I. Executive Summary

The Maine Biennial Hazardous Waste Report for 2019/2020 and 2021/2022 has been prepared by the Maine Department of Environmental Protection (“Department”) to fulfill the requirement of 38 M.R.S. § 1319-Q(2) for biennial reporting on the generation, transportation, and handling of hazardous waste in Maine. The report for 2019/2020 which was due by November 1, 2021, was not completed due to a combination of a staffing shortages and pandemic-related delays. The data for both report cycles is therefore included in this document.

A total of 23,004,908 pounds of hazardous waste was generated in calendar year 2019, a total of 81,112,707 pounds was generated in calendar year 2020, a total of 26,075,571 pounds of hazardous waste was generated during calendar year 2021, and a total of 17,755,954 pounds of hazardous waste was generated during calendar year 2022 (Table 1). These totals include hazardous waste generated from manufacturing and commercial activities, as well as hazardous wastes generated from clean-up/remediation projects in Maine.

A total of 21,747,245 pounds of hazardous waste were exported from Maine generators to out-of-state facilities in 2019, 80,276,805 pounds were exported in 2020, 25,584,941 pounds of hazardous waste were exported in 2021, and a total of 15,924,916 pounds of hazardous waste were exported in 2022 (Table 4).

Two licensed commercial hazardous waste facilities in Maine accept wastes from generators. The two facilities received 2,762,048 pounds in 2019, 1,759,432 pounds in 2020, 2,505,121 pounds in 2021 and 1,868,932 pounds in 2022 of hazardous waste from Maine generators. Additionally, 1,900,960 pounds in 2019, 1,070,671 pounds in 2020, 2,455,333 pounds in 2021, and 2,706,647 pounds in 2022 were imported from out-of-state generators to Maine’s two commercial hazardous waste facilities (Table 3).

An assessment of the hazardous waste generation trends for Maine from 2003 through 2022 indicates that yearly waste generation totals vary greatly year-to-year, primarily due to the volumes generated by site remediation projects (see Figure 5 of the report).

II. Introduction

The Maine Biennial Hazardous Waste Report for 2019/2020 and 2021/2022 has been prepared by the Department to fulfill the requirements of 38 M.R.S. § 1319-Q(2) for biennial reporting on the generation, transportation, and handling of hazardous waste in Maine. The requirements of 38 M.R.S. § 1319-Q(2) include biennial reporting on the following: (1) amount of hazardous waste by type generated, handled and transported in Maine; (2) the amount of hazardous waste by type handled at commercial hazardous waste facilities in Maine; (3) the number of hazardous waste facility permits by type currently active, granted and revoked; (4) the amount of hazardous waste imported from out-of-state generators to in-state hazardous waste facilities, and the amount of hazardous waste generated in Maine exported to out-of-state facilities; (5) a list of hazardous waste facilities in Maine and out-of-state available for use by generators in Maine; and (6) a list of known firms which provide testing, consulting, brokerage, waste exchange, transportation and other services to generators in Maine.

This report includes data from shipments of hazardous waste from all facilities that generated and shipped hazardous waste using a hazardous waste manifest in 2019, 2020, 2021 and 2022. This includes facilities that are regulated in Maine’s three categories of hazardous waste generators: Small Quantity Generators,

Small Quantity Generator Plus, and Large Quantity Generators. Small Quantity Generators (SQGs) must generate less than 100 kilograms or 220 pounds per month and must not accumulate more than one 55-gallon drum or 440 pounds on site at any one time. SQGs have the fewest regulatory requirements. Those in the Small Quantity Generator Plus (SQG Plus) category also must generate less than 100 kilograms or 220 pounds per month, but can accumulate up to three 55-gallon drums or 600 kilograms of hazardous waste on site at any one time. SQG Plus facilities have regulatory requirements in addition to those that SQGs must adhere to. Large Quantity Generators (LQGs) generate more than 100 kilograms or 220 pounds per month or accumulate more than 600 kilograms (1,320 pounds) on site at any one time. This report also includes waste quantities from “one-time generators” of hazardous waste. Examples of one-time generation of hazardous waste include site remediation activity and underground gasoline storage tank removals.

Hazardous waste information in this report was compiled from data in EPA’s eManifest system that was downloaded into the Department’s hazardous waste manifest database. A change in data collection methods occurred on June 30, 2018, when EPA’s eManifest database became the source of record. Some data entry of hazardous waste being exported out of the country is still entered directly into the State of Maine’s manifest database. For this 2019/2020 and 2021/2022 report, all U.S. based receiving facilities that accept hazardous waste, regardless of quantity, were required to submit a hazardous waste manifest to EPA’s Clearinghouse for entry into EPA’s eManifest system. The unit of measure used in this report for the quantity of waste is pounds. The hazardous waste quantities reported on the manifests which are not reported in pounds (i.e. gallons, liters, etc.) are converted to pounds using conversion factors based upon the type of waste. This report does not include hazardous waste generated and treated on-site under abbreviated treatment licenses since this waste is not transported or documented on manifests, is not entered into the manifest database, and is a relatively minor amount compared to the shipment data. This report also does not include information about waste oil or biomedical waste generation or shipment. This report includes data and information on universal wastes, a category of hazardous waste. However, the data and information on universal waste is compiled and reported separately from hazardous waste and includes information on universal waste recycled under manufacturer take-back programs.

III. Waste Generation

In 2019, 23,004,908 pounds; in 2020, 81,112,664 pounds; in 2021, 26,075,571 pounds; and in 2022, 17,755,954 pounds of hazardous waste were generated and shipped by Maine generators (Table 1). Universal wastes, a sub-category of hazardous waste which includes fluorescent lamps, cathode ray tubes, mercury switches and other wastes, are not included in the totals reported in Tables 1 - 4 and Figures 1 - 9. Data related to the recycling efforts for universal wastes are reported and discussed in this report, on pages 14 - 18 and in Figures 10 - 13.

Table 1 shows the quantities of hazardous waste generation in Maine, by generator type, for calendar years 2019, 2020, 2021 and 2022, while Figures 1 through 4 illustrate the percentage of hazardous waste shipped by generator type for 2019, 2020, 2021 and 2022, respectively. Generator types in Table 1 include: LQGs and SQG Plus; One-Time Generators; and SQGs.

**Table 1
Hazardous Waste Shipping Information from Manifests**

Generator Type	Pounds	Pounds	Pounds	Pounds
	2019	2020	2021	2022
LQGs and SQGs Plus	20,705,265	79,245,217	24,416,477	16,285,677
One-Time Generators	1,515,677	1,124,378	1,005,832	918,247
Small Quantity Generators	783,966	743,069	653,262	552,030
Total	23,004,908	81,112,664	26,075,571	17,755,954

**Figure 1
2019 Hazardous Waste Generation**

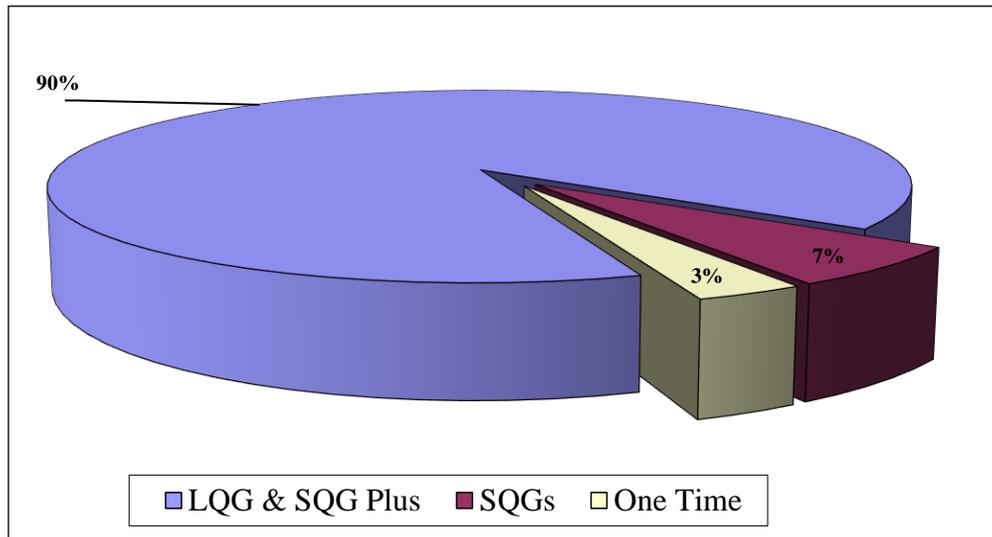

Figure 2
2020 Hazardous Waste Generation

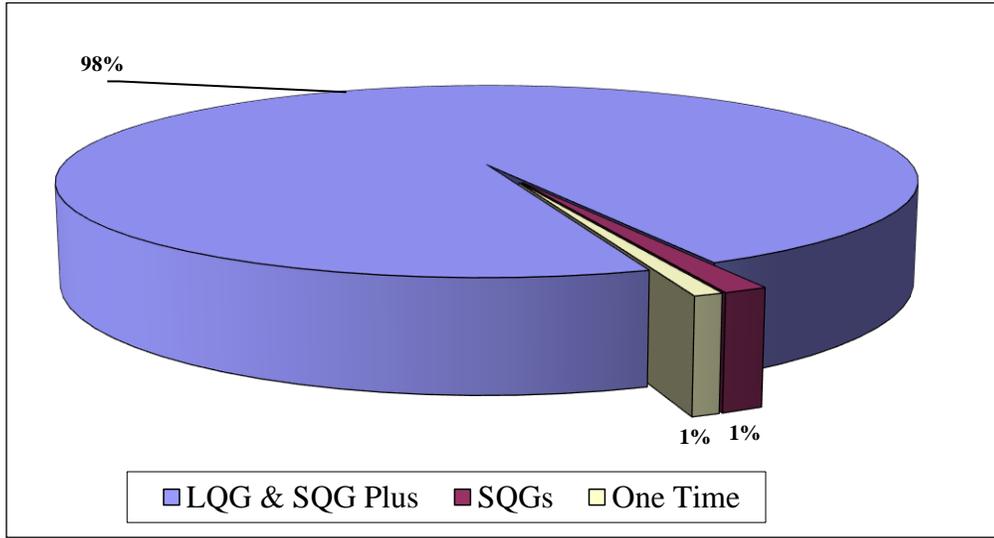

Figure 3
2021 Hazardous Waste Generation

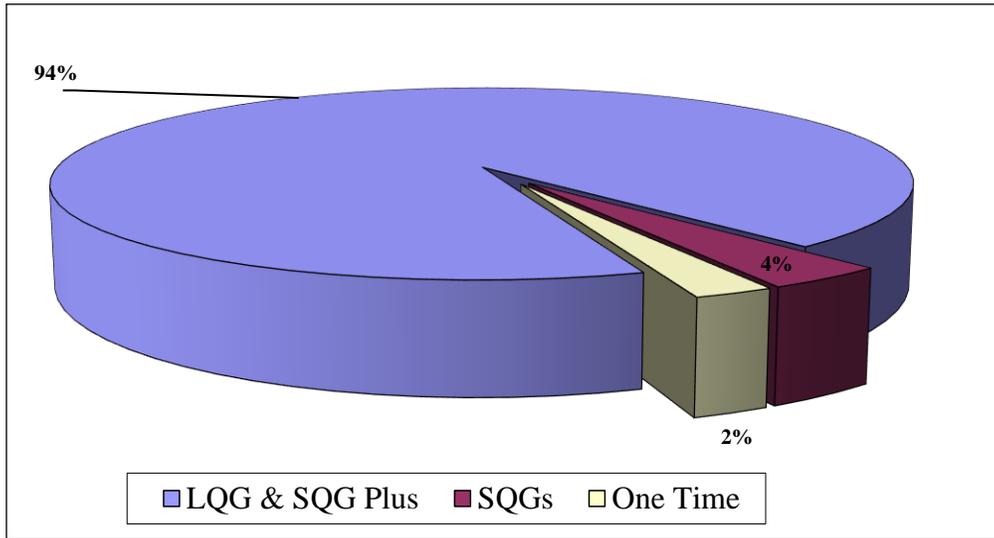

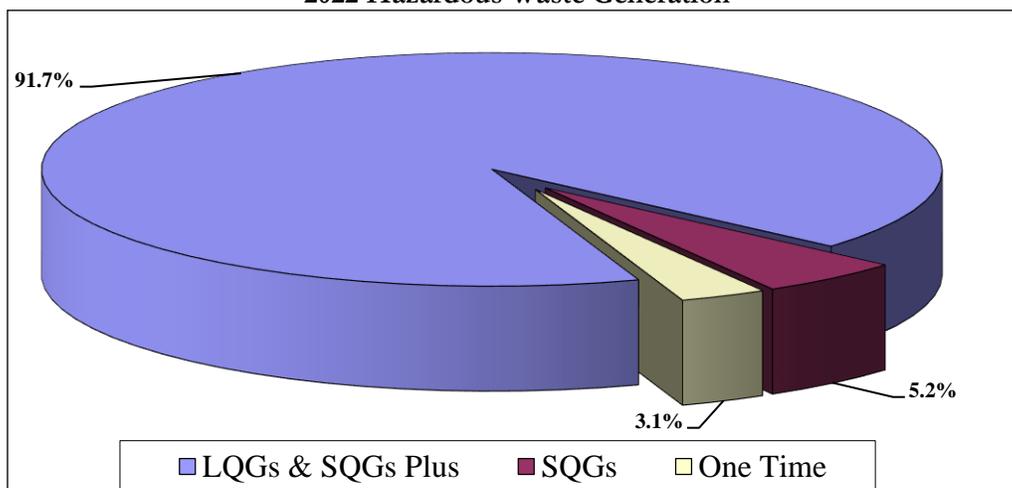

Figure 4
2022 Hazardous Waste Generation

Tables 2 and 3 provide, by waste types, the quantity of hazardous waste generated in pounds for 2019/2020 and 2021/2022, respectively. For a graphical representation of this same data, see Figures 5 through 8. It should be noted that the data in these tables and figures represent an approximate breakdown of hazardous waste quantities by waste types. The reason for the approximation is that many waste items can be reported under more than one waste type. For example, chemical oxygen demand test vials contain both corrosive chemicals and metals. For waste items where more than one waste code was reported, the quantity is accounted for under the first waste type listed for the waste item described on a manifest.

Table 2
Total Quantity of Hazardous Waste Generated in 2019 and 2020 by Waste Types

Waste Types (Codes)	Quantity in Pounds	Quantity in Pounds
	2019	2020
Ignitable (D001)	5,844,042	2,564,596
Corrosive (D002)	1,574,249	721,646
Reactive (D003)	44,399	43,897
Metals & Pesticides (D004-D017)	6,349,910	20,402,620
TCLP organics (D018-D043)	3,535,466	1,800,869
Non-specific source wastes (F-wastes)	932,506	968,959
Specific source wastes (K-wastes)	0	49,346,000
PCBs over 50 ppm (M002)	3,950,495	4,925,992
Acute wastes (P-wastes)	32,294	71,596
Toxic wastes (U-wastes)	533,244	130,461
Other	208,303	136,028
Total	23,004,908	81,112,664

Table 3
Total Quantity of Hazardous Waste Generated in 2021 and 2022 by Waste Types

Waste Types (Codes)	Quantity in Pounds	Quantity in Pounds
	2021	2022
Ignitable (D001)	2,658,890	2,656,890
Corrosive (D002)	1,027,531	916,946
Reactive (D003)	42,088	31,646
Metals & Pesticides (D004-D017)	8,564,105	6,629,116
TCLP organics (D018-D043)	1,567,741	991,788
Non-specific source wastes (F-wastes)	1,319,099	1,396,067
Specific source wastes (K-wastes)	3,813,549	0
PCBs over 50 ppm (M002)	6,872,830	4,855,924
Acute wastes (P-wastes)	76,249	105,196
Toxic wastes (U-wastes)	114,241	145,594
Other	19,248	26,787
Total	26,075,571	17,755,954

IV. Waste Generation Trends

The Department analyzed hazardous waste trends from 2003 through 2022 (2018 data is incomplete for that year due to EPA beginning data entry of manifest data into its eManifest system). Two different sets of data and corresponding trend lines are plotted in the graph in Figure 9 for (1) the total amount of hazardous waste generated (all wastes including remediation waste, i.e. one-time generators or clean-ups) and for (2) manufacturing and commercial wastes generated by SQGs, SQGs Plus, and LQGs (i.e. excluding one-time generators/remediation waste).

The upper trend line is the total amount of hazardous waste generated in Maine, which includes hazardous waste from site remediation as well as manufacturing and commercial activities. This trend varies considerably from year to year depending on the number of remediation projects underway during each year and the volume of clean-up wastes generated from such projects. For example, the peaks that occurred in 2003, 2007, 2011, 2017, 2019, 2020 and 2021 were a result of major remediation or clean-up projects. Listed below are specific remedial projects that produced significant volumes of hazardous wastes during peak years of hazardous waste generation:

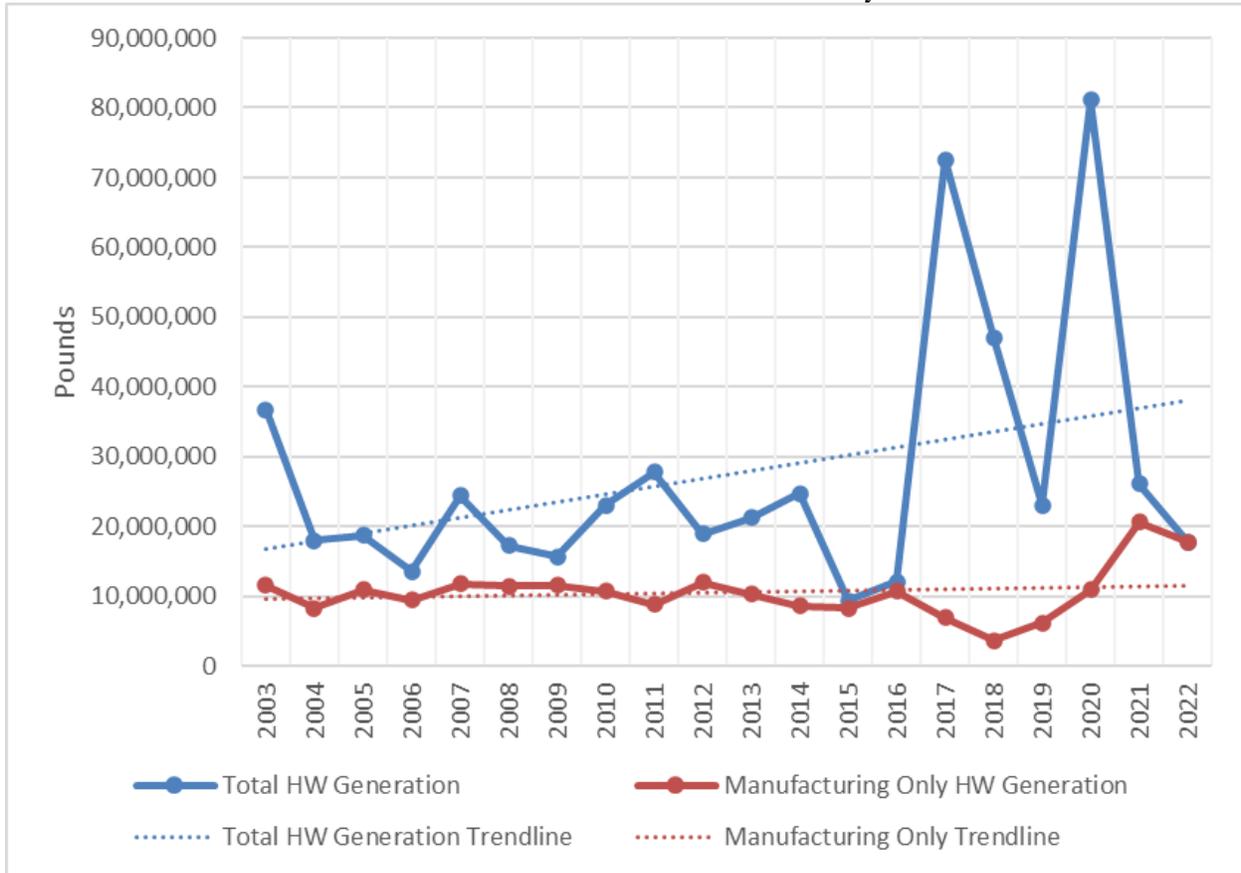

Year	Site	Waste Type	Volume (lbs)
2003	Eastland Woolen Mill	Chlorobenzene solvent	14,242,000
2003	National Semiconductor	Chlorinated & non-chlorinated solvent	6,654,000
2007	Holtrachem Manufacturing	Mercury metals & concrete	3,000,000
2007	Portsmouth Naval Shipyard	Lead waste	2,000,000
2011	Portsmouth Naval Shipyard	Lead waste	11,500,000
2011	Callahan Mine	PCBs	>5,000,000
2012	Portsmouth Naval Shipyard	Lead waste	>2,000,000
2012	Callahan Mine	PCBs	>3,000,000
2013	Portsmouth Naval Shipyard	Lead waste	>6,000,000
2013	Callahan Mine	PCBs	4,000,000
2014	Casella Waste Systems	PCBs	>7,000,000
2014	Portsmouth Naval Shipyard	Lead waste	>8,000,000
2017	Mallinckrodt US LLC	Mercury contaminated soil	>62,000,000
2019	Portland Pipeline	Crude oil residuals	>5,125,000
2019	Mallinckrodt US LLC	Mercury contaminated soil	>11,700,000
2020	Mallinckrodt US LLC	Mercury contaminated soil	>66,400,000
2020	US Naval Support Activity Cutler	PCBs	>3,800,000
2021	Mallinckrodt US LLC	Mercury contaminated soil	5,414,449

For the reporting years of 2019, 2020, and 2021, the remediation of mercury-contaminated soil by Mallinckrodt US LLC at the former Holtrachem site, a removal of crude oil residuals from the Portland Pipeline, and the removal of PCB-contaminated soil and debris from the US Naval Support site in Cutler accounts for the significant increase in volume of hazardous waste in Figure 9. Remediation projects did not seem to significantly affect the 2022 hazardous waste volume.

The upper trend line for the past 20 years for the total amount of hazardous waste generated including remediation waste (upper line in Figure 9) represents a weak upward ascension (correlation coefficient $r^2 = 0.1209$), with variations due primarily to the volumes generated from site remediation projects.

The lower trend line in the graph shows hazardous waste generated from manufacturing and commercial activities from 2003 through 2022, excluding site remediation wastes. Increases in hazardous waste generation from manufacturing and commercial activities occurred in 2005, 2007, 2012, 2017, 2020 and 2021, while other years during this period show waste generation from manufacturing and commercial activities either remaining steady or decreasing. During this biennial reporting period, wastes generated from manufacturing and commercial activities in 2021 and 2022 showed an increase when compared to the last biennial reporting period. The trend line since 2003 for hazardous waste generated from manufacturing and commercial activities (excluding remediation projects) represents a nearly steady increase in generation of hazardous waste (correlation coefficient $r^2 = .0264$). A simple comparison of the amount of hazardous waste generated in 2022 (i.e. 17,755,954 lbs.) to that generated in 2003 (i.e. 11,510,693 lbs.) shows an increase of approximately 54%.

**Figure 9
Hazardous Waste Generation Trends Analysis**

V. Licenses and Abbreviated Licenses

As of December 2022, there were 38 facilities licensed in Maine to handle, treat or store hazardous waste, including two commercial storage facilities, one commercial treatment and storage facility, one mixed waste storage facility, one post-closure facility, 22 facilities licensed for beneficial reuse on-site, 11 other facilities licensed for a variety of site-specific hazardous waste activities, and two facilities licensed for de-manufacturing of universal waste. The Department received nine license renewal applications for abbreviated licenses for hazardous waste activities in 2019, six renewal applications for abbreviated licenses in 2020, two new and three renewal license applications for abbreviated licenses in 2021, and five renewal applications and one transfer of ownership for abbreviated licenses in 2022. NRC Environmental of Maine, Inc. received renewal licenses for a commercial hazardous waste treatment and storage facility in 2019 and Portsmouth Naval Shipyard received a renewal license for a commercial storage facility in 2020. Appendix A provides a list of the facilities in Maine licensed to handle, treat, or store hazardous waste.

VI. Import/Export Information

Imports

Approximately 1,900,960 pounds in 2019, 1,070,671 pounds in 2020, 1,548,804 pounds in 2021 and 1,331,203 pounds in 2022 of hazardous waste were imported into Maine from other states for treatment or recycling. NRC Environmental of Maine, Inc., formerly known as Enpro Services of Maine, (“NRC”) in South Portland was the receiving facility for 100% of the imported waste in 2019/2020 and 2021/2022, which consisted of only one waste type, designated as D001/D018 ignitable and benzene-contaminated hazardous waste. NRC is licensed by the Department to treat D001/D018 hazardous waste, i.e. waste gasoline and oil-contaminated water, and to store hazardous waste for subsequent transport to other facilities licensed for treatment or disposal. Table 4 contains the amounts of hazardous waste (D001/D018) that were imported from other states during the reporting period. The amount of waste imported is based on the wastes that are deemed hazardous in the State of Maine and does not include waste deemed hazardous in another state or country, if that waste (i.e. waste oils) is not considered hazardous waste in Maine. However, fluctuations in the amount of imports are common, and generally have depended upon the volume of out-of-state waste which is imported to NRC. Over several reporting periods, the amount of hazardous waste imported has not had a singular trajectory. Some years the numbers have increased, while other years have seen significant decreases in the amount of hazardous waste imported into the state.

Table 4
Hazardous Waste Imported from Out of State or Canada

State/Country (from)	Pounds of waste type D001/D018			
	2019	2020	2021	2022
Massachusetts	60,888	50,157	248,751	154,106
New Hampshire	1,768,270	998,253	1,284,490	1,155,260
New York	1,079	0	3,320	3,901
Vermont	70,724	22,261	12,243	17,936
Canada	0	0	0	0
Total	1,900,960	1,070,671	1,548,804	1,331,203

Exports

Of the 23,004,908 pounds of hazardous waste generated and shipped by Maine generators in 2019, 94% (21,747,245) was exported to other states and Canada for treatment, storage, or disposal. Of the 81,112,664 pounds of hazardous waste generated and shipped by Maine generators in 2020, 99% (80,276,805) was exported to other states and Canada. Of the 26,075,571 pounds of hazardous waste generated and shipped by Maine generators in 2021, 97% (24,948,370 pounds) was exported to other states and Canada for treatment, storage, or disposal. Of the 17,755,954 pounds generated in Maine in 2022, 91% (16,075,733 pounds) was exported to other states and Canada. For a complete breakdown of wastes exported to other states and Canada, see Table 5 below.

Table 5
Maine Hazardous Waste Exported to Other States/Foreign Countries

State/Country (to)	Total in pounds 2019	Total in pounds 2020	Total in pounds 2021	Total in pounds 2022
Alabama	1,053,484	3,953,122	19,146	32,693
Arkansas	533,788	740,643	637,812	639,653
Arizona	24	0	0	15
Colorado	550	500	0	0
Connecticut	467,387	333,753	157,967	171,470
Florida	4	0	880	0
Idaho	4,401	0	6,521,119	4,471,333
Illinois	2,525	3,822	2,532	20,089
Indiana	455,688	369,141	55,256	101,171
Kentucky	189,875	234,182	218,012	230,543
Louisiana	30	0	8,237	0
Massachusetts	1,006,430	881,559	814,940	979,761

Pennsylvania	791,237	623,487	905,594	832,321
Rhode Island	1,000,956	767,721	864,867	1,097,955
South Carolina	2,298	5,875	3,139	11,498
Tennessee	106	464	358	326
Texas	1,372	15,514	1,013	75,966
Utah	1,556,372	78	52	1
Vermont	348,656	349,995	439,130	768,257
Canada	3,700,940	66,889,093	10,598,352	3,873,268
Total	21,747,245	80,276,805	24,948,370	16,075,733

VII. Maine Waste Handled at Commercial Hazardous Waste Facilities in Maine

In 2019, 2,762,048 pounds of hazardous waste generated in Maine; in 2020, 1,759,432 pounds of hazardous waste generated in Maine; in 2021, 2,414,022 pounds of hazardous waste generated in Maine; and in 2022, 1,095,746 pounds of hazardous waste generated in Maine were shipped to licensed treatment or storage facilities (TSF), i.e. commercial hazardous waste facilities, within the state. NRC Environmental of Maine, Inc. in South Portland received approximately 2,760,836 pounds of Maine-generated waste in 2019, 1,757,661 pounds of Maine-generated waste in 2020, 2,413,692 pounds of Maine-generated waste in 2021 and 1,092,126 pounds in 2022 of Maine-generated waste consisting primarily of waste gasoline and water

mixtures. Other than the gasoline-contaminated wastewater treated on-site, the remaining hazardous waste (primarily waste gasoline) received by NRC is ultimately sent out of state for treatment and/or disposal. Additionally, Portsmouth Naval Shipyard, which is a licensed storage facility authorized to receive hazardous and universal wastes from other military facilities (to store, bulk, and subsequently ship to licensed treatment or disposal facilities), received 1,212 pounds of hazardous waste in 2019, 1,771 pounds of hazardous waste in 2020, 330 pounds of hazardous waste in 2021 and in 2022 received 2,620 pounds of hazardous waste generated at military facilities located in Maine.

VIII. Hazardous Waste Facilities

A listing of commercial hazardous waste facilities within the United States is provided in Appendix B. The listing is from U.S. EPA's ECHO database which can be found at <https://echo.epa.gov/>. The listing includes the two commercial hazardous waste facilities in Maine which are licensed by the Department: Portsmouth Naval Shipyard in Kittery (for waste generated by military facilities); and NRC Environmental of Maine, Inc. (formerly ENPRO Services of Maine) in South Portland which treats waste gasoline and oil-contaminated wastewaters. Portsmouth Naval Shipyard can only accept hazardous waste from other military facilities. NRC Environmental of Maine, Inc. can accept hazardous waste from other generators. In addition to those two facilities, Central Maine Power's North Augusta Service Center (CMP - NASC) in Augusta is a Department-licensed hazardous waste facility for storage of PCB wastes generated off-site by CMP. CMP-NASC can only accept waste PCBs generated by CMP facilities.

IX. Transporters

Maine's hazardous waste generators are required to ship their wastes using licensed hazardous waste transporters. Transport companies must apply annually to be licensed by the Department. The majority of transporters are full-service entities that also provide testing, consulting, and other services associated with transportation and disposal of hazardous wastes. The Department licenses the company, the conveyances, and the conveyance operators. Driver's records are reviewed. The companies, once listed, are placed on a list of licensed transporters which is available to the public. A complete list of transporters, their site and mailing addresses, and phone numbers is supplied in Appendix C and is available on the Department's web site at <https://www.maine.gov/dep/ftp/reports/activehaztrans.pdf>. Appendix D provides a list of firms that the Department is aware of (in addition to the licensed transporters in Appendix C) which offer services in hazardous waste testing, consulting, brokerage, waste exchange and other hazardous waste related services. Inclusion of a firm on this list does not constitute an endorsement from the Department.

X. Universal Waste

The Universal Waste category was created to encourage the proper management and recycling of certain hazardous wastes, including those which are widely generated by entities such as small businesses or schools. Small businesses that typically do not generate other hazardous waste may generate universal waste.

Universal wastes include mercury or lead containing lamps (Sodium Vapor, HID or fluorescent), mercury thermostats, cathode ray tubes (CRTs), non-leaking polychlorinated biphenyls (PCBs) lamp ballasts, mercury devices such as mercury thermometers and switches, mercury switches from automobiles, and certain types of batteries, such as NiCad, lithium, silver oxide, mercury oxide, and sealed lead-acid batteries (alkaline batteries do not exhibit a hazardous waste characteristic and are not included). In March of 2015, Architectural Paint was added as a universal waste category. Data on the quantities of universal waste items

collected at municipally-owned central accumulation facilities, and at sites sponsored by Call2Recycle and the Thermostat Recycling Corporation (TRC), are included in this report. This data may include household waste which meets the description of universal waste, including electronic devices containing circuit boards.

Universal waste shipments are tracked by a log system, through the use of Uniform Bills of Lading (UBOLs) or hazardous waste manifests, or reports from manufacturer take back programs. Universal waste can be collected at central accumulation facilities (company or municipally owned) and commercial consolidation facilities before being shipped to a recycling facility. Universal waste going to a recycling facility must be documented on a UBOL or hazardous waste manifest unless the Department has approved alternate reporting methods. The UBOLs are entered into the Department's hazardous waste manifest database. Hazardous waste manifest data is from EPA's eManifest system. The Department compiled the data for this report by reviewing Maine's manifest database, EPA's eManifest database, reports from the TRC and Call2Recycle manufacturer take back programs, and reports of motor vehicle mercury switch collections from the Alliance of Automobile Manufacturers, Subaru, the Truck Manufacturers Association and the Recreational Vehicle Industry Association. Figures 10, 11 and 12 show the number of items that were shipped for recycling or disposal from 2010 through 2022 in a line chart format. The universal waste is split into three charts because of the difference in scale between some of the items. Figure 13 illustrates the total number of all universal waste items that have been sent for recycling for the years 2003 through 2022, with the exception of Architectural Paint which has only been collected as universal waste since March 2015.

The graphs show most universal waste collection is decreasing with spikes in recycling of electronic devices and CRTs from 2011 through 2019. The large spike in handling electronic devices and CRTs is attributed to e-Waste Recycling Solutions (which was a licensed electronics de-manufacturing facility until 2019) receiving over a million electronic devices and CRTs, including some from out of state handlers, in conjunction with the e-waste product stewardship program. Data regarding Architectural Paint has been collected since mid-2015 (2016-2022). The Architectural Paint collection program appears to be relatively consistent from 2019 to the present. The Department's annual Product Stewardship report provides additional information regarding wastes managed by manufacturer take-back programs.
