated with sample LORNG_OW21005_09142022_K. The detection of chloromethane in sample LORNG_OW21005_09142022_K was less than the LOD, and the result was qualified as not-detected (U) at the LOD.

Chloromethane was detected in the trip blank LORNG_TB16_10032022 (0.85 ug/L) associated with sample LORNG_BW12006_10012022_K. The detection of chloromethane in sample LORNG_BW12006_10012022_K was less than the LOQ and greater than the LOD, and the result was qualified as not-detected (U) at the reported sample result.

2.2.3 LCS

Reporting limits for iodomethane (methyl iodide) in the following samples were qualified as estimated (UJ) based on LCS and/or LCSD percent recoveries less than DoD limits:

LORNG_JBW7338B_09272022_K
LORNG_BW12006_10012022_K
LORNG_JBW7339B_10012022_K

LORNG_OW07003_10022022_K
LORNG_OW08002_09302022_K
LORNG_OW24001_10262022_K

2.2.4 MS/MSD

Results for 1,2,4-trimethylbenzene, cyclohexane, and methylcyclohexane in sample LORNG_JMW0445_08312022_K were qualified as estimated (J) based on MSD percent recoveries and/or MS/MSD relative percent differences greater than DoD limits.

2.2.5 Surrogate

Non-detect results for 1,2-dibromo-3-chloropropane and 1,2-dibromoethane in sample LORNG_JBW7338B_09272022_K were qualified as rejected (R) based on a surrogate percent recovery of 0.

Results for a subset of analytes in samples LORNG_JBW7348_09282022_K, LORNG_JBW7737B_09282022_K, and LORNG_JBW7339B_10012022_K were qualified as estimated (J) based on surrogate percent recoveries greater than DoD limits.

2.2.6 Continuing Calibration

Reporting limits for carbon tetrachloride, chloroethane, and viny acetate in samples LORNG_JMW0445_08312022_K and LORNG_OW12001_09012022_K were qualified as estimated (UJ) based on second source verification and/or continuing calibration percent differences less than DoD limits.

2.3 SVOCs

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
  Holding Times
  QC Blanks
  Instrument Performance/Tuning
  LCS
  MS/MSD
* Field Duplicates
  Surrogate
* Reporting Limits
* Electronic Data Verification
  Initial Calibration
  Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks

* Miscellaneous

* QC criteria were met for this parameter.

2.3.1 Holding Time

All results and reporting limits in sample LORNG_JBW7711_09012022_K and LORNG_JMW0445_08312022_K were qualified as estimated (J/UJ) due to extraction time exceeding method holding times.

2.3.2 QC Blanks

Bis(2-ethylhexyl)phthalate was detected below the LOQ in the method blanks associated with samples LORNG_JPZ0349_09142022_K and LORNG_OW21005_09142022_K. Detected concentrations of bis(2-ethylhexyl)phthalate in associated samples were less than the LODs and less than the reported concentrations in the method blanks. Results were qualified not-detected (U) at the LOD.

2.3.3 Instrument Performance/Tuning

The reporting limit for di-N-octylphthalate in sample LORNG_JPZ0349_09142022_K was qualified as estimated (UJ) based on the associated internal standard response outside of the range calculated from the initial calibration.

2.3.4 Laboratory Control Sample

Percent recoveries for a subset of SVOCs in the LCS/LCSDs associated with the following samples were less than the QC rejection limit of 10. The LCS/LCSD RPDs for several SVOCs were outside of the acceptance criteria. The affected SVOCs were not detected in the samples and the reporting limits were qualified as rejected (R).

LORNG_OW16001_09182022_K
LORNG_OW24001_09182022_K
LORNG_AA07MW01_09202022_K
LORNG_JMW0683_09192022_K
LORNG_JBW7338B_09272022_K
LORNG_JBW7348_09282022_K
LORNG_JBW7339B_10012022_K
LORNG_OW07003_10022022_K
LORNG_OW08002_09302022_K
LORNG_OW24001_10262022_K

The percent recoveries and relative percent differences for a subset of analytes in the LCS/LCSDs associated with the following samples were outside of project limits. Results and reporting limits for the affected analytes in the following samples were qualified estimated (J/UJ):

LORNG_OW16001_09182022_K

LORNG_OW24001_09182022_K
LORNG_AA07MW01_09202022_K
LORNG_JMW0683_09192022_K
LORNG_JBW7338B_09272022_K
LORNG_JBW7348_09282022_K
LORNG_JBW7339B_10012022_K
LORNG_OW07003_10022022_K
LORNG_OW08002_09302022_K
LORNG_OW24001_10262022_K

2.3.5 MS/MSD

Non-detect results for 2,4-dinitriphenol, 4,6-dinitro-2-methylphenol, 4-nitrophenol, and benzoic acid in sample LORNG_BW05007_09072022_K were qualified as rejected (R) based on MS/MSD percent recoveries less than the lower rejection limit.

Reporting limits for a subset of analytes in sample LORNG_BW05007_09072022_K were qualified as estimated (UJ) based on MS/MSD percent recoveries and or MS/MSD relative percent differences outside of DoD limits.

2.3.6 Surrogates

Reporting limits for subsets of analytes in samples LORNG_JBW7339B_10012022_K and LORNG_OW24001_10262022_K were qualified as estimated (UJ) based on surrogate percent recoveries less than DoD limits.

2.3.6 Initial/Continuing Calibration

Reporting limits for benzaldehyde, benzidine, and benzyl alcohol were qualified estimated (UJ) in samples LORNG_BW05007_09072022_K and LORNG_JMW0445_08312022_K based on instrument calibration check standard and/or second source verification standard recoveries outside project control limits.

2.4 PAHs and Select SVOCs by SIM

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
  Holding Times
* QC Blanks
* Instrument Performance/Tuning
  LCS
* MS/MSD
* Field Duplicates
  Surrogate

* Reporting Limits
* Electronic Data Verification
  Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
* Miscellaneous

* QC criteria were met for this parameter.

2.4.1 Holding Time

Positive and non-detect results for all target analytes in samples LORNG_JBW7711_09012022_K and LORNG_JMW0445_08312022_K were qualified as estimated (J/UJ) based on sample extraction after expiration of the seven day holding time.

The reporting limit for pentachlorophenol in sample LORNG_OW24001_10262022_K was qualified estimated (UJ) based on sample extraction after expiration of the seven day holding time.

2.4.2 LCS

Non-detect results for pentachlorophenol in samples LORNG_AA07MW01_09202022_K and LORNG_JMW0683_09192022_K were qualified as rejected (R) based on LCS/LCSD percent recovery less than the QC rejection limit of 10. The LCS/LCSD RPD was outside of the acceptance criteria.

Reporting limits for a subset of analytes in the following samples were qualified as estimated (UJ) based on LCS/LCSD percent recoveries and or LCS/LCSD relative percent differences outside of DoD limits:

LORNG_OW16001_09182022_K
LORNG_OW24001_09182022_K
LORNG_JBW7339B_10012022_K
LORNG_OW07003_10022022_K
LORNG_OW08002_09302022_K

2.4.3 Surrogate

Reporting limits for a subset of analytes in sample LORNG_OW24001_10262022_K were qualified as estimated (UJ) based on surrogate percent recoveries less than DoD limits.

2.4.4 Initial Calibration

Reporting limits for chrysene and dibenz(a,h)anthracene in samples LORNG_BW05007_09072022_K and LORNG_JMW0445_08312022_K were qualified as estimated (UJ) based on initial calibration percent recoveries less than DoD limits.

2.5 Pesticides

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
  Holding Times
* QC Blanks
* Instrument Performance/Tuning
* LCS
* MS/MSD
* Field Duplicates
* Surrogate
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
* Miscellaneous

* QC criteria were met for this parameter.

2.5.1 Holding Times

Reporting limits for all analytes in sample LORNG_BW05007_09072022_K were qualified as estimated (UJ) due to extraction exceeding method holding times.

2.6 PCBs

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance/Tuning
* LCS
* MS/MSD

* Field Duplicates
* Surrogate
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
* Miscellaneous

* QC criteria were met for this parameter.

2.7 Metals

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
  QC Blanks
* Instrument Performance/Tuning
* LCS
* MS/MSD
* Field Duplicates
* Surrogate
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Total/Dissolved Solids
* Raw Data Review and Calculation Checks
  Miscellaneous

* QC criteria were met for this parameter.

2.7.1 QC Blanks

Low concentration detections of total antimony, chromium, thallium, mercury, vanadium, and zinc in one or more samples were qualified not detected (U) at the LOD or reported sample concentrations based on contamination in the associated laboratory method blanks.

Low concentration detections of total iron and chromium in one or more samples were qualified not detected (U) at the LOD or reported sample concentrations based on contamination in the associated instrument calibration blanks.

2.8 Perchlorate

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance/Tuning
* LCS
* MS/MSD
* Field Duplicates
* Surrogate
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
* Miscellaneous

* QC criteria were met for this parameter.

Notes:

J = Concentration is estimated

U = Analyte not detected

UJ = Analyte not detected and considered estimated

R = Result is rejected

CBL = Continuing calibration blank concentration less than the reporting limit

CCL = Continuing calibration standard recovery less than lower control limit

EBG = Equipment blank concentration greater than the reporting limit

FDD = Field duplicate RPD criteria exceeded

HHL = Holding time exceeded

IAG = Ion abundance ratio outside calculated limits

ICD = Initial calibration relative standard deviation limit exceeded

ISL = Internal standard response less than the lower control limit

LBL = Laboratory blank contamination less than reporting limit

LBM = Laboratory blank contamination greater than reporting limit

LCD = Laboratory control sample (LCS) relative percent difference (RPD) criteria exceeded

LDD = Lab duplicate RPD criteria exceeded

LCL = LCS recovery less than lower control limit

MSD = Matrix spike (MS)/MSD RPD criteria exceeded

MSH = MS recovery greater than upper control limit

MSL = MS recovery less than lower control limit

RIS = Extracted internal standard recovery outside control limits

SGL = Surrogate recovery less than lower control limit

SGH = Surrogate recovery greater than the upper control limit

SVLL = Second source verification standard recovery less than lower control limit

TBL = Trip blank concentration less than the reporting limit

CFHD = Field sample/Split Sample RPD exceeds project limits

NG/L = nanogram per liter

UG/L = microgram per liter

Data Validation and Usability Report
Loring PFAS Remedial Investigation
August - October 2022 Lysimeter Water Sampling
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Lysimeter water samples were collected at the Former Loring Air Force Base in Limestone, Maine, in August and October 2022 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. Samples were submitted to SGS North America Laboratory in Orlando, Florida and Katahdin Analytical Services (KAS) in Scarborough, Maine, as summarized below.

SGS analyzed 16 samples for PFAS by Method M537, liquid chromatography tandem mass spectrometry compliant with Table B-15 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.3 (USDoD, 2019a).

KAS analyzed 16 samples for Total Organic Carbon (TOC) by Standard Method SM5310B.

Sample event information included in this data validation report is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Summary of Data Validation Actions
- Table 4 – Acronyms and Abbreviations

Data quality reviews were completed as described in the Quality Program Plan (QPP) Remedial Investigation PFAS Response (Wood, 2022). Data validation levels are established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019b). PFAS data were validated using Stage 2B procedures and all other chemistry data were validated using Stage 2A procedures. Ten percent of the PFAS and other chemistry data collected during the remedial investigation were validated using Stage 4 procedures. Validation checklists, documentation of sample recalculations, and qualification justification documentation are stored in the Wood project file.

Stage 2A data validation includes review of sample results forms, chain of custody (COC) and supporting records, laboratory receipt checklists, analytical holding time compliance, sample related quality control (QC) data forms (method blanks, laboratory control samples (LCS), matrix spike/matrix spike duplicates (MS/MSD), field and laboratory duplicates, surrogates, internal standards, post digestion spikes, and serial dilutions), and QC sample frequency checks.

Stage 2B data validation includes all reviews performed in a Stage 2A data validation as well as review of initial calibration summaries, continuing calibration verification summaries,

instrument performance/tuning summaries, dual column confirmation results, and sample preparation logs.

Stage 4 data validation includes all reviews performed in Stages 2A and 2B as well as review of raw data and chromatograms, target analyte identification confirmation, and recalculation of QC and sample results.

Data review and qualification actions were completed based on DoD Data Validation Guidelines Module 3 for PFAS (USDoD, 2020), general procedures described in USEPA Data Review and Validation Guidelines for PFAS (USEPA, 2018), USEPA National Functional Guidelines for Superfund Data Review (USEPA, 2020a; USEPA, 2020b), and method specifications in the DoD QSM 5.3 and/or the referenced analytical methods when DoD specifications were not available. QC limits presented in the DoD QSM 5.3 and/or the QPP were used during the data evaluation. Data qualifications were completed, if necessary, in accordance with the USEPA guidelines and the professional judgment of the validator using the following qualifiers:

J = Analyte present; concentration is estimated
U = Analyte not detected at the associated detection limits
UJ = Analyte was not detected at the associated detection limits; however, the associated detection limit should be considered an estimate.
R = Sample result is considered unusable for project objectives

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

Validation reason codes were applied to results associated with QC measurements outside project QC goals where validation qualifiers were added to results. Final results are presented in Table 2. The validation qualification actions and associated validation reason codes applied to sample results are summarized in Table 3. The following data validation reason codes were applied to one or more sample results:

HHL = Holding time exceeded
RIS = Extracted internal standard recovery outside control limits

1.1 DATA USABILITY EVALUATION

The overall data quality and data usability for this data set is interpreted to meet the project objectives identified in the QAPP. Interpretations of data validation qualifications and data usability are provided below:

PFAS
Non-detect results for N-methyl perfluorooctane sulfonamide (N-MeFOSA) in the following samples were qualified as rejected (R) based on extracted internal standard (EIS) percent recoveries less than the DoD PFAS validation guideline limit of 20. Results for N-MeFOSA in these samples are considered unusable for project objectives:

LORNG_LYS01007D_08232022
LORNG_LYS01007S_08222022
LORNG_LYS05012D_08232022
LORNG_LYS05012S_08232022
LORNG_LYS07007D_08222022
LORNG_LYS07007DDUP_08222022
LORNG_LYS07007S_08222022
LORNG_LYS07007SDUP_08222022

The non-detect results for perfluorotetradecanoic acid (PFTeDA) and perfluorooctane sulfonamide (PFOSA) in sample LORNG_LYS07007S_08222022 were qualified as rejected (R) based on extracted internal standard (EIS) percent recoveries less than the DoD PFAS validation guideline limit of 20. Results for PFTeDA and PFOSA in the affected sample are considered unusable for project objectives.

The non-detect result for PFOSA in sample LORNG_LYS01007D_08232022 was qualified as rejected (R) based on an extracted internal standard (EIS) percent recovery less than the DoD PFAS validation guideline limit of 20. The PFOSA result in the affected sample is considered unusable for project objectives.

PFAS detections were qualified estimated (J) in a subset of samples based on associated QC results exceeding limits for EIS recovery and/or method holding time exceedance. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as qualified. The uncertainties that may occur from using estimated detections should be considered during contamination assessment or evaluation of contaminant data against project action limits.

Reporting limits for PFAS were qualified estimated (UJ) in a subset of samples based on associated QC results exceeding limits for EIS recovery and/or method holding time exceedance. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as qualified. The uncertainties and/or data gaps that may occur from using estimated reporting limits should be considered during contamination assessment or evaluation of contaminant data against project action limits.

Of the 400 individual PFAS results reported for the lysimeter water sampling event, a total of 11 results were qualified as rejected (R) and are interpreted to be unusable for project objectives. This represents a PFAS data completeness of 97.3% for the lysimeter water data set.

TOC

No data qualifications were required for TOC results. Of the 16 individual TOC results reported for the lysimeter water sampling event, no results were qualified as rejected. This represents a TOC data completeness of 100% for the lysimeter water sampling event.

Of the overall 416 individual results reported for the lysimeter water sampling event, 11 results were qualified as rejected. This represents an overall data completeness of 97.4% for the lysimeter water sampling event.

2.0 DATA VALIDATION QUALIFICATION ACTION SUMMARY

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the DoD QSM 5.3, the QPP, and/or analytical methods. Unless specified below, results are interpreted to be usable as reported by the laboratory.

2.1 PFAS

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
  Holding Times
* QC Blanks
* Instrument Performance/Tuning
* LCS
* MS/MSD
* Field Duplicates
  Extracted Internal Standard Recovery
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
* Miscellaneous

* QC criteria were met for this parameter.

2.1.1 Holding Times

All results and reporting limits reported for sample LORNG_LYS07007D_08222022 were qualified as estimated (J/UJ) due to sample extraction after expiration of the method holding time.

2.1.2 Extracted Internal Standard Recovery

EIS percent recoveries associated with a subset of target compounds in multiple samples were less than the lower QC acceptance limit of 50. Results for target compounds reported above the DL are considered estimated (J). Reporting limits associated with non-detected target compounds with EIS recoveries between 20 and 50 are qualified as estimated (UJ). Results for non-detected target compounds with EIS recoveries below 20 were qualified as rejected (R) and are considered unusable for project objectives.

The non-detect results for N-MeFOSA in the following samples were rejected (R) based on EIS percent recoveries less than 20:

LORNG_LYS01007D_08232022
LORNG_LYS01007S_08222022
LORNG_LYS05012D_08232022
LORNG_LYS05012S_08232022
LORNG_LYS07007D_08222022
LORNG_LYS07007DDUP_08222022
LORNG_LYS07007S_08222022
LORNG_LYS07007SDUP_08222022

Non-detect results for PFOSA in samples LORNG_LYS01007D_08232022 and LORNG_LYS07007S_08222022 were qualified as rejected (R) based on EIS percent recoveries less than 20.

The non-detect result for PFTeDA in sample LORNG_LYS07007S_08222022 was qualified as rejected (R) based on an EIS percent recovery less than 20.

Results for 6:2 fluorotelomer sulfonic acid (6:2 FTS) in the following samples were qualified as estimated (J) based on EIS percent recoveries less than 50 in the initial runs of the associated samples:

LORNG_LYS07007D_08222022
LORNG_LYS07007DDUP_08222022
LORNG_LYS07007D_10032022
LORNG_LYS07007DDUP_10032022
LORNG_LYS07007SDUP_10032022

The result for 8:2 fluorotelomer sulfonic acid (8:2 FTS) in sample LORNG_LYS07007S_08222022 was qualified as estimated (J) based on an EIS percent recovery less than 50.

Reporting limits for N-ethyl perfluorooctanesulfonamidoacetic acid (N-EtFOSAA) in samples LORNG_LYS05012S_08232022, LORNG_LYS07007S_08222022, and LORNG_LYS07007SDUP_08222022 were qualified as estimated (UJ) based on EIS percent recoveries less than 50.

Reporting limits for N-MeFOSA in samples LORNG_LYS01007D_10032022, LORNG_LYS01007S_10032022, and LORNG_LYS07007D_10032022 were qualified as estimated (UJ) based on EIS percent recoveries less than 50.

Reporting limits for N-methyl perfluorooctanesulfonamidoacetic acid (N-MeFOSAA) in samples LORNG_LYS07007DDUP_08222022 and LORNG_LYS07007S_08222022 were qualified as estimated (UJ) based on EIS percent recoveries less than 50.

The results for perfluorobutanoic acid (PFBA) in samples LORNG_LYS01007S_08222022, LORNG_LYS05012S_08232022, and LORNG_LYS07007S_08222022 were qualified as estimated (J) based on EIS percent recoveries less than 50.

Results for perfluorodecanoic acid (PFDA) and perfluoroheptanoic acid (PFHpA) in sample LORNG_LYS07007S_08222022 were qualified as estimated (J) based on EIS percent recoveries less than 50.

The reporting limit for perfluorodecane sulfonate (PFDS) in sample LORNG_LYS05012S_10032022 was qualified as estimated (UJ) based on an EIS percent recovery less than 50.

The reporting limit for perfluoroundecanoic acid (PFUNA) in sample LORNG_LYS07007S_08222022 was qualified as estimated (UJ) based on EIS percent recovery less than 50.

The reporting limits for perfluorododecanoic acid (PFDOA) in samples LORNG_LYS01007S_08222022, LORNG_LYS07007S_08222022, and LORNG_LYS07007SDUP_08222022 were qualified as estimated (UJ) based on EIS percent recoveries less than 50.

The results for perfluoroheptane sulfonic acid (PFHpS) in samples LORNG_LYS01007S_10032022 and LORNG_LYS05012S_10032022 were qualified as estimated (J) based on EIS percent recoveries less than 50.

The result for perfluorohexanesulfonic acid (PFHxS) in sample LORNG_LYS01007S_10032022 was qualified as estimated (J) based on an EIS percent recovery less than 50.

Results for perfluorononanesulfonic acid (PFNS) and perfluorononanoic acid (PFNA) in sample LORNG_LYS05012S_10032022 were qualified as estimated (J) based on an EIS percent recovery less than 50.

Reporting limits for PFOSA in samples LORNG_LYS07007D_08222022 and LORNG_LYS07007DDUP_08222022 were qualified as estimated (UJ) based on EIS percent recoveries less than 50.

The result for PFOSA in sample LORNG_LYS01007S_10032022 was qualified as estimated (J) based on an EIS percent recovery less than 50.

Reporting limits for perfluorotetradecanoic acid (PFTeDA) in the following samples were qualified as estimated (UJ) based on EIS percent recoveries less than 50:

LORNG_LYS01007D_08232022
LORNG_LYS01007S_08222022
LORNG_LYS07007D_08222022
LORNG_LYS07007SDUP_08222022
LORNG_LYS01007S_10032022

Reporting limits for perfluorotridecanoic acid (PFTrDA) in samples LORNG_LYS01007S_08222022, LORNG_LYS07007S_08222022, and LORNG_LYS07007SDUP_08222022 were qualified as estimated (UJ) based on EIS percent recoveries less than 50.

2.2 TOC

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance/Tuning
* LCS
* MS/MSD
* Field Duplicates
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
* Miscellaneous

* QC criteria were met for this parameter.

Data Validation and Usability Report
Loring PFAS Remedial Investigation
August - September 2022 Soil Sampling
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Soil samples were collected at the Former Loring Air Force Base in Limestone, Maine, in August – September 2022 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. Samples were submitted to SGS North America Laboratory in Orlando, Florida, Katahdin Analytical Services (KAS) in Scarborough, Maine, and Vista Analytical Laboratory (Vista) in El Dorado Hills, California, as summarized below.

SGS analyzed 244 samples for PFAS by Method M537, liquid chromatography tandem mass spectrometry (LC/MS/MS) compliant with Table B-15 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.3 (USDoD, 2019a).

KAS analyzed 31 samples for one or more of the following methods:

- Volatile Organic Compounds (VOCs) by SW846 Method 8260C
- Semivolatile Organic Compounds (SVOCs) by SW846 Method 8270D
- Polynuclear Aromatic Hydrocarbons (PAHs) and Select SVOCs (Pentachlorophenol and 1,4-Dioxane) by SW846 Methods 8270C Selected Ion Monitoring (SIM) and 8270D SIM
- Pesticides by SW846 Method 8081B
- Polychlorinated Biphenyls (PCBs) by SW846 Method 8082A
- Metals by SW846 Methods 6010C and 7470B
- Perchlorate (subcontracted to Eurofins Test America Laboratory (TAL) in South Burlington, Vermont) by SW846 Method 6850
- Total Organic Carbon (TOC) by Lloyd Kahn/9060A
- Percent Solids by SM2540G and ASTM D2216

Split samples were submitted to Vista Analytical Laboratory in El Dorado Hills, California (Vista) as an interlaboratory comparison assessment sample. Vista analyzed samples for PFAS by Method MS014.0, liquid chromatography tandem mass spectrometry compliant with Table B-15 of the USDoD Quality Systems Manual for Environmental Laboratories (QSM), Version 5.3 (USDoD, 2019a). An evaluation of split sample results is presented in Section 2.1.5.

Sample event information included in this data validation report is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Summary of Data Validation Actions
- Table 4 – Field Duplicate RPD Summary
- Table 5 – Acronyms and Abbreviations

- Table 6 – Interlaboratory Comparison Assessment Summary

Data quality reviews were completed as described in the Quality Program Plan (QPP) Remedial Investigation PFAS Response (Wood, 2022). Data validation levels are established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019b). PFAS data were validated using Stage 2B procedures and all other chemistry data were validated using Stage 2A procedures. Ten percent of the PFAS and other chemistry data collected during the remedial investigation were validated using Stage 4 procedures. Validation checklists, documentation of raw data and calculation checks, and qualification justification documentation are stored in the WSP project file.

Stage 2A data validation includes review of sample results forms, chain of custody (COC) and supporting records, laboratory receipt checklists, analytical holding time compliance, sample related quality control (QC) data forms (method blanks, laboratory control samples (LCS), matrix spike/matrix spike duplicates (MS/MSD), field and laboratory duplicates, surrogates, internal standards, post digestion spikes, and serial dilutions), and QC sample frequency checks.

Stage 2B data validation includes all reviews performed in a Stage 2A data validation as well as review of initial calibration summaries, continuing calibration verification summaries, instrument performance/tuning summaries, dual column confirmation results, and sample preparation logs.

Stage 4 data validation includes all reviews performed in Stages 2A and 2B as well as review of raw data and chromatograms, target analyte identification confirmation, and recalculation of a subset of QC and sample results.

Data review and qualification actions were completed based on DoD Data Validation Guidelines Module 3 for PFAS (USDoD, 2020), general procedures described in USEPA Data Review and Validation Guidelines for PFAS (USEPA, 2018) and USEPA National Functional Guidelines for Superfund Data Review (USEPA, 2020a; USEPA, 2020b), and method specifications in the DoD QSM 5.3 and/or the referenced analytical methods when DoD specifications were not available. QC limits presented in the DoD QSM 5.3 and the QPP were used during the data evaluation. Data qualifications were completed, if necessary, in accordance with the USEPA guidelines and the professional judgment of the validator using the following qualifiers:

J = Analyte present; concentration is estimated
U = Analyte not detected at the associated detection limits
UJ = Analyte was not detected at the associated detection limits; however, the associated detection limit should be considered an estimate.
R = Sample result is considered unusable for project objectives

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

Validation reason codes were applied to results associated with QC measurements outside project QC goals where validation qualifiers were added to results. Final results are presented in Table 2. The validation qualification actions and associated validation reason codes applied to sample results are summarized in Table 3. The following data validation reason codes were applied to one or more sample results:

CCL = Continuing calibration standard recovery less than lower control limit
CFD = Dual column RPD criteria exceeded
DS = Serial dilution percent difference exceeded control limit
FDD = Field duplicate RPD criteria exceeded
ICD = Initial calibration RSD exceeded
ISL = Internal standard response less than lower control limit
LBM = Laboratory blank contamination greater than reporting limit
LCD = Laboratory control sample (LCS) relative percent difference (RPD) criteria exceeded
LCH = LCS recovery greater than upper control limit
LCL = LCS recovery less than lower control limit
MSD = Matrix spike (MS)/MSD RPD criteria exceeded
MSH = MS recovery greater than upper control limit
MSL = MS recovery less than lower control limit
PDSL = post digestion spike (PDS) recovery less than lower control limit
RIS = Extracted internal standard recovery outside control limits
SGL = Surrogate recovery less than lower control limit
SVLL = Second source verification standard recovery less than lower control limit
TBL = Trip blank concentration less than reporting limit

Interlaboratory split samples were submitted to Vista as an additional quality assurance step. Data validation was not planned for Vista data unless gross deviations were observed. No gross deviations were observed. Results are presented in this report to complete the interlaboratory comparison only and are not included in the final data set of the Loring RI sampling program and not presented on Table 2. The interlaboratory comparison assessment summary is included in Table 6.

1.1 DATA USABILITY EVALUATION

The overall data quality and data usability for this data set is interpreted to meet the project objectives identified in the QPP. A summary of data validation qualifications and interpretations on data usability are provided in this section. More detailed discussions are provided in Section 2.0.

An error was made in the field and the wrong location was initially assigned to samples LORNG_SB14007_0-1_08172022 and LORNG_SB14007_8-10_08172022. Subsequently the locations were changed from SB14006 to SB14007 and a request to revise the data package was submitted to the lab on 1/4/2023.

PFAS compound detections were qualified estimated (J) and reporting limits (UJ) in a subset of samples based on associated QC results outside limits for MS/MSD recovery, field duplicate precision, and extracted internal standard (EIS) recovery. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as estimated values.

The uncertainties that may occur from using estimated detections should be considered during contamination assessment or evaluation of contaminant data against project action limits.

The split samples analyzed at Vista Laboratory are interpreted to confirm the accuracy of samples reported in the SGS data sets. Split sample results are presented in Table 6 and discussed in Section 2.1.5.

A total of 34 PFAS field duplicates were collected from soil locations during the sampling period. Perfluorooctanesulfonic acid (PFOS) was the primary compound detected. There were detections in 17 pairs where RPDs were calculated, and 15 of 17 field duplicate pairs met the project RPD precision goal of ≤ 50 indicating that good precision was met for PFAS in the soil media. Field duplicate results are summarized on Table 4. Field duplicate results within QPP project limits were reported for PFAS compounds with the following exceptions:

- The results for PFOS in samples LORNG_SB01015_8-10_08082022 and LORNG_SB01015_8-10_08082022FD are qualified estimated due to RPDs that exceed project limits.
- The results for 6:2 fluorotelomer sulfonate (6:2FTS), perfluorohexane sulfonic acid (PFHxS), and PFOS in samples LORNG_SB05016_0-1_08052022 and associated field duplicate LORNG_SB05016_0-1_08052022FD are qualified estimated due to RPDs that exceed project limits.

Recoveries within QSM and QPP project limits were reported for PFAS compounds in most MS/MSD analyses indicating accuracy goals were achieved in the soil media with the following exceptions:

- The result for PFOS in sample LORNG_SB06006_7.5-8.5_80222 is qualified estimated due to a high recovery and RPD exceedance in the associated MS/MSD.
- The result for PFOS in sample LORNG_SB01006_8-10_08042022 is qualified estimated due to a high recovery in the associated MS/MSD.
- The result for PFOS in sample LORNG_SB05025_0-1_08172022 is qualified estimated due to a low recovery in the associated MS/MSD.
- The result for PFOS in sample LORNG_SB01017_0-1_09142022 is qualified estimated due to a high recovery in the associated MS.

PFAS compound detections were qualified estimated (J) and reporting limits (UJ) in a subset of samples based on EIS recovery. In accordance with QSM and QPP objectives EIS recovery limits are 50-150 percent. Target compound results and reporting limits associated with recoveries less than 50 percent are qualified estimated. Non-detect results associated with recoveries less than 20 percent are qualified rejected. Affected samples and associated qualified results are summarized in Table 3 with code RIS. Results qualified estimated (J/UJ) are considered usable as estimated values. Results qualified rejected (R) are considered unusable. The target compound N-methyl perfluorooctane sulfonamide (N-MeFOSA) in sample LORNG_SB13025_0-1_08172022 was the only rejected PFAS result.

Of the 6,100 individual PFAS results reported for the soil event, one result was qualified as rejected. This represents an overall data completeness of 99% for the soil event.

Sample results for non-PFAS methods were qualified estimated (J) and reporting limits (UJ) in a subset of samples based on associated QC results outside limits for instrument calibration, LCS recovery and precision, MS/MSD recovery and precision, field duplicate precision, surrogate recovery, internal standard response, dual column confirmation differences, post digestion spike recovery, and/or serial dilution differences. Low concentration detections in some samples are qualified due to detections in associated blanks in accordance with validation guidelines. Affected samples and associated qualified results and validation action reason codes are summarized in Table 3. Results are considered usable as estimated values. The uncertainties that may occur from using estimated detections should be considered during contamination assessment or evaluation of contaminant data against project action limits.

Benzidine is considered rejected (R) in a subset of the samples due to the compound not being recovered in the initial calibration verification (ICV) standard. Results are summarized on Table 3.

Results for total organic carbon in samples LORNG_SB20009_0-1_08082022_K and LORNG_SB20009_0-1_08082022FD_K are considered estimated due to an RPD that exceeds project limits. No impact on data usability was identified.

Of the 9,498 individual results reported for the soil event, five results were qualified as rejected. This represents an overall data completeness of 99% for the soil event.

Analytical results are reported using laboratory detection limits that are defined in the QPP. These include the LOQ, LOD, and DL. Project Action Limits (PALs) are also identified in the QPP for analytes with established screening levels, guidance values, or standards. In the QPP PALs for a subset of VOCs, SVOCs, and metals are identified as less than the DL reported by the laboratory. Analytical results for these target analytes are reported to the lowest achievable detection limit provided by the analytical method.

2.0 DATA VALIDATION QUALIFICATION ACTION SUMMARY

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the DoD QSM 5.3, the QPP, and/or analytical methods. Unless specified below, results are interpreted to be usable as reported by the laboratory.

2.1 PFAS

Data were evaluated based on the following parameters:

* Lab Report Narrative
  Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times

* QC Blanks
* Instrument Performance/Tuning
* LCS
  MS/MSD
  Field Duplicates
  Extracted Internal Standard Recovery
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks

* QC criteria were met for this parameter.

2.1.1 Data Completeness and COC Review

An error was made in the field and the wrong location was initially assigned to samples LORNG_SB14007_0-1_08172022 and LORNG_SB14007_8-10_08172022. Subsequently the locations were changed from SB14006 to SB14007 and a request to revise the data package was submitted to the lab on 1/4/2023.

2.1.2 MS/MSD

The percent recovery of perfluorooctanesulfonic acid (PFOS)[141] in the MS/MSD associated with sample LORNG_SB06006_7.5-8.5_80222 was greater than the upper QC acceptance limits. The MS/MSD RPD (38) exceeded the QC acceptance limit for PFOS. The result for PFOS in sample LORNG_SB06006_7.5-8.5_80222 was qualified as estimated (J).

The percent recovery of PFOS (156) in the MS/MSD associated with sample LORNG_SB01006_8-10_08042022 was greater than the upper QC acceptance limits. The result for PFOS in sample LORNG_SB01006_8-10_08042022 was qualified as estimated (J).

The percent recovery of PFOS in the MS/MSD associated with sample LORNG_SB05025_0-1_08172022 (38) was less than the lower QC acceptance limits (38). The result for PFOS in sample LORNG_SB05025_0-1_08172022 was qualified as estimated (J).

The percent recovery of PFOS (151) in the MS associated with sample LORNG_SB01017_0-1_09142022 greater than the QC acceptance limits. The result for PFOS in sample LORNG_SB01017_0-1_09142022 was qualified as estimated (J).

2.1.3 Field Duplicates

The field duplicate RPD for PFOS (85) in sample LORNG_SB01015_8-10_08082022 and its associated field duplicate LORNG_SB01015_8-10_08082022FD exceeded the project limit of 50. The results for PFOS in samples LORNG_SB01015_8-10_08082022 and LORNG_SB01015_8-10_08082022FD were qualified as estimated (J).

The field duplicate RPD for 6:2FTS (118), 8:2 fluorotelomer sulfonate (8:2FTS) (121), perfluorohexane sulfonic acid (PFHxS) (108), and perfluorooctane sulfonic acid (PFOS) (133) between sample LORNG_SB05016_0-1_08052022 and its associated field duplicate LORNG_SB05016_0-1_08052022FD exceeded QC limits. The results for 6:2FTS, 8:2FTS, PFHxS, and PFOS in the associated samples were qualified as estimated (J).

2.1.4 Extracted Internal Standard Recovery

The EIS percent recovery associated with N-MeFOSA (39) in sample LORNG_SB06006_0-1_08022022 was less than the lower QC acceptance limit of 50. N-MeFOSA was not detected in sample LORNG_SB06006_0-1_08022022 and the reporting limit was qualified as estimated (UJ).

The EIS percent recovery associated with N-MeFOSAA (42) in sample LORNG_SB01006_0-1_08042022 was less than the lower QC acceptance limit of 50. N-MeFOSA was detected in sample LORNG_SB01006_0-1_08042022 and the result was qualified as estimated (J).

The EIS percent recoveries associated with N-MeFOSAA (40-41) and N-ethyl perfluorooctancesulfonamidoacetic acid (N-EtFOSAA) (42-43) in samples LORNG_SB01006_8-10_08042022 and LORNG_SB13021_0-1_08032022 were less than the lower QC acceptance limit of 50. N-MeFOSAA and Et-FOSAA were not detected in samples LORNG_SB01006_8-10_08042022 and LORNG_SB13021_0-1_08032022 and the reporting limits were qualified as estimated (UJ).

The EIS percent recoveries associated with N-MeFOSA in samples LORNG_SB17008_13-15_08042022 (30) and LORNG_SB05018_0-1_08042022FD (48) were less than the lower QC acceptance limit of 50. N-MeFOSA was not detected in samples LORNG_SB17008_13-15_08042022 and LORNG_SB05018_0-1_08042022FD and the reporting limits were qualified as estimated (UJ).

The EIS percent recoveries associated with N-MeFOSA (42) and perfluorooctane sulfonamide (PFOSA) (44) in sample LORNG_SB17008_8-10_08042022 were less than the lower QC acceptance limit of 50. N-MeFOSA and PFOSA were not detected in sample LORNG_SB17008_8-10_08042022 and the reporting limits were qualified as estimated (UJ).

The EIS percent recoveries associated with N-MeFOSA in samples LORNG_SB01015_0-1_08082022 (46) and LORNG_SB01015_0-1_08082022FD (47) were less than the lower QC acceptance limit of 50. N-MeFOSA was not detected in samples LORNG_SB01015_0-1_08082022 and LORNG_SB01015_0-1_08082022FD were and the reporting limits were qualified as estimated (UJ).

The EIS percent recoveries associated with N-MeFOSA (34-39) and PFOSA (33-45) in samples LORNG_SB22004_0-1_08052022 and LORNG_SB22004_8-10_08052022 were less than the lower QC acceptance limit of 50. N-MeFOSA and PFOSA were not detected in sample LORNG_SB22004_0-1_08052022 and LORNG_SB22004_8-10_08052022 and the reporting limits were qualified as estimated (UJ).

The EIS percent recoveries associated with N-MeFOSA in samples LORNG_SB22004_13-15_08052022 (37) and LORNG_SB22004_8-10_08052022FD (45) were less than the lower QC acceptance limit of 50. N-MeFOSA was not detected in sample LORNG_SB22004_13-15_08052022 and LORNG_SB22004_8-10_08052022FD and the reporting limits were qualified as estimated (UJ).

The EIS percent recovery associated with N-MeFOSA (45) in sample LORNG_SB07018_8-10_08202022FD was less than the lower QC acceptance limit of 50. N-MeFOSA was not detected in sample LORNG_SB07018_8-10_08202022FD and the reporting limits were qualified as estimated (UJ).

The EIS percent recoveries associated with N-MeFOSA (36) and PFOSA (41) in sample LORNG_SB07018_8-10_08202022 were less than the lower QC acceptance limit of 50. N-MeFOSA and PFOSA were not detected in sample LORNG_SB07018_8-10_08202022 and the reporting limits were qualified as estimated (UJ).

The EIS percent recoveries associated with N-MeFOSA in samples LORNG_SB01022_0-1_08162022 (47) and LORNG_SB20013_6-7_08162022 (45) were less than the lower QC acceptance limit of 50. N-MeFOSA was not detected in samples LORNG_SB01022_0-1_08162022 and LORNG_SB20013_6-7_08162022 and the reporting limits were qualified as estimated (UJ).

The EIS percent recoveries associated with N-MeFOSA (42) and PFOSA (47) in sample LORNG_SB13026_0-1_08172022 were less than the lower QC acceptance limit of 50. N-MeFOSA and PFOSA were not detected in sample LORNG_SB13026_0-1_08172022 and the reporting limits were qualified as estimated (UJ).

The EIS percent recovery associated with PFOSA (34) in sample LORNG_SB13025_0-1_08172022 was less than the lower QC acceptance limit of 50. The EIS percent recovery associated with N-MeFOSA (19) in sample LORNG_SB13025_0-1_08172022 was below the lower rejectable limit of 20. PFOSA was not detected in sample LORNG_SB13025_0-1_08172022 and the reporting limits were qualified as estimated (UJ). N-MeFOSA was not detected in sample LORNG_SB13025_0-1_08172022 and the reporting limit was qualified as rejected (R).

The EIS percent recoveries associated with N-MeFOSA in samples LORNG_SB12015_0-1_08182022 (44), LORNG_SB12016_8-10_08182022 (49), and LORNG_SB12017_0-1_08182022FD (49) were less than the lower QC acceptance limit of 50. N-MeFOSA was not detected in samples LORNG_SB12015_0-1_08182022, LORNG_SB12016_8-10_08182022, and LORNG_SB12017_0-1_08182022FD and the reporting limits were qualified as estimated (UJ).

The EIS percent recoveries associated with N-MeFOSA (24-45) and N-EtFOSAA (30-46) in a subset of samples in SDG FA98980 were less than the lower QC acceptance limit of 50. N-MeFOSA and N-EtFOSAA were not detected in the subset of samples and the reporting limits were qualified as estimated (UJ).

The EIS percent recoveries associated with N-MeFOSA in samples LORNG_SB19006_0-1_09132022 (42) and LORNG_SB05026_0-1_09132022 (43) were less than the lower QC

acceptance limit of 50. N-MeFOSA was not detected in samples LORNG_SB19006_0-1_09132022 and LORNG_SB05026_0-1_09132022 and the reporting limits were qualified as estimated (UJ).

The EIS percent recoveries associated with N-methyl perfluorooctanesulfonamidoacetic acid (N-MeFOSAA) (48) in sample LORNG_SB01028_0-1_09142022 was less than the lower QC acceptance limit of 50. N-MeFOSA was not detected in sample LORNG_SB01028_0-1_09142022 and the reporting limit was qualified as estimated (UJ).

2.1.5 Interlaboratory Split Samples

Interlaboratory split samples were collected in association with the following soil samples:

LORNG_SB01015_8-10_080822
LORNG_SB01015_11.5-13.5_80822
LORNG_SB01026_0-1_08162022
LORNG_SB20010_7-8_08162022
LORNG_SB12015_0-1_08182022
LORNG_SB12016_8-10_08182022
LORNG_SB07019_0-1_08192022

A summary of split sample results is presented on Table 6. Comparison criteria are established in QPP Appendix E. The majority of PFAS target compounds were not detected in either sample. PFOS was detected in 6 of 7 samples and reported at similar concentrations by both laboratories in all samples. Results for 6 of 7 split samples met comparison criteria. The PFOS result in one sample (LORNG_SB01015_8-10_08082022) had PFOS reported by SGS at 9.4 µg/kg and reported by Vista Laboratory at 5.17 µg/kg, with an RPD of 58, which slightly exceeds the project goal of 50. The result reported by SGS was previously qualified estimated (J) based on field duplicate precision, with the associated field duplicate result reported at 3.8 µg/kg. No data qualifier was applied to the PFOS result for sample LORNG_SB01015_8-10_08082022 based on the split sample RPD. Other PFAS compounds were detected in several split samples at concentrations <LOQ with results showing general agreement at the trace detections reported. The split sample results analyzed at Vista Laboratory are interpreted to confirm the accuracy of samples reported in the SGS data sets.

2.2 VOCs

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
  QC Blanks
* Instrument Performance/Tuning
* Initial Calibration
* Continuing Calibration

* LCS
* MS/MSD
  Field Duplicates
  Surrogate
  Internal Standards
* Reporting Limits
* Electronic Data Verification
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks

* QC criteria were met for this parameter.

2.2.1 QC Blanks

Trip blank LORNG_TB13_08092022 had a detection of toluene below the LOQ (3.6 µg/kg). Toluene was detected at a concentration below the LOQ in sample LORNG_SB24003_8-10_08082022FDK and the result was qualified as non-detect (U) at the LOD.

2.2.2 Field Duplicates

The result for acetone in sample LORNG_SB05016_0-1_08052022_K and its associated field duplicate LORNG_SB05016_0-1_08052022FD_K were qualified as estimated (UJ/J) due to inconsistent results.

2.2.3 Surrogates

The percent recovery of surrogate 4-bromofluorobenzene (76) in sample LORNG_SB05016_0-1_08052022FD_K was less than the lower acceptance limit. All results in sample LORNG_SB05016_0-1_08052022FD_K were qualified as estimated (UJ/J) with code SGL.

2.2.4 Internal Standards

The response of internal standard 1,4-dichlorobenzene-d4 in sample LORNG_SB05016_0-1_08052022FD_K was less than the lower acceptance limit. The results for associated target compounds in sample LORNG_SB05016_0-1_08052022FD_K were qualified as estimated (UJ/J) with code ISL.

2.3 SVOCs

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance/Tuning

Initial Calibration
Continuing Calibration
LCS
* MS/MSD
* Field Duplicates
Surrogate
* Reporting Limits
* Electronic Data Verification
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks

* QC criteria were met for this parameter.

2.3.1 Initial/Continuing Calibration

The initial calibration RSD for 4-nitrophenol (22) associated with all field samples in SDG SP4213 was outside of QC acceptance limits. 4-nitrophenol was not detected in the associated samples and reporting limits were qualified as estimated (UJ).

The percent recoveries of multiple parameters (50 -74) in the initial calibration verifications (ICVs) associated with all field samples in SDG SP4213 were below the lower QC acceptance limit, indicating potential low bias. The parameters were not detected in the associated samples and the reporting limits were qualified as estimated (UJ). The percent recovery of benzidine in the ICVs were less than the lower rejectable limit (0). Benzidine was not detected in the associated samples the reporting limits were qualified as rejected (R).

The percent differences of multiple parameters in the continuing calibration verifications (CCVs) associated with all field samples in SDG SP4213 exceeded the QC acceptance limit indicating potential low bias. The parameters were not detected in the associated samples and the reporting limits were qualified as estimated (J/UJ).

Results qualified for calibration are summarized on Table 3 with code CCL and ICD.

2.3.2 LCS

The percent recovery of benzaldehyde (790/496) in the LCS/LCSD associated with sample LORNG_SB06006_0-1_08022022_K was above the upper QC limit, indicating high bias. The LCS/LCSD RPD is outside of the acceptance criteria (46). Benzaldehyde was detected in sample LORNG_SB06006_0-1_08022022_K and the result was qualified as estimated (J) with code LCH and LCD.

The LCS/LCSD RPD for bis-(2-ethylhexyl) phthalate associated with LORNG_SB06006_0-1_08022022_K sample is outside of the acceptance criteria (24). Bis-(2-ethylhexyl) phthalate was detected in sample LORNG_SB06006_0-1_08022022_K and the result was qualified as estimated (J) with code LCD.

The percent recovery of benzaldehyde (790/496) in the LCS/LCSD associated with all field samples in SDG SP4245 recovered above the upper QC limit, indicating high bias. The LCS/LCSD RPD is outside of the acceptance criteria (46). The detections of benzaldehyde in the associated samples were qualified as estimated (J).

The LCS/LCSD RPD for bis-(2-ethylhexyl) phthalate associated with samples LORNG_SB07015_0-1_08042022_K and LORNG_SB12009_8-10_08042022_K was outside of the acceptance criteria (24). Bis-(2-ethylhexyl) phthalate was detected in samples LORNG_SB07015_0-1_08042022_K and LORNG_SB12009_8-10_08042022_K and the results were qualified as estimated (J).

The percent recovery of benzaldehyde (790/496) in the LCS/LCSD associated with samples LORNG_SB05016_0-1_08052022_K and LORNG_SB05016_0-1_08052022FD_K recovered above the upper QC limit, indicating high bias. The LCS/LCSD RPD is outside of the acceptance criteria (46). The detections of benzaldehyde in samples LORNG_SB05016_0-1_08052022_K and LORNG_SB05016_0-1_08052022FD_K were qualified as estimated (J).

The percent recovery of benzaldehyde (790/496) in the LCS/LCSD associated with sample LORNG_SB24003_0-1_08082022_K recovered above the upper QC limit, indicating high bias. The LCS/LCSD RPD is outside of the acceptance criteria (46). The detections of benzaldehyde in sample LORNG_SB24003_0-1_08082022_K was qualified as estimated (J).

Results qualified for LCS recovery and RPD are summarized on Table 3 with code LCL and LCD.

2.3.3 Surrogates

The surrogate recoveries for multiple base-extractable surrogates associated with sample LORNG_SB10010_8-10_08022022_K (31 – 49.9) were less than lower control limits, indicating low bias. The results for all SVOCs in the base/neutral fractions of sample LORNG_SB10010_8-10_08022022_K were qualified as estimated (UJ).

The surrogate recoveries for multiple based-extracted surrogates associated with sample LORNG_SB01006_8-10_08042022_K (30 – 39) were less than lower control limits, indicating low bias. The results for all SVOCs in the base/neutral fractions of sample LORNG_SB01006_8-10_08042022_K were qualified as estimated (UJ).

The surrogate recoveries for multiple surrogates associated with sample LORNG_SB24003_8-10_08082022FDK were less than lower control limits, indicating low bias. Reporting limits for all SVOCs in the base/neutral extractable fraction of sample LORNG_SB24003_8-10_08082022FDK were qualified as estimated (UJ).

Results qualified for low surrogate recovery are summarized on Table 3 with code SGL.

2.4 PAHs and Select SVOCs by SIM

Data were evaluated based on the following parameters:

* Lab Report Narrative

* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance/Tuning
  Initial Calibration
* Continuing Calibration
  LCS
* MS/MSD
* Field Duplicates
* Surrogate
  Internal Standards
* Reporting Limits
* Electronic Data Verification
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks

* QC criteria were metfor this parameter.

2.4.1 Initial Calibration

The percent recovery of pentachlorophenol (67) in the initial calibration verification (ICV) associated with all field samples in SDG SP4213 was below the lower QC acceptance limit, indicating potential low bias. Pentachlorophenol not detected in the associated samples and the reporting limits were qualified as estimated (UJ) with code SVLL.

2.4.2 LCS

The LCS/LCSD RPD for fluorene (22) associated with sample LORNG_SB06006_0-1_08022022_K is outside of the acceptance criteria of 20. Fluorene was detected in sample LORNG_SB06006_0-1_08022022_K and the result was qualified as estimated (J).

The percent recoveries of pyrene (52) and benzo(k)fluoranthene (54) in the LCS/LCSD associated with all field samples in SDG SP4245 recovered below the lower QC limit, indicating low bias. The results for pyrene and benzo(k)fluoranthene in the associated samples were qualified as estimated (UJ/J).

Results qualified for LCS recovery and RPD are summarized on Table 3 with code LCL and LCD.

2.4.3 Internal Standards

The internal standard response for multiple internal standards associated with samples LORNG_SB06006_0-1_08022022_K and LORNG_SB10010_8-10_08022022_K were less than lower control limits. The results for subsets of parameters in samples LORNG_SB06006_0-1_08022022_K and LORNG_SB10010_8-10_08022022_K were qualified as estimated (J/UJ) with code ISL.

2.5 Pesticides

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance
* Initial Calibration
  Continuing Calibration
* LCS
* MS/MSD
  Field Duplicates
* Surrogate
* Reporting Limits
* Electronic Data Verification
  Dual column RPD
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks

* QC criteria were met for this parameter.

2.5.1 Continuing Calibration

The percent difference of toxaphene in the continuing calibration verifications (CCVs) associated with sample LORNG_SB06006_0-1_08022022_K was outside the QC acceptance limit indicating potential low bias. Toxaphene was not detected in the associated sample and the reporting limit was qualified as estimated (UJ).

The percent difference of methoxyclor in the continuing calibration verifications (CCVs) associated with sample L LORNG_SB06006_7.5-8.5_8022022K wasoutside the QC acceptance limit indicating potential low bias. Methoxyclor was not detected in the associated sample and the reporting limit was qualified as estimated (UJ).

Results qualified for CCVs are listed on Table 3 with code CCL.

2.5.2 Field Duplicates

The results for 4,4'-DDD (95), 4,4'-DDE (65), and 4,4'-DDT (73) in sample LORNG_SB05016_0-1_08052022_K and its associated field duplicate LORNG_SB05016_0-1_08052022FD_K were qualified as estimated (J) due to RPDs that exceeded project control limits with code FDD.

2.5.3 Dual Column RPD

The dual column RPD for 4-4'-DDD (80) in sample LORNG_SB06006_0-1_08022022_K exceeded the method limit of 40. The detection of 4-4'-DDD in sample LORNG_SB06006_0-1_08022022_K was qualified as estimated (J).

The dual column RPD for 4-4'-DDD (92) in sample LORNG_SB01006_0-1_08042022_K exceeded the method limit. The detection of 4-4'-DDD in sample LORNG_SB01006_0-1_08042022_K was qualified as estimated (J).

The dual column RPDs for 4-4'-DDD (132), beta endosulfan (107), endrin aldehyde (92), and endrin ketone (140) in sample LORNG_SB07015_0-1_08042022_K exceeded the method limit. The detections of 4-4'-DDD, beta endosulfan, endrin aldehyde, and endrin ketone in sample LORNG_SB07015_0-1_08042022_K were qualified as estimated (J).

Results qualified for dual column evaluations are summarized on Table 3 with code CFD.

2.6 PCBs

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance
* Initial Calibration
  Continuing Calibration
* LCS
* MS/MSD
* Field Duplicates
  Surrogate
* Reporting Limits
* Electronic Data Verification
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks

* QC criteria were met for this parameter.

2.6.1 Continuing Calibration

The percent recovery of Aroclor-1016 in the CCVs associated with samples LORNG_SB06006_0-1_08022022_K and LORNG_SB06006_7.5-8.5_8022022K were below the lower QC acceptance limit, indicating potential low bias. Aroclor-1016, Aroclor-1221, Aroclor-1232, and Aroclor-142

were not detected in the associated samples and the reporting limits were qualified as estimated (UJ) with code CCL.

2.6.2 Surrogates

The surrogate recovery for multiple surrogates associated with sample LORNG_SB06006_7.5-8.5_8022022K (40, 47) were less than lower control limits indicating low bias. All parameters in sample LORNG_SB06006_7.5-8.5_8022022K were qualified as estimated (UJ).

The surrogate recovery for the surrogate decachlorobiphenyl (58) in sample LORNG_SB07015_8-10_08042022_K is less than the lower control limit indicating low bias. The results for all parameters in sample LORNG_SB07015_8-10_08042022_K were qualified as estimated (UJ).

The percent recovery of the surrogate decachlorobiphenyl (57) associated with sample LORNG_SB05016_0-1_08052022_K was less than the lower acceptance limit. All results in sample LORNG_SB05016_0-1_08052022_K were qualified as estimated (UJ/J).

Results qualified for low surrogate recovery are summarized on Table 3 with code SGL.

2.7 Metals

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
  QC Blanks
* Instrument Performance
* Initial Calibration
* Continuing Calibration
* LCS
  MS/MSD
  Post Digestion Spike
  Serial Dilution
* Field Duplicates
* Reporting Limits
* Electronic Data Verification
* Compound Identification and Quantitation
* Total/Dissolved Solids
* Raw Data Review and Calculation Checks

* QC criteria were met for this parameter.

2.7.1 QC Blanks

The method blank associated with all field samples in SDG SP4213 had a detection of sodium (5.7 mg/kg) below the LOQ. The detections of sodium in samples LORNG_SB06006_0-1_08022022_K, LORNG_SB06006_7.5-8.5_8022022K, LORNG_SB10010_0-1_08022022_K, and LORNG_SB10010_8-10_08022022_K were less than the LOQ and qualified as not detected (U) at the reported concentrations.

The method blank associated with all field samples in SDG SP4245 had a detection of sodium (5.7 mg/kg) below the LOQ. The detections of sodium in samples LORNG_SB01006_0-1_08042022_K and LORNG_SB07015_8-10_08042022_K were less than the LOD and qualified as not detected (U) at the LOD. The detections of sodium in samples LORNG_SB01006_8-10_08042022_K, LORNG_SB07015_0-1_08042022_K, LORNG_SB12009_0-1_08042022_K, and LORNG_SB12009_8-10_08042022_K were less than the LOQ and qualified as not detected (U) at the reported concentrations.

The method blank associated with sample LORNG_SB24003_0-1_08082022_K had a detection of sodium (3.3 mg/kg) below the LOQ. The detections of sodium in sample LORNG_SB24003_0-1_08082022_K was less than the LOQ and qualified as not detected (U) at the reported concentration.

The method blank associated with samples LORNG_SB24003_8-10_08082022_K and LORNG_SB24003_8-10_08082022FDK had a detection of sodium (6.6 mg/kg) below the LOQ. The detections of sodium in samples LORNG_SB24003_8-10_08082022_K and LORNG_SB24003_8-10_08082022FDK were less than the LOQ and less than ten times the blank contamination. The sodium results were qualified as not detected (U) at the reported concentration.

2.7.2 MS/MSD

The percent recovery of antimony (21/25), chromium (66), and nickel (81) in the MS/MSD associated with sample LORNG_SB10010_0-1_08022022_K were less than the lower QC limits, indicating low bias. The MS/MSD RPDs for antimony (30) and calcium (92) were above of the acceptance criteria. Antimony, chromium, calcium, and nickel were detected in sample LORNG_SB10010_0-1_08022022_K and the results were qualified as estimated (J).

The percent recovery of potassium (151) in the MS/MSD associated with sample LORNG_SB10010_0-1_08022022_K exceeded the upper QC limits, indicating high bias. The MS/MSD RPD for potassium (26) was outside of the acceptance criteria. Potassium was detected in sample LORNG_SB10010_0-1_08022022_K and the result was qualified as estimated (J).

The MS/MSD RPD for calcium (26) associated with sample LORNG_SB10010_0-1_08022022_K was above the acceptance criteria. Calcium was detected in sample LORNG_SB10010_0-1_08022022_K and the result was qualified as estimated (J).

Results qualified for spike recovery or RPD are summarized on Table 3 with code MSL, MSH, and MSD.

2.7.3 Post Digestion Spike

The percent recoveries of aluminum (25) and magnesium (67) in the post digestion spike associated with sample LORNG_SB10010_0-1_08022022_K were less than the lower QC limits indicating low bias. Aluminum and magnesium were detected in sample LORNG_SB10010_0-1_08022022_K and the results were qualified as estimated (J) with code PDSL.

2.7.4 Serial Dilution

The percent difference for lead (11) and zinc (12) in the serial dilution associated with sample LORNG_SB10010_0-1_08022022_K exceed QC limits. The results for lead and zinc in sample LORNG_SB10010_0-1_08022022_K were qualified as estimated (J) with code DS.

2.8 Perchlorate

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance
* Initial Calibration
* Continuing Calibration
* LCS
* MS/MSD
* Field Duplicates
* Surrogate
* Reporting Limits
* Electronic Data Verification
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks

* QC criteria were met for this parameter.

No data quality issues were identified and results are interpreted to be usable as reported by the laboratory.

2.9 Total Organic Carbon

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times

* QC Blanks
* Initial Calibration
* Continuing Calibration
* LCS
* MS/MSD
  Field Duplicates
* Surrogate
* Reporting Limits
* Electronic Data Verification
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks

* QC criteria were met for this parameter.

2.9.1 Field Duplicates

The result for total organic carbon in sample LORNG_SB20009_0-1_08082022_K and its associated field duplicate LORNG_SB20009_0-1_08082022FD_K were qualified as estimated (J) with code FDD due to the field duplicate RPD (53) exceeding QC limits.

Notes:
N = Normal Field Sample; FD = Field Duplicate
J = Concentration is estimated
U = Analyte not detected at the associated detection limits
UJ = Analyte not detected and considered estimated
R = Sample reuslt is considered unusable for project objectives
NG/L = nanograms per liter
T = total
TB = trip blank

Notes:

J = Concentration is estimated
U = Analyte not detected at the associated detection limits
UJ = Analyte not detected and considered estimated
R = Sample reuslt is considered unusable for project objectives
CCL = Continuing calibration standard recovery less than lower control limit
CFD = Dual column RPD criteria exceeded
DS = Serial dilution percent difference exceeded control limit
LCL = LCS recovery less than lower control limit
MSD = Matrix spike (MS)/MSD RPD criteria exceeded
MSH = MS recovery greater than upper control limit
MSL = MS recovery less than lower control limit
PDSL = post digestion spike (PDS) recovery less than lower control limit
RIS = Extracted internal standard recovery outside control limits
SGL = Surrogate recovery less than lower control limit

Stage 1 Data Validation Report
Loring PFAS Remedial Investigation
August 2022 LEAF Water
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Lysimeter water samples were collected at the Former Loring Air Force Base in Limestone, Maine, in August – September 2022 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. Samples were submitted to SGS North America Laboratory in Orlando, Florida, and Katahdin Analytical Services (KAS) in Scarborough, Maine, as summarized below.

SGS analyzed 54 samples for PFAS by Method M537, liquid chromatography tandem mass spectrometry (LC/MS/MS) compliant with Table B-15 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.3 (USDoD, 2019a).

Sample event information included in this Stage 1 data validation report is presented in the following table:

- Table 1 – Summary of Samples and Analytical Methods

Data quality reviews were completed as described in the Quality Program Plan (QPP) Remedial Investigation PFAS Response (Wood, 2022). Data validation levels are established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019b). Samples included in this report were validated using Stage 1 procedures. Documentation of the Stage 1 verification and validation checks is stored in the WSP project file.

Stage 1 data validation consists of verification and validation checks for the compliance of sample receipt conditions, sample characteristics (e.g., percent moisture for soils), and analytical results with associated information. The following checks are performed as applicable to the data set:

- Documentation identifies the laboratory and samples submitted for analyses (COC and electronic data check)
- Requested analytical methods verified
- Sample preparation and analysis dates are present
- Target analyte lists verified
- Laboratory data qualifiers and data qualifier definitions provided
- Requested target analyte result units are reported
- Reporting limits/sample detection limits meet project objectives in QPP
- Results below the reporting limits are identified (J qualified)

- Sampling dates and times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory including preservation, pH and temperature are documented (COC and Sample Receipt Logs)
- Sample conditions upon receipt at the laboratory (e.g., preservation checks) and sample collection meet project requirements in the QPP

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

2.0 STAGE 1 EVALUATION

Stage 1 verification and validation checks confirmed the overall data package compliance for this data set is interpreted to meet the project objectives identified in the QPP. A summary of Stage 1 verification and validation findings for checks that identified data package compliance issues are summarized below.

Stage 1 documentation is present in lab reports and electronic data and no compliance issues were identified.

Stage 1 Data Validation Report
Loring PFAS Remedial Investigation
Fate and Transport Sampling
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Soil and aqueous samples were collected at the Former Loring Air Force Base in Limestone, Maine, in August 2022 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. Samples were submitted to SGS North America Laboratory in Orlando, Florida, and Katahdin Analytical Services (KAS) in Scarborough, Maine, as summarized below.

SGS analyzed 3 samples for PFAS by Method M537, liquid chromatography tandem mass spectrometry (LC/MS/MS) compliant with Table B-15 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.3 (USDoD, 2019a).

KAS analyzed 10 samples for one or more of the following methods:

- Total Organic Carbon (TOC) by Lloyd Kahn/9060A
- Percent Solids by SM2540G and ASTM D2216
- Cation-Exchange Capacity (CEC) by SW9081

Sample event information included in this Stage 1 data validation report is presented in the following table:

- Table 1 – Summary of Samples and Analytical Methods

Data quality reviews were completed as described in the Quality Program Plan (QPP) Remedial Investigation PFAS Response (Wood, 2022). Data validation levels are established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019b). Samples included in this report were validated using Stage 1 procedures. Documentation of the Stage 1 verification and validation checks is stored in the WSP project file.

Stage 1 data validation consists of verification and validation checks for the compliance of sample receipt conditions, sample characteristics (e.g., percent moisture for soils), and analytical results with associated information. The following checks are performed as applicable to the data set:

- Documentation identifies the laboratory and samples submitted for analyses (COC and electronic data check)
- Requested analytical methods verified
- Sample preparation and analysis dates are present
- Target analyte lists verified
- Laboratory data qualifiers and data qualifier definitions provided
- Requested target analyte result units are reported

- Reporting limits/sample detection limits meet project objectives in QPP
- Results below the reporting limits are identified (J qualified)
- Sampling dates and times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory including preservation, pH and temperature are documented (COC and Sample Receipt Logs)
- Sample conditions upon receipt at the laboratory (e.g., preservation checks) and sample collection meet project requirements in the QPP

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

2.0 STAGE 1 EVALUATION

Stage 1 verification and validation checks confirmed the overall data package compliance for this data set is interpreted to meet the project objectives identified in the QPP. A summary of Stage 1 verification and validation findings for checks that identified data package compliance issues are summarized below.

Stage 1 documentation is present in lab reports and electronic data and no compliance issues were identified.

Stage 1 Data Validation Report
Loring PFAS Remedial Investigation
August 2022 Sampling
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Soil samples were collected at the Former Loring Air Force Base in Limestone, Maine, in August 2022 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. Samples were submitted to Enthalpy Analytical in El Dorado Hills, California, and Eurofins Pittsburgh (EET PIT) in Pittsburgh, Pennsylvania, as summarized below.

Enthalpy Analytical analyzed 132 samples for PFAS by Method M537, liquid chromatography tandem mass spectrometry (LC/MS/MS) compliant with Table B-15 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.3 (USDoD, 2019a).

EET PIT analyzed 54 samples for one or more of the following American Public Health Association Standard Methods (APHA SM), United States Environmental Protection Agency (USEPA), and/or American Society for Testing and Materials (ASTM) methods:

- Conductivity by SM 2510B
- REDOX potential by SM 2580B
- pH by EPA 9040C
- Percent Solids by ASTM D2216

Sample event information included in this Stage 1 data validation report is presented in the following table:

- Table 1 – Summary of Samples and Analytical Methods

Data quality reviews were completed as described in the Quality Program Plan (QPP) Remedial Investigation PFAS Response (Wood, 2022). Data validation levels are established based on current USEPA guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019b). Samples included in this report were validated using Stage 1 procedures. Documentation of the Stage 1 verification and validation checks is stored in the WSP project file.

Stage 1 data validation consists of verification and validation checks for the compliance of sample receipt conditions, sample characteristics (e.g., percent moisture for soils), and analytical results with associated information. The following checks are performed as applicable to the data set:

- Documentation identifies the laboratory and samples submitted for analyses (COC and electronic data check)

- Requested analytical methods verified
- Sample preparation and analysis dates are present
- Target analyte lists verified
- Laboratory data qualifiers and data qualifier definitions provided
- Requested target analyte result units are reported
- Reporting limits/sample detection limits meet project objectives in QPP
- Results below the reporting limits are identified (J qualified)
- Sampling dates and times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory including preservation, pH and temperature are documented (COC and Sample Receipt Logs)
- Sample conditions upon receipt at the laboratory (e.g., preservation checks) and sample collection meet project requirements in the QPP

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

2.0 STAGE 1 EVALUATION

Stage 1 verification and validation checks confirmed the overall data package compliance for this data set is interpreted to meet the project objectives identified in the QPP. A summary of Stage 1 verification and validation findings for checks that identified data package compliance issues are summarized below.

Stage 1 documentation is present in lab reports and electronic data and no compliance issues were identified.

Stage 1 Data Validation Report
Loring PFAS Remedial Investigation
Fate and Transport Sampling
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Soil and aqueous samples were collected at the Former Loring Air Force Base in Limestone, Maine, in August 2022 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. Samples were submitted to SGS North America Laboratory in Orlando, Florida, and Katahdin Analytical Services (KAS) in Scarborough, Maine, as summarized below.

SGS analyzed 3 samples for PFAS by Method M537, liquid chromatography tandem mass spectrometry (LC/MS/MS) compliant with Table B-15 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.3 (USDoD, 2019a).

KAS analyzed 10 samples for one or more of the following methods:

- Total Organic Carbon (TOC) by Lloyd Kahn/9060A
- Percent Solids by SM2540G and ASTM D2216
- Cation-Exchange Capacity (CEC) by SW9081

Sample event information included in this Stage 1 data validation report is presented in the following table:

- Table 1 – Summary of Samples and Analytical Methods

Data quality reviews were completed as described in the Quality Program Plan (QPP) Remedial Investigation PFAS Response (Wood, 2022). Data validation levels are established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019b). Samples included in this report were validated using Stage 1 procedures. Documentation of the Stage 1 verification and validation checks is stored in the WSP project file.

Stage 1 data validation consists of verification and validation checks for the compliance of sample receipt conditions, sample characteristics (e.g., percent moisture for soils), and analytical results with associated information. The following checks are performed as applicable to the data set:

- Documentation identifies the laboratory and samples submitted for analyses (COC and electronic data check)
- Requested analytical methods verified
- Sample preparation and analysis dates are present
- Target analyte lists verified
- Laboratory data qualifiers and data qualifier definitions provided
- Requested target analyte result units are reported

- Reporting limits/sample detection limits meet project objectives in QPP
- Results below the reporting limits are identified (J qualified)
- Sampling dates and times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory including preservation, pH and temperature are documented (COC and Sample Receipt Logs)
- Sample conditions upon receipt at the laboratory (e.g., preservation checks) and sample collection meet project requirements in the QPP

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

2.0 STAGE 1 EVALUATION

Stage 1 verification and validation checks confirmed the overall data package compliance for this data set is interpreted to meet the project objectives identified in the QPP. A summary of Stage 1 verification and validation findings for checks that identified data package compliance issues are summarized below.

Stage 1 documentation is present in lab reports and electronic data and no compliance issues were identified.

Data Validation and Usability Report
Loring PFAS Remedial Investigation
February 2022 Groundwater Sampling
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

One groundwater and one source water sample were collected at the Former Loring Air Force Base in Limestone, Maine, in February 2022. Per- and polyfluoroalkyl substances (PFAS) samples were submitted to Vista Analytical Laboratory in El Dorado Hills, California (Vista).

Vista analyzed 2 samples for per- and polyfluoroalkyl substances (PFAS) by liquid chromatography tandem mass spectrometry compliant with Table B-15 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.3 (USDoD,2019a).

Results were reported in the following Sample Delivery Groups (SDGs):

- 2202134

Sample event information included in this data validation report is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Summary of Data Validation Actions
- Table 4 – Acronyms and Abbreviations

Data quality reviews were completed as described in the Draft Quality Program Plan (QPP) for Remedial Investigation at Former Loring Air Force Base (Wood, 2021). Data validation levels are established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019b). PFAS data were validated using Stage 2B procedures. Ten percent of the data collected during the remedial investigation were validated using Stage 4 procedures. Validation checklists, documentation of sample recalculations, and qualification justification documentation are stored in the Wood project file.

Stage 2A data validation includes review of sample results forms, chain of custody (COC) and supporting records, laboratory receipt checklists, analytical holding time compliance, sample related quality control (QC) data forms (method blanks, laboratory control samples (LCS), matrix spike/matrix spike duplicates (MS/MSD), field and laboratory duplicates, surrogates, internal standards, post digestion spikes, and serial dilutions), and QC sample frequency checks.

Stage 2B data validation includes all reviews performed in a Stage 2A data validation as well as review of initial calibration summaries, continuing calibration verification summaries, instrument performance/tuning summaries, dual column confirmation results, and sample preparation logs.

Stage 4 data validation includes all reviews performed in Stages 2A and 2B as well as review of raw data and chromatograms, target analyte identification confirmation, and recalculation of QC and sample results.

Data review and qualification actions were completed based on DoD Data Validation Guidelines Module 3 for PFAS (USDoD, 2020), general procedures described in USEPA Data Review and Validation Guidelines for PFAS (USEPA, 2018), and method specifications in the DoD QSM 5.3 and/or the referenced analytical methods when DoD specifications were not available. QC limits presented in the DoD QSM 5.3 and/or the QPP were used during the data evaluation. Data qualifications were completed, if necessary, in accordance with the USEPA guidelines and the professional judgment of the validator using the following qualifiers:

J = Analyte present; concentration is estimated
U = Analyte not detected at the associated detection limits

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

Validation reason codes were applied to results associated with QC measurements outside project QC goals where validation qualifiers were added to results. Final results are presented in Table 2. The validation qualification actions and associated validation reason codes applied to sample results are summarized in Table 3. The following data validation reason codes were applied to one or more sample results:

RIS = Extracted internal standard outside control limit

1.1 DATA USABILITY EVALUATION

The overall data quality and data usability for this data set is interpreted to meet the project objectives identified in the QAPP. Interpretations of data validation qualifications and data usability are provided below:

The reporting limit for N-methyl perfluorooctane sulfonamide (N-MeFOSA) in samples LORNG-ANWR01-02102022 and LORNG-Sourcewater-02102022 and perfluorobutanoic acid (PFBA) in sample LORNG-Sourcewater-02102022 are considered estimated based on extracted internal standard (EIS) recoveries outside of the QC acceptance criteria. No impact on data usability was identified.

2.0 DATA VALIDATION QUALIFICATION ACTION SUMMARY

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the DoD QSM 5.3, the QPP, and/or analytical methods. Unless specified below, results are interpreted to be usable as reported by the laboratory.

2.1 PFAS

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance/Tuning
* LCS
* MS/MSD
* Field Duplicates
  Extracted Internal Standard Recovery
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
* Miscellaneous

* QC criteria were met for this parameter.

2.1.1 Extracted Internal Standard Recovery

The EIS percent recoveries associated with N-MeFOSA and PFBA were less than the lower QC acceptance limit of 50. The reporting limit for N-methyl perfluorooctane sulfonamide (N-MeFOSA) in samples LORNG-ANWR01-02102022 and LORNG-Sourcewater-02102022 and perfluorobutanoic acid (PFBA) in sample LORNG-Sourcewater-02102022 were qualified as estimated (UJ).

Data Validation and Usability Report
Loring PFAS Remedial Investigation
July - August 2022 New Wells Sampling
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Groundwater samples were collected at the Former Loring Air Force Base in Limestone, Maine, in July - August 2022 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. Samples were submitted to SGS North America Laboratory in Orlando, Florida, Katahdin Analytical Services (KAS) in Scarborough, Maine, and Vista Analytical Laboratory (Vista) in El Dorado Hills, California, as summarized below.

SGS analyzed 82 samples for PFAS by Method M537, liquid chromatography tandem mass spectrometry compliant with Table B-15 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.3 (USDoD, 2019a).

KAS analyzed 9 samples for one or more of the following methods:

- Volatile Organic Compounds (VOCs) by SW846 Methods 8011 and 8260C
- Semivolatile Organic Compounds (SVOCs) by SW846 Method 8270D
- Polynuclear Aromatic Hydrocarbons (PAHs) and Select SVOCs by SW846 Methods 8270C Selected Ion Monitoring (SIM) and 8270D SIM
- Metals by SW846 Methods 6010C, 6020A, and 7470A

Duplicates of groundwater samples LORNG_BW16002_08072022 and LORNG_OW17002_08162022 were collected and submitted to Vista Analytical Laboratory in El Dorado Hills, California (Vista) as interlaboratory comparison assessment samples. Vista analyzed two samples for PFAS by Method MS014.0, liquid chromatography tandem mass spectrometry compliant with Table B-15 of the USDoD Quality Systems Manual for Environmental Laboratories (QSM), Version 5.3 (USDoD, 2019a).

Sample event information included in this data validation report is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Summary of Data Validation Actions
- Table 4 – Field Duplicate RPD Summary
- Table 5 – Acronyms and Abbreviations
- Table 6 – Interlaboratory Comparison Assessment Summary

Data quality reviews were completed as described in the Quality Program Plan (QPP) Remedial Investigation PFAS Response (Wood, 2022). Data validation levels are established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019b). PFAS

data were validated using Stage 2B procedures and all other chemistry data were validated using Stage 2A procedures. Ten percent of the PFAS and other chemistry data collected during the remedial investigation were validated using Stage 4 procedures. Validation checklists, documentation of sample recalculations, and qualification justification documentation are stored in the Wood project file.

Stage 2A data validation includes review of sample results forms, chain of custody (COC) and supporting records, laboratory receipt checklists, analytical holding time compliance, sample related quality control (QC) data forms (method blanks, laboratory control samples (LCS), matrix spike/matrix spike duplicates (MS/MSD), field and laboratory duplicates, surrogates, internal standards, post digestion spikes, and serial dilutions), and QC sample frequency checks.

Stage 2B data validation includes all reviews performed in a Stage 2A data validation as well as review of initial calibration summaries, continuing calibration verification summaries, instrument performance/tuning summaries, dual column confirmation results, and sample preparation logs.

Stage 4 data validation includes all reviews performed in Stages 2A and 2B as well as review of raw data and chromatograms, target analyte identification confirmation, and recalculation of QC and sample results.

Data review and qualification actions were completed based on DoD Data Validation Guidelines Module 3 for PFAS (USDoD, 2020), general procedures described in USEPA Data Review and Validation Guidelines for PFAS (USEPA, 2018), USEPA National Functional Guidelines for Superfund Data Review (USEPA, 2020a; USEPA, 2020b), and method specifications in the DoD QSM 5.3 and/or the referenced analytical methods when DoD specifications were not available. QC limits presented in the DoD QSM 5.3 and/or the QPP were used during the data evaluation. Data qualifications were completed, if necessary, in accordance with the USEPA guidelines and the professional judgment of the validator using the following qualifiers:

J = Analyte present; concentration is estimated
U = Analyte not detected at the associated detection limits
UJ = Analyte was not detected at the associated detection limits; however, the associated detection limit should be considered an estimate.
R = Sample result is considered unusable for project objectives

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

Validation reason codes were applied to results associated with QC measurements outside project QC goals where validation qualifiers were added to results. Final results are presented in Table 2. The validation qualification actions and associated validation reason codes applied to sample results are summarized in Table 3. The following data validation reason codes were applied to one or more sample results:

CBL = Continuing calibration blank concentration less than the reporting limit

CCL = Continuing calibration standard recovery less than lower control limit
HHL = Holding time exceeded
IAG = Ion abundance ratio outside calculated limits
ICD = Initial calibration relative standard deviation limit exceeded
LBL = Laboratory blank contamination less than reporting limit
LCD = Laboratory control sample (LCS) relative percent difference (RPD) criteria exceeded
LCL = LCS recovery less than lower control limit
LCH = LCS recovery greater than upper control limit
MSH = MS recovery greater than upper control limit
MSL = MS recovery less than lower control limit
RFL = Signal to noise ratio criteria exceeded
RIS = Extracted internal standard recovery outside control limits
SGL = Surrogate recovery less than lower control limit
SVLL = Second source verification standard recovery less than lower control limit
TBL = Trip blank concentration less than the reporting limit

Interlaboratory split samples LORNG_BW16002_08072022SPLIT and LORNG_OW17002_08162022SPLIT were submitted to Vista as an additional quality assurance step. Data validation was not planned for Vista data unless gross deviations were observed. No gross deviations were observed. Results are presented in this report to complete the interlaboratory comparison only and are not included in the final data set of the Loring RI sampling program and not presented on Table 2. The interlaboratory comparison assessment summary is included in Table 6. An evaluation of split sample results is presented in Section 2.1.6.

1.1 DATA USABILITY EVALUATION

The overall data quality and data usability for this data set is interpreted to meet the project objectives identified in the QAPP. Interpretations of data validation qualifications and data usability are provided below:

PFAS

Non-detect results for N-methyl perfluorooctane sulfonamide (N-MeFOSA) in the following samples were qualified as rejected (R) based on extracted internal standard (EIS) percent recoveries less than the DoD PFAS validation guideline limit of 20. Results for N-MeFOSA in these samples are considered unusable for project objectives:

LORNG_BW07001_08022022
LORNG_BW08003_08032022
LORNG_OW07001_08022022
LORNG_BW01006_08032022FD
LORNG_BW01009_08032022
LORNG_BW02001_08032022
LORNG_OW01002_08032022
LORNG_OW05004_08052022FD
LORNG_OW02002_08042022

LORNG_BB_BW001_08072022
LORNG_BW01008_08062022
LORNG_BW05008_08062022
LORNG_BW05009_08062022
LORNG_BW18007_08062022
LORNG_BW06008_08172022
LORNG_GC_BW001_08182022
LORNG_BW13003_08192022

Non-detect results for N-MeFOSA in samples LORNG_BW07001_08022022 and LORNG_BW08003_08032022 were qualified as rejected (R) based on an LCS percent recovery of 0. Results for N-MeFOSA in these samples are considered unusable for project objectives.

PFAS detections were qualified estimated (J) in a subset of samples based on associated QC results exceeding limits for MS/MSD recovery, EIS recovery, continuing calibration percent difference, quantitation ion signal to noise ratio, and/or transition ion ratio. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as qualified. The uncertainties that may occur from using estimated detections should be considered during contamination assessment or evaluation of contaminant data against project action limits.

Reporting limits for PFAS were qualified estimated (UJ) in a subset of samples based on associated QC results exceeding limits for EIS recovery and/or MS/MSD percent recovery. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as qualified. The uncertainties and/or data gaps that may occur from using estimated reporting limits should be considered during contamination assessment or evaluation of contaminant data against project action limits.

The split samples analyzed at Vista Laboratory are interpreted to confirm the accuracy of samples reported in the SGS data sets. Split sample results are presented in Table 6 and discussed in Section 2.1.6.

Of the 2,100 individual PFAS results reported for the groundwater event, a total of 17 results were qualified as rejected (R) and are interpreted to be unusable for project objectives. This represents a PFAS data completeness of 99.2% for the groundwater data set.

VOCs

A low concentration detection of chloromethane in the sample LORNG_OW08002_08022022_K was qualified non-detect (U) at the LOD based on contamination in the associated trip blank. No impact on data usability was identified.

Reporting limits for VOCs were qualified estimated (UJ) in a subset of samples based on associated QC results exceeding limits for holding time. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as qualified. The uncertainties and/or data gaps that may occur from using estimated reporting limits should be

considered during contamination assessment or evaluation of contaminant data against project action limits.

Of the 366 individual VOC results (Methods 8260C and 8011) reported for the groundwater event, 0 results were qualified as rejected. This represents a VOC data completeness of 100% for the groundwater event.

SVOCs

The non-detect results for hexachlorobutadiene in sample LORNG_OW08002_08022022_K and 2,3,4,6-tetrachlorophenol in sample LORNG_OW07003_08232022_K were rejected (R) based on LCS/LCSD percent recovery less than 10. Results for hexachlorobutadiene in sample LORNG_OW08002_08022022_K and 2,3,4,6-tetrachlorophenol in sample LORNG_OW07003_08232022_K are considered unusable for project objectives.

Reporting limits for SVOCs were qualified estimated (UJ) in a subset of samples based on associated QC results exceeding limits for LCS/LCSD recovery, LCS/LCSD RPD, surrogate recovery, initial calibration percent recovery, instrument calibration check standard recovery,. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as qualified. The uncertainties and/or data gaps that may occur from using estimated reporting limits should be considered during contamination assessment or evaluation of contaminant data against project action limits.

The benzyl alcohol result in sample LORNG_OW08002_08022022_K was qualified estimated (J) based on associated QC results exceeding limits for LCS/LCSD percent recovery and relative percent difference. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as qualified. The uncertainties that may occur from using estimated detections should be considered during contamination assessment or evaluation of contaminant data against project action limits.

Of the 112 individual SVOC results (Method 8270D) reported for the groundwater event, a total of 2 results were qualified as rejected (R) and are interpreted to be unusable for project objectives. This represents an SVOC data completeness of 98.2% for the groundwater data set.

PAHs and Select SVOCs by SIM

Reporting limits for indeno(1,2,3-cd)pyrene and pentachlorophenol were qualified estimated (UJ) in sample LORNG_OW08002_08022022_K based on associated QC results exceeding limits for initial calibration percent recovery. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as qualified. The uncertainties and/or data gaps that may occur from using estimated reporting limits should be considered during contamination assessment or evaluation of contaminant data against project action limits.

Of the 38 individual PAH and select SVOCs by SIM results (Methods 8270C SIM and 8270D SIM) reported for the groundwater event, 0 results were qualified as rejected. This represents a PAH and select SVOCs by SIM data completeness of 100% for the groundwater event.

Metals

Low concentration detections of total chromium, mercury, and thallium in sample LORNG_OW08002_08022022 and cadmium in sample LORNG_OW07003_08232022 were qualified not detected (U) at the LOD based on contamination in the associated laboratory method blanks or instrument calibration blanks. The LOD for chromium is less than the PAL and results forchromium are considered usable for project objectives. LODs for mercury in sample LORNG_OW08002_08022022 and cadmium in sample LORNG_OW07003_08232022 are greater than associated project action limits (PALs). Although the LODS for a subset of target analytes are greater than associated PALs, MDLs are less than the PALs and results are interpreted to be usable for project objectives. The LODs and MDLs for arsenic and thallium are greater than the PALs. The potential data gaps that may occur from using non-detect results for arsenic and thallium, as well as mercury in sample LORNG_OW08002_08022022 and cadmium in sample LORNG_OW07003_08232022, should be considered during contamination assessment.

Of the 50 individual total and dissolved metals results (Methods 6010C, 6020A, and 7470A) reported for the groundwater event, no results were qualified as rejected. This represents a metals data completeness of 100% for the groundwater event.

Laboratory reporting limits (RLs) and/or MDLs for all samples in the groundwater event are less than the Project Action Limits (PALs) identified in the QAPP with the following exception:

- Reporting limits for a subset of VOCs, SVOCs, and metals as reported by the laboratory do not meet the PALs.

Of the overall 2,641 individual results reported for the groundwater event, 19 results were qualified as rejected. This represents an overall data completeness of 99.3% for the groundwater event.

2.0 DATA VALIDATION QUALIFICATION ACTION SUMMARY

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the DoD QSM 5.3, the QPP, and/or analytical methods. Unless specified below, results are interpreted to be usable as reported by the laboratory.

2.1 PFAS

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times

* QC Blanks
* Instrument Performance/Tuning
  LCS
  MS/MSD
* Field/Lab Duplicates
  Extracted Internal Standard Recovery
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
  Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
  Miscellaneous

* QC criteria were met for this parameter.

2.1.1 LCS

Non-detect results for N-MeFOSA in samples LORNG_BW07001_08022022 and LORNG_BW08003_08032022 were qualified as rejected (R) based on an LCS percent recovery of 0.

2.1.2 MS/MSD

The perfluorohexanoic acid (PFHxA) result in sample LORNG_BW07003_0722022 was qualified as estimated (J) based on MS/MSD percent recoveries greater than DoD limits.

The reporting limit for perfluorotetradecanoic acid (PFTeDA) in sample LORNG_BW03002_08052022 was qualified as estimated (UJ) based on an MSD percent recovery less than DoD limits.

2.1.3 Extracted Internal Standard Recovery

Non-detect results for N-MeFOSA in the following samples were qualified as rejected (R) based on EIS percent recoveries less than 20:

LORNG_BW08003_08032022
LORNG_OW07001_08022022
LORNG_BW01006_08032022FD

LORNG_BW13002_08192022

Reporting limits for 4:2 fluorotelomer sulfonate (4:2 FTS), 6:2 fluorotelomer sulfonate (6:2 FTS), and 8:2 fluorotelomer sulfonate (8:2 FTS) in sample LORNG_BW18007_08062022 were qualified as estimated (UJ) based on EIS percent recoveries less than 50.

Reporting limits for N-ethyl perfluorooctanesulfonamidoacetic acid (N-EtFOSAA) and N-methyl perfluorooctanesulfonamidoacetic acid (N-MeFOSAA) in samples LORNG_BW01008_08062022, LORNG_BW05009_08062022, and LORNG_BW18007_08062022 were qualified as estimated (UJ) based on EIS percent recoveries less than 50.

The reporting limit for perfluorobutanesulfonic acid (PFBS) in sample LORNG_BW18007_08062022 was qualified as estimated (UJ) based on an EIS percent recovery less than 50.

Reporting limits for perfluorobutanoic acid (PFBA) in samples LORNG_BW05008_08062022, LORNG_BW18007_08062022, and LORNG_OW20003_08072022 were qualified as estimated (UJ) based on EIS percent recoveries less than 50.

Results for PFBA in samples LORNG_BW10007_08082022 and LORNG_OW23001_08172022 were qualified as estimated (J) based on EIS percent recoveries less than 50.

Reporting limits for perfluorodecane sulfonate (PFDS) in samples LORNG_BW05009_08062022 and LORNG_BW18007_08062022 were qualified as estimated (UJ) based on EIS percent recoveries less than 50.

The reporting limit for perfluorodecanoic acid (PFDA) in sample LORNG_BW18007_08062022 was qualified as estimated (UJ) based on an EIS percent recovery less than 50.

Reporting limits for perfluorododecanoic acid (PFDoA) in the following samples were qualified as estimated (UJ) based on EIS percent recoveries less than 50:

LORNG_BW08003_08032022
LORNG_BW03001_08052022
LORNG_BW05009_08062022
LORNG_BW18007_08062022
LORNG_GC_BW001_08182022

Reporting limits for subset of PFAS analytes in sample LORNG_BW18007_08062022 were qualified as estimated (UJ) based on EIS percent recoveries less than 50.

Reporting limits for perfluorooctane sulfonamide (PFOSA) in samples LORNG_BW01008_08062022, LORNG_BW05008_08062022, and LORNG_BW18007_08062022 were qualified as estimated (UJ) based on EIS percent recoveries less than 50.

Results for PFOSA in samples LORNG_BW01009_08032022 and LORNG_BW05009_08062022 were qualified as estimated (J) based on EIS percent recoveries less than 50.

Reporting limits for PFTeDA in the following samples were qualified as estimated (UJ) based on EIS percent recoveries less than 50:

LORNG_BW08003_08032022
LORNG_BW03001_08052022
LORNG_BW01008_08062022
LORNG_BW05009_08062022
LORNG_BW05010_08062022
LORNG_BW18007_08062022
LORNG_BW13002_08192022FD
LORNG_GC_BW001_08182022

Reporting limits for perfluorotridecanoic acid (PFTrDA) in the following samples were qualified as estimated (UJ) based on EIS percent recoveries less than 50:

LORNG_BW08003_08032022
LORNG_BW03001_08052022
LORNG_BW05009_08062022
LORNG_BW18007_08062022
LORNG_GC_BW001_08182022

Reporting limits for perfluoroundecanoic acid (PFUnA) in samples LORNG_BW05009_08062022, LORNG_BW18007_08062022, and LORNG_GC_BW001_08182022 were qualified as estimated (UJ) based on EIS percent recoveries less than 50.

2.1.4 Continuing Calibration

The result for perfluorooctanesulfonic acid (PFOS) in sample LORNG_OW20003_08072022 was qualified as estimated (J) due to one or more associated continuing calibration verification standards reporting a percent difference outside of DoD limits.

2.1.5 Miscellaneous

The transition ion ratios for PFOSA and perfluorononanesulfonic acid (PFNS) in sample LORNG_OW07001_08022022 were outside the acceptable ion ratio range calculated from the associated daily calibration standard. The PFOSA and PFNS result in sample LORNG_OW07001_08022022 was qualified estimated (J).

The results for PFBS and PFOS in sample LORNG_OW16002_08162022 were qualified as estimated (J) based on signal to noise ratios less than 10 for the quantitation ions.

2.1.6 Interlaboratory Split Samples

Interlaboratory split samples were collected in association with the following groundwater samples:

LORNG_BW16002_08072022
LORNG_OW17002_08162022

A summary of split sample results is presented on Table 6. Comparison criteria are established in QPP Appendix E. The majority of PFAS target compounds were not detected in either sample. PFAS compounds that were detected showed general agreement between results reported by SGS and Vista. No data qualifiers were required as a result of the split sample evaluation, and results for the split samples analyzed at Vista Laboratory are interpreted to confirm the accuracy of samples reported in the SGS data sets.

2.2 VOCs

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
  Holding Times
  QC Blanks
* Instrument Performance/Tuning
* LCS
* MS/MSD
* Field Duplicates
* Surrogate
  Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
* Miscellaneous

* QC criteria were met for this parameter.

2.2.1 Holding Times

Reporting limits for 1,2-dibromo-3-chloropropane and 1,2-dibromoethane in sample LORNG_OW07003_08232022_K was qualified as estimated (UJ) due to analysis time exceeding method limits.

2.2.2 QC Blanks

Chloromethane was detected in the trip blank LORNG_TB09_08022022 (0.72 ug/L) associated with sample LORNG_OW08002_08022022_K. The detection of chloromethane in sample LORNG_OW08002_08022022_K was reported below the LOQ, and the result was qualified as not-detected (U) at the LOD.

2.2.3 Reporting Limits

Reporting limits for a subset of VOCs as reported by the laboratory do not meet the PALs identified in the QPP.

2.3 SVOCs

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance/Tuning
  LCS
* MS/MSD
* Field Duplicates
  Surrogate
  Reporting Limits
* Electronic Data Verification
  Initial Calibration
  Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
* Miscellaneous

* QC criteria were met for this parameter.

2.3.1 Laboratory Control Sample

Non-detect results for hexachlorocyclopentadiene in sample LORNG_OW08002_08022022_K and 2,3,4,6-tetrachlorophenol in sample LORNG_OW07003_08232022_K were qualified as rejected (R) based on LCS/LCSD percent recoveries less than 10 and LCS/LCSD relative percent differences greater than DoD limits.

Reporting limits for a subset of analytes in sample LORNG_OW08002_08022022_K were qualified as estimated (UJ) based on LCS and/or LCSD precent recoveries less than DoD limits and LCS/LCSD relative percent differences greater than DoD limits.

The result for benzyl alcohol in sample LORNG_OW08002_08022022_K was qualified as estimated (J) based on LCS and/or LCSD percent recoveries and LCS/LCSD relative percent differences greater than DoD limits.

2.3.2 Surrogate

Reporting limits for all acid-fraction SVOC analytes in sample LORNG_OW07003_08232022_k were qualified as estimated (UJ) based on surrogate percent recoveries less than DoD limits.

2.3.3 Reporting Limits

Reporting limits for a subset of SVOCs as reported by the laboratory do not meet the PALs identified in the QPP.

2.3.4 Initial Calibration

The reporting limit for 4-nitrophenol in sample LORNG_OW08002_08022022_K was qualified as estimated (UJ) based on an initial calibration relative standard deviation outside of DoD limits.

2.3.5 Continuing Calibration

Reporting limits for a subset of analytes in sample LORNG_OW08002_0802022_K were qualified as estimated (UJ) based on a second source verification percent recovery outside of DoD limits.

2.4 PAHs and Select SVOCs by SIM

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance/Tuning
* LCS
* MS/MSD
* Field Duplicates
* Surrogate
* Reporting Limits
* Electronic Data Verification
  Initial Calibration
* Continuing Calibration

* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
* Miscellaneous

* QC criteria were met for this parameter.

2.4.1 Initial Calibration

Reporting limits for indeno(1,2,3-cd)pyrene and pentachlorophenol in sample LORNG_OW08002_08022022_K were qualified as estimated (UJ) based on initial calibration relative standard deviations outside of DoD limits.

2.5 Metals

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
  QC Blanks
* Instrument Performance/Tuning
* LCS
* MS/MSD
* Field Duplicates
* Surrogate
  Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Total/Dissolved Solids
* Raw Data Review and Calculation Checks
  Miscellaneous

* QC criteria were met for this parameter.

2.5.1 QC Blanks

Low concentration detections of total mercury and cadmium in samples LORNG_OW08002_08022022_K and LORNG_OW07003_08232022_K were qualified not detected (U) at the LOD or reported sample concentrations based on contamination in the associated laboratory method blanks.

Low concentration detections of total thallium and chromium in sample LORNG_OW08002_08022022_K were qualified not detected (U) at the LOD or reported sample concentrations based on contamination in the associated instrument calibration blanks.

2.5.2 Reporting Limits

Reporting limits for a subset of metals as reported by the laboratory do not meet the PALs identified in the QPP.

Notes:

J = Concentration is estimated

U = Analyte not detected

UJ = Analyte not detected and considered estimated

R = Result is rejected

CBL = Continuing calibration blank concentration less than the reporting limit

CCL = Continuing calibration standard recovery less than lower control limit

HHL = Holding time exceeded

IAG = Ion abundance ratio outside calculated limits

ICD = Initial calibration relative standard deviation limit exceeded

LBL = Laboratory blank contamination less than reporting limit

LCD = Laboratory control sample (LCS) relative percent difference (RPD) criteria exceeded

LCL = LCS recovery less than lower control limit

LCH = LCS recovery greater than upper control limit

MSH = MS recovery greater than upper control limit

MSL = MS recovery less than lower control limit

RFL = Signal to noise ratio criteria exceeded

RIS = Extracted internal standard recovery outside control limits

SGL = Surrogate recovery less than lower control limit

SVLL = Second source verification standard recovery less than lower control limit

TBL = Trip blank concentration less than the reporting limit

NG/L = nanogram per liter

UG/L = microgram per liter

Data Validation and Usability Report
Loring PFAS Remedial Investigation
July - October 2022 Residential Sampling
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Residential samples were collected at the Former Loring Air Force Base in Limestone, Maine, in July - October 2022 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. Samples were submitted to SGS North America Laboratory in Orlando, Florida, and Vista Analytical Laboratory (Vista) in El Dorado Hills, California, as summarized below.

SGS analyzed 39 samples for PFAS by Method M537, liquid chromatography tandem mass spectrometry compliant with Table B-15 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.3 (USDoD, 2019a).

A duplicate of groundwater LORNG_LF2RESD_WH_08162022 was collected and submitted to Vista Analytical Laboratory in El Dorado Hills, California (Vista) as an interlaboratory comparison assessment sample. Vista analyzed one sample for PFAS by Method MS014.0, liquid chromatography tandem mass spectrometry compliant with Table B-15 of the USDoD Quality Systems Manual for Environmental Laboratories (QSM), Version 5.3 (USDoD, 2019a).

Sample event information included in this data validation report is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Summary of Data Validation Actions
- Table 4 – Field Duplicate RPD Summary
- Table 5 – Acronyms and Abbreviations
- Table 6 – Interlaboratory Comparison Assessment Summary

Data quality reviews were completed as described in the Quality Program Plan (QPP) Remedial Investigation PFAS Response (Wood, 2022). Data validation levels are established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019b). PFAS data were validated using Stage 2B procedures. Ten percent of the PFAS data collected during the remedial investigation were validated using Stage 4 procedures. Validation checklists, documentation of sample recalculations, and qualification justification documentation are stored in the Wood project file.

Stage 2A data validation includes review of sample results forms, chain of custody (COC) and supporting records, laboratory receipt checklists, analytical holding time compliance, sample related quality control (QC) data forms (method blanks, laboratory control samples (LCS), matrix spike/matrix spike duplicates (MS/MSD), field and laboratory duplicates, surrogates, internal standards, post digestion spikes, and serial dilutions), and QC sample frequency checks.

Stage 2B data validation includes all reviews performed in a Stage 2A data validation as well as review of initial calibration summaries, continuing calibration verification summaries, instrument performance/tuning summaries, dual column confirmation results, and sample preparation logs.

Stage 4 data validation includes all reviews performed in Stages 2A and 2B as well as review of raw data and chromatograms, target analyte identification confirmation, and recalculation of QC and sample results.

Data review and qualification actions were completed based on DoD Data Validation Guidelines Module 3 for PFAS (USDoD, 2020), general procedures described in USEPA Data Review and Validation Guidelines for PFAS (USEPA, 2018),, and method specifications in the DoD QSM 5.3 and/or the referenced analytical methods when DoD specifications were not available. QC limits presented in the DoD QSM 5.3 and/or the QPP were used during the data evaluation. Data qualifications were completed, if necessary, in accordance with the USEPA guidelines and the professional judgment of the validator using the following qualifiers:

J = Analyte present; concentration is estimated
U = Analyte not detected at the associated detection limits
UJ = Analyte was not detected at the associated detection limits; however, the associated detection limit should be considered an estimate.
R = Sample result is considered unusable for project objectives

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

Validation reason codes were applied to results associated with QC measurements outside project QC goals where validation qualifiers were added to results. Final results are presented in Table 2. The validation qualification actions and associated validation reason codes applied to sample results are summarized in Table 3. The following data validation reason codes were applied to one or more sample results:

RIS = Extracted internal standard recovery outside control limits
RFL = Signal-to-noise ratio less than QC limits

Interlaboratory split sample LORNG_LF2RESD_WH_08162022SPLIT was submitted to Vista as an additional quality assurance step. Data validation was not planned for Vista data unless gross deviations were observed. Split sample results for perfluorooctane sulfonamide (PFOSA) in residential sample LORNG_LF2RESD_WH_08162022 showed a gross difference in results between the primary laboratory SGS Orlando and the split sample laboratory Vista. SGS reported PFOSA as not detected at 1.9 U ng/L and Vista reported a detection well above the LOQ at 89.5 ng/L. Available laboratory data were reviewed by WSP to identify a possible cause for the difference in results, and both labs were requested to complete an additional review of data to determine if a reporting error had occurred. During the WSP review it was noted that in the liquid chromatography dual mass spectrometry method (LC/MS/MS Table B-15 of QSM V

5.3) used by the laboratories, the transition ions used for this compound are different between SGS and Vista. The transition ions for PFOSA are not specified in Table B-15 of QSM V 5.3. PFOSA is included in Method 1633 and the primary and secondary ions being used by SGS match those identified in Method 1633 (77.9 and 478.0). For Vista, the nominal mass assigned to the primary ion (77.4) and the secondary transition ion used by Vista (168.7) are different from those specified in Method 1633. During the review, SGS provided additional mass chromatograms for the primary and secondary ions used to quantify PFOSA. The chromatograms confirmed that PFOSA was not present above the method detection limit in the analytical run. Vista completed a review of the result based on their current methodology and indicated that the peak selection, quantification and rejection requirements for PFOSA met all criteria. Based on these reviews the differences in reporting for PFOSA is interpreted to possibly be due to variations in the analytical methods and possible sample specific matrix interactions with the result provided by Vista. The SGS result for PFOSA is interpreted to be usable as reported by the laboratory.

Results for LORNG_LF2RESD_WH_08162022SPLIT are presented in this report to complete the interlaboratory comparison only and are not included in the final data set of the Loring RI sampling program and not presented on Table 2. The interlaboratory comparison assessment summary is included in Table 6. An evaluation of split sample results is presented in Section 2.1.3.

1.1 DATA USABILITY EVALUATION

The overall data quality and data usability for this data set is interpreted to meet the project objectives identified in the QAPP. Interpretations of data validation qualifications and data usability are provided below:

PFAS
The non-detect result for N-methyl perfluorooctane sulfonamide (N-MeFOSA) in sample LORNG_RES21_10262022 was qualified as rejected (R) based on extracted internal standard (EIS) percent recovery less than the DoD PFAS validation guideline limit of 20.

Low concentration detections of perfluorooctanesulfonic acid were qualified estimated (J) in twosamples based on signal-to-noise ratios exceeding QC limits. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as qualified. The uncertainties that may occur from using estimated detections should be considered during contamination assessment or evaluation of contaminant data against project action limits.

Reporting limits for PFAS were qualified estimated (UJ) in a subset of samples based on associated QC results exceeding limits for EIS recovery. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as qualified. The uncertainties and/or data gaps that may occur from using estimated reporting limits should be considered during contamination assessment or evaluation of contaminant data against project action limits.

Of the 975 individual PFAS results reported for the groundwater event, a total of one result was qualified as rejected (R) and is interpreted to be unusable for project objectives. This represents a PFAS data completeness of 99.9% for the residential data set.

2.0 DATA VALIDATION QUALIFICATION ACTION SUMMARY

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the DoD QSM 5.3, the QPP, and/or analytical methods. Unless specified below, results are interpreted to be usable as reported by the laboratory.

2.1 PFAS

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance/Tuning
* LCS
* MS/MSD
* Field/Lab Duplicates
  Extracted Internal Standard Recovery
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
  Miscellaneous

* QC criteria were met for this parameter.

2.1.1 Extracted Internal Standard Recovery

The extracted internal standard (EIS) percent recoveries associated with a subset of target compounds in multiple samples were less than the lower QC acceptance limit of 50. Results for target compounds reported above the DL are considered estimated (J). Reporting limits associated with non-detected target compounds with EIS recoveries between 20 and 50 are qualified as estimated (UJ). Results for non-detected target compounds with EIS recoveries below 20 were qualified as rejected (R) and are considered unusable for project objectives.

The non-detect result for N-MeFOSA in sample LORNG_RES21_10262022 was qualified as rejected (R) based on extracted internal standard (EIS) percent recoveries less than the DoD PFAS validation guideline limit of 20.

The non-detect result or 4:2 fluorotelomer sulfonate (4:2 FTS) in sample LORNG_RES21_10262022 was qualified as estimated (UJ) based on an EIS percent recovery less than 50.

The non-detect results for N-MeFOSA in the following samples were qualified as estimated (UJ) based on EIS percent recoveries less than 50:

LORNG_LWTF-EFF_07252022
LORNG_LWTF-INF_07252022
LORNG_EGRESD_WH_07252022
LORNG_USFW-01_07252022FD
LORNG_RRRRESD_WH_08042022
LORNG_GC_01_08042022

The non-detect results for N-methyl perfluorooctanesulfonamidoacetic acid (N-MeFOSAA) in samples LORNG_RES22_09292022FD and LORNG_RES26_10132022 were qualified as estimated (UJ) based on an EIS percent recovery less than 50.

The non-detect result for perfluorobutanoic acid (PFBA) in sample LORNG_RES21_10262022 was qualified as estimated (UJ) based on an EIS percent recovery less than 50.

The non-detect results for perfluorododecanoic acid (PFDoA) and perfluorotridecanoic acid (PFTrDA) in samples LORNG_RES24_09292022, LORNG_RES33_09292022, and LORNG_RES26_10132022 were qualified as estimated (UJ) based on EIS percent recoveries less than 50.

The non-detect result for perfluoroheptanoic acid (PFHpA), perfluorohexanoic acid (PFHxA), perfluoropentanoic acid (PFPeA), and PFOSA in sample LORNG_RES21_10262022 were qualified as estimated (UJ) based on EIS percent recoveries less than 50.

The on-detect results for perfluorotetradecanoic acid (PFTeDA) in samples LORNG_RES26_10132022 and LORNG_RES21_10262022 were qualified as estimated (UJ) based on EIS percent recoveries less than 50.

2.1.2 Miscellaneous

The signal-to-noise ratio for PFOS in samples LORNG_LSTWELLB_07252022 and LORNG_LWTF-INF_07252022 were less than the QC limit of 10. The PFOS results in the affected samples were qualified estimated (J).

2.1.3 Interlaboratory Split Samples

One interlaboratory split sample was collected in association with the following residential sample:

LORNG_LF2RESD_WH_08162022

A summary of split sample results is presented on Table 6. Comparison criteria are established in QPP Appendix E. The majority of PFAS target compounds were not detected in the sample. With the exception of PFOSA, PFAS compounds that were detected showed general agreement between results reported by SGS and Vista. Split sample results for perfluorooctane sulfonamide PFOSA in residential sample LORNG_LF2RESD_WH_08162022 showed a gross difference in results between the primary laboratory SGS Orlando and the split sample laboratory Vista. SGS reported PFOSA as not detected at 1.9 U ng/L and Vista reported a detection well above the LOQ at 89.5 ng/L. Available laboratory data were reviewed by WSP to identify a possible cause for the difference in results, and both labs were requested to complete an additional review of data to determine if a reporting error had occurred. During the WSP review it was noted that in the liquid chromatography dual mass spectrometry method (LC/MS/MS Table B-15 of QSM V 5.3) used by the laboratories, the transition ions used for this compound are different between SGS and Vista. The transition ions for PFOSA are not specified in Table B-15 of QSM V 5.3. PFOSA is included in Method 1633 and the primary and secondary ions being used by SGS match those identified in Method 1633 (77.9 and 478.0). For Vista, the nominal mass assigned to the primary ion (77.4) and the secondary transition ion used by Vista (168.7) are different from those specified in Method 1633. During the review, SGS provided additional mass chromatograms for the primary and secondary ions used to quantify PFOSA. The chromatograms confirmed that PFOSA was not present above the method detection limit in the analytical run. Vista completed a review of the result based on their current methodology and indicated that the peak selection, quantification and rejection requirements for PFOSA met all criteria. Based on these reviews the difference in reporting for PFOSA is interpreted to possibly be due to variations in the analytical methods and possible sample specific matrix interactions with the result provided by Vista. The SGS result for PFOSA is interpreted to be usable as reported by the laboratory. Results for the split samples analyzed at Vista Laboratory are interpreted to confirm the accuracy of samples reported in the SGS data set.

Data Validation and Usability Report
Loring PFAS Remedial Investigation
Stormwater Sampling - 2022
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Stormwater samples were collected at the Former Loring Air Force Base in Limestone, Maine, in June and August 2022 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. Samples were submitted to SGS North America Laboratory in Orlando, Florida, as summarized below.

SGS analyzed 42 samples for PFAS by Method M537, liquid chromatography tandem mass spectrometry compliant with Table B-15 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.3 (USDoD, 2019a).

Sample event information included in this data validation report is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Summary of Data Validation Actions
- Table 4 – Field Duplicate RPD Summary
- Table 5 – Acronyms and Abbreviations

Data quality reviews were completed as described in the Quality Program Plan (QPP) Remedial Investigation PFAS Response (Wood, 2022). Data validation levels are established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019b). PFAS data were validated using Stage 2B procedures. Ten percent of the PFAS data collected during the remedial investigation were validated using Stage 4 procedures. Validation checklists, documentation of sample recalculations, and qualification justification documentation are stored in the Wood project file.

Stage 2A data validation includes review of sample results forms, chain of custody (COC) and supporting records, laboratory receipt checklists, analytical holding time compliance, sample related quality control (QC) data forms (method blanks, laboratory control samples (LCS), matrix spike/matrix spike duplicates (MS/MSD), field and laboratory duplicates, surrogates, internal standards, post digestion spikes, and serial dilutions), and QC sample frequency checks.

Stage 2B data validation includes all reviews performed in a Stage 2A data validation as well as review of initial calibration summaries, continuing calibration verification summaries, instrument performance/tuning summaries, dual column confirmation results, and sample preparation logs.

Stage 4 data validation includes all reviews performed in Stages 2A and 2B as well as review of raw data and chromatograms, target analyte identification confirmation, and recalculation of QC and sample results.

Data review and qualification actions were completed based on DoD Data Validation Guidelines Module 3 for PFAS (USDoD, 2020), general procedures described in USEPA Data Review and Validation Guidelines for PFAS (USEPA, 2018), and method specifications in the DoD QSM 5.3 and/or the referenced analytical methods when DoD specifications were not available. QC limits presented in the DoD QSM 5.3 and/or the QPP were used during the data evaluation. Data qualifications were completed, if necessary, in accordance with the USEPA guidelines and the professional judgment of the validator using the following qualifiers:

J = Analyte present; concentration is estimated
U = Analyte not detected at the associated detection limits
UJ = Analyte was not detected at the associated detection limits; however, the associated detection limit should be considered an estimate.
R = Sample result is considered unusable for project objectives

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

Validation reason codes were applied to results associated with QC measurements outside project QC goals where validation qualifiers were added to results. Final results are presented in Table 2. The validation qualification actions and associated validation reason codes applied to sample results are summarized in Table 3. The following data validation reason codes were applied to one or more sample results:

IAG = Ion abundance ratio outside calculated limits
LCH = LCS recovery greater than upper control limit
MSD = Matrix spike (MS)/MSD RPD criteria exceeded
MSL = MS recovery less than lower control limit
RIS = Extracted internal standard recovery outside control limits

1.1 DATA USABILITY EVALUATION

The overall data quality and data usability for this data set is interpreted to meet the project objectives identified in the QAPP. Interpretations of data validation qualifications and data usability are provided below:

Non-detect results for N-methyl perfluorooctane sulfonamide (N-MeFOSA) in 32 samples were qualified as rejected (R) based on extracted internal standard (EIS) percent recoveries less than the DoD PFAS validation guideline limit of 20. Affected samples and associated qualified results are summarized in Table 3. Results for N-MeFOSA in the affected samples are considered unusable for project objectives.

Non-detect results for perfluorooctane sulfonamide (PFOSA) in samples LORNG_ST05003_06142022FD and LORNG_ST18008_06162022 were qualified as rejected (R) based on EIS percent recoveries less than the DoD PFAS validation guideline limit of 20. Results for PFOSA in the affected samples are considered unusable for project objectives.

Non-detect results for perfluorotetradecanoic acid (PFTeDA) in samples LORNG_ST05003_06142022 and LORNG_ST20001_06182022 were qualified as rejected (R) based on based on EIS percent recoveries less than the DoD PFAS validation guideline limit of 20. Results for PFTeDA in the affected samples are considered unusable for project objectives.

PFAS detections were qualified estimated (J) in a subset of samples based on associated QC results exceeding limits for LCS recovery, EIS recovery, and/or transition ion ratio. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as qualified. The uncertainties that may occur from using estimated detections should be considered during contamination assessment or evaluation of contaminant data against project action limits.

Reporting limits for PFAS were qualified estimated (UJ) in a subset of samples based on associated QC results exceeding limits for MS/MSD recovery, MS/MSD relative percent difference (RPD), and/or EIS recovery. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as qualified. The uncertainties and/or data gaps that may occur from using estimated reporting limits should be considered during contamination assessment or evaluation of contaminant data against project action limits.

Of the 1,050 individual PFAS results reported for the 2022 Stormwater event, a total of 36 results were qualified as rejected (R) and are interpreted to be unusable for project objectives. This represents a completeness of 97% for the Stormwater data set.

Laboratory reporting limits (RLs) and method detection limits (MDLs) for all samples in the 2022 Stormwater events are less than the Project Action levels (PALs) identified in the QAPP.

2.0 DATA VALIDATION QUALIFICATION ACTION SUMMARY

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the DoD QSM 5.3, the QPP, and/or analytical methods. Unless specified below, results are interpreted to be usable as reported by the laboratory.

2.1 PFAS

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance/Tuning

LCS
MS/MSD
* Field Duplicates
Extracted Internal Standard Recovery
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
Miscellaneous

* QC criteria were met for this parameter.

2.1.1 LCS

Results for PFHpS in samples LORNG_ST18013_06162022 and LORNG_ST21001_06162022 were qualified estimated (J) based on laboratory control sample percent recovery (138) greater than the upper project QC limit (134).

Results for PFPeA in the following samples were qualified estimated (J) based on laboratory control sample percent recovery (131) greater than the upper project QC limit (129).

LORNG_ST17000_06162022
LORNG_ST18003_06162022

LORNG_ST23002_06162022
LORNG_ST23003_06162022
LORNG_ST24001_06162022

2.1.2 MS/MSD

The non-detect result for perfluorodecane sulfonate (PFDS) in sample LORNG_C1_ST_06142022 was qualified estimated (UJ) based on matrix spike percent recovery (47) less than the lower project QC limit (53) and matrix spike/matrix spike duplicate relative percent difference (40) greater than the project limit (30).

The non-detect result for PFNS in sample LORNG_C1_ST_05142022 was qualified estimated (UJ) based on matrix spike percent recovery (68) less than the lower project QC limit (69).

2.1.3 Extracted Internal Standard Recovery

The extracted internal standard (EIS) percent recoveries associated with a subset of target compounds in multiple samples were less than the lower QC acceptance limit of 50. Results for target compounds reported above the DL are considered estimated (J). Reporting limits associated with non-detected target compounds with EIS percent recoveries between 20 and 50

are qualified as estimated (UJ). Results for non-detected target compounds with EIS percent recoveries less than 20 were qualified as rejected (R) and are considered unusable for project objectives.

Non-detect results for 4:2 fluorotelomer sulfonate (4:2 FTS) in samples LORNG_ST05003_06142022FD, LORNG_ST18007_06162022, and LORNG_ST18013_06162022 were qualified estimated (UJ) based on EIS percent recoveries less than 50.

The non-detect result for 6:2 fluorotelomer sulfonate (6:2 FTS) in sample LORNG_ST18007_06162022 was qualified estimated (UJ) based on EIS percent recovery less than 50.

The non-detect result for 8:2 fluorotelomer sulfonate (8:2 FTS) in sample LORNG_ST18007_06162022 was qualified estimated (UJ) based on EIS percent recovery less than 50.

Non-detect results for n-ethyl perfluorooctanesulfonamidoacetic acid (N-EtFOSAA) in samples LORNG_ST16001_06162022, LORNG_ST18007_06162022, and LORNG_ST18008_06162022 were qualified estimated (UJ) based on EIS percent recoveries less than 50.

Non-detect results for n-methyl perfluorooctane sulfonamide (N-MeFOSA) in the following samples are considered estimated (UJ) based on EIS percent recoveries less than 50:

LORNG_ST08001_06152022
LORNG_ST08002_06152022FD
LORNG_ST09004_06152022
LORNG_ST13014_06152022
LORNG_ST18006_06152022

LORNG_ST20001_06182022
LORNG_ST13016_08312022

The non-detect result for perfluorobutanesulfonic acid (PFBS) in sample LORNG_ST05003_06142022FD was qualified estimated (UJ) and the detections of PFBS in samples LORNG_ST18006_06152022 and LORNG_ST18007_06162022 were qualified estimated (J) based on EIS percent recoveries less than 50.

Results for perfluorobutanoic acid (PFBA) in the following samples were qualified estimated (J) based on EIS percent recoveries less than 50:

LORNG_ST18006_06152022
LORNG_ST12001_06162022
LORNG_ST16001_06162022
LORNG_ST18007_06162022
LORNG_ST18013_06162022
LORNG_ST24001_06162022

Non-detect results for PFBA in the following samples were qualified estimated (UJ) based on EIS percent recoveries less than 50:

LORNG_ST16002_06162022
LORNG_ST16003_06162022
LORNG_ST17000_06162022
LORNG_ST18003_06162022
LORNG_ST18003_06162022FD
LORNG_ST21001_06162022
LORNG_ST23003_06162022

The non-detect result for PFDS in sample LORNG_ST18007_06162022 was qualified estimated (UJ) based on EIS percent recovery less than 50.

The non-detect result for perfluorodecanoic acid (PFDA) in sample LORNG_ST18007_06162022 was qualified estimated (UJ) based on EIS percent recovery less than 50.

Non-detect results for perfluorododecanoic acid (PFDoA) in the following samples were qualified estimated (UJ) based on EIS percent recoveries less than 50:

LORNG_ST18006_06152022
LORNG_ST12001_06162022
LORNG_ST16001_06162022
LORNG_ST16002_06162022
LORNG_ST16003_06162022
LORNG_ST18007_06162022

Non-detect results for perfluoroheptanesulfonic acid (PFHpS) in samples LORNG_ST05003_06142022FD and LORNG_ST18007_06162022 were qualified estimated (UJ) based on EIS percent recoveries less than 50.

Results for perfluoroheptanoic acid (PFHpA) in samples LORNG_ST05003_06142022FD, LORNG_ST18006_06152022, and LORNG_ST18007_06162022 were qualified estimated (J) based on EIS percent recoveries less than 50.

The result for perfluorohexanesulfonic acid (PFHxS) in sample LORNG_ST18007_06162022 was qualified estimated (J) based on EIS percent recovery less than 50.

Results for perfluorohexanoic acid (PFHxA) in samples LORNG_ST05003_06142022FD, LORNG_ST18006_06152022, and LORNG_ST18007_06162022 were qualified estimated (J) based on EIS percent recoveries less than 50.

Non-detect results for perfluorononanesulfonic acid (PFNS) in samples LORNG_ST18001_06152022 and LORNG_ST18007_06162022 were qualified estimated (UJ) based on EIS percent recoveries less than 50.

The result for perfluorononanoic acid (PFNA) in sample LORNG_ST18007_06162022 was qualified estimated (J) based on EIS percent recovery less than 50.

Non-detect results for perfluorooctane sulfonamide (PFOSA) in the following samples were qualified estimated (UJ) based on EIS percent recoveries less than 50:

LORNG_C1_ST_06142022
LORNG_ST05003_06142022
LORNG_ST13001_06142022
LORNG_ST17000_06162022
LORNG_ST18007_06162022
LORNG_ST24001_06162022

Non-detect results for PFOSA in samples LORNG_ST05003_06142022FD and LORNG_ST18008_06162022 were qualified as rejected (R) based on DoD PFAS validation

guidelines due to EIS percent recoveries less than 20. Results for PFOSA in the affected samples are considered unusable for project objectives.

Results for PFOSA in the following samples were qualified estimated (J) based on EIS percent recoveries less than 50:

LORNG_C3_ST_06142022
LORNG_C3_ST_06142022FD
LORNG_ST05002_06152022
LORNG_ST09001_06152022FD
LORNG_ST12001_06162022
LORNG_ST16001_06162022

Results for perfluorooctanesulfonic acid (PFOS) in samples LORNG_ST12001_06162022 and LORNG_ST18007_06162022 were qualified estimated (J) based on EIS percent recoveries less than 50.

The result for perfluorooctanoic acid (PFOA) in sample LORNG_ST18007_06162022 was qualified estimated (J) based on EIS percent recovery less than 50.

The non-detect result for perfluoropentanesulfonic acid (PFPeS) in sample LORNG_ST18007_06162022 was qualified estimated (UJ) based on EIS percent recovery less than 50.

Results for perfluoropentanoic acid (PFPeA) in samples LORNG_ST05003_06142022FD, LORNG)ST18006_06152022, LORNG_ST18007_06162022, and LORNG_ST18013_06162022 were qualified estimated (J) based on EIS percent recovery less than 50.

Non-detect results for perfluorotetradecanoic acid (PFTeDA) in the following samples were qualified estimated (UJ) based on EIS percent recoveries less than 50.

LORNG_C3_ST_06142022FD
LORNG_ST05003_06142022FD
LORNG_ST09001_06152022

LORNG_ST18007_06162022
LORNG_ST18008_06162022
LORNG_ST18009_06162022

Non-detect results for PFTeDA in samples LORNG_ST05003_06142022 and LORNG_ST20001_06182022 were qualified rejected (R) based on DoD PFAS validation guidelines due to EIS percent recoveries less than 20. Results for PFTeDA in the affected samples are considered unusable for project objectives.

Non-detect results for perfluorotridecanoic acid (PFTrDA) in the following samples were qualified estimated (UJ) based on EIS percent recoveries less than 50.

LORNG_ST18006_06152022
LORNG_ST12001_06162022
LORNG_ST16001_06162022
LORNG_ST16002_06162022
LORNG_ST16003_06162022
LORNG_ST18007_06162022

Non-detect results for perfluoroundecanoic acid (PFUnA) in the following samples were qualified estimated (UJ) based on EIS percent recoveries less than 50:

LORNG_ST18006_06152022
LORNG_ST12001_06162022
LORNG_ST16001_06162022
LORNG_ST16003_06162022
LORNG_ST18007_06162022
LORNG_ST18008_06162022

2.1.3 Miscellaneous

The transition ion ratio for PFOSA (6.3) in sample LORNG_ST05002_06152022 was outside the acceptance range (1.8 - 5.3) calculated from the associated mid-level calibration standard. The PFOSA result in sample LORNG_ST05002_06152022 was qualified estimated (J).

The transition ion ratio for PFNS (21.7) in sample LORNG_ST11001_06152022 was outside the acceptance range (24.9 – 74.7) calculated from the associated mid-level calibration standard. The PFNS result in sample LORNG_ST11001_06152022 was qualified estimated (J).

Notes:

J = Concentration is estimated

U = Analyte not detected at the associated detection limits

UJ = Analyte not detected and considered estimated

R = Sample reuslt is considered unusable for project objectives

IAG = Ion abundance ratio outside calculated limits

LCH = LCS recovery greater than upper control limit

MSD = Matrix spike (MS)/MSD RPD criteria exceeded

MSL = MS recovery less than lower control limit

RIS = Extracted internal standard outside of acceptance limits

NG/L = nanograms per liter

Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Surface water and sediment samples were collected at the Former Loring Air Force Base in Limestone, Maine, in June, July, August, and September 2022 as part of the Remedial Investigation Per- and Polyfluoroalkyl Substances (PFAS) Response. Samples were submitted to SGS North America Laboratory in Orlando, Florida, Katahdin Analytical Services (KAS) in Scarborough, Maine, and Vista Analytical Laboratory (Vista) in El Dorado Hills, California, as summarized below.

SGS analyzed 213 samples for PFAS by Method M537, liquid chromatography tandem mass spectrometry (LC/MS/MS) compliant with Table B-15 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.3 (USDoD, 2019a).

KAS analyzed 74 samples for Total Organic Carbon (TOC) (subsets subcontracted to CT Laboratory (TAL) in Baraboo, Wisconsin) by the Llyod Kahn method.

Sample event information included in this data validation report is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Summary of Data Validation Actions
- Table 4 – Field Duplicate Relative Percent difference (RPD) Summary
- Table 5 – Acronyms and Abbreviations

Data quality reviews were completed as described in the Quality Program Plan (QPP) Remedial Investigation PFAS Response (Wood, 2022). Data validation levels are established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019b). PFAS data were validated using Stage 2B procedures. TOC data were validated using Stage 2A procedures. Ten percent of the PFAS and TOC samples collected during the remedial investigation were validated using Stage 4 procedures. Validation checklists, documentation of sample recalculations, and qualification justification documentation are stored in the WSP project file.

Stage 2A data validation includes review of sample results forms, chain of custody (COC) and supporting records, laboratory receipt checklists, analytical holding time compliance, sample related quality control (QC) data forms (method blanks, laboratory control samples (LCS), matrix spike/matrix spike duplicates (MS/MSD), field and laboratory duplicates, surrogates, internal standards, post digestion spikes, and serial dilutions), and QC sample frequency checks.

Stage 2B data validation includes all reviews performed in a Stage 2A data validation as well as review of initial calibration summaries, continuing calibration verification summaries, instrument performance/tuning summaries, dual column confirmation results, and sample preparation logs.

Stage 4 data validation includes all reviews performed in Stages 2A and 2B as well as review of raw data and chromatograms, target analyte identification confirmation, and calculation verifications of QC and sample results.

Data review and qualification actions were completed based on DoD Data Validation Guidelines Module 3 for PFAS (USDoD, 2020), general procedures described in USEPA Data Review and Validation Guidelines for PFAS (USEPA, 2018) and USEPA National Functional Guidelines for Superfund Data Review (USEPA, 2020a; USEPA, 2020b), and method specifications in the DoD QSM 5.3 and/or the referenced analytical methods when DoD specifications were not available. QC limits presented in the DoD QSM 5.3 and the QPP were used during the data evaluation. Data qualifications were completed, if necessary, in accordance with the USEPA guidelines and the professional judgment of the validator using the following qualifiers:

J = Analyte present; concentration is estimated
U = Analyte not detected at the associated detection limits
UJ = Analyte was not detected at the associated detection limits; however, the associated detection limit should be considered an estimate.
R = Sample result is considered unusable for project objectives

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

Validation reason codes were applied to results associated with QC measurements outside project QC goals where validation qualifiers were added to results. Final results are presented in Table 2. The validation qualification actions and associated validation reason codes applied to sample results are summarized in Table 3. The following data validation reason codes were applied to one or more sample results:

FDD = Field duplicate RPD criteria exceeded
HHL = Sampling to analysis holding time exceeded
LDD = Lab duplicate RPD criteria exceeded
MSD = Matrix spike (MS)/MSD RPD criteria exceeded
MSL = MS recovery less than lower control limit
RIS = Extracted internal standard recovery outside control limits

1.1 DATA USABILITY EVALUATION

The overall data quality and data usability for this data set is interpreted to meet the project objectives identified in the QAPP. A summary of data validation qualifications and interpretations on data usability are provided in this section. More detailed discussions are provided in Section 2.0.

PFAS compound detections were qualified estimated (J) and reporting limits (UJ) in a subset of samples based on associated QC results outside limits for MS/MSD recovery, field duplicate precision, and extracted internal standard (EIS) recovery. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as estimated values. The uncertainties that may occur from using estimated detections should be considered during contamination assessment or evaluation of contaminant data against project action limits.

The reporting limits for the following samples and PFAS compounds are usable as estimated values due to the sample being extracted past the 28-day holding time for PFAS analysis:

- Perfluorododecanoic acid (PFDoA), perfluorotetradecanoic acid (PFTeDA), perfluorotridecaonic acid (PFTrDA), perfluorooctane sulfonamide (PFOSA), and N-methyl perfluorooctane sulfonamide (N-MeFOSA) in sample LORNG_SW11004_06212022
- PFTeDA, PFOSA, and N-MeFOSA in sample LORNG_SW11008_06212022
- PFTeDA in sample LORNG_LT14A_SW_07072022
- PFTeDA in sample LORNG_LT14A_SW_07072022

Recoveries within QSM and QPP project limits were reported for PFAS compounds in most MS/MSD analyses indicating accuracy goals were achieved in the surface water and sediment media with the following exception:

- The recoveries for N-MeFOSA and PFTrDA in sample LORNG_LT03_SW_07112022 were outside limits. Results are usable as estimated values due to low recoveries and/or RPD exceedances in the associated MS/MSD.

Field duplicate results within QPP project limits were reported for PFAS compounds in most field duplicate pairs indicating precision goals were achieved for the surface water and sediment media with the following exceptions:

- The results for perfluorooctanesulfonic acid (PFOS) in samples LORNG_LT1002_SW_07102022 and LORNG_LT1002_SW_07102022FD are considered estimated based on an RPD that exceeds the project limit of 30.
- The results for perfluoropentanoic acid (PFPeA) in samples LORNG_LT16_SW_07072022 and LORNG_LT16_SW_07072022FD are considered estimated based on an RPD that exceeds project limit of 30.

PFAS compound detections were qualified estimated (J) and reporting limits (UJ) in a subset of samples based on EIS recovery. In accordance with QSM and QPP objectives EIS recovery limits are 50-150 percent. Target compound results associated with recoveries less than 50 percent are qualified estimated. Non-detect results associated with recoveries less than 20 percent are

qualified rejected. Affected samples and associated qualified results are summarized in Table 3 with code RIS. Results qualified estimated (J/UJ) are considered usable as estimated values. Results qualified rejected (R) are considered unusable. The majority of rejected results are for the target compound N-MeFOSA as discussed below. A smaller number of results for PFOSA, PFTeDA, and PFTrDA were also rejected as indicated in Table 3.

Non-detect results for N-MeFOSA in the following samples were qualified as rejected (R) based on EIS percent recoveries less than 20. The low recoveries are believed to be due to a matrix effect due to geological conditions at the sample locations. Results for N-MeFOSA in these samples are considered unusable for project objectives:

Of the 5,325 individual PFAS results reported for the surface water and sediment sampling, a total of 107 results were qualified as rejected (R) and are interpreted to be unusable for project objectives. This represents a PFAS data completeness of 98% for the data set. All results for

PFAS compounds with project action limits identified for aqueous and soil in Worksheet 15 of the QPP are considered usable.

A total of eight field duplicate samples were collected for TOC in sediment. Results for 4 of 8 locations had RPDs that met the project precision objective of RPD ≤ 50. Four sample locations had RPDs that exceeded the limit with duplicate results differing from original sample results by factors of approximately 3 to 4 times indicating variability in measuring TOC occurred at the sediment locations. Results for TOC in duplicate pairs LORNG_LT16_SD_07072022_C and LORNG_LT16_SD_07072022FD_C, LORNG_LT02_SD_07082022_C and LORNG_LT02_SD_07082022FD_C, LORNG_LT1002_SD_07102022_C and LORNG_LT1002_SD_07102022FD_C, and LORNG_SD16005_07102022_C and LORNG_SD16005_071092022FD_C are considered estimated values. Qualified results are summarized on Table 3 with code FDD. Potential variability of TOC results should be considered when using sediment data.

The results for TOC were also qualified estimated in samples LORNG_LT1006A_SD_07072022_C and LORNG_LT14_SD_07082022_C based on laboratory duplicate RPDs that exceed project limits.

Of the 74 individual TOC results reported for the surface water and sediment event, no results were qualified as rejected. This represents a TOC data completeness of 100% for the surface water and sediment event.

2.0 DATA VALIDATION QUALIFICATION ACTION SUMMARY

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the DoD QSM 5.3, the QPP, and/or analytical methods. Unless specified below, results are interpreted to be usable as reported by the laboratory.

2.1 PFAS

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
  Holding Times
* QC Blanks
* Instrument Performance/Tuning
* LCS
  MS/MSD
* Field Duplicates
  Extracted Internal Standard Recovery
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration

* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
  Miscellaneous

* QC criteria were met for this parameter.

2.1.1 Holding Times

The reporting limits for PFDoA, PFTeDA, PFTrDA, PFOSA, and N-MeFOSA in sample LORNG_SW11004_06212022 were qualified as estimated (UJ) due to the sample being extracted past the 28-day holding time for PFAS sample preparation.

The reporting limits for PFTeDA, PFOSA, and N-MeFOSA in sample LORNG_SW11008_06212022 were qualified as estimated (UJ) due to the sample being extracted past the 28-day holding time for PFAS sample preparation.

The reporting limit for PFTeDA in sample LORNG_LT14A_SW_07072022 was qualified as estimated (UJ) due to the sample being extracted past the 28-day holding time for PFAS sample preparation.

2.1.2 MS/MSD

The percent recoveries of N-MeFOSA and PFTrDA in the MS/MSD associated with sample LORNG_LT03_SW_07112022 were below the lower QC acceptance limit. The MS/MSD RPD exceeded the QC acceptance limit for PFTrDA. N-MeFOSA and PFTrDA were not detected in sample LORNG_LT03_SW_07112022 and reporting limits were qualified as estimated (UJ).

2.1.3 Field Duplicates

The results for PFOS in sample LORNG_LT1002_SW_07102022 and its associated field duplicate LORNG_LT1002_SW_07102022FD were qualified as estimated (J) based on a relative percent difference that exceeds project limits.

2.1.4 Extracted Internal Standard Recovery

The EIS percent recoveries associated with a subset of target compounds in multiple samples were less than the lower QC acceptance limit of 50. Results for target compounds reported above the DL are considered estimated (J). Reporting limits associated with non-detected target compounds with EIS recoveries between 20 and 50 are qualified as estimated (UJ). Results for non-detected target compounds with EIS recoveries below 20 were qualified as rejected (R) and are considered unusable for project objectives.

Non-detect results for N-MeFOSA in the following samples were qualified as rejected (R) based on EIS percent recoveries less than 20.

LORNG_WBGB_005_SD_07102022

The EIS percent recoveries associated with Perfluorooctane sulfonamide (PFOSA) and perfluorotetradecanoic acid (PFTeDA) in sample LORNG_AA20SW01_06182022 were less than the lower QC acceptance limit of 50. The results for PFOSA, PFTeDA, and perfluorotridecanoic acid (PFTrDA) in sample LORNG_AA20SW01_06182022 were qualified as estimated (UJ).

The EIS percent recoveries associated with PFTeDA in sample LORNG_AA20SW02_06182022 were less than the lower QC acceptance limit of 50. The EIS recoveries associated with PFOSA in sample LORNG_AA20SW02_06182022 was less than the rejectable limit of 20. The results for PFTeDA, and PFTrDA in sample LORNG_AA20SW01_06182022 were qualified as estimated (UJ). PFOSA was not detected in sample LORNG_AA20SW02_06182022 and the reporting limit was qualified as rejected (R).

The EIS percent recoveries associated with a subset of parameters in sample LORNG_SD18004_06192022 were less than the lower QC acceptance limit of 50. The results for the subset of parameters in sample LORNG_SD18004_06192022 were qualified as estimated (UJ/J).

The EIS percent recoveries associated with a subset of parameters in sample LORNG_SD18005_06192022 were less than the lower QC acceptance limit of 50. The results for the subset of parameters in sample LORNG_SD18005_06192022 were qualified as estimated (UJ/J).

The EIS percent recoveries associated with PFTeDA and PFOSA in sample LORNG_SW18002_06182022 were less than the rejectable limit of 20. The results for PFOSA, FOSA, PFTeDA, and PFTrDA in sample LORNG_SW18002_06182022 were not detected and the reporting limits were qualified as rejected (R).

The EIS percent recoveries associated with a subset of parameters in sample LORNG_SW18004_06192022 were less than the lower QC acceptance limit of 50. The EIS recoveries associated with PFOSA in sample LORNG_SW18004_06192022 was less than the rejectable limit of 20. The results for the subset of parameters in sample LORNG_SW18004_06192022 were qualified as estimated (UJ). PFOSA was not detected in sample LORNG_SW18004_06192022 and the reporting limits were qualified as rejected (R).

The EIS percent recoveries associated with a subset of parameters in sample LORNG_SW18005_06192022 were less than the lower QC acceptance limit of 50. The EIS recoveries associated with PFOSA in sample LORNG_SW18005_06192022 was less than the rejectable limit of 20. The results for the subset of parameters in sample LORNG_SW18005_06192022 were qualified as estimated (UJ). PFOSA was not detected in sample LORNG_SW18005_06192022 and the reporting limits were qualified as rejected (R).

The EIS percent recoveries associated with PFOSA and PFTeDA in sample LORNG_AA19SW02_07072022 were less than the lower QC acceptance limit of 50. The EIS recovery associated with N-MEFOSA in sample LORNG_AA19SW02_07072022 was less than the rejectable limit of 20. The results for PFOSA, PFTeDA, and perfluorotridecanoic acid (PFTrDA) in sample LORNG_AA19SW02_07072022 were qualified as estimated (UJ). N-MEFOSA was not detected in sample LORNG_AA19SW02_07072022 and the reporting limit was qualified as rejected (R).

The EIS percent recoveries associated with a subset of parameters in sample LORNG_AA19SW03_07072022 were less than the lower QC acceptance limit of 50. The EIS recoveries associated with PFTeDA in sample LORNG_AA19SW03_07072022 was less than the rejectable limit of 20. The results for the subset of parameters in sample LORNG_AA19SW03_07072022 were qualified as estimated (UJ). PFTeDA was not detected in sample LORNG_AA19SW03_07072022 and the reporting limits were qualified as rejected (R).

The EIS percent recovery associated with PFOSA in sample LORNG_LT16_SW_07072022 was less than the lower QC acceptance limit of 50. The EIS recovery associated with PFTeDA in sample LORNG_LT16_SW_07072022 was less than the rejectable limit of 20. The results for PFOSA in sample LORNG_LT16_SW_07072022 was qualified as estimated (UJ). PFTeDA was not detected in sample LORNG_LT16_SW_07072022 and the reporting limit was qualified as rejected (R).

The EIS percent recoveries associated with PFOSA and PFTeDA in sample LORNG_LT16_SW_07072022FD were less than the lower QC acceptance limit of 50. The results

for PFOSA, PFTeDA, and PFTrDA sample LORNG_LT16_SW_07072022FD was qualified as estimated (UJ).

The EIS percent recovery associated with PFOSA in sample LORNG_SW11004_06212022 was less than the lower QC acceptance limit of 50. PFOSA was not detected in sample LORNG_SW11004_06212022 and the reporting limit was qualified as estimated (UJ).

The EIS percent recovery associated with PFTeDA in sample LORNG_SW11008_06212022 was less than the lower QC acceptance limit of 50. The EIS recoveries associated with PFOSA in sample LORNG_SW11008_06212022 was less than the rejectable limit of 20. PFTeDA was not detected in sample LORNG_SW11008_06212022 and the reporting limit was qualified as estimated (UJ). PFOSA was not detected in sample LORNG_SW11008_06212022 and the reporting limits were qualified as rejected (R).

The EIS percent recoveries associated with PFTeDA and PFOSA in sample LORNG_SW11009_06212022 were less than the rejectable limit of 20. PFTeDA and PFOSA were not detected in sample LORNG_SW11009_06212022 and the reporting limits were qualified as rejected (R).

The EIS percent recoveries associated with a subset of parameters in sample LORNG_LT19_SW_07072022 were less than the lower QC acceptance limit of 50. The results for the subset of parameters in sample LORNG_LT19_SW_07072022 were qualified as estimated (UJ/J).

The EIS percent recoveries associated with a subset of parameters in sample LORNG_LMR_001_SW_07082022 were less than the lower QC acceptance limit of 50. The results for the subset of parameters in sample LORNG_LMR_001_SW_07082022 were qualified as estimated (UJ/J).

The EIS percent recoveries associated with subsets of parameters in samples LORNG_SW19004_07072022, LORNG_LT02_SW_07082022FD, LORNG_LT13A_SW_07082022, LORNG_SW22001_07082022FD, LORNG_SW22002_07082022, LORNG_LT1006_SW_07082022 were less than the lower QC acceptance limit of 50. The results for the subsets of parameters in the associated samples were qualified as estimated (UJ/J).

The EIS percent recoveries associated with perfluorobutanoic acid (PFBA) in samples LORNG_LT02_SW_07082022 and LORNG_SW22001_07082022 were less than the lower QC acceptance limit of 50. The results for PFBA in sample LORNG_SW22001_07082022 and LORNG_LT02_SW_07082022 were qualified as estimated (UJ/J).

The EIS percent recovery associated with PFOSA in sample LORNG_LT15_SD_07082022 was less than the lower QC acceptance limit of 50. PFOSA was not detected in sample LORNG_LT15_SD_07082022 and were qualified as estimated (UJ).

The EIS percent recovery associated with PFTeDA in sample LORNG_LT14_SW_07082022 was less than the lower QC acceptance limit of 50. PFTeDA was not detected in sample LORNG_LT14_SW_07082022 and was qualified as estimated (UJ).

The EIS percent recoveries associated with subsets of parameters in samples LORNG_LMR_002_SW_07082022, LORNG_LT18_SW_07082022, and LORNG_LT13_SW_07082022 were less than the lower QC acceptance limit of 50. The results for the subsets of parameters in the associated samples were qualified as estimated (UJ/J).

The EIS percent recoveries associated with subsets of parameters in samples LORNG_LS_003_SW_07072022, LORNG_LT15_SW_07082022, LORNG_SW22003_07082022 were less than the lower QC acceptance limit of 50. The results for the subsets of parameters in the associated samples were qualified as estimated (UJ/J).

The EIS percent recoveries associated with a subset of parameters in sample LORNG_LT14A_SW_07072022 were less than the lower QC acceptance limit of 50. The subset of parameters was not detected in sample LORNG_LT14A_SW_07072022 and was qualified as estimated (UJ).

The EIS percent recoveries associated with PFTeDA, PFOSA, and PFBA in samples LORNG_HSSG01_07202022 and LORNG_LS_002_SW_07202022 were less than the lower QC acceptance limit of 50. The reporting limits for PFBA, PFTeDA, and PFOSA in samples LORNG_HSSG01_07202022 and LORNG_LS_002_SW_07202022 were qualified as estimated (J/UJ).

The EIS percent recovery associated with PFTeDA and PFOSA in samples LORNG_HSSG02_07212022, LORNG_HSSG04_07212022, and LORNG_HSSG05_07212022 were less than the lower QC acceptance limit of 50. PFTeDA and PFOSA were not detected in samples LORNG_HSSG02_07212022, LORNG_HSSG04_07212022, and LORNG_HSSG05_07212022 and reporting limits were qualified as estimated (UJ).

The EIS percent recoveries associated with PFBA, PFTeDA, and PFOSA in sample LORNG_HSSG05_07212022FD were less than the lower QC acceptance limit of 50. The results for PFBA, PFTeDA, and PFOSA in samples LORNG_HSSG05_07212022FD were qualified as estimated (J/UJ).

The EIS percent recoveries associated with PFOSA in samples LORNG_LT04_SW_07112022FD, LORNG_WBGB_002_SW_07112022, and LORNG_WBGB_003_SW_07112022 were less than the lower QC acceptance limit of 50. PFOSA was not detected in samples LORNG_LT04_SW_07112022FD, LORNG_WBGB_002_SW_07112022, and LORNG_WBGB_003_SW_07112022 and the reporting limits were qualified as estimated (UJ).

The EIS percent recoveries associated with PFBA and PFTeDA in sample LORNG_SW21001_07112022 were less than the lower QC acceptance limit of 50. The results for PFBA and PFTeDA in sample LORNG_SW21001_07112022 were qualified as estimated (J/UJ).

The EIS percent recovery associated with PFOSA in sample LORNG_SW08002_07112022 was less than the lower QC acceptance limit of 50. PFOSA was detected in sample LORNG_SW08002_07112022 and the result was qualified as estimated (J).

The EIS percent recovery associated with PFTeDA in samples LORNG_LT03_SW_07112022, LORNG_SW12007_07122022 and LORNG_SW12009_07122022 were less than the lower QC acceptance limit of 50. PFTeDA was not detected in samples LORNG_LT03_SW_07112022, LORNG_SW12007_07122022 and LORNG_SW12009_07122022 and reporting limits were qualified as estimated (UJ).

The EIS percent recovery associated with PFTeDA in sample LORNG_SW12009_07122022FD was less than the lower QC acceptance limit of 50. PFTeDA was not detected in sample LORNG_SW12009_07122022FD and reporting limit was qualified as estimated (UJ).

The EIS percent recovery associated with PFOSA in sample LORNG_SWI_007_SW_08062022 was less than the lower QC acceptance limit of 50. PFOSA was not detected in sample LORNG_SWI_007_SW_08062022 and the reporting limit was qualified as estimated (UJ).

The EIS percent recovery associated with PFOSA in samples LORNG_EBGB_006_SW_07092022, LORNG_SW16005_07102022, and LORNG_EBGB_005_SW_07102022 was less than the rejection limit of 20. PFOSA was not detected in samples LORNG_EBGB_006_SW_07092022, LORNG_SW16005_07102022, and LORNG_EBGB_005_SW_07102022 and the reporting limits were qualified as rejected (R).

The EIS recoveries associated with PFTeDA in samples LORNG_SW16005_07102022, LORNG_EBGB_002_SW_07102022, LORNG_EBGB_005_SW_07102022, LORNG_LS_001_SW_07102022, and LORNG_SW21003_07102022 were less than the rejection limit of 20. PFOSA was not detected in samples LORNG_SW16005_07102022, LORNG_EBGB_002_SW_07102022, LORNG_EBGB_005_SW_07102022, LORNG_LS_001_SW_07102022, and LORNG_SW21003_07102022 and the reporting limits were qualified as rejected (R).

The EIS recovery associated with N-EtFOSAA in sample LORNG_SW21003_07102022 was less than the lower QC acceptance limit of 50. The result for N-EtFOSAA in sample LORNG_SW21003_07102022 was qualified as estimated (UJ).

The EIS recoveries associated with PFBA in samples LORNG_EBGB_006_SW_07092022, LORNG_EBGB_006_SW_07092022FD, and LORNG_LT005A_SW_07102022 were less than the lower QC acceptance limit of 50. The results for PFBA in the associated samples were qualified as estimated (UJ).

The EIS recoveries associated with PFBA in a subset of samples in SDG FA97236 were less than the lower QC acceptance limit of 50. PFBA was detected in the associated samples and the results were qualified as estimated (J).

The EIS recoveries associated with PFDoA in a subset of samples in SDG FA97236 were less than the lower QC acceptance limit of 50. PFDoA was not detected in the associated samples and the results were qualified as estimated (UJ).

The EIS recovery associated with perfluoroheptanesulfonic acid (PFHpA) in sample LORNG_EBGB_005_SW_07102022 was less than the lower QC acceptance limit of 50. PFHpA

was detected in sample LORNG_EBGB_005_SW_07102022 and the result was qualified as estimated (J).

The EIS recoveries associated with PFOSA in samples LORNG_EBGB_006_SW_07092022, LORNG_SW16005_07102022, and LORNG_EBGB_005_SW_07102022 were less than the rejection limit of 20. PFOSA was not detected in samples LORNG_EBGB_006_SW_07092022, LORNG_SW16005_07102022, and LORNG_EBGB_005_SW_07102022 and the reporting limits were qualified as rejected (R).

The EIS recoveries associated with PFOSA in a subset of samples in SDG FA97236 were less than the lower QC acceptance limit of 50. PFOSA was not detected in the associated samples and the reporting limits were qualified as estimated (UJ).

The EIS recoveries associated with PFOSA in samples LORNG_SW05001_07102022 and LORNG_SW21004_were less than the lower QC acceptance limit of 50. PFOSA was detected in samples LORNG_SW05001_07102022 and LORNG_SW21004_and the results were qualified as estimated (J).

The EIS recoveries associated with PFTeDA in a subset of samples in SDG FA97236 were less than the lower QC acceptance limit of 50. PFTeDA was not detected in the associated samples and the reporting limits were qualified as estimated (UJ).

The EIS recoveries associated with PFTrDA in a subset of samples in SDG FA97236 were less than the lower QC acceptance limit of 50. PFTrDA was not detected in the associated samples and the reporting limits were qualified as estimated (UJ).

The EIS recoveries associated with PFUnDA in samples LORNG_EBGB_002_SW_07102022, LORNG_WBGB_005_SW_07102022, and LORNG_SW21003_07102022 were less than the lower QC acceptance limit of 50. PFUnDA was not detected in samples LORNG_EBGB_002_SW_07102022, LORNG_WBGB_005_SW_07102022, and LORNG_SW21003_07102022 and the reporting limits were qualified as estimated (UJ).

The EIS percent recoveries associated with PFOSA and PFTeDA in sample LORNG_HSSG03_07222022 were less than the lower QC acceptance limit of 50. The results for PFOSA, PFTeDA, and PFTrDA in sample LORNG_HSSG03_07222022 were qualified as estimated (UJ).

The EIS percent recoveries associated with PFOSA, PFDoA, PFTrDA and PFTeDA in sample LORNG_HSSG06_07222022 were less than the lower QC acceptance limit of 50. The results for PFDoA, PFOSA, PFTeDA, and PFTrDA in sample LORNG_HSSG06_07222022 were qualified as estimated (UJ).

The EIS percent recoveries associated with N-methyl perfluorooctanesulfonamidoacetic acid (N-MeFOSAA) and N-ethyl perfluorooctanesulfonamidoacetic acid (N-EtFOSAA) in sample LORNG_HSSO03_07222022 were less than the lower QC acceptance limit of 50. The results for N-MeFOSAA and N-EtFOSAA in sample LORNG_HSSO03_07222022 were qualified as estimated (UJ).

The EIS percent recoveries associated with PFOSA and PFTeDA in sample LORNG_SWI_002_SW_08052022 were less than the lower QC acceptance limit of 50. The results for PFOSA, PFTrDA and PFTeDA in sample LORNG_SWI_002_SW_08052022 were qualified as estimated (UJ).

The EIS percent recoveries associated with a subset of parameters in sample LORNG_ FHSSO01_09192022 were lower than the lower QC acceptance limit of 50. The results the subset of parameters in sample LORNG_ FHSSO01_09192022 were qualified as estimated (UJ).

The EIS percent recoveries associated with a subset of parameters in sample LORNG_ FHSSO02_09192022 were lower than the lower QC acceptance limit of 50. The results the subset of parameters in sample LORNG_ FHSSO02_09192022 were qualified as estimated (UJ).

The EIS recovery associated with PFDoA in sample LORNG_ FHSSO03_09192022 were lower QC acceptance limit of 50. PFDoA and PFTrDA were not detected in sample LORNG_ FHSSO03_09192022 and reporting limits were qualified as estimated (UJ).

2.2 TOC

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance/Tuning
* LCS
* MS/MSD
  Field Duplicates
  Laboratory Duplicates
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
* Miscellaneous

* QC criteria were met for this parameter.

2.2.1 Field Duplicates

170701 – The results for total organic carbon in sample LORNG_LT16_SD_07072022_C and its associated field duplicate LORNG_LT16_SD_07072022FD_C were qualified as estimated (J) due to the field duplicate RPD exceeding project limits (108).

170702 – The results for total organic carbon in sample LORNG_LT02_SD_07082022_C and its associated field duplicate LORNG_LT02_SD_07082022FD_C were qualified as estimated (J) due to the field duplicate RPD exceeding project limits (113).

170731 – The results for total organic carbon in sample LORNG_LT1002_SD_07102022_C and its associated field duplicate LORNG_LT1002_SD_07102022FD_C were qualified as estimated (J) due to the field duplicate RPD exceeding project limits (76).

170731 – The results for total organic carbon in sample LORNG_SD16005_07102022_C and its associated field duplicate LORNG_SD16005_071092022FD_Cwere qualified as estimated (J) due to the field duplicate RPD exceeding project limits (138).

2.2.2 Laboratory Duplicates

170701 – The result for total organic carbon in sample LORNG_LT1006A_SD_07072022_C was qualified as estimated (J) due to the laboratory duplicate RPD (61) that exceeded project limits.

170702 – The result for total organic carbon in sample LORNG_LT14_SD_07082022_C was qualified as estimated (J) due to the laboratory duplicate RPD (84) that exceeded project limits.

Data Validation and Usability Report
Loring PFAS Remedial Investigation
Round 1 Soil Sampling
Former Loring Air Force Base, Limestone, Maine

1.0 INTRODUCTION

Soil samples were collected at the Former Loring Air Force Base in Limestone, Maine, in May through August 2022. Per- and polyfluoroalkyl substances (PFAS) samples were submitted to SGS North America Laboratory in Orlando, Florida (SGS).

SGS analyzed 347 samples for PFAS by Method M537, liquid chromatography tandem mass spectrometry compliant with Table B-15 of the United States Department of Defense (USDoD) Quality Systems Manual for Environmental Laboratories (QSM), Version 5.3 (USDoD, 2019a).

KAS analyzed 44 samples for one or more of the following methods:

- Volatile Organic Compounds (VOCs) by SW846 Methods 8011 and 8260C
- Semivolatile Organic Compounds (SVOCs) by SW846 Method 8270D
- Polynuclear Aromatic Hydrocarbons (PAHs) by SW846 Methods 8270C Selected Ion Monitoring (SIM) and 8270D SIM
- Pesticides by SW846 Method 8081B
- Polychlorinated Biphenyls (PCBs) by SW846 Method 8082A
- Metals by SW846 Methods 6010C, 6020A, and 7470A
- Perchlorate (subcontracted to Eurofins Test America Laboratory (TAL) in South Burlington, Vermont) by SW846 Method 6850
- Total Organic Carbon (subcontracted to CT Laboratories in Baraboo, WI) by Lloyd Kahn

One split sample was submitted to Vista Analytical Laboratory in El Dorado Hills, California (Vista) as an interlaboratory comparison assessment sample. Vista analyzed the sample for PFAS by Method MS014.0, liquid chromatography tandem mass spectrometry compliant with Table B-15 of the USDoD Quality Systems Manual for Environmental Laboratories (QSM), Version 5.3 (USDoD, 2019a). An evaluation of split sample results is presented in Section 2.1.5.

Sample event information included in this data validation report is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Summary of Data Validation Actions
- Table 4 – Field Duplicate RPD Summary
- Table 5 – Acronyms and Abbreviations
- Table 6 – Interlaboratory Comparison Assessment Summary

Data quality reviews were completed as described in the Draft Quality Program Plan (QPP) for Remedial Investigation at Former Loring Air Force Base (Wood, 2021). Data validation levels are

established based on current United States Environmental Protection Agency (USEPA) guidelines for staged validation of analytical data (USEPA, 2009) and DoD General Validation Guidelines (USDoD, 2019b). PFAS data were validated using Stage 2B procedures and all other chemistry data were validated using Stage 2A procedures. Ten percent of the data collected during the remedial investigation were validated using Stage 4 procedures. Validation checklists, documentation of sample recalculations, and qualification justification documentation are stored in the Wood project file.

Stage 2A data validation includes review of sample results forms, chain of custody (COC) and supporting records, laboratory receipt checklists, analytical holding time compliance, sample related quality control (QC) data forms (method blanks, laboratory control samples (LCS), matrix spike/matrix spike duplicates (MS/MSD), field and laboratory duplicates, surrogates, internal standards, post digestion spikes, and serial dilutions), and QC sample frequency checks.

Stage 2B data validation includes all reviews performed in a Stage 2A data validation as well as review of initial calibration summaries, continuing calibration verification summaries, instrument performance/tuning summaries, dual column confirmation results, and sample preparation logs.

Stage 4 data validation includes all reviews performed in Stages 2A and 2B as well as review of raw data and chromatograms, target analyte identification confirmation, and recalculation of QC and sample results.

Data review and qualification actions were completed based on DoD Data Validation Guidelines Module 3 for PFAS (USDoD, 2020), general procedures described in USEPA Data Review and Validation Guidelines for PFAS (USEPA, 2018), USEPA National Functional Guidelines for Superfund Data Review (USEPA, 2020a; USEPA, 2020b), and method specifications in the DoD QSM 5.3 and/or the referenced analytical methods when DoD specifications were not available. QC limits presented in the DoD QSM 5.3 and/or the QPP were used during the data evaluation. Data qualifications were completed, if necessary, in accordance with the USEPA guidelines and the professional judgment of the validator using the following qualifiers:

J = Analyte present; concentration is estimated
U = Analyte not detected at the associated detection limits
UJ = Analyte was not detected at the associated detection limits; however, the associated detection limit should be considered an estimate.
R = Sample result is considered unusable for project objectives

Results for non-detects are reported as U qualified results at the reported limit of detection (LOD) as defined by the laboratory. Analytes detected at concentrations between the detection limit (DL) and limit of quantitation (LOQ) are reported by the laboratory as J qualified estimated values.

Validation reason codes were applied to results associated with QC measurements outside project QC goals where validation qualifiers were added to results. Final results are presented in Table 2. The validation qualification actions and associated validation reason codes applied to

sample results are summarized in Table 3. The following data validation reason codes were applied to one or more sample results:

CCL = Continuing calibration recovery less than the lower control limit
CFD = Dual column RPD exceeds the control limit
CRR = Result exceeds calibration range
CVHL = Continuing calibration recovery greater than the upper control limit
FDD = Field duplicate RPD criteria exceeded
HHL = Holding time for prep or analysis exceeded
ISL = Internal standard recovery less than the lower control limit
LBM = Laboratory blank contamination
LCD = Laboratory control limits RPD criteria exceeded
LCL = Laboratory control sample recovery less than the lower control limit
LDD = Laboratory duplicate RPD criteria exceeded
MSD = Matrix spike RPD criteria exceeded
MSH = Matrix spike recovery greater than the upper control limit
MSL = Matrix spike recovery less than the lower control limit
RIS = Extracted internal standard outside the control limit
SGH = Surrogate recovery greater than the upper control limit
SGL = Surrogate recovery less than the lower control limit
SVLL = Second source verification recovery less than the lower control limit
TBG = Trip blank contamination greater than the reporting limit
TBL = Trip blank contamination less than the reporting limit

One interlaboratory split sample was submitted to Vista as an additional quality assurance step. Data validation was not planned for Vista data unless gross deviations were observed. No gross deviations were observed. Results are presented in this report to complete the interlaboratory comparison only and are not included in the final data set of the Loring RI sampling program and not presented on Table 2. The interlaboratory comparison assessment summary is included in Table 6.

1.1 DATA USABILITY EVALUATION

The overall data quality and data usability for this data set is interpreted to meet the project objectives identified in the QPP. A summary of data validation qualifications and interpretations on data usability are provided in this section. More detailed discussions are provided in Section 2.0.

PFAS compound detections were qualified estimated (J) and reporting limits (UJ) in a subset of samples based on associated QC results outside limits for MS/MSD recovery, field duplicate precision, and extracted internal standard (EIS) recovery. Affected samples and associated qualified results are summarized in Table 3. Results are considered usable as estimated values. The uncertainties that may occur from using estimated detections should be considered during contamination assessment or evaluation of contaminant data against project action limits.

The non-detect result for N-methyl perfluorooctane sulfonamide (N-MeFOSA) in sample LORNG_SB24004_2-3_06182022 was qualified rejected (R) based on percent recovery of the

associated EIS which was less than the rejection QC limit of 20. This result is considered unusable.

A total of 22 PFAS field duplicates were collected from soil locations during the sampling period. Perfluorooctanesulfonic acid (PFOS) was the primary compound detected. There were detections in six pairs where RPDs were calculated, and five of those six field duplicate pairs met the project RPD precision goal of ≤ 50 indicating that good precision was met for PFAS in the soil media. Field duplicate results are summarized on Table 4. Field duplicate results within QPP project limits were reported for PFAS compounds with the following exceptions:

- The results for PFOS in sample LORNG_SB07004_8-10_05202022 and associated field duplicate LORNG_SB07004_8-10_05202022FD were qualified estimated due to a relative percent difference that exceeded project limits.

Recoveries within QSM and QPP project limits were reported for PFAS compounds in most MS/MSD analyses indicating accuracy goals were achieved in the soil media with the following exceptions:

- Results for PFOA, perfluoroheptanesulfonic acid (PFHpS), and 6:2-fluorotelomer sulfonate (6:2-FTS) in sample LORNG_SB07007_8-9_05202022 are qualified estimated due to low recoveries in the associated MS/MSD.

PFAS compound detections were qualified estimated (J) and reporting limits (UJ) in a subset of samples based on EIS recovery. In accordance with QSM and QPP objectives EIS recovery limits are 50-150 percent. Target compound results and reporting limits associated with recoveries less than 50 percent are qualified estimated. Non-detect results associated with recoveries less than 20 percent are qualified rejected. Affected samples and associated qualified results are summarized in Table 3 with code RIS. Results qualified estimated (J/UJ) are considered usable as estimated values. Results qualified rejected (R) are considered unusable. The non-detect result for N-MeFOSA in sample LORNG_SB24004_2-3_06182022 was the only rejected PFAS result.

The laboratory was unable to acquire a second source standard of N-MeFOSA and perfluorononanesulfonic acid (PFNS) for use in the Initial Calibration Verification (ICV) in a subset of SDGs. Based on professional judgement, the LCS preparation was used to confirm the initial calibration (ICAL) and no qualifications were made.

Of the 8,675 individual PFAS results reported for the soil event, one result was qualified as rejected. This represents an overall data completeness of greater than 99% for the soil event.

Sample results for non-PFAS methods were qualified estimated (J) and reporting limits (UJ) in a subset of samples based on associated QC results outside limits for instrument calibration, LCS recovery and precision, MS/MSD recovery and precision, field duplicate precision, laboratory duplicate precision, surrogate recovery, internal standard response, and/or dual column confirmation differences, as well as holding time exceedances and/or reported sample concentrations greater than the instrument calibration range. Low concentration detections in some samples are qualified due to detections in associated blanks in accordance with validation guidelines. Affected samples and associated qualified results and validation action reason codes

are summarized in Table 3. Results are considered usable as estimated values. The uncertainties that may occur from using estimated detections should be considered during contamination assessment or evaluation of contaminant data against project action limits.

Percent recoveries for vinyl acetate in the MS/MSD associated with sample LORNG_SB01016-8-10_06072022_K and its associated field duplicate LORNG_SB01016-8-10_06072022FDK were less than the rejection limit of 20. Vinyl acetate was not detected in the sample or field duplicate and reporting limits for vinyl acetate in sample LORNG_SB01016-8-10_06072022_K and associated field duplicate LORNG_SB01016-8-10_06072022FDK were qualified as rejected (R) and are considered unusable for project objectives.

Percent recoveries for 3,3-dichlorobenzidine, 4-chloroaniline, benzoic acid, and benzidine were less than the rejection limit of 10 percent in one or more LCS/LCSDs associated with the soil sample event. 3,3-Dichlorobenzidine, 4-chloroaniline, benzoic acid, and benzidine in associated samples were not detected and reporting limits were qualified as rejected (R) and are considered unusable for project objectives.

Field duplicate results for non-PFAS methods are summarized in Table 4. Field duplicate results within QPP project limits were reported for non-PFAS target analytes with the following exceptions:

- The results for acetone in sample LORNG_SB01016-8-10_06072022_K and associated field duplicate LORNG_SB01016-8-10_06072022FDK are considered estimated based on an RPD that exceeds project limits.
- The results for total organic carbon in sample LORNG_SB21001-0-1_06182022_C and associated field duplicate LORNG_SB21001-0-1_06182022FD_C are considered estimated based on an RPD that exceeds project limits.
- The results for calcium and lead in sample LORNG_SB21001-0-1_06182022_K and associated field duplicate LORNG_SB21001-0-1_06182022FD_K are considered estimated based on an RPD that exceeds project limits.

The uncertainties that may occur from using estimated detections should be considered during contamination assessment or evaluation of contaminant data against project objectives.

Of the 14,913 individual results reported for the soil event, 31 results were qualified as rejected. This represents an overall data completeness of greater than 99% for the soil event.

2.0 DATA VALIDATION QUALIFICATION ACTION SUMMARY

With the exception of the items discussed below, QC parameters and measurements checked during validation met requirements in the DoD QSM 5.3, the QPP, and/or analytical methods. Unless specified below, results are interpreted to be usable as reported by the laboratory.

2.1 PFAS

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance/Tuning
* LCS
  MS/MSD
  Field Duplicates
  Extracted Internal Standard Recovery
* Reporting Limits
* Electronic Data Verification
* Initial Calibration
* Continuing Calibration
* Compound Identification and Quantitation
* Raw Data Review and Calculation Checks
  Miscellaneous

* QC criteria were met for this parameter.

2.1.1 MS/MSD

FA95871 – The percent recoveries of PFOA, PFHpS, and 6:2FTS in the MS/MSD associated with sample LORNG_SB07007_8-9_05202022 were below the associated DoD acceptance limit (47 - 59). PFOA, PFHpS, and 6:2FTS were detected in sample LORNG_SB07007_8-9_05202022 and results were qualified as estimated (J).

2.1.2 Field Duplicates

FA95871 – The results for PFOS in sample LORNG_SB07004_8-10_05202022 and associated field duplicate LORNG_SB07004_8-10_05202022FD were qualified estimated (J) based on an RPD (92) that exceeds the project limit of 50.

2.1.3 Extracted Internal Standard Recovery

FA95871 – The extracted internal standard (EIS) percent recoveries associated with N-MeFOSAA in sample LORNG_SB08005_8-10_05192022 (48) and N-MeFOSA in samples LORNG_SB08003_0-1_05172022 (46), LORNG_SB08003_0-1_05172022FD (46), LORNG_SB08005_0-1_05192022 (49), LORNG_SB08004_0-1_05172022 (47), LORNG_SB07004_0-1_05202022 (48), LORNG_SB08002_0-1_05192022 (45), and LORNG_SB07007_8-9_05202022 (48) were less than the lower QC acceptance limit of 50. Results for target compounds reported above the DL are considered estimated (J). Reporting limits associated with non-detected target compounds with EIS recoveries between 20 and 50 are qualified as estimated (UJ).

FA95916 – The EIS percent recoveries associated with N-MeFOSA in samples LORNG_SB07011_0-1_05202022 (48) and LORNG_SB07012_0-1_05202022 (44) were less than the lower QC acceptance limit of 50. N-MeFOSA was not detected in samples

LORNG_SB07011_0-1_05202022 and LORNG_SB07012_0-1_05202022 and reporting limits were qualified as estimated (UJ).

FA95934 – The EIS percent recovery associated with N-MeFOSA in sample LORNG_SB13002_0-1_05232022 (48) was less than the lower QC acceptance limit of 50. N-MeFOSA was not detected in sample LORNG_SB13002_0-1_05232022 and the reporting limit was qualified as estimated (UJ).

FA96328 – The EIS percent recoveries associated with N-MeFOSA (31– 49) in a subset of samples were less than the lower QC acceptance limit of 50. N-MeFOSA was not detected in the affected samples and reporting limits were qualified as estimated (UJ).

FA96351 – The EIS percent recoveries associated with N-MeFOSA (36 – 49) in a subset of samples were less than the lower QC acceptance limit of 50. N-MeFOSA was not detected in the affected samples and reporting limits were qualified as estimated (UJ).

FA96351 – The EIS percent recoveries associated with N-MeFOSAA (40) and N-EtFOSAA (43) in sample LORNG_SB01013_0-1_06072022 were less than the lower QC acceptance limit of 50. N-MeFOSAA and N-EtFOSAA were not detected in sample LORNG_SB01013_0-1_06072022 reporting limits were qualified as estimated (UJ).

FA96551 – The EIS percent recoveries associated with PFOSA (45/36) and N-MeFOSA (39/29) in samples LORNG_SB18013_0-1_06142022 and LORNG_SB22003_0-1_06142022 were less than the lower QC acceptance limit of 50. PFOSA and N-MeFOSA were not detected in samples LORNG_SB18013_0-1_06142022 and LORNG_SB22003_0-1_06142022 and reporting limits were qualified as estimated (UJ).

FA96551 – The EIS percent recoveries associated with N-MEFOSA in samples LORNG_SB22001_7-8_06142022 (39) and LORNG_SB22002_6-7_06142022 (43) were less than the lower QC acceptance limit of 50. N-MEFOSA was not detected in samples LORNG_SB22001_7-8_06142022 and LORNG_SB22002_6-7_06142022 and reporting limits were qualified as estimated (UJ).

FA96616 – The EIS percent recovery associated with N-MeFOSA in sample LORNG_SB16006_8-10_06172022 (48) was less than the lower QC acceptance limit of 50. N-MeFOSA was not detected in sample LORNG_SB16006_8-10_06172022 and the reporting limit was qualified as estimated (UJ).

FA96627 – The EIS percent recoveries associated with PFOSA and N-MeFOSA in samples LORNG_SB18008_0-1_06152022 (40/35), LORNG_SB18009_0-1_06152022 (40/34), LORNG_SB18010_0-1_06152022 (39/35), and LORNG_SB18010_8-10_06152022 (44/39) were less than the lower QC acceptance limit of 50. PFOSA and N-MeFOSA were not detected in samples LORNG_SB18008_0-1_06152022, LORNG_SB18009_0-1_06152022, LORNG_SB18010_0-1_06152022, and LORNG_SB18010_8-10_06152022 and reporting limits were qualified as estimated (UJ).

FA96627 – The EIS percent recovery associated with N-MeFOSA in sample LORNG_SB18011_0-1_06152022 (46) was less than the lower QC acceptance limit of 50. N-MeFOSA was not detected in sample LORNG_SB18011_0-1_06152022 and the reporting limit was qualified as estimated (UJ).

FA96691 – The EIS percent recovery associated with MeFOSA in sample LORNG_SB24004_2-3_06182022 (19) was less than the rejection QC limit of 20. MeFOSA was not detected in the sample and the non-detect result was qualified as rejected (R).

FA96691 -- EIS percent recoveries (20 – 49) for a subset of parameters in the following samples were less than the lower QC acceptance limit of 50. Affected parameters were not detected in the associated samples and the reporting limits were qualified as estimated (UJ).

LORNG_SB20008_0-1_06182022
LORNG_SB20008_8-10_06182022
LORNG_SB21001_0-1_06182022
LORNG_SB24001_0-1_06182022
LORNG_SB24001_3-4_06182022
LORNG_SB24004_2-3_06182022

LORNG_SS18008_0-1_06192022
LORNG_SS18009_0-1_06192022

FA96726 – The EIS percent recovery associated with N-MeFOSA in samples LORNG_SS19011_0-1_062022 (48) and LORNG_SS13005_0-1_06202022 (46) were less than the lower QC acceptance limit of 50. N-MeFOSA was not detected in samples LORNG_SS19011_0-1_062022 and LORNG_SS13005_0-1_06202022 and the reporting limits were qualified as estimated (UJ).

FA96726 – The EIS percent recovery associated with N-MeFOSAA in sample LORNG_SB12006_8-10_062022 (48) was less than the lower QC acceptance limit of 50. N-MeFOSAA was not detected in sample LORNG_SB12006_8-10_062022 and the reporting limit was qualified as estimated (UJ).

2.1.4 Miscellaneous

The laboratory was unable to acquire a second source standard of N-MeFOSA and PFNS for use in the Initial Calibration Verification (ICV) in a subset of SDGs. Based on professional judgement, the LCS preparation was used to confirm the initial calibration (ICAL) and no qualifications were made.

2.1.5 Interlaboratory Split Samples

An interlaboratory split sample was collected in association with the following soil sample:

LORNG_SB01012_8-10_06062022

A summary of split sample results is presented on Table 6. Comparison criteria are established in QPP Appendix E. The majority of PFAS target compounds were not detected in the split sample pair. PFOS was detected and reported at similar concentrations by both laboratories in the split sample. All split sample results met comparison criteria, and the split sample results analyzed at Vista Laboratory are interpreted to confirm the accuracy of samples reported in the SGS data sets. .

2.2 VOCs

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
  Holding Times
  QC Blanks
* Instrument Performance/Tuning
* LCS
  MS/MSD
  Field Duplicates
  Surrogates
  Internal Standards
* Reporting Limits
* Electronic Data Verification
* Compound Identification and Quantitation
  Miscellaneous

* QC criteria were met for this parameter.

2.2.1 Holding Times

SP3101 – The results for all target compounds in all field samples were qualified as estimated (UJ/J) due to being analyzed outside of the 14-day holding time for VOCs analysis.

2.2.2 QC Blanks

SP2461 – Chloroform was detected in the method blank (0.94 ug/kg) and trip blank LORNG_TB01_0519022 (1.0 ug/kg) associated with all field samples. The detections of chloroform in the associated samples were reported below the LOD and results were qualified as not-detected (U) at the LOD.

SP2461 – Acetone was detected in the trip blank LORNG_TB01_0519022 (6.0 ug/kg) associated with sample LORNG_SB08001_0-1_05192022_K. The reported concentration of acetone in sample LORNG_SB08001_0-1_05192022_K was greater than the LOD and less than the LOQ, and the result was qualified as not-detected (U) at the sample result.

SP2461 – Toluene was detected in the trip blank LORNG_TB01_0519022 (18 ug/kg) associated with sample LORNG_SB08006_0-1_05192022_K. The detection of toluene in sample LORNG_SB08006_0-1_05192022_K was reported above the LOQ, and the result was qualified as not-detected (U) at the sample result.

SP2522 – Chloroform was detected in the method blank (0.94 ug/kg) and trip blank LORNG_TB02_0523022 (0.80 ug/kg) associated with samples LORNG_SB11002_0-1_05222022_K and LORNG_SB11002_8-10_05222022_K. The detections of chloroform in the associated samples were reported below the LOD and the results were qualified as not-detected (U) at the LOD.

SP2566 – Chloroform was detected in the method blank (0.83 ug/kg) and trip blank LORNG_TB03_0525022 (0.90 ug/kg) associated with samples LORNG_SB13008_0-1_05242022_K, LORNG_SB13017_0-1_05242022_K, and LORNG_SB13017_8-10_05242022_K. The detections of chloroform in the associated samples were reported below the LOD and results were qualified as not-detected (U) at the LOD.

SP2692 – Chloroform was detected in the method blank (0.63 ug/kg) and trip blank LORNG_TB04_0531022 (0.67 ug/kg) associated with samples LORNG_SB06010_0-1_05312022_K and LORNG_SB06010_5-6_05312022_K. The detections of chloroform in the associated samples were reported below the LOD and results were qualified as not-detected (U) at the LOD.

SP2721 – Chloroform was detected in the method blank (0.53 ug/kg) and trip blank LORNG_TB05_06012022 (0.57 ug/kg) associated with samples LORNG_SB13018_8-10_06012022_K and LORNG_SB13018_8-10_06012022FDK. The detections of chloroform in the associated samples were reported below the LOD and results were qualified as not-detected (U) at the LOD.

SP2809 – Chloroform was detected in the method blank (0.64 ug/kg) and trip blank LORNG_TB06_06062022 (0.64 ug/kg) associated with samples LORNG_SB09006_0-1_06042022_K and LORNG_SB09006_8-10_06042022_K. The detections of chloroform in the associated samples were reported below the LOD and results were qualified as not-detected (U) at the LOD.

SP2868 – Chloroform was detected in the method blank (0.59 ug/kg) and trip blank LORNG_TB09_06182022 (0.56 ug/kg) associated with all field samples. The detections of chloroform in the associated samples were reported below the LOD and results were qualified as not-detected (U) at the LOD.

SP3101 – Methylene chloride was detected in trip blank LORNG_TB08_06172022 (2,700 ug/kg) associated with samples LORNG_SB16006_0-1_06172022, LORNG_SB16006_8-10_06172022, LORNG_SB16011_0-1_06172022, and LORNG_SB16011_8-10_06172022. The detections of methylene chloride in samples LORNG_SB16006_0-1_06172022, LORNG_SB16006_8-10_06172022, LORNG_SB16011_0-1_06172022, and LORNG_SB16011_8-10_06172022 were reported above the LOQ and the results were qualified as not-detected (U) at the reported sample concentrations.

SP3101 – Chloroform was detected in the method blank (0.94 ug/kg) and the trip blank LORNG_TB08_06172022 (0.95 ug/kg) associated with samples LORNG_SB16006_0-1_06172022, LORNG_SB16011_0-1_06172022, and LORNG_SB16011_8-10_06172022. The detections of chloroform in samples LORNG_SB16006_0-1_06172022, LORNG_SB16011_0-1_06172022, and LORNG_SB16011_8-10_06172022 were reported below the LOD and the results were qualified as not-detected (U) at the LOD.

SP3119 – Chloroform was detected in the method blank (0.94 ug/kg) and trip blank LORNG_TB09_06182022 (0.97 ug/kg) associated with samples LORNG_SB21001_0-1_06182022, LORNG_SB21001_0-1_06182022FD, and LORNG_SB21001_2-3_06182022. The detections of chloroform in samples LORNG_SB21001_0-1_06182022, LORNG_SB21001_0-1_06182022FD, and LORNG_SB21001_2-3_06182022 were reported below the LOD and results were qualified as not-detected (U) at the LOD.

SP3119 – Acetone was detected in trip blank LORNG_TB09_06182022 (8.7 ug/kg) associated with sample LORNG_SB21001_0-1_06182022. The detection of acetone in sample LORNG_SB21001_0-1_06182022 was reported below the LOD and the result was qualified as not-detected (U) at the LOD.

2.2.3 MS/MSD

SP2868 – Percent recoveries for a subset of parameters in the MS/MSD associated with sample LORNG_SB01016-8-10_06072022_K and associated field duplicate LORNG_SB01016-8-10_06072022FDK recovered below the lower QC acceptance limit. The MS/MSD RPD for multiple parameters was outside of the acceptance criteria. Results and reporting limits for the subset of parameters in samples LORNG_SB01016-8-10_06072022_K and LORNG_SB01016-8-10_06072022FDK were qualified as estimated (UJ/J).

SP2868 – The percent recovery of vinyl acetate in the MS/MSD associated with sample LORNG_SB01016-8-10_06072022_K and its associated field duplicate LORNG_SB01016-8-10_06072022FDK recovered below the rejection limit of 20 percent. Vinyl acetate was not detected in sample LORNG_SB01016-8-10_06072022_K and its associated field duplicate LORNG_SB01016-8-10_06072022FDK and reporting limits were qualified as rejected (R).

2.2.4 Field Duplicates

SP2868 – The field duplicate RPD for acetone (60) exceeded project limits for sample LORNG_SB01016-8-10_06072022_K and associated field duplicate LORNG_SB01016-8-10_06072022FDK. The results for acetone in sample LORNG_SB01016-8-10_06072022_K and associated field duplicate LORNG_SB01016-8-10_06072022FDK were qualified as estimated (J).

2.2.5 Surrogates

SP2566 – The surrogate, dibromofluoromethane, associated with the undiluted analysis of sample LORNG_SB13008_8-10_05242022_K recovered below the lower acceptance limit. Multiple surrogates associated with the undiluted analysis of sample LORNG_SB13008_8-10_05242022_K recovered above the upper acceptance limit. The results for all target

compounds reported from the undiluted analysis of sample LORNG_SB13008_8-10_05242022_K were qualified as estimated (UJ/J).

2.2.6 Internal Standards

SP2566 – The internal standard, 1,4-difluorobenzene, associated with sample LORNG_SB13008_8-10_05242022_K recovered below the lower acceptance limit. The results for associated target compounds in sample LORNG_SB13008_8-10_05242022_K were qualified as estimated (UJ/J).

SP2809 – The internal standard, 1,4-dichlorobenzene-D4, associated with sample LORNG_SB09006_0-1_06042022_K recovered below the lower acceptance limit. The results for all target compounds in sample LORNG_SB09006_0-1_06042022_K were qualified as estimated (UJ/J).

2.2.7 Miscellaneous

SP2566 – Several target compounds in the undiluted analysis of sample LORNG_SB13008_8-10_05242022_K were reported with results that exceeded the upper calibration range. A methanol extraction of the sample was completed, and detections reported in the methanol extraction analysis that had exceeded the calibration range in the undiluted analysis were selected for final reporting. Results for VOCs with reported concentrations greater than the upper calibration range in the undiluted analysis, but that were not detected in the methanol extraction analysis, were selected from the initial analysis for final reporting. Results for compounds with concentrations greater than the upper calibration range were qualified estimated (J) in the final data set.

SP3101 – The results for methylene chloride in samples LORNG_SB16006_8-10_06172022 and LORNG_SB16011_0-1_06172022 exceeded the upper calibration range of the instrument and the results were qualified as estimated (J). Methylene chloride in sample LORNG_SB16006_8-10_06172022 and LORNG_SB16011_0-1_06172022 had previously been qualified as not detected (U) based on contamination in the associated trip blank and have final qualifiers of estimated (UJ).

2.3 SVOCs

Data were evaluated based on the following parameters:

Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
QC Blanks
* Instrument Performance/Tuning
LCS
* MS/MSD

* Field Duplicates
  Surrogates
* Internal Standards
* Reporting Limits
* Electronic Data Verification
* Compound Identification and Quantitation
* Miscellaneous

* QC criteria were met for this parameter.

2.3.1 Lab Report Narrative

SP2522 – As stated in the narrative, benzidine in the initial calibration verification associated with samples LORNG_SB11002_0-1_05222022_K and LORNG_SB11002_8-10_05222022_K had a recovery less than the rejection limit of 10 percent. Benzidine was not detected in the associated samples and reporting limits were qualified as rejected (R).

SP2566 – As stated in the narrative, benzidine in the initial calibration verification associated with all field samples had a recovery less than the rejection limit of 10 percent. The percent recovery for 4-chloroaniline was less than the lower control limit. Benzidine was not detected in the associated samples and reporting limits were qualified as rejected (R). 4-Chloroaniline was not detected in the associated samples and reporting limits were qualified as estimated (UJ).

SP2692 – As stated in the narrative, benzidine in the initial calibration verification associated with samples LORNG_SB06010_0-1_05312022_K and LORNG_SB06010_5-6_05312022_K had a recovery less than the rejection limit of 10 percent. Benzidine was not detected in the associated samples and reporting limits were qualified as rejected (R).

2.3.2 QC Blanks

SP2566 – Bis(2-ethylhexyl)phthalate was detected in the method blank (240 ug/kg) associated with samples LORNG_SB13008_8-10_05242022_K and LORNG_SB13017_0-1_05242022_K. The detections of bis(2-ethylhexyl)phthalate in samples LORNG_SB13008_8-10_05242022_K and LORNG_SB13017_0-1_05242022_K were reported below the LOD and results were qualified as not-detected (U) at the LOD.

SP3101 – Bis(2-ethylhexyl)phthalate was detected in the method blank (210 ug/kg) associated with samples LORNG_SB16006_0-1_06172022, LORNG_SB16006_8-10_06172022, and LORNG_SB16011_0-1_06172022. The detections of bis(2-ethylhexyl)phthalate in samples LORNG_SB16006_0-1_06172022, LORNG_SB16006_8-10_06172022, and LORNG_SB16011_0-1_06172022 were reported below the LOD and results were qualified as not-detected (U) at the LOD.

SP3101 – Bis(2-ethylhexyl)phthalate was detected in the method blank (250 ug/kg) associated with sample LORNG_SB16011_8-10_06172022. The detection of bis(2-ethylhexyl)phthalate in sample LORNG_SB16011_8-10_06172022 was reported below the LOD and the result was qualified as not-detected (U) at the LOD.

SP3119 – Bis(2-ethylhexyl)phthalate was detected in the method blank (170 ug/kg) associated with sample LORNG_SB21001_0-1_06182022. The detection of bis(2-ethylhexyl)phthalate in sample LORNG_SB21001_0-1_06182022 was reported below the LOD and the result was qualified as not-detected (U) at the LOD.

SP3119 – Bis(2-ethylhexyl)phthalate was detected in the method blank (240 ug/kg) associated with sample LORNG_SB21001_0-1_06182022FD. The detection of bis(2-ethylhexyl)phthalate in sample LORNG_SB21001_0-1_06182022FD was reported below the LOD and the result was qualified as not-detected (U) at the LOD.

2.3.3 LCS

SP2461 – The percent recovery of benzoic acid in the LCS associated with samples LORNG_SB08001_0-1_05192022_K, LORNG_SB08001_8-10_05192022_K, LORNG_SB08006_0-1_05192022_K, and LORNG_SB08006_8-10_05192022_K was less than the rejection limit of 10 percent. Benzoic acid was not detected in samples LORNG_SB08001_0-1_05192022_K, LORNG_SB08001_8-10_05192022_K, LORNG_SB08006_0-1_05192022_K, and LORNG_SB08006_8-10_05192022_K and the reporting limits were qualified as rejected (R).

SP2522 – The percent recoveries of 2,4-dimethylphenol, 4-chloroaniline and benzidine in the LCS associated with samples LORNG_SB11002_0-1_05222022_K and LORNG_SB11002_8-10_05222022_K were less than the lower QC acceptance limit. Benzidine recovered below the rejection limit of 10 percent. The RPDs between LCS/LCSD results for 2,4-dimethylphenol and 4-chloroaniline also exceeded the LCS/LCSD RPD limit. 2,4-Dimethylphenol and 4-chloroaniline were not detected in the associated samples and the reporting limits were qualified as estimated (UJ). Benzidine was not detected in the associated samples reporting limits were qualified as rejected (R).

SP2566 – The percent recoveries of 4-chloroaniline and benzidine in the LCS associated with all field samples were less than the lower QC acceptance limit. Benzidine recovered below the rejection limit of 10 percent. 4-Chloroaniline was not detected in the associated samples and the reporting limits were qualified as estimated (UJ). Benzidine was not detected in the associated samples reporting limits were qualified as rejected (R).

SP2692 – The percent recoveries of 4-chloroaniline and benzidine in the LCS associated with samples LORNG_SB06010_0-1_05312022_K and LORNG_SB06010_5-6_05312022_K were less than the lower QC acceptance limit. Benzidine recovered below the rejection limit of 10 percent. The RPD between LCS/LCSD results for 4-chloroaniline also exceeded the LCS/LCSD RPD limit. 4-Chloroaniline was not detected in samples LORNG_SB06010_5-6_05312022_K and the reporting limits were qualified as estimated (UJ). Benzidine was not detected in samples LORNG_SB06010_0-1_05312022_K the reporting limits were qualified as rejected (R).

SP2721 – The percent recoveries of 4-chloroaniline and benzidine in the LCS associated with samples LORNG_SB13018_0-1_06012022_K and LORNG_SB13018_8-10_06012022_K were less than the lower QC acceptance limit. Benzidine recovered below the rejection limit of 10 percent. 4-Chloroaniline was not detected in samples LORNG_SB13018_0-1_06012022_K and

LORNG_SB13018_8-10_06012022_K and the reporting limits were qualified as estimated (UJ). Benzidine was not detected in samples LORNG_SB13018_0-1_06012022_K and LORNG_SB13018_8-10_06012022_K and the reporting limits were qualified as rejected (R).

SP2809 – The percent recovery of benzidine in the LCS associated with samples LORNG_SB09006_0-1_06042022_K and LORNG_SB09006_8-10_06042022_K was less than the rejection limit of 10 percent. The LCS/LCSD RPD for benzidine (200) was also outside of QC limits. Benzidine was not detected in samples LORNG_SB09006_0-1_06042022_K and LORNG_SB09006_8-10_06042022_K and the reporting limits were qualified as rejected (R).

SP2868 – The percent recovery of benzidine in the LCS associated with all field samples was less than the rejection limit of 10 percent. Benzidine was not detected in the associated samples and the reporting limits were qualified as rejected (R).

SP3119 – The percent recoveries of 4-chloroaniline and hexachlorocyclopentadiene in the LCS associated with samples LORNG_SB21001_0-1_06182022 and LORNG_SB21001_2-3_06182022 were less than the lower QC acceptance limit. Benzidine recovered below the rejection limit of 10 percent. The LCS/LCSD RPD exceeded project limits for 4-chloroaniline. 4-Chloroaniline and hexachlorocyclopentadiene were not detected in samples LORNG_SB21001_0-1_06182022 and LORNG_SB21001_2-3_06182022 and the reporting limits were qualified as estimated (UJ). Benzidine was not detected in samples SB21001_0-1_06182022 and LORNG_SB21001_2-3_06182022 and the reporting limits were qualified as rejected (R).

SP3119 – The percent recoveries of 3-nitroaniline and hexachlorocyclopentadiene in the LCS associated with sample LORNG_SB21001_0-1_06182022FD were less than the lower QC acceptance limit. 3,3-Dichlorobenzidine, 4-chloroaniline, and benzidine recovered below the rejection limit of 10 percent. The LCS/LCSD RPD exceeded project limits for 4-chloroaniline and 3-nitroaniline. 3-Nitroaniline and hexachlorocyclopentadiene were not detected in sample LORNG_SB21001_0-1_06182022FD and the reporting limits were qualified as estimated (UJ). 3,3-Dichlorobenzidine, 4-chloroaniline, and benzidine were not detected in sample LORNG_SB21001_0-1_06182022FD and the reporting limits were qualified as rejected (R).

2.3.4 Surrogates

SP2868 – The percent recoveries of several surrogates associated with sample LORNG_SB01016-8-10_06072022FDK were outside of QC limits (32 – 35), indicating low bias. The results for all target compounds in sample LORNG_SB01016-8-10_06072022FDK were non-detect and reporting limits were qualified as estimated (UJ). The reporting limit for benzidine was previously qualified rejected (R) based on LCS percent recovery less than 10.

SP2809 – The percent recoveries of several surrogates associated with sample LORNG_SB09006_8-10_06042022_K were outside of QC limits (14 – 37), indicating low bias. The results for all target compounds in sample LORNG_SB09006_8-10_06042022_K were non-detect and reporting limits were qualified as estimated (UJ). The reporting limit for benzidine was previously qualified rejected (R) based on LCS percent recovery less than 10.

2.4 SVOCs - SIM

Data were evaluated based on the following parameters:

Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
QC Blanks
* Instrument Performance/Tuning
LCS
MS/MSD
* Field Duplicates
* Surrogates/ Internal Standards
* Reporting Limits
* Electronic Data Verification
* Compound Identification and Quantitation
* Miscellaneous

* QC criteria were met for this parameter.

2.4.1 Lab Report Narrative

SP2461 – As stated in the narrative, the percent recoveries of pyrene and chrysene in the continuing calibration verification associated with sample LORNG_SB08001_8-10_05192022_K were greater than the upper QC limit. Pyrene and chrysene were detected in sample LORNG_SB08001_8-10_05192022_K and results were qualified as estimated (J).

SP2461 – As stated in the narrative, the percent recoveries of dibenz(a,h)anthracene and indeno(1,2,3-c,d)pyrene in the continuing calibration verification associated a subset of samples were less than the lower QC limit. Positive and non-detect results for dibenz(a,h)anthracene and indeno(1,2,3-c,d)pyrene in the subset of samples were qualified as estimated (UJ/J).

2.4.2 QC blanks

SP2522 – Benzo(b)fluoranthene was detected in the method blank (3.9 ug/kg) associated with sample LORNG_SB11002_8-10_05222022_K. The reported detection of benzo(b)fluoranthene in sample LORNG_SB11002_8-10_05222022_K was less than the LOD and the result was qualified as not-detected (U) at the LOD.

2.4.3 LCS

SP2522 – The percent recoveries of benzo(a)pyrene and benzo(k)fluoranthene in the LCS associated with samples LORNG_SB11002_0-1_05222022_K and LORNG_SB11002_8-10_05222022_K were less than the lower QC acceptance limit. Benzo(a)pyrene and benzo(k)fluoranthene were not detected in sample and LORNG_SB11002_8-10_05222022_K and the reporting limits were qualified as estimated (UJ). Benzo(a)pyrene and

benzo(k)fluoranthene were detected in sample LORNG_SB11002_0-1_05222022_K and results were qualified as estimated (J).

SP2566 – The LCS/LCSD RPD associated with samples LORNG_SB13008_0-1_05242022_K and LORNG_SB13017_0-1_05242022_K exceeded project limits for benzo(k)fluoranthene. Benzo(k)fluoranthene was detected in samples LORNG_SB13008_0-1_05242022_K and LORNG_SB13017_0-1_05242022_K and the results were qualified as estimated (J).

SP2692 – The LCS/LCSD RPD associated with sample LORNG_SB06010_0-1_05312022_K exceeded project limits for benzo(k)fluoranthene. Benzo(k)fluoranthene was detected in sample LORNG_SB06010_0-1_05312022_K and the result was qualified as estimated (J).

SP2809 – The percent recovery of 1,4-dioxane in the LCS associated with samples LORNG_SB09006_0-1_06042022_K and LORNG_SB09006_8-10_06042022_K was less than the lower QC acceptance limit. 1,4-dioxane was not detected in samples LORNG_SB09006_0-1_06042022_K and LORNG_SB09006_8-10_06042022_K and the reporting limits were qualified as estimated (UJ).

SP2868 – The percent recovery of 1,4-dioxane in the LCS associated with samples LORNG_SB01016-0-1_06072022_K, LORNG_SB01016-8-10_06072022_K, and LORNG_SB01016-8-10_06072022FDK was less than the lower QC acceptance limit. 1,4-dioxane was not detected in samples LORNG_SB01016-0-1_06072022_K, LORNG_SB01016-8-10_06072022_K, and LORNG_SB01016-8-10_06072022FDK and the reporting limits were qualified as estimated (UJ).

SP3101 – The percent recoveries of benzo(k)fluoranthene and chrysene in the LCS associated with samples LORNG_SB16006_0-1_06172022, LORNG_SB16006_8-10_06172022, LORNG_SB16011_0-1_06172022, and LORNG_SB16011_8-10_06172022 were less than the lower QC acceptance limit. The LCS/LCSD RPDs also exceeded project limits for benzo(k)fluoranthene and chrysene. Positive and non-detect results for benzo(k)fluoranthene and chrysene in samples LORNG_SB16006_0-1_06172022, LORNG_SB16006_8-10_06172022, LORNG_SB16011_0-1_06172022, and LORNG_SB16011_8-10_06172022 were qualified as estimated (UJ/J).

SP3101 – The percent recovery of 1,4-dioxane in the LCS associated with samples LORNG_SB16011_0-1_06172022 and LORNG_SB16011_8-10_06172022 was less than the lower QC acceptance limit. The LCS/LCSD RPD also exceeded project limit for 1,4-dioxane. 1,4-dioxane was not detected in samples LORNG_SB16011_0-1_06172022 and LORNG_SB16011_8-10_06172022 and the reporting limits were qualified as estimated (UJ).

SP3101 – The LCS/LCSD RPDs exceeded project limits for multiple target compounds associated with samples LORNG_SB16006_0-1_06172022, LORNG_SB16006_8-10_06172022, LORNG_SB16011_0-1_06172022, and LORNG_SB16011_8-10_06172022. The detections in samples LORNG_SB16006_0-1_06172022, LORNG_SB16006_8-10_06172022, LORNG_SB16011_0-1_06172022, and LORNG_SB16011_8-10_06172022 were qualified as estimated (J).

2.4.4 MS/MSD

SP2868 – Percent recoveries of 1,4-dioxane, anthracene, benzo(a)pyrene, benzo(k)fluoranthene, and chrysene in the MS/MSD associated with sample LORNG_SB01016-8-10_06072022_K and associated field duplicate LORNG_SB01016-8-10_06072022FDK were less than the lower QC acceptance limit. 1,4-Dioxane, anthracene, benzo(a)pyrene, benzo(k)fluoranthene, and chrysene were not detected in the samples and the reporting limits were qualified as estimated (UJ).

2.5 Pesticides

Data were evaluated based on the following parameters:

Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance/Tuning
* LCS
* MS/MSD
* Field Duplicates
Surrogates/ Internal Standards
Dual-column RPD
* Reporting Limits
* Electronic Data Verification
* Compound Identification and Quantitation
* Miscellaneous

* QC criteria were met for this parameter.

2.5.1. Lab Report Narrative

SP2461 – As stated in the narrative, the percent recoveries of methoxyclor and 4,4'-DDT in the continuing calibration verification associated with samples LORNG_SB08006_0-1_05192022_K and LORNG_SB08006_8-10_05192022_K were less than the lower QC limit. Positive and non-detect results for methoxyclor and 4,4'-DDT samples LORNG_SB08006_0-1_05192022_K and LORNG_SB08006_8-10_05192022_K were qualified as estimated (UJ/J).

2.5.2 Surrogates

SP2461 – Percent recovery of the surrogate, tetrachloro-m-xylene, associated with sample LORNG_SB08006_8-10_05192022_K (38) was less than the lower control limit, indicating low bias. The reporting limits for sample LORNG_SB08006_8-10_05192022_K were qualified as estimated (UJ).

SP3101 – Percent recovery of the surrogate, tetrachloro-m-xylene, associated with sample LORNG_SB16011_8-10_06172022 (24) was less than the lower control limit, indicating low bias. The reporting limits for sample LORNG_SB16011_8-10_06172022 were qualified as estimated (UJ).

SP3119 – Percent recovery of the surrogate, tetrachloro-m-xylene, associated with sample LORNG_SB21001_2-3_06182022 (41) was less than the lower control limit, indicating low bias. The reporting limits for sample LORNG_SB21001_2-3_06182022 were qualified as estimated (UJ).

2.5.3 Dual-column RPD

SP3119 –The dual column RPDs exceeded QC limits for 4,4'-DDT and endrin ketone in samples LORNG_SB21001_0-1_06182022 (140/134) and LORNG_SB21001_0-1_06182022FD (139/134). The results for 4,4'-DDT and endrin ketone in samples LORNG_SB21001_0-1_06182022 and LORNG_SB21001_0-1_06182022FD were qualified as estimated (J).

2.6 PCBs

Data were evaluated based on the following parameters:

Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* Instrument Performance/Tuning
* LCS
* MS/MSD
* Field Duplicates

Surrogates
* Internal Standards
* Dual-column RPD
* Reporting Limits
* Electronic Data Verification
* Compound Identification and Quantitation
* Miscellaneous

* QC criteria were met for this parameter.

2.6.1 Lab Report Narrative

SP2461 – As stated in the narrative, the percent recovery of Aroclor-1260 in the continuing calibration verification standard associated with samples LORNG_SB08006_0-1_05192022_K and LORNG_SB08006_8-10_05192022_K was less than the lower QC limit. Based on professional judgment the results for Aroclor-1260, Aroclor-1254, Aroclor-1262, and Aroclor-1268 were non-

detect in samples LORNG_SB08006_0-1_05192022_K and LORNG_SB08006_8-10_05192022_K and reporting limits were qualified as estimated (UJ).

2.6.2 Surrogates

SP2461 – Percent recovery of the surrogate tetrachloro-m-xylene (33) associated with sample LORNG_SB08006_8-10_05192022_K was less than the lower control limits, indicating low bias. All analytes were non-detect in sample LORNG_SB08006_8-10_05192022_K and the reporting limits were qualified as estimated (UJ).

SP3101 – Percent recoveries of surrogates tetrachloro-m-xylene (33) and decachlorobiphenyl (55/31) in sample LORNG_SB16011_8-10_06172022 were less than the lower control limits, indicating low bias. All analytes were non-detect in sample LORNG_SB16011_8-10_06172022 and the reporting limits were qualified as estimated (UJ).

2.7 Metals

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
  QC Blanks
* LCS
  MS/MSD
  Field Duplicates
* Interference Check Standard
* Reporting Limits
* Electronic Data Verification
  Miscellaneous

* QC criteria were met for this parameter.

2.7.1 QC Blanks

SP2522 – Potassium was detected in the method blank (138 mg/kg) associated with sample LORNG_SB11002_8-10_05222022_K. The detection of potassium in sample LORNG_SB11002_8-10_05222022_K was reported above the LOQ but less than 10x the blank result and the sample result was qualified as estimated (J).

SP2566 – Sodium was detected a in the method blank (6.5 J mg/kg) associated with samples LORNG_SB13008_0-1_05242022_K, LORNG_SB13008_8-10_05242022_K, LORNG_SB13017_0-1_05242022_K, and LORNG_SB13017_8-10_05242022_K. Detections of sodium in the associated samples were reported above the LOQ and the results were qualified as not-detected (U) at the reported sample results.

2.7.2 MS/MSD

SP2461 – The percent recoveries of antimony, chromium, copper, lead, nickel, potassium, and zinc in the MS/MSD associated with sample LORNG_SB08001_0-1_05192022_K were less than the lower QC acceptance limit. The percent recoveries of arsenic, lead, and potassium in the MSD were greater than the upper control limit. The MS/MSD RPDs for multiple target analytes were outside of project limits. The results for the associated target compounds in sample LORNG_SB08001_0-1_05192022_K were qualified as estimated (UJ/J).

SP2566 – The percent recoveries of chromium, copper, and vanadium in the MS/MSD associated with sample LORNG_SB13008_0-1_05242022_K were greater than the upper QC acceptance limit. The MS/MSD RPDs for copper and vanadium were outside of project limits. Chromium, copper, and vanadium was detected in sample LORNG_SB13008_0-1_05242022_K and the result was qualified as estimated (J).

SP2566 – Percent recoveries for a subset of target compounds in the MS/MSD associated with sample LORNG_SB13008_0-1_05242022_K were less than the lower QC acceptance limit. The MS/MSD RPDs for arsenic, copper, and nickel were outside of project limits. Positive and non-detect results for affected analytes in sample LORNG_SB13008_0-1_05242022_K were qualified as estimated (J/UJ).

SP2809 – The percent recovery of mercury in the MS/MSD associated with sample LORNG_SB09006_0-1_06042022_K was greater than the upper QC acceptance limit. The MS/MSD RPD for mercury was also outside of project limits. Mercury was detected in sample LORNG_SB09006_0-1_06042022_K and the result was qualified as estimated (J).

SP2868 – The percent recoveries of antimony and lead in the MS/MSD associated with sample LORNG_SB01016-0-1_06072022_K were less than the lower QC acceptance limit. The results for antimony and lead in sample LORNG_SB01016-0-1_06072022_K were qualified as estimated (UJ/J).

SP2868 – The percent recoveries of zinc and potassium in the MS/MSD associated with sample LORNG_SB01016-0-1_06072022_K were greater than the upper QC acceptance limit. Zinc and potassium were detected in sample LORNG_SB01016-0-1_06072022_K and results were qualified as estimated (J).

2.7.3 Field Duplicates

SP3119 – The results for calcium and lead in samples LORNG_SB21001_0-1_06182022 and LORNG_SB21001_0-1_06182022FD were qualified as estimated (J) due to field duplicate RPDs that are outside of project limits (63/86).

2.7.4 Miscellaneous

SP2461 – Continuing calibration percent recoveries for arsenic (111) and cobalt (112) associated with a subset of samples were greater than the upper control limit. The detections for arsenic and cobalt in the associated samples were qualified as estimated (J).

2.8 General Chemistry

Data were evaluated based on the following parameters:

* Lab Report Narrative
* Data Completeness and COC Review
* Sample Collection and Preservation
* Holding Times
* QC Blanks
* LCS
* MS/MSD
  Field Duplicates
  Laboratory Duplicates
* Reporting Limits
* Electronic Data Verification

* QC criteria were met for this parameter.

2.8.1 Field Duplicates

170363 – The results for total organic carbon in sample LORNG_SB21001_0-1_06182022_C and its associated field duplicate LORNG_SB21001_0-1_06182022FD_C were qualified as estimated (J) due to a field duplicate RPD (109) greater than the project limit.

2.8.2 Laboratory Duplicates

169966 – The result for total organic carbon in sample LORNG_SB11002_0-1_052222_C was qualified as estimated (J) due to a laboratory duplicate RPD (39) greater than project limits.

U = Analyte not detected at the associated detection limits
UJ = Analyte not detected and considered estimated
R = Sample reuslt is considered unusable for project objectiv
NG/L = nanograms per liter
PFAS = Per and Polyfluoroalkyl Substance

Notes:

J = Concentration is estimated

U = Analyte not detected at the associated detection limits

UJ = Analyte not detected and considered estimated

R = Sample reuslt is considered unusable for project objectives

CCL = Continuing calibration standard recovery less than lower control limit

CFD = Dual column RPD criteria exceeded

CRR = Calibration range exceeded

CVHL = Continuing calibration standard recovery greater than upper control limit

LDD = Laboratory duplicate RPD criteria exceeded

MSD = Matrix spike (MS)/MSD RPD criteria exceeded

MSH = MS recovery greater than upper control limit

MSL = MS recovery less than lower control limit

RIS = Extracted internal standard recovery outside control limits

SGH = Surrogate recovery greater than upper control limit

SGL = Surrogate recovery less than lower control limit

SVLL = Second source verification standard recovery less than lower control limit
